OF THE

United States Patent Office

Vol. 590—No. 1 TUESDAY, SEPTEMBER 3, 1946 Price—$16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $18.75; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

[Chapter 775—2d Session]

[H. R. 4080]

AN ACT

To authorize the Commissioner of Patents to designate Examiners to serve temporarily as Examiners in Chief.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That notwithstanding the provisions of section 476 of the Revised Statutes (U. S. C., title 35, sec. 2), the Commissioner of Patents is authorized to designate Examiners of the Principal Examiner grade or higher, having the requisite ability, to serve as Examiners in Chief and such Examiners so designated shall be fully qualified to act as members of the Board of Appeals constituted by section 482 of the Revised Statutes (U. S. C., title 35, sec. 7): *Provided,* That no such Examiner shall so serve for more than ninety days in any calendar year but thereafter they shall have authority to act and sign decisions and papers necessary to complete action on cases heard during such ninety days: *And provided further,* That not more than one such Examiner shall be among the members of the Board of Appeals hearing an appeal.

Sec. 2. This act shall take effect on the date of approval and shall expire three years after such date.

Approved August 7, 1946.

Order No. 4079

August 16, 1946.

The following units of the United States Patent Office are hereby transferred from Richmond, Va., to Gravelly Point, Washington, D. C., beginning on or about September 30, 1946:

The First Assistant Commissioner's Office;
The Law Examiner's Office;
The Supervisory Examiners' Office;
The Law Library;
The Drafting Division;
The parts of the following divisions still remaining in Richmond:
The Chief Clerk's Office;
The Personnel Office;
The Issue and Gazette Division;
The Docket Clerk's Division;
The Financial Clerk's Division;
The Mail Room;
The Assignment Division;
The Stockroom;
The following Examining Divisions: 1, 2, 4, 5, 8, 9, 11, 12, 13, 14, 17, 18, 19, 20, 22, 28, 29, 30, 32, 33, 34, 35, 36, 39, 40, 44, 45, 46, 47, 49, 52, 53, 57, 58, 61, and 62; and any and all units or parts thereof now remaining in Richmond.

THOMAS F. MURPHY,
Acting Commissioner.

Approved for change of station:

H. A. WALLACE,
Secretary of Commerce.

Notice of Cancellation

U. S. Patent Office, *Richmond, Va., August 1, 1946.*

Napoleon O. Basford, his assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of The Hygienic Products Company, 220 Seventh Street, Southeast, Canton, Ohio, to effect the cancellation of trade-mark registration of Napoleon O. Basford, 317 Maiden Lane, Akron, Ohio, No. 259,376, dated July 30, 1929, and the Patent Office having been advised that the said Basford is deceased, notice is hereby given that unless the heirs of Basford, his assigns, legal representatives, or other person claiming an interest in the registration, shall enter an appearance therein within thirty days from the first publication of this order the cancellation will be proceeded with as in the case of default. This notice will be published in the Official Gazette for three consecutive weeks.

LESLIE FRAZER,
First Assistant Commissioner.

Adjudicated Patent

(D. C. N. Y.) Grube patent, No. 1,731,415, for gold leaf in roll form, claims 2, 6, and 7 *Held* invalid. *Peerless Roll Leaf Co.* v. *M. Swift & Sons,* 65 F. Supp. 819; 69 USPQ 306.

Condition of Applications Under Examination at Close of Business September 3, 1946

(Total number of applications awaiting action, excluding Trade-Mark Division, 121,568; Trade-Mark Division, 9,845. Oldest new case, February 12, 1945; oldest amended, February 20, 1945.)
(The dates given are 1945 except where † indicates 1946.)

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

FARRINGTON ET AL. *v.* MIKESKA

MIKESKA *v.* FARRINGTON ET AL.

Nos. 5,112 and 5,113. Decided May 7, 1946

[155 F.(2d) 412; 69 USPQ 509]

1. INTERFERENCE — CONCEPTION — REDUCTION TO PRACTICE—EVIDENCE.

The identity of a product as falling within the scope of counts relating to mixed ester salts of phosphoric acid *Held* established by an analysis of the product which showed the phosphorous content to be very close to the "theoretical value," and by the "solubility characteristics of the product."

2. SAME — REDUCTION TO PRACTICE — SUFFICIENCY OF TESTS.

"The tests made of the product obtained showed satisfactory results as a wetting agent in soft water, which is sufficient in view of the fact that the counts are not limited to any particular use of the product and clearly do not require that it be an effective wetting agent in hard water or in acid solutions."

3. SAME — DISCLOSURE — CONSTRUCTIVE REDUCTION TO PRACTICE.

"A disclosure, in order to amount to a constructive reduction to practice, must be sufficient to enable those skilled in the art to practice the invention without the necessity of extensive experimentation."

4. SAME — CONCEPTION — REDUCTION TO PRACTICE — EVIDENCE.

"In the absence of any analysis whatsoever of * * * intermediate compounds, we are unable to hold that their production warrants a holding of conception or reduction to practice of the compounds defined by the counts in issue."

5. SAME—SAME—SAME—SAME.

"Although Farrington, Clayton, and their witness Roland T. Macdonald all testified as to the Hirsch experiment, their testimony was merely based on the contents of a note book allegedly kept by Hirsch. It does not appear that any of those witnesses had any independent recollection of the details of that experiment. The entire case of Farrington et al., therefore, as to the Hirsch experiment, rests on the accuracy of an unverified note book which was not identified by the person who allegedly made the entries therein. Under the circumstances hereinbefore related, it is evident that Farrington et al. have not introduced evidence which would justify a holding of conception or actual reduction to practice of the invention defined by count 2 prior to the filing of their involved application."

6. SAME—OPERATIVENESS—ADMISSION.

"The failure of Mikeska to assert that the disclosure of the Farrington et al. application is inoperative cannot be taken as an admission of more than that the application contains a disclosure of some operative method of producing compounds here in issue. It is not an admission that each example disclosed is operative, nor is it an admission that every experiment falling within the terms of some particular example was necessarily successful."

7. SAME—SAME—SAME.

Where Farrington et al. alleged that certain experiments relied upon to show conception and actual reduction to practice parallel examples disclosed in their application, and contended that "since Mikeska did not attack the disclosure of their application as inoperative, he should be held to have admitted that the processes of the examples given therein will always produce the products which the application discloses as being produced by them," *Held* that "Mikeska's failure to contend that the disclosure of the Farrington et al. application is inoperative cannot supply the lack of affirmative proof as to the results of experiments performed several months before that application was filed."

8. SAME—SAME—SAME.

The failure of a party to attack the operativeness of the disclosure of an opponent's application does not relieve the opponent of the duty of establishing that experiments carried out prior to the filing of his application, and set forth as examples therein and upon which he relies for actual reduction to practice, were successful.

APPEAL from the Patent Office. Affirmed.

Mr. James P. Burns for Farrington et al.

Mr. Wilbur F. Smith (*Mr. W. E. Currie, Mr. P. L. Young* and *Mr. W. F. Weigester* of counsel) for Mikeska.

HATFIELD, *J.*:

These are cross-appeals in an interference proceeding from the decision of the Board of Interference Examiners of the United States Patent Office awarding priority of invention of the subject matter defined by count 1 to appellees Farrington et al. in appeal No. 5113, and that of count 2 to appellee Mikeska in appeal No. 5112.

The interference is between application No. 374,078 of Farrington et al. filed January 11, 1941, which is a division of a parent application No. 241,648, filed November 21, 1938, and Mikeska's patent, No. 2,219,050, issued October 22, 1940, on an application filed December 31, 1938. Farrington et al. are the senior parties by virtue of the filing of their earlier application. Accordingly, the burden was upon Mikeska to establish priority of invention by a preponderance of the evidence.

The counts in issue relate to mixed ester salts of phosphoric acid in which the alkylaryl groups "constitute the ester portion of the molecule." They read:

1. A base metal salt of a phosphoric acid ester containing at least one alkylaryl group and a total of 5 to 16 saturated carbon atoms in the alkyl radicals of said alkylaryl groups.

2. A compound of the general formula

$$(R—Ar—O)_x PO(OM)_y$$

in which R represents at least one alkyl substituent containing an average total of 5 to 16 carbon atoms, Ar represents an aromatic nucelus, M represents a basic metal atom and x and y are whole numbers from 1 to 2, the sum of which is 3.

As stated in the decision of the Board of Interference Examiners, the involved counts are substantially the same as claims 1 and 12 in the Mikeska patent "and differ therefrom only in the upper limit of the number of carbon atoms present in the alkyl substituent; Farrington not having adequate basis for the particular upper limitation of the patent claims" which call for 5 to 20 carbon atoms.

[1] The Board of Interference Examiners accorded Miskeska a date of conception and reduction to practice as of July 1938, on the basis of an experiment performed on his behalf by one George E. Serniuk, a chemist employed by the Standard Oil Development Company, assignee of Mikeska, in

which, Serniuk testified, "an attempt was made to prepare a di-tertiary amyl phenyl phosphate as a mono-sodium salt by esterifying tertiary amyl phenol with phosphorus penta chloride." That the desired product was obtained by Serniuk, was indicated by an analysis which showed the phosphorus content to be very close to what is termed the "theoretical value," that is, the amount which would theoretically be present if the product had the desired composition, and also by the "solubility characteristics of the product." Farrington et al. contend that that analysis is insufficient because the amount of each element was not determined. The Board of Interference Examiners held, however, that the tests employed were sufficient to establish the identity of the product as falling within the scope of both counts. That holding, under all the circumstances and in view of the method by which the product was prepared, is, in our opinion, correct.

Farrington et al. also allege that the product was not sufficiently tested to establish a reduction to practice.

[2] The tests made of the product obtained showed satisfactory results as a wetting agent in soft water, which is sufficient in view of the fact that the counts are not limited to any particular use of the product and clearly do not require that it be an effective wetting agent in hard water or in acid solutions. Mikeska, therefore, is entitled to July 1938, when the witness Serniuk completed his experiment, for reduction to practice of the subject matter defined by the involved counts.

The only experiments relied upon here by Mikeska as establishing dates prior to July 1938 are those performed by the witness Frank E. Toonder in 1937, who at that time was an employee of the Standard Oil Development Company.

The results of the Toonder experiments differed from those of the Serniuk experiment in that the phosphorous content of the products varied to a considerable extent from the "theoretical value" of compounds coming within the counts. Although Mikeska argues that this discrepancy was due to impurities, that argument is merely speculative. The evidence submitted does not satisfactorily establish that any product obtained by the witness Toonder was of the kind called for by either of the counts, and it follows that his work is not sufficient to establish either conception or reduction to practice of the subject matter defined by either of the counts in issue.

Mikeska also relies for conception and constructive reduction to practice on an earlier application which matured into Patent No. 2,213,588.

That patent, however, merely suggests that compounds of the kind here involved may be prepared by certain steps, which are indicated only generally. No specific examples are given, and there is no statement as to the particular conditions under which the reactions are to be carried out. The fact that the witness Serniuk, working under Mikeska, made a number of unsuccessful attempts to prepare the compounds called for by the counts in issue after the application for the Mikeska Patent No. 2,213,588 had been filed, clearly indicates that that patent does not disclose the invention defined by the involved counts. It is asserted by Mikeska that the lack of success was due to impure materials. It is not established, however, that pure materials would have produced the desired product. In his successful experiment, the witness Serniuk employed materials different from those employed by him in the other experiments. Under the circumstances, the disclosure in the Mikeska Patent No. 2,213,588 was properly held to be insufficient to support the counts in the interference.

[3] A disclosure, in order to amount to a constructive reduction to practice, must be sufficient to enable those skilled in the art to practice the invention without the necessity of extensive experimentation. *Thompson* v. *Dicke*, 27 C. C. P. A. (Patents) 931, 110 F.(2d) 98, 44 USPQ 514, 517 O. G. 564.

We are of opinion that the Board of Interference Examiners properly held that Mikeska was entitled to a date not earlier than July 1938 for conception and reduction to practice of the invention defined by the counts in issue.

Owing to the fact that the Board held that the parties Farrington et al. are entitled to conception and reduction to practice of the invention defined by count 1 as early as April 1938, and since Mikeska has alleged no error in that holding, and as that holding of the Board is supported by the evidence of record, the award of priority of invention of the subject matter defined by count 1 to Farrington et al. is affirmed.

[4] Farrington et al. rely on three alleged preparations of sodium or potassium compounds, which, it is alleged, come within the terms of the counts in issue and which were prepared prior to July 1938. In each of those experiments, the compound was merely an intermediate product which was used in making a calcium or aluminum salt which is not called for by count 2. (It may be said at this point that count 2 is limited to a compound of monovalent metal, whereas count 1 is not so limited.) None of those intermediate products was actually analyzed. It is urged by Farrington et al. that, in view of the final product which was obtained, the intermediate compounds must have corresponded to the composition called for by the counts in issue. However, in the absence of any analysis whatsoever of such intermediate compounds, we are unable to hold that their production warrants a holding of conception or reduction to practice of the compounds defined by the counts in issue. Moreover, in two of the three experiments, that is, those carried out by the witnesses Daniel H. Condit and Charles C. Robin, the compounds relied upon were not isolated, but were present in solution only.

The counts in issue do not call for compounds in solution, but for compounds per se.

[5] In the third experiment relied upon by Farrington et al., that allegedly performed by one Julian Hirsch (who was not called as a witness), the intermediate compound, hereinafter referred to, is said to have been separated from solution, although there is no evidence that it was analyzed. Moreover, it was apparently immediately redissolved and used in preparing another composition not here involved. Although Farrington, Clayton, and their witness Roland T. Macdonald all testified as to the Hirsch experiment, their testimony was merely based on the contents of a note book allegedly kept by Hirsch. It does not appear that any of those witnesses had any independent recollection of the details of that experiment. The entire case of Farrington et al., therefore, as to the Hirsch experiment, rests on the accuracy of an unverified note book which was not identified by the person who allegedly made the entries therein. Under the circumstances hereinbefore related, it is evident that Farrington et al. have not introduced evidence which would justify a holding of conception or actual reduction to practice of the invention defined by count 2 prior to the filing of their involved application.

[6][7] Farrington et al. allege that some of the experiments, hereinbefore referred to, parallel examples disclosed in their application, and contend that, since Mikeska did not attack the disclosure of their application as inoperative, he should be held to have admitted that the processes of the examples given therein will always produce the products which the application discloses as being produced by them. It is to be noted, however, that the application, even in the examples, does not give every detail of the necessary procedure to be followed, certain details being left to the judgment of the skilled worker. The failure of Mikeska to assert that the disclosure of the Farrington et al. application is inoperative cannot be taken as an admission of more than that the application contains a disclosure of some operative method of producing the compounds here in issue. It is not an admission that each example disclosed is operative, nor is it an admission that every experiment falling within the terms of some particular example was necessarily successful. Accordingly, Mikeska's failure to contend that the disclosure of the Farrington et al. application is inoperative cannot supply the lack of affirmative proof as to the results of experiments performed several months before the application was filed.

[8] The decisions in the cases of *Schweyer* v. *Thomas*, 21 C. C. P. A. (Patents) 859, 68 F.(2d) 953, 20 USPQ 273, 443 O. G. 298; *Garand* v. *Pedersen*, 22 C. C. P. A. (Patents) 1161, 76 F.(2d) 407, 25 USPQ 247, 460 O. G. 9; and *Hogue* v. *Cowling et al.*, 26 C. C. P. A. (Patents) 874, 101 F.(2d) 541, 40 USPQ 492, 504 O. G. 583, relied upon by Farrington et al., are not in point here. In those cases, parties who had failed to attack an opponent's application during the motion period on the ground that its disclosure was inoperative or that it would not support the counts were not permitted to urge those grounds later against the identical structures disclosed in such application when embodied in actual devices or disclosed in other applications. Those decisions, however, do not hold that the failure of a party to attack the operativeness of the disclosure of an opponent's application relieves the opponent of the duty of establishing that experiments carried out prior to the filing of his application, and set forth as examples therein and upon which he relies for actual reduction to practice, were successful.

In the reasons of appeal assigned by Farrington et al. it is alleged that the calcium compound prepared by the witness Robin and held by the Board to be a reduction to practice of the subject matter of count 1 also satisfies the requirements of count 2.

That contention of counsel does not appear to be urged in his brief and might well be ignored by the court. It is our view, however, that the Board of Interference Examiners correctly held that count 2 calls for a monovalent metal and, therefore, is not satisfied by a compound of a bivalent metal, such as calcium.

It is also alleged that Exhibit 16 of Farrington et al. (which is referred to in the record as a "sheaf of correspondence bearing on the preparation of the Farrington, et al., application") establishes conception as to count 2, and that this conception was coupled, by diligence, with an actual reduction to practice.

It has not been explained by Farrington et al. wherein their Exhibit 16 contains a disclosure of the subject matter of count 2, and we are unable to find that it does contain such a disclosure.

The remaining contentions of counsel for both parties have been considered without finding any error which would justify a modification of the decision of the Board of Interference Examiners as to either of the counts in issue.

For the reasons stated, we are of opinion that the Board was clearly right in awarding priority of invention of the subject matter defined by count 1 to Farrington et al. and that by count 2 to Mikeska.

The decision is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

IN RE WESTGATE SEA PRODUCTS COMPANY

No. 5,140. Decided April 1, 1946

[154 F.(2d) 1010; 69 USPQ 438]

1. TRADE-MARKS—REGISTRABILITY UNDER ACT OF 1905—GEOGRAPHICAL NAMES.
   The word "Westgate" applied to canned fish *Held* properly refused registration under the Trade-Mark Act of February 20, 1905, as merely a geographical name.
2. SAME—SAME—SAME.
   "Westgate is a geographical word even though it is the name of inconsequential towns. The provisions of the Trade-Mark Act of February 20, 1905, draw no distinction as to the size of towns, and therefore we do not deem it incumbent upon us to draw a line with respect to the general knowledge or size of cities, towns or villages. We think that if Congress had intended any such distinction to be made it would have so expressed itself."

3. SAME—SAME—SAME.

"There is a decided difference between the word 'Westgate' and the two words 'west' and 'gate,' and we are of opinion that the contention of appellant that joining those two words together gives no different meaning than if used apart is not tenable."

APPEAL from the Patent Office. Affirmed.

O'CONNELL, *J.*, dissenting.

Messrs. Jackson, Webster & Read, Mr. William G. Mackay and *Mr. Chas. R. Allen* for Westgate Sea Products Company.

Mr. W. W. Cochran (*Mr. R. F. Whitehead* of counsel) for the Commissioner of Patents.

JACKSON, *J.*:

The Commissioner of Patents affirmed, 63 USPQ 152, a decision of the Examiner of Trade-Marks rejecting the application of appellant for registration of the trade-mark "Westgate," applied to canned fish, Serial No. 459,971, filed April 17, 1943, in accordance with the Trade-Mark Act of February 20, 1905. From that decision this appeal was taken.

The Examiner in his statement refused registration on the ground that the mark sought to be registered is geographical in that it is the name of "inconsequential" towns in Iowa, Kansas, and England, and because it is a surname not distinctively displayed, being found in the telephone directories of Chicago and New York, and for the further reason that the mark is confusingly similar to a registered mark "Westgate" as applied to flour.

The Commissioner in his decision disapproved the Examiner's holding with respect to the reference. The Commissioner pointed out that the owner of that registration expressly agreed to the registration of the mark of appellant, and also expressed his doubts as to whether flour, to which the registration was applied, and canned fish, to which appellant's trade-mark is applied, are of the same descriptive properties. Otherwise the decision of the Examiner was affirmed.

It appears that appellant had previously registered the mark "Westgate" as applied to canned fish but neglected to renew the registration within the prescribed period.

Appellant in its reasons of appeal alleged that the Commissioner erred in affirming the decision of the Examiner in holding that the mark sought to be registered is merely geographic and merely the name of an individual, and in failing to consider that appellant was the owner of an expired registration as aforesaid.

Appellant contends that his trade-mark is an arbitrary expression and is to be regarded in all respects as such. It does not deny that the word "Westgate" is the name of towns or that it is the name of individuals found in the telephone directories above referred to.

The Examiner of Trade-Marks, with respect to the first rejection, relied on the case of *In re Lamson & Co., Inc., Etc.*, 30 C. C. P. A. (Patents) 1030, 135 F.(2d) 1021, 57 USPQ 555, 553 O. G. 769, wherein we held the name "Elmwood" to be geographical over the contention of the appellant that because that word was composed of the two words "elm" and "wood" it should not be considered as geographical. In that case it appeared, as it does here, that the two words making up the combination of the term sought to be registered lost their individual significance when made into a single word.

[1][2] It seems to us that the reasoning of the Lamson case is controlling on the contention made here, for the reason that "Westgate" is a geographical word even though it is the name of inconsequential towns. The provisions of the Trade-Mark Act of February 20, 1905, draw no distinction as to the size of towns, and therefore we do not deem it incumbent upon us to draw a line with respect to the general knowledge or size of cities, towns or villages. We think that if Congress had intended any such distinction to be made it would have so expressed itself.

[3] There is a decided difference between the word "Westgate" and the two words "west" and "gate," and we are of opinion that the contention of appellant that joining those two words together gives no different meaning than if used apart is not tenable.

For the reasons heretofore stated, it is not necessary to discuss any other ground given for the refusal to register.

The decision of the Commissioner is affirmed.

Affirmed.

O'CONNELL, *J.*, dissents.

U. S. Court of Customs and Patent Appeals

LAND *v.* DREYER

No. 5,073. Decided April 1, 1946. Petition for rehearing denied June 7, 1946

[155 F.(2d) 383; 69 USPQ 602]

1. RULES OF PRACTICE—FORCE.

Held that the Rules of Practice in the United States Patent Office applicable to the case at bar "were established and explicitly promulgated by the Commissioner of Patents for the purpose of facilitating the prompt and orderly disposition of the issues of an interference proceeding"; and that the Rules of Practice "when not inconsistent with the statutes from which they are derived, have the force of law and control the procedure in that Office."

2. INTERFERENCE—MOTION TO DISSOLVE—RULE 122.

Where appellant moved to dissolve under rule 122 on the grounds that appellee's disclosure was inadequate to support the counts and was inoperative, and that motion was dismissed by the Examiner of Interferences as indefinite, *Held* that "appellant might have availed himself of his right to petition the Commissioner of Patents to reverse the ruling of the Examiner of Interferences," or "appellant could have filed an amended motion in proper form and have had it set for hearing before the Primary Examiner."

3. SAME—FINAL HEARING—RULE 130.

"Having failed to take either action to force a dissolution of the interference during the motion period, and not having shown good reason or any reason why such motion was not presented and prosecuted at the proper time, appellant cannot raise the question after the testimony has been completed and have the issue of patentability reviewed at the final hearing before the Board of Interference Examiners."

4. SAME—REBUTTAL TESTIMONY.

"It is not disputed that the senior party in an interference proceeding can introduce evidence to rebut the factual evidence of diligence developed by the junior party relative to the question of his reduction to practice during the critical period."

5. SAME—CONCEPTION.

"The party claiming conception of an invention must show that it was complete and operative and such as would enable a person skilled in the art to reduce the conception to practice without any further research or exercise of the inventive skill. It is not sufficient, therefore, to show that a party claiming an invention has conceived a result to be obtained; the patentable thing is the means provided and disclosed by him to accomplish that result."

6. SAME—SAME.

"Although appellant alleges here that his invention is but a simple mechanical improvement involving merely the direct application of the polarizing sheet material to the non-planar or spherically curved surface of an incandescent lamp, the record fails to disclose that his conception of the invention here in issue included the kind of polarizing material that was necessary to solve the problem with which he was confronted."

7. SAME—EVIDENCE—JUDICIAL NOTICE.

"Appellant asks the court here to take judicial notice of the fact that automobile headlight bulbs are necessarily of clear or transparent glass. That is a critical issue upon which appellant had the burden of proof and upon which this court cannot base a finding of fact without supporting evidence. There is nohe in the record to establish it."

APPEAL from the Patent Office. Affirmed.

Mr. Donald L. Brown (*Mr. Nathaniel R. French* of counsel) for Land.

Mr. Richard K. Stevens (*Mr. Truman S. Safford* and *Messrs. Blair, Curtis & Hayward* of counsel) for Dreyer.

O'CONNELL, *J.*:

The junior party, Land, appeals here from the decision of the Board of Interference Examiners of the United States Patent Office awarding to the senior party, Dreyer, priority of invention for an incandescent lamp having a coating of light polarizing material and a filament light source enclosed within a non-planar envelope.

Dreyer filed his application July 2, 1938; Land on October 4, 1938. Land was granted a patent August 12, 1941. This interference was declared December 30, 1941, between the foregoing patent to Land, No. 2,252,324, and Dreyer's pending application, Serial No. 217, 249.

The invention is designed generally to provide polarized illumination for eliminating the glare from automobile headlights as well as reading or display lamps. The subject matter of the interference is more specifically described in four counts taken from the patent to Land of which count 1 is illustrative—

1. An incandescent lamp comprising, in combination, a filament light source, an envelope therefor a portion at least of which is transparent, at least a portion of said envelope being non-planar, said envelope substantially encompassing said source, a non-planar portion at least of said envelope being coated with a material which polarizes transmitted light, said coating being affixed to and positioned on said envelope to intercept light beams emanating from said source.

Count 2 calls for a structure in which the polarizing material is on the transparent portion of the envelope and counts 3 and 4 call for a structure in which the coating is on the outer surface of the transparent portion of the envelope.

Appellant took testimony and appellee having taken no testimony on the question of priority of invention, is therefore restricted to his filing date for conception and reduction to practice. However, appellee filed a notice under rule 154 (*e*) of the Rules of Practice in the United States Patent Office, the effect of which is hereinafter noted and discussed.

It was incumbent upon appellant, being the junior party, to prove by a preponderance of evidence that he was first to conceive the invention defined by the counts and first to reduce it to actual practice prior to the date upon which appellee filed his application; or that appellant was first to conceive and was actively engaged in reducing his invention to practice at and immediately prior to the time appellee filed his application and entered the field, and that appellant continued such activity to the time of his own filing date.

In his appeal here, to quote from appellant's brief, "Land made forty-one specific assignments of error * * *. The ultimate error to which he objects is the award of priority to Dreyer and in connection therewith the failure of the Board to accept as sufficient Land's proofs of conception and reduction to practice."

Two of the alleged errors which appellant assigns here are that the Board erred in holding that Land had failed to comply with the requirements of rule 130 entitling him to raise at final hearing and in refusing then to consider the question of Dreyer's right to make the counts; and that the Board erred in holding Land's rebuttal testimony was not proper rebuttal and for that reason in granting Dreyer's motion to strike it out.

Inasmuch as the proceedings and events herein disclosed may have a direct bearing on the final issue involved, they are necessarily here set forth so far as pertinent.

The first of the two issues presented resolves itself into the question of whether the action of the Examiner of Interferences in dismissing appellant's motion to dissolve as indefinite is subject to review and disposal at the final hearing before the Board of Interference Examiners; and the second is whether appellant, the junior party, may take rebuttal testimony as to his own diligence when the testimony of appellee, the senior party, is restricted to a rebuttal of the evidence submitted as to such diligence on the part of the junior party.

On August 13, 1942, appellant moved to dissolve the interference on the specific grounds that appellee's disclosure not only is inadequate to support the counts in issue but also that such disclosure is inoperative.

On August 24, 1942, the Examiner of Interferences dismissed appellant's motion to dissolve on the ground that the motion papers did not clearly

and unequivocally point out which elements of the counts are not supported by Dreyer's disclosure and wherein it is apparent from Dreyer's disclosure that it is inoperative.

Appellant promptly moved for reconsideration of the decision dismissing his motion to dissolve as indefinite, whereupon the Examiner of Interferences on September 15, 1942, rendered a further decision explaining his ruling and adhering to his original conclusion.

Thereafter during the motion period no action was taken by appellant on the decision of the Examiner of Interferences either by motion or petition to the Commissioner of Patents. At the final hearing, however, appellant renewed his motion to dissolve on the ground that appellee had no right to make the counts.

In support of his position before the Board, appellant urged that the original decisions of the Examiner of Interferences dismissing his motions to dissolve were both erroneous. Appellant also urged that the "requirement of rule 130 is clearly predicated upon the doctrine of notice, and is designed to protect a party from being surprised at final hearing by an attack upon his right to make a count, * * * and "that the question of Dreyer's right to make the counts was fairly extensively developed in the various additional papers which have been filed in connection with Land's motion."

Without commenting on but without questioning the accuracy of the holding of the Board of Interference Examiners that "the additional papers which were filed after the close of the motion period do not serve to correct the defects" in appellant's original motion to dissolve, it is clearly apparent that appellant has here misconceived not only the requirements but also the significance of the Rules of Practice applicable to the case at bar.

[1] These rules were established and explicitly promulgated by the Commissioner of Patents for the purpose of facilitating the prompt and orderly disposition of the issues of an interference proceeding. Furthermore, the Rules of Practice in the Patent Office, when not inconsistent with the statutes from which they are derived, have the force of law and control the procedure in that office. *In re Terres et al.*, 32 C. C. P. A. (Patents) 965, 150 F.(2d) 711, 65 USPQ 245, 576 O. G. 341; *Broadwell* v. *Long*, 36 App. D. C. 418, 164 O. G. 252.

The validity of such rules is not here questioned. So far as pertinent, they read—

> 122. Motions to dissolve an interference * * * denying the patentability of an applicant's claim, or * * * denying his right to make the claim, * * * should contain a full statement of the grounds relied upon and should, if possible, be made within the time fixed by the Examiner of Interferences, not less than thirty days, after the statements of the parties have been received and approved. Such motions and all motions of a similar character, if in the opinion of the Examiner of Interferences they be in proper form, will be heard and determined by the Primary Examiner. * * *. If in the opinion of the Examiner of Interferences the motion be not in proper form, or if it be not brought within the time specified and no satisfactory reason be given for the delay, it will not be considered and the parties will be so notified.
>
> 130. Where the patentability of a claim to an opponent is material to the right of a party to a patent, said party may urge the nonpatentability of the claim to his opponent as a basis for the decision upon priority of invention. A party shall not be entitled to raise this question, however, unless he has duly presented and prosecuted a motion under rule 122 for dissolution upon this ground or shows good reason why such a motion was not presented and prosecuted. * * *

[2] It will be noted that appellant accepted the dismissal of his motion by the Examiner of Interferences and proceeded to take testimony without first presenting the point raised by his motion and then prosecuting that question to a final determination before the proper tribunal.

At that time appellant might have availed himself of his right to petition the Commissioner of Patents to reverse the ruling of the Examiner of Interferences as disclosed in the procedure of the case cited by the Examiner of Interferences on appellant's original motions to dissolve. See *Burleigh* v. *Elliot*, 197 O. G. 240, 1913 C. D. 244. Furthermore, appellant could have filed an amended motion in proper form and have had it set for hearing before the Primary Examiner.

[3] Having failed to take either action to force a dissolution of the interference during the motion period, and not having shown good reason or any reason why such motion was not presented and prosecuted at the proper time, appellant cannot raise the question after the testimony has been completed and have the issue of patentability reviewed at the final hearing before the Board of Interference Examiners. See *Broadwell* v. *Long*, supra.

On December 1, 1942, the period for taking testimony in chief by appellant expired.

Thereafter, on January 9, appellee gave notice in accordance with the provisions of rule 154 (*e*) that he would rely at the final hearing on twenty-nine patents and applications filed by appellant, to show that appellant's "activity on the invention at issue was dilatory and thereby to rebut any claim to diligence which the party Land may attempt to base upon his proofs." The Examiner of Interferences held that cognizance of the twenty-nine items set forth in appellee's notice might be taken at final hearing, and fixed the date for rebuttal testimony of Land to close on January 28 and for final hearing for April 13.

On January 23, 1943, appellee moved to quash appellant's notice of taking rebuttal testimony and to exclude such testimony on the ground that appellant had no right to take rebuttal testimony, which motion was dismissed without prejudice to its renewal at the final hearing "if circumstances then so warrant."

[4] It is not disputed that the senior party in an interference proceeding can introduce evidence to rebut the factual evidence of diligence developed by the junior party relative to the question of his reduction to practice during the critical period. Before that question can have any bearing upon the final issue, however, the junior party must establish that he conceived the invention defined in the counts of the interference.

Appellee does not question in his brief that as early as 1929 the junior party, Land, had the idea that it would be desirable to apply a polarizing material directly onto an incandescent lamp and that that idea remained in or recurred to his mind off and on during the next ten years; nor does he question that the lamp appellant had in mind had a filament light source encompassed within a non-planar envelope or that he visualized a coating of a polarizer on the non-planar surface.

[5] The party claiming conception of an invention must show that it was complete and operative and such as would enable a person skilled in the art to reduce the conception to practice without any further research or exercise of the inventive skill. It is not sufficient, therefore, to show that a party claiming an invention has conceived a result to be obtained; the patentable thing is the means provided and disclosed by him to accomplish that result. See *Townsend* v. *Smith*, 17 C. C. P. A. (Patents) 647, 36 F.(2d) 292, 4 USPQ 269, 391 O. G. 753; *Rowe* v. *Holtz*, 19 C. C. P. A. (Patents) 970, 55 F.(2d) 468, 12 USPQ 234, 419 O. G. 295, and authorities therein cited; *Curtis et al.* v. *Land*, 29 C. C. P. A. (Patents) 1118, 129 F.(2d) 549, 54 USPQ 212, 543 O. G. 656.

It is noted that the invention defined in the counts in issue calls for the use of a material which polarizes light by the transmission thereof, or of a light polarizing material. Counts 1, 2, and 3 require that at least a portion of the envelope be transparent and count 4 requires that the entire envelope be transparent. The limitation in the respective counts 2, 3, and 4 provides that the transparent portion be coated with the light-polarizing material.

[6] Although appellant alleges here that his invention is but a simple mechanical improvement involving merely the direct application of the polarizing sheet material to the non-planar or spherically curved surface of an incandescent lamp, the record fails to disclose that his conception of the invention here in issue included the kind of polarizing material that was necessary to solve the problem with which he was confronted.

We have given careful consideration to all of the evidence presented by appellant and are of opinion that he has failed to establish conception of the invention defined by the counts in issue prior to the filing date of appellee. Accordingly, appellant's diligence is not an issue to be considered in the case, and the question of the striking out by the Board of Interference Examiners of the rebuttal evidence introduced by appellant to establish diligence is not of importance in deciding the issue of priority here presented.

In reviewing the testimony submitted by appellant it is noted that importance is placed upon the oral but unconvincing testimony of witnesses who relied upon their memories as to critical tests which were conducted by them in years gone by. Appellant by the contention here of his own counsel is an expert in his particular art and has been engaged for many years with a staff of expert associates in the production of inventive polarization. There are more than twenty patented applications in the record of this case which alone evince his knowledge and success in the art, but he produced no records that were helpful in the way of documentary evidence. See *MacGregor* v. *Johnston*, 21 C. C. P. A. (Patents) 1216, 71 F.(2d) 165, 22 USPQ 42, 448 O. G. 508.

[7] Appellant asks the court here to take judicial notice of the fact that automobile headlight bulbs are necessarily of clear or transparent glass. That is a critical issue upon which appellant had the burden of proof and upon which this court cannot base a finding of fact without supporting evidence. There is none in the record to establish it.

The Board of Interference Examiners concluded after consideration of all of appellant's evidence that he had failed to prove conception or reduction to practice prior to appellee's filing date and therefore the appellee, Dreyer, was entitled to the award of priority.

In reaching that conclusion the Board carefully reviewed and analyzed in detail the testimony of the respective witnesses and the exhibits submitted. The same procedure has been carefully followed here with the result that this court is convinced of the correctness of the conclusion reached by the Board of Interference Examiners and therefore affirms it without further and unnecessary discussion of the numerous subordinate aspects of the case presented by appellant.

Subsequent to the filing of the record in this court appellee filed a motion suggesting a diminution of the record by the addition thereto of certain parts of the record filed in the Patent Office. The motion was granted subject to an order of the court that the costs of printing the additional matter requested by appellee should be taxed on final decision. We are of opinion that the additional matter so certified to the court was reasonably necessary to a proper decision of the issues in this case in connection with the subject matter relating to appellant's alleged inoperativeness of appellee's disclosure.

In view of our conclusion in the case at bar, it is not necessary to pass upon the subject matter relating to appellee's "rebuttal evidence." As to that matter, however, the additional parts of the record so certified to the court might have become necessary to a proper decision of issues in this case. Under the facts thus presented, the costs of printing the additional matter requested by appellee will be taxed against appellant.

For the reasons stated, appellee is entitled to the award of priority in this case and the decision of the Board of Interference Examiners is accordingly affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

LUCKY HEART LABORATORIES, INC.
v.
MORTON G. NEUMANN

*No. 5,116. Decided May 3, 1946.**
[154 F.(2d) 519; 69 USPQ 393]

1. TRADE-MARKS—OPPOSITION—RES JUDICATA.
Where the opposed mark of appellant was different from its mark involved in a prior cancellation proceeding *Held* that the doctrine of res judicata was inapplicable.

2. SAME—SAME—RIGHT TO OPPOSE.
Held that under the law opposer "is entitled to rely not only upon his registered trade-marks but also upon trade names and designs which are analogous to a trade-mark use."

3. SAME—CONFUSING SIMILARITY.
"In the case at bar the contested marks, 'Lucky Heart' with a heart shaped design and 'Lucky Sweathearts' with a heart shaped design, so nearly resemble each other in sound, meaning, and appearance as to be likely in our opinion to cause confusion in the mind of the public when concurrently used by the parties on merchandise of the same descriptive properties."

APPEAL from the Patent Office. Affirmed.

Mr. A. Yates Dowell (*Mr. Edward Taylor Newton* of counsel) for Lucky Heart Laboratories, Inc.

Mr. A. W. Murray for Morton G. Neumann.

O'CONNELL, *J.*:

This is an appeal from the decision of the Commissioner of Patents, rendered by the First Assistant, 62 USPQ 317, affirming the action of the Examiner of Trade-Mark Interferences in sustaining the opposition of appellee to the application of appellant, Serial No. 434,989, filed August 14, 1940, for registration of a composite mark, which consists of a heart-shape design, color lined for red, across which is written in large script the words "Lucky Heart," as a trade-mark for cosmetics, including such articles as rouge, perfume, creams, and talcum powder, and for chemicals, medicines, and pharmaceutical preparations. The applicant alleges continuous use of the mark "since about October 20, 1934."

In his notice of opposition appellee relies upon his prior use and ownership of the registration of—

(a) a trade-mark consisting of a heart-shape design for a chamois sachet bag, on which is also a design of a heart and man and woman kissing each other, used on sachet powder; and
(b) a trade-mark consisting of a heart design, a picture of man and woman kissing each other, and the words "Lucky Mo-Jo", used on perfume; and
(c) a trade-mark consisting of a heart design, a picture of man and woman kissing each other, and the words "Lucky Sweethearts," used on sachet powder; * * *
* * * * * * * *

4. In addition to opposer's continuous and extensive use of his said trade-marks, on labels affixed to cosmetics and medicinal preparations made and sold by opposer, the opposer has also extensively used his said trade-marks in advertising and offering for sale of opposer's said goods.

The opposition is based upon that portion of the proviso to section 5 of the Trade-Mark Act of February 20, 1905, which states "That trade-marks which * * * so nearly resemble a registered or known trade-mark owned and in use by another and appropriated to merchandise of the same descriptive properties as to be likely to cause confusion or mistake in the mind of the public or to deceive purchasers shall not be registered." 15 U. S. C. sec. 85(*b*).

The involved merchandise in part is identical and it is not disputed that all the goods are of the same descriptive properties.

The case at bar is but one of two appeals brought to this court by appellant as a result of the decision adverse to it in each of the two opposition proceedings litigated between the parties in the tribunals of the Patent Office. Appellant having withdrawn the companion appeal, Patent Appeal Docket, No. 5,117, the appeal as to that case was accordingly dismissed by this court on July 2, 1945.

[1] A further factor in the determination of the case at bar, however, is a previously litigated cancellation proceeding in which each party sought to cancel the other's registered trade-mark. *Lucky Heart Laboratories, Inc.*, v. *Neumann*, 53 USPQ 175, 537 O. G. 723. The record in that case has been made a part of the record in the case here and contains a large portion of the testimony relied upon by each of the parties. Appellant contends that the decision in the cancellation proceedings hereinbefore noted is res judicata of the issue presented herein. Since the mark of appellant in the former case is different from the one it has here submitted for consideration, its contention is obviously without merit. *Prince Matchabelli, Inc.*, v. *De Botelho*, 31 C. C. P. A. (Patents) 748, 139 F.(2d) 519, 60 USPQ 190, 560 O. G. 4.

Both of the parties are engaged in the mail order business and it is established by the evidence that appellee began in 1930 the use of his trade-mark embodying the notation "Lucky Sweethearts" and a heart design; that other trade-marks employed by him, prior to any use of appellant's mark, embody the notation "Lucky Mo-Jo" and "Good Luck Sachet" each with a heart design; that labels, catalogs, circulars, and advertising literature printed in various colors with the notation "Lucky Sweethearts" together with a heart-shaped design were extensively used by appellee in association with its merchandise and the sale thereof; and that a heart-shaped chamois bag depicting on its face a heart as well as a man and a woman kissing each other was utilized by appellee as a container for sachet powder.

[2] The evidence establishes that the continuous use of appellee's trade-marks and the advertising material associated therewith, as hereinbefore noted, was inaugurated prior to appellant's entry into the field with its mark. It is true as pointed out by the First Assistant Commissioner of Patents that "Opposer relies upon his use * * * of several marks and labels in which the heart motif predominates." Under the law appellee is entitled to rely not only upon his registered trade-marks but also upon trade-names and designs which are analogous to a trade-mark use. *Central Iron & Steel Company* v. *Republic Steel Corporation*, 26 C. C. P. A. (Patents) 1091, 102 F.(2d) 899, 41 USPQ 276, 507 O. G. 231.

[3] This court has held repeatedly that the primary purpose of that portion of the trade-mark law with which we are here concerned is to protect the public. See *In re Laskin Brothers, Inc.*, 32 C. C. P. A. (Patents) 820, 146 F.(2d) 308, 64 USPQ 225, 572 O. G. 353; *Schering & Glatz, Inc.*, v. *Sharp & Dohme, Inc.*, 32 C. C. P. A. 827, 146 F.(2d) 1019, 64 USPQ 394, 572 O. G. 542. In the case at bar the contested marks, "Lucky Heart" with a heart shaped design and "Lucky Sweethearts" with a heart shaped design, so nearly resemble each other in sound, meaning, and appearance as to be likely in our opinion to cause confusion in the mind of the public when concurrently used by the parties on merchandise of the same descriptive properties.

Appellant, basing his argument on one of the reasons of appeal, urges that appellee is not entitled to the decision appealed from by reason of unclean hands. We have examined the record with care and find no merit in this contention.

For the reasons hereinbefore stated, the decision of the Commissioner of Patents is affirmed.

Affirmed.

* This appeal was originally decided by this court on March 6, 1946. Thereafter, counsel for appellant filed a petition for rehearing. The rehearing was granted May 3, 1946, solely for the purpose of permitting the court to revise certain language in its original decision.

U. S. Court of Customs and Patent Appeals

IN RE SAUNDERS ET AL.

No. 5,141. Decided April 1, 1946
[154 F.(2d) 693; 69 USPQ 341]

1. CLAIMS—LIMITATION.
Upon consideration of appellant's contention that the rejected claims to a method of administering their hormone pellet "definitely include by implication the step of dispersing the hormone in a desiccated condition in the solid waxy medium before implanting the resulting pellet under the skin or in the flesh," *Held* that since appellants failed to point out and distinctly claim "the additional necessary step" as part of their invention, "appellants cannot successfully contend upon the facts presented here that they have defined a critical limitation in the rejected claims by implication."

2. APPEAL—REASONS OF APPEAL.
Where a point raised by appellants was not considered by the Examiner or the Board of Appeals, and their failure was not set forth as error in any of the reasons of appeal enumerated by appellants, *Held* that there was nothing involving the merit of the point presented for review.

3. PATENTABILITY—PROCESS.
"In passing upon the patentability of method or process claims, this court has held repeatedly that where an old method or process is used by an applicant in the administration of a new and analogous material, and the improved result is due solely to the quality of the material used, no inventive method or patentable process is involved in what the applicant has done."

4. SAME—METHOD OF ADMINISTERING HORMONES.
Certain claims to a method of administering gonadotropic pituitary hormones *Held* unpatentable over the prior art.

APPEAL from the Patent Office. Affirmed.

Messrs. Davis, Lindsey, Smith and Shonts (*Mr. Glen E. Smith* of counsel) for Saunders et al.

Mr. W. W. Cochran (*Mr. E. L. Reynolds* of counsel) for the Commissioner of Patents.

O'CONNELL, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the rejection by the Primary Examiner of claims 7 to 12 inclusive in appellants' application for a patent for a method of and pellet for administering gonadotropic pituitary hormones. The claims, which relate to the method of administering the hormones, were rejected not only as lacking invention over the prior art but also "as being for an unpatentable method in view of the Brinkerhoff decision cited by the Examiner." Claims 1 to 6, drawn to the pellet, were allowed by the Examiner.

Claims 7 and 11 are illustrative of the appealed claims:

7. A method of administering the gonadrotropic fraction of the hormones of the anterior pituitary gland which consists in the subcutaneous implantation of said hormone in a desiccated condition as a dispersion of said desiccated hormone in a solid waxy medium.

11. A method of administering the gonadotropic fraction of the hormones of the anterior pituitary gland which consists in the subcutaneous implantation of said hormone in a desiccated condition in a synthetic hydrocarbon wax having substantially the composition of 85½ per cent by weight of carbon and 14½ per cent by weight of hydrogen.

The reference is, Vest et al. — Journal of the American Medical Association, November 18, 1939, pages 1869 to 1872.

Omitting numerical citations to the record, appellants explain in their brief:

Briefly stated, the invention under consideration on this appeal relates to a method of administering the gonadotropic fractions of the hormones of the anterior pituitary gland, more particularly to a method which causes a very slow constant absorption of the active hormone material by the tissues, and to a pellet for use in this method of administration comprising a solid, relatively non-absorbable preparation of these fractions, suitable for subcutaneous implantation. This pellet which consists of a dispersion of the desiccated hormone substance in a waxy medium is defined with varying degrees of particularity in the allowed claims. The claims involved in this appeal are directed to the method of administering the hormone substance by implanting under the skin the pellet consisting of a dispersion of the desiccated hormone substance in a waxy medium.

It is noted that appellants have defined but a single step as the feature of the rejected claims in which the question of patentability resides, and that feature or step "consists in the subcutaneous implantation of said hormone." It was the only feature of these claims which was submitted for decision to the Examiner and the Board of Appeals on the question of patentability, and both concurred in holding that since the method of administering appellants' hormone pellet is exactly the same as the method of administering that of the cited reference, no invention on the part of the appellants was involved in their method of administration of the material and they were not entitled to the allowance of the appealed claims.

[1][2] Appellants argue here that "The method claims," which were rejected as hereinbefore noted, "definitely include by implication the step of *dispersing the hormone in a desiccated condition in the solid waxy medium* before implanting the resulting pellet under the skin or in the flesh," and that the Examiner and apparently the Board of Appeals rendered their respective decisions "without giving consideration to the necessary additional step of dispersing the particular hormone, with which appli-

cants are dealing, in a waxy medium." [Italics not ours.]

It is elementary that an applicant for a patent is required to "particularly point out and distinctly claim the part, improvement, or combination which he claims as his invention or discovery." See section 4888 R. S. (U. S. C., title 35, sec. 33). Having failed to point out and distinctly claim "the additional necessary step" hereinbefore noted as part of their invention, appellants cannot successfully contend upon the facts presented here that they have defined a critical limitation in the rejected claims by implication. See *In re Crowell*, 23 C. C. P. A. (Patents) 1246, 84 F.(2d) 206, 30 USPQ 28, 472 O. G. 737; *In re Wait*, 23 C. C. P. A. (Patents) 1172, 83 F.(2d) 696, 29 USPQ 527, 471 O. G. 709, and authorities therein cited. Neither the Primary Examiner nor the Board of Appeals considered that point and their failure so to do is not set forth as error in any of the reasons of appeal enumerated by appellants. Accordingly, there is nothing involving the merit of the point presented here for review.

[3] Appellants further urge that the Board erred in holding, "In so far as the process is concerned it is deemed to be immaterial what composition is used except that it must be in the form of a solid pellet." In passing upon the patentability of method or process claims, this court has held repeatedly that where an old method or process is used by an applicant in the administration of a new and analogous material, and the improved result is due solely to the quality of the material used, no inventive method or patentable process is involved in what the applicant has done. *In re Williams*, 24 C. C. P. A. 861, 87 F.(2d) 499, 32 USPQ 311, 481 O. G. 216; *In re Dreyfus*, 20 C. C. P. A. 1204, 65 F.(2d) 472, 18 USPQ 263, 437 O. G. 7; *In re Elmyr A. Laughlin*, 18 C. C. P. A. 1239, 48 F.(2d) 921, 9 USPQ 126, 411 O. G. 9; *In re Truslow*, 26 C. C. P. A. 1292, 104 F.(2d) 203, 41 USPQ 737, 508 O. G. 297; *In re Williams*, 24 C. C. P. A. 1175, 89 F.(2d) 674, 33 USPQ 377; *In re Haller and Kappeler*, 24 C. C. P. A. 887, 87 F.(2d) 520, 32 USPQ 306, 481 O. G. 6.

It is interesting to note that while appellants emphasize in their argument here that they have provided a new method by which a particular hormone may be administered, they point out in their specification, "Further, the value of this invention is not dependent upon the purity of the gonadotropic pituitary hormone employed, since it may be equally well applied to comparatively crude or to highly refined hormone preparations. * * * It will be understood that this invention is not limited in scope by the examples quoted herein, but is to be construed as including such equivalents as may be obvious to one skilled in the art within the scope of the appended claims."

[4] Upon the basis of the facts disclosed by the record, we agree with the following summarization quoted from the Solicitor's brief:

> In the present case, the appellants have secured the allowance of claims to a hormone pellet which, so far as appears, has no utility except when implanted subcutaneously; and the art shows such implantation of similar pellets to be old. Obviously, this invention was complete when the pellet was made and, given such a pellet, it could not require invention to implant it in the old manner. Any improved result is due solely to the pellet itself and not to any improved method of use. * * *
>
> It is submitted that the appellants have made a single invention only, and that this is adequately protected by the allowed claims. * * *

In view of our conclusion it is unnecessary to discuss in this opinion and pass upon the further question of the rejection of the appealed claims on the ground that methods of treating the human body are not patentable.

For the reasons stated, the decision of the Board of Appeals is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

IN RE JONES ET AL.

No. 5,154. Decided April 1, 1946

[154 F.(2d) 688; 69 USPQ 343]

1. APPEAL—EVIDENCE CONSIDERED.
   Where a letter and an affidavit were not presented by appellants "until after the first decision of the Board of Appeals," and were not considered by the Examiner, *Held* that they were "not properly before the court and may not be here considered."
2. CLAIMS—LIMITATION—REFERENCE.
   Where the appealed claims merely stated that the fluidity of the defined composition was such that it might be applied to paper in the conventional way, and thus were not limited to any particular use, *Held* that the fact that the reference patentee did not state that his composition might be used on paper was immaterial.
3. PATENTABILITY—ANALOGOUS ARTS.
   "In considering a reference alleged not to be in the art involved, the question always is whether such reference suggests doing the thing that the applicant has done."
4. SAME—NEW USE OF OLD COMPOSITION.
   Where a composition had been used for collar stiffening, *Held* that appellants' discovery that it could be used as a protective coating for paper did not entitle them to allowance of claims to the composition.
5. SAME—INVENTION.
   Invention *Held* not to reside in the substitution of one known plasticizer for an equivalent plasticizer.

APPEAL from the Patent Office. Affirmed.

Mr. Keith Misegades for Jones et al.

Mr. W. W. Cochran (*Mr. E. L. Reynolds* of counsel) for the Commissioner of Patents.

O'CONNELL, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the action of the Primary Examiner who finally rejected, as lacking invention over the prior art, all of the claims in appellants' application for a patent for thermoplastic coating compositions and articles produced therewith.

The claims on appeal sufficiently describe the alleged invention. They read:

> 14. A composition of matter substantially free of ingredients volatile at ordinary room temperatures, which is solid, flexible, mar-proof, non-tacky, transparent and moisture-proof in thin films at room temperatures, comprising from 25 to 50 parts by weight of a mixed ester of cellulose and saturated aliphatic acids having from 2 to 4 carbon atoms, from 20 to 45 parts by weight of a plasticizer compatible therewith and substantially non-volatile at 190° C., said plasticizer being present in substantially greater proportion than half the cellulose ester, and from 10 to 40 parts by weight of a resin compatible with the ingredients and heat-stable at temperatures up to 200° C., the composition being characterized by sufficient fluidity, at temperatures of from 160 to 190° C., to be applicable to paper from conventional roll-coater and intaglio coating machines, and being further characterized by its resistance to thermal decomposition at such temperatures.
>
> 15. The composition of claim 14 in which the mixed ester is cellulose aceto-propionate.
>
> 16. The composition of claim 14, in which the plasticizer is tricresyl phosphate.

Numerous functional limitations, such as flexible, transparent, and mar-proof, are recited in the appealed claims which it is alleged make the disclosed material desirable. However, the composition for which appellants seek protection, as stated in their brief, is quite narrowly defined, being made up of a cellulose mixed ester of the cellulose acetopropionate type, a non-volatile plasticizer, and a compatible heat stable resin. The proportions of the ingredients of this composition are enumerated as 25 to 50 mixed esters of cellulose and a saturated aliphatic acid having 2 to 4 carbon atoms, 20 to 45 compatible plasticizer, non-volatile at 190° C. (present in substantially greater proportion than half the amount of the cellulose ester), and 10 to 40 compatible resin, heat stable at 200° C. The properties which make it desirable in application are specified as fluid for application at 160 to 190° C. resistant to thermal decomposition.

Claim 14 defines the characteristics of the composition, claim 15 is specific to the mixed ester, and claim 16 to the plasticizer. The last two claims are dependent on the first. Claims 14 and 15 were rejected as lacking invention over the principal reference, the patent to Klinger, No. 2,170,416, of August 22, 1939 and claim 16 was rejected as lacking invention over Klinger in view of the publication "Hercose C," page 6, 1936, issued by the Cellulose Products Department, Hercules Powder Company, Incorporated, Wilmington, Del.

The patent to Klinger discloses a thermoplastic composition for collar stiffening which comprises a mixed ester of cellulose, a plasticizer, and/or a resin. A cellulose mixed ester of the cellulose acetopropionate type is specified as suitable to accomplish the desired result as well as a cellulose acetobutyrate, a cellulose acetostearate, and a cellulose acetopalmitate. Of these enumerated cellulose esters, the first two are likewise listed by appellants as suitable for their purpose.

Among the suitable plasticizers listed, Klinger mentions metylphthalylethyl glycollate and butylphthalylbutyl glycollate and among the suitable resins listed are the toluenesulfonamideformaldehyde condensation type resins, the phenolformaldehyde type resins, and the vinyl resins. These plasticizers and resins are likewise described by appellants as being suitable for their defined compositions.

Klinger further discloses—

> The exact amount of plasticizer included in the thermoplastic composition, will depend on the melting point of the cellulose ester used and on the characteristics of the resin, if such is included, and will usually be included in amounts within the range of about 5 parts to about 50 parts by weight per 100 parts of the cellulose ester by weight. The exact amount of resin included will, likewise, depend on the melting point of the cellulose ester used and on the characteristics of the plasticizer, if such is included, and will usually be included in amounts within the range of about 5 parts to about 70 parts by weight per 100 parts of the cellulose ester by weight.

"Reducing this to a basis of 50 parts, to correspond to the claim," as correctly stated in the brief of the Solicitor, "Klinger may use 2½ to 25 parts of plasticizer and 2½ to 35 parts of resin to 50 parts of ester. A considerable portion of this range (20 to 25 parts of plasticizer and 10 to 35 parts of resin) will satisfy the requirements of claim 14 when the upper limit, 50 parts, of ester is used. Clearly, therefore, Klinger, discloses proportions satisfying the numerical values given by claim 14." Furthermore, while appellants state in claim 14 that the plasticizer is "present in substantially greater proportion than half the cellulose ester," they fail to disclose that a proportion greater than half the cellulose ester is of critical importance.

[1] Appellants argue that the Klinger composition includes substances which render it inoperative for appellants' purpose. This contention is based primarily upon a letter and an affidavit neither of which was considered by the Examiner for the reason that the documents were not presented by appellants until after the first decision of the Board of Appeals. Under such circumstances this evidence is not properly before the court and may not be here considered. *In re Replogle*, 27 C. C. P. A. (Patents) 704, 107 F.(2d) 592, 43 USPQ 402, 510 O. G. 775; *In re Spengler et al.*, 32 C. C. P. A. (Patents) 855, 147 F.(2d) 1013, 64 USPQ 560, 575 O. G. 203.

Upon the facts presented, the position of both the Primary Examiner and the Board of Appeals was that inasmuch as appellants have merely selected certain substances in the Klinger composition and had purposes in mind other than the treatment of cloth, this selection would not amount to invention. That was "regarded as a matter within the expected skill of one trained in the art."

[2] Moreover, as correctly stated by the Solicitor, "the claims do not actually state that the material is to be used for coating paper, but merely that its fluidity is such that it might be applied to paper in the conventional way. Since the claims are not limited to any particular use, the fact that Klinger does not state that his composition may be used on paper is immaterial."

[3] Appellants' contention that the principal reference, Klinger, cannot be considered here because it discloses a composition drawn from a non-analogous art is without merit. In considering a reference alleged not to be in the art involved, the question always is whether such reference suggests doing the thing that the applicant has done. *In re Stover*, 32 C. C. P. A. (Patents) 823, 146 F.(2d) 299, 64 USPQ 186, 573 O. G. 367. The difference disclosed between appellants' composition and that of Klinger is of degree only and not of kind and what appellants have done is clearly suggested by the cited reference.

[4] Appellants' further contention that they are entitled to a patent for a new use of an old composition, or of selected proportions thereof, is also without merit. The mere fact that appellants have discovered a composition which is comprised of certain

proportions of mixed ester of cellulose, plasticizer and resin as a protective coating for paper properties, does not, in view of the fact that the composition is old and is suggested by the art of record, entitle them to the allowance of the appealed claims. See *In re Thuau*, 30 C. C. P. A. (Patents) 979, 135 F.(2d) 344, 57 USPQ 324; 554 O. G. 14; *In re James*, 23 C. C. P. A. (Patents) 1124, 83 F.(2d) 313, 29 USPQ 431, 471 O. G. 251; *In re Heap*, 22 C. C. P. A. (Patents) 950, 74 F.(2d) 948, 24 USPQ 300, 456 O. G. 265.

[5] Claims 14 and 15 were properly rejected by the tribunals of the Patent Office on the ground that they were anticipated by Klinger, and claim 16 was likewise properly rejected since it is limited to tricresyl phosphate which Klinger does not disclose but which is old as a plasticizer as disclosed by the publication "Hercose C." In other words, claim 16 merely substitutes one known plasticizer for an equivalent plasticizer which the record shows was also disclosed by Klinger.

For the reasons stated, the decision of the Board of Appeals affirming the action of the Examiner in rejecting the appealed claims as lacking invention over the disclosure of the prior art is affirmed.

Affirmed.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

Des. 144,793. DESIGN FOR A CIGARETTE BUTT SNUFFER OR SIMILAR ARTICLE. Patented May 21, 1946. (Owner) Rudolph C. Kulling, 1541 North Wood St., Chicago 22, Ill. Groups 32—29; 39—99. Reg. No. 3,393.

Pat. 2,292,452. KITCHEN IMPLEMENT. Patented Aug. 11, 1942. Combination perforator, corkscrew, can and bottle opener. Has conventional type of folded handle and corkscrew pivoted to fold into handle. The head of the implement in addition to a can cutter and bottle opener has perforators for punching large as well as small heart-shaped openings into cans. (Owner) Rudolph C. Kulling, 1541 North Wood St., Chicago 22, Ill. Group 33—73. Reg. No. 3,394.

Pat. 2,377,560. ASH TRAY HOLDER. Patented June 5, 1945. Comprises a ring (for holding ash tray) with a laterally extending U-shaped bracket to which a resilient band is secured. The band is adjustable to fit supports of various sizes being clamped thereto by the bracket. One end of the band is fixedly secured to the bracket, the other (having holes for different positions of adjustment) being detachably held by the bracket. (Owner) Rudolph C. Kulling, 1541 North Wood St., Chicago 22, Ill. Group 33—73. Reg. No. 3,395.

Pat. 2,398,951. VEHICLE WHEEL. Patented Apr. 23, 1946. Wheel is constructed with the outer flange of the rim (which engages the bead of the tire) integral with a removable ring so that tires may be quickly and easily changed, a socket wrench being the only tool needed. The ring has hooks for engaging elongated slots in the felly which interlock when ring is slightly rotated. A second ring leaving the flange exposed fits over the first ring. Both rings and the felly have aligned threaded openings for the reception of threaded bolts to hold the assembly together. (Owner) Warren L. Moore, 437 East Main St., Danville, Ky. Groups 33—72; 38—31. Reg. No. 3,396.

Pat. 2,185,602. AUTOMATIC CHANGE-SPEED GEAR. Patented Jan. 2, 1940. Automatic transmission having free wheeling may also be manually operated at will by shifting a conventional lever. An axially slidable drum to which conical rollers are radially secured is splined to the driven shaft. An adjustable spring progressively urges the rollers against a number of concentrically nested cams (one for each speed) in accordance with the load on the driven shaft. The cams are secured to the ends of concentrically nested shafts which are geared on their free ends to engage gears on a countershaft which is, in turn, geared to a driving shaft. (Owner) Heinrich Metzler, 11 West 42d St., New York 18, N. Y. Group 38—31. Reg. No. 3,397.

Pat. 2,032,850. DIRECTION SIGNAL FOR AUTOMOBILES. Patented Mar. 3, 1936. A signaling device which may be mounted on vehicles. Designed to indicate direction in which vehicle is about to turn. Operating controls are located upon steering column below wheel. Pilot light adjacent operating controls shows that signal is functioning. (Owners) Byron T. Denison and Francis B. O'Shea. Address correspondence to Byron T. Denison, 46 West Main St., Mohawk, N. Y. Groups 36—19; 38—31. Reg. No. 3,398.

Pat. 2,301,702. EXTENSION SHOE. Patented Nov. 10, 1942. Extension designed for attachment to the shoe of a person with one leg shorter than the other. It is adjustable as to height and width and is readily attached to and detached from shoes of standard construction. Inventor states attachment is easily kept in serviceable condition. It is of light construction and may be manufactured by mass production methods. (Owners) William G. Purcell, Robert E. Hite, and James R. Grinels. Address correspondence to William G. Purcell, Mutual Bldg., Richmond, Va. Group 39—16. Reg. No. 3,399.

Pat. 2,390,226. MOTOR ACTUATED ERASER. Patented Dec. 4, 1945. A tubular housing containing a motor has a flexible shaft at one end for holding a detachable disc-shaped eraser. The shaft may be bent and held at various positions by a pivoted, telescoping bracket to permit use of the eraser in different angular positions. Built into the housing is a rheostat and speed control regulator. (Owner) John P. Smith, Post Office Box 638, Reidsville, N. C. Group 36—21. Reg. No. 3,400.

Pat. 2,385,576. CLASPING DEVICE FOR BAGS, PORTFOLIOS, ENVELOPES, AND THE LIKE. Patented Sept. 25, 1945. Flap has a pair of spaced slots that fit over downwardly projecting hook-like clips on side of bag or envelope. An elastic, cord-like band extending longitudinally across the top of the flap above the slots is stretched downwardly and slid under the hooks to hold the flap in closed position. The ends of the cord passing through openings in the flap are secured to the inside of the flap. (Owner) Jean I. L. Israel. Address correspondence to Michael S. Striker, 500 Fifth Ave., New York 18, N. Y. Groups 26—41; 31—71. Reg. No. 3,401.

Pat. 2,212,649. DISHWASHING MACHINE. Patented Aug. 27, 1940. Dishwasher has a valve for admitting water into the bottom. Impellers mounted on a pair of horizontal shafts are rotated to spray and throw water upwardly through a screen onto dishes positioned vertically in a rack. An impeller is mounted at each end of each shaft and double impellers in back to back relation are mounted in the centers of the shafts. Each impeller comprises a disc to which a frusto-conically shaped bell-extension is secured and a number of vanes and fins. The vanes are secured to the disc and extend radially outwardly inside the bell extension. The fins are positioned in the space between the disc and the outside of the bell extension. (Co-owner) Paul R. Powell, 221 Main St., Kansas City 6, Mo. Group 35—89. Reg. No. 3,402.

Pat. 2,382,804. MUSIC CHARACTER PRINTING. Patented Aug. 14, 1945. Clear and accurate musical symbols or characters in proper orientation relative to each other may be printed by the use of a hand operated stamp. Stamp is rod-like, being no larger than an ordinary penholder, and operated like a plunger. Any selected disc having the desired rubber symbol is removably inserted in the head. A locator pin projecting longitudinally from the head and centrally through the disc is retractible into the barrel. Pairs of pins project laterally from the head. (Owner) David L. Morrison, 6 Park Ave., Bloomfield, N. J. Groups 27—33; 39—53. Reg. No. 3,403.

Pat. 1,961,871. RADIO PROGRAM CONTROLLER. Patented June 5, 1934. Apparatus provides a means to manually switch off unwanted portions of programs for intervals of five to twenty-five minutes. The device consists of five control keys (mounted on a support or casing) any of which when pressed down switch off the receiver (of radio to which it is attached) thereby energizing an electric motor and magnetic clutch. After predetermined interval has elapsed the motor acts to operate a cam so

that key is returned to its original position. (Owner) Floyd G. Caskey. Address correspondence to Argus Advisory Service, Post Office Box 577, Benjamin Franklin Station, Washington, D. C. Group 36—61. Reg. No. 3,404.

Pat. 2,214,692. COPYHOLDER. Patented Sept. 10, 1940. Groups 33—73; 35—79. Reg. No. 3,405.

Pat. 2,273,486. COPYHOLDER. Patented Feb. 17, 1942. Groups 33—73; 35—79. Reg. No. 3,406.

These two patents relate to easel type copyholders which support notebooks or other copy in a vertical position behind a typewriter. The easel is pivotally mounted on an L-shaped base and has a movable marker operated by a key positioned adjacent the space bar of the typewriter, allowing all adjustments to be made with one hand. In Patent 2,273,486 the marker is adjustable to books of various sizes and thicknesses. The copyholders may be made of stamped sheet metal. (Co-owner) Theodore E. Simonton, 619 University Bldg., Syracuse 2, N. Y.

Pat. 2,399,552. SAFETY RAZOR. Patented Apr. 30, 1946. May be adapted to hold various types of blades, including both single and double edge. Several modified forms are shown. One form is provided with a pivoted blade support and pivoted guard and a common operator whereby the guard and support may be simultaneously moved to operative or inoperative position. A wiper may also be provided to wipe the back of the guard. (Owner) Louis A. Larson, 213 Nicollet Ave., Minneapolis, Minn. Group 33—51. Reg. No. 3,407.

Pat. 2,004,337. FLUID PUMP. Patented June 11, 1935. For use in oil or gas wells. Comprises a tubular shell adapted to be attached to the end of a length of pipe and lowered into well. Shell has upper and lower partitions with balls seating over openings in the partitions forming check valves. A pipe extending downwardly into the shell is connected to upwardly directed nozzles, the mouths of which are beneath the upper check valves. An operating fluid introduced under pressure into the pipe flows in streams from the nozzles, striking and opening the upper valves allowing the operating fluid to pass which carries some of the fluid to be pumped with it. The upper check valves also act as mixing valves causing both fluids to be thoroughly mixed together. (Owner) Mrs. J. W. Murphey, 1012 Jackson St., Monroe, La. Group 35—32—61. Reg. No. 3,408.

Pat. 2,399,393. TREE PRUNING SAW. Patented Apr. 30, 1946. Utilizes two wooden poles placed in parallel edge to edge relation, a curved saw being mounted on the end of one and a resilient rest (straddling the saw) angularly mounted on the end of the other. Handles are provided on the other ends. In operation, one pole is held so that rest bears against under side of a limb, while the other pole is grasped and reciprocated, the saw cutting on the downward stroke. Springs are provided to cushion shock on handles at end of each stroke. The poles may be locked together and reciprocated as a unit, if desired. (Owner) Byron J. Schillinger, 377 Cedar St., Benton Harbor, Mich. Groups 33—52; 35—22. Reg. No. 3,409.

Pat. 2,396,870. HAND ELECTRIC WELDING TONGS. Patented Mar. 19, 1946. Adjustable clamp (made largely of plastic) for holding welding rods of various sizes is of tubular formation with a reduced end to which a removable tip containing a fixed jaw is attached. A circular slot through the tip forms the fixed jaw. A movable rod-like jaw attached to linkage is positioned in a channel in the clamp and operated by a push button. The clamp is wholly enclosed by insulation except for the opening through the tip. Should the tip become worn or burned it may be replaced. (Owner) James S. McLean, Post Office Box 5035, Box Section, Metro Station, Los Angeles 55, Calif. Groups 36—19; 39—81. Reg. No. 3,410.

Pat. 2,398,322. COMBINATION AIR FILTER AND SILENCER. Patented Apr. 9, 1946. Filter and silencer for attachment to a carburetor is of conventional shape with wire mesh screens for properly filtering the air. In addition the inside is provided with air deflecting and silencing means in the form of an inverted cone-shaped cloth loosely suspended with its apex extending toward the discharge end. The cone partially yields to the inflow of air through the filters to deflect and concentrate the air through the discharge end and simultaneously serves to deaden engine noises without impeding the flow of air, or decreasing the required volume for proper combustion. (Owner) William Neumann, 224–38 93d Road, Queens Village, N. Y. Group 38—31. Reg. No. 3,411.

Pat. 2,373,552. GLOBE VALVE. Patented Apr. 10, 1945. Valve is constructed so that leakage around the valve stem is prevented. A circular recess is formed in the upper part of the casing around the valve stem. The stem above the seat carries a fiber washer on top of a small metal washer. As the valve is opened the fiber washer enters the recess sealing the space between stem and casing. (Owner) Charles A. Dies, 4810 North Christiana, Chicago 25, Ill. Group 33—61—66. Reg. No. 3,412.

Pat. 2,347,469. PIPE COUPLING. Patented Apr. 25, 1944. Group 35—69. Reg. No. 3,413.

Pat. 2,396,163. PIPE COUPLING. Patented Mar. 5, 1946. Group 35—69. Reg. No. 3,414.

The two preceding patents relate to couplings for threadless pipes designed to withstand high pressure and vibration without danger of leakage or loosening of the joint. In Patent 2,347,469 the inside of the coupling is tapered and smooth and the end of the pipe is correspondingly tapered to fit therein. The pipe in back of the taper has a ring positioned in a circumferential groove. A flanged nut or ferrule cap encircling the pipe is threaded on the outside of the coupling, the flanges engaging the ring to force the tapered portions into tight sealing engagement. In Patent 2,396,163 a tapered malleable bushing having a flanged outer end is utilized. The end of the pipe is of reduced diameter and has a number of circumferential grooves. When the flanged nut is threaded on the coupling it exerts pressure on the bushing to bind it between the pipe and coupling causing the metal of the bushing to crowd into the grooves of the pipe, the flange of the bushing being simultaneously clamped between the end of the coupling and flanged nut. (Owner) Charles A. Dies, 4810 North Christiana, Chicago 25, Ill.

Correction

The following patent, owned by the United States Government, as represented by the Secretary of the Interior, is available for licensing, upon a non-exclusive, royalty-free basis:

Pat. 2,403,481. METHOD OF CONCENTRATING IRON ORE. Patented July 9, 1946. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) The preparation for smelting of iron ores containing siliceous gangue materials may consist of conditioning a watery pulp of the ground ore with hydrated lime to establish a pulp with an alkalinity of pH 11. Soda ash is then added to precipitate the dissolved hydrated lime so that not more than 100 parts per million of the hydrated lime remains in solution. Lignin sulphonate is then added and the pulp subjected to agitation and aeration in the presence of an anion active collecting agent (resin acid, mixtures of resin and fatty acids, etc.) The gangue is floated and the concentrated iron ore settles and is recovered. Other examples given in patent. Group 32—95. Reg. No. 3,392.

TRADE-MARKS

OFFICIAL GAZETTE, SEPTEMBER 3, 1946

[VOL. 590. No. 1]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Ser. No. 459,805. ALBERT C. FISCHER, doing business as Servicised Products Company, Chicago, Ill. Filed Apr. 12, 1943.

SERVICISED

FOR NATURAL AND SYNTHETIC PLASTIC COMPOSITIONS IN SHEET, ROD OR TUBE FORM FROM WHICH FINISHED ARTICLES ARE MANUFACTURED; ASPHALT AND/OR ASPHALT COMPOSITIONS ADAPTED TO BE HEATED AND POURED IN PLACE OR MOLDED INTO STRIPS; CORK SHEETS; CORK-RUBBER COMPOSITION SHEETS; SPONGE RUBBER SHEETS; CORK-RUBBER COMPOSITIONS WITH OR WITHOUT OTHER FIBROUS OR MINERAL FILLING MATERIAL; SEED GERMINATING TAPES OF FIBROUS MATERIAL FOR HAVING SEEDS MOUNTED THEREON.

Claims use since May 1, 1915.

Ser. No. 489,509. GERMAIN SEED AND PLANT CO., Los Angeles, Calif. Filed Oct. 6, 1945.

GOLDEN WEST

FOR VEGETABLE AND FLOWER SEEDS.

Claims use since Nov. 30, 1943.

Ser. No. 491,109. MONSANTO CHEMICAL COMPANY, St. Louis, Mo. Filed Nov. 5, 1945.

RESLON

Applicant is the owner of Reg. No. 411,455.

FOR SYNTHETIC RESINS IN SOLID AND SOLUTION FORMS FOR GENERAL USE IN THE INDUSTRIAL ARTS—NAMELY, MOLDING, CASTING, SURFACE COATING, AND IMPREGNATION AND OTHER USES.

Claims use since Oct. 17, 1945.

Ser. No. 491,913. GERMAIN SEED AND PLANT CO., Los Angeles, Calif. Filed Nov. 20, 1945.

EMRALAWN

FOR LAWN SEED.

Claims use since Nov. 6, 1945.

Ser. No. 493,150. SEMET-SOLVAY COMPANY, New York, N. Y. Filed Dec. 12, 1945.

SEMET-SOLVAY COKE

Applicant is the owner of Reg. Nos. 260,579; 294,750; 294,751, and 294,752. Registration rights in the word "Coke" and a label in the form of a disc per se are disclaimed.

FOR COKE.

Claims use since Aug. 7, 1945.

CLASS 2

RECEPTACLES

Ser. No. 487,634. PERFECTION TWINE COMPANY, Camas, Wash., and Portland, Oreg. Filed Aug. 27, 1945.

The words "For Protection" and "Brand" are disclaimed apart from the mark.
FOR PAPER BAGS.
Claims use since October 1941.

Ser. No. 487,744. THE VISKING CORPORATION, Chicago, Ill. Filed Aug. 29, 1945.

FOR CELLULOSE CASINGS AND TUBING USED AS CONTAINERS.
Claims use since Aug. 14, 1945.

Ser. No. 491,055. BEMIS BRO. BAG COMPANY, St. Louis, Mo. Filed Nov. 5, 1945.

TRY-SAX

No claim is made to "Sax" apart from the mark.
FOR FABRIC BAGS AND SACKS.
Claims use since January 1941.

Ser. No. 494,976. MERCURY AIRCRAFT, INC., Hammondsport, N. Y. Filed Jan. 18, 1946.

FOR GASOLINE TANKS AND OIL TANKS.
Claims use since September 1944.

CLASS 3

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS

Ser. No. 489,129. LICHTENBERGER-FERGUSON COMPANY, Los Angeles, Calif. Filed Sept. 28, 1945.

The drawing is lined for shading only. The word "Superior" is disclaimed apart from the mark.
FOR HORSE COLLARS, HALTERS, STRAPS, BRIDLES, AND SADDLES.
Claims use since 1920.

Ser. No. 491,221. TOWN AND COUNTRY SHOES, Sedalia, Mo. Filed Nov. 7, 1945.

FOR HANDBAGS.
Claims use since Oct. 15, 1945.

Ser. No. 498,078. PRIME LEATHER CO., INC., New York, N. Y. Filed Mar. 12, 1946.

FOR BRIEF CASES.
Claims use since Oct. 1, 1945.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 491,427. PEMBERTON PRODUCTS COMPANY, Irvington, N. J. Filed Nov. 10, 1945.

TRI-FOAM

FOR SOAP POWDER.
Claims use since May 1, 1945.

Ser. No. 494,791. THE INTERNATIONAL NICKEL COMPANY, INC., New York, N. Y. Filed Jan. 15, 1946.

MONEL-O

FOR POT CLEANERS MADE OF METAL TEXTILE.
Claims use since Nov. 28, 1945.

Ser. No. 496,301. COLGATE-PALMOLIVE-PEET COMPANY, Jersey City, N. J. Filed Feb. 9, 1946.

PILOT

FOR SOAP.
Claims use since Jan. 25, 1946.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 476,071. THE LLEWELLYN BIOLOGICAL INSTITUTE, Los Angeles, and Westwood Village, Los Angeles, Calif. Filed Nov. 3, 1944.

"TOPLIVEX"

FOR LIVER EXTRACT FOR EXTERNAL APPLICATION IN LIVER THERAPY.
Claims use since Nov. 15, 1940.

Ser. No. 480,313. COMMERCIAL SOLVENTS CORPORATION, New York, N. Y. Filed Feb. 28, 1945.

2-2-4

FOR DIHYDRIC ALCOHOL—NAMELY, METHYLPENTANEDIOL.
Claims use since Jan. 3, 1945.

Ser. No. 485,752. CENTRAL PETROLEUM COMPANY, Cleveland, Ohio. Filed July 13, 1945.

IDEAL HOG-KOTE

The words "Hog-Kote" are disclaimed separate and apart from the mark.
FOR MEDICATED HOG OIL FOR TREATMENT OF HOGS TO KILL LICE, MANGE, AND OTHER DISEASES.
Claims use since Dec. 1, 1942.

Ser. No. 486,648. BETTER FINISHES AND COATINGS, INC., Newark, N. J. Filed Aug. 3, 1945.

LIQUID ENVELOPE

Applicant disclaims the word "Liquid" apart from the mark.
FOR RESINOUS COATING COMPOSITIONS FOR APPLICATION AS PROTECTIVE COATING MEDIA FOR GOODS TO BE PLACED IN STORAGE, IN TRANSIT OR IN USE ALSO AS PROTECTIVE MEDIA IN PACKAGING OF GOODS TO BE PLACED IN STORAGE OR IN TRANSIT.
Claims use since Jan. 7, 1944.

Ser. No. 487,331. STEPHEN MOLCHAN, doing business as Dobre Products Co., Jersey City, N. J. Filed Aug. 20, 1945.

DOBRÈ

FOR HAIR WAVING SOLUTIONS.
Claims use since May 1934.

Ser. No. 487,692. ELIZABETH F. RIETTE, doing business as Texatone Co., Methuen, Mass. Filed Aug. 28, 1945.

TEXATONE

FOR PREPARATION FOR INTERNAL TREATMENT OF ASTHMA, BRONCHIAL AFFECTIONS, CATARRH, HAY FEVER, BRONCHITIS, INFLUENZA, AND WHOOPING COUGH.
Claims use since Nov. 1, 1922.

Ser. No. 488,074. AGAWAM CHEMICALS, INC., West Springfield, Mass. Filed Sept. 7, 1945.

AGCHEM

FOR CHEMICAL PREPARATIONS USED AS RUBBER ACCELERATORS, ANTIOXIDANTS, RESIN TACKIFIERS AND SOLVENTS; ANTIFOAMS; ANIONIC AND CATIONIC SURFACE ACTIVE AGENTS; CHEMICAL COMPOSITIONS USED AS EMULSIFIERS AND EMULSION STABILIZERS; AND COMPOSITIONS INCLUDING RESIN, WAX AND PROTEIN USED AS SIZING FOR PAPER AND THE LIKE.
Claims use since June 15, 1945.

Ser. No. 488,120. PARFUMERIE FRAGONARD G. FUCHS & CIE, Paris, France. Filed Sept. 7, 1945.

SOURCE BLEUE

FOR PERFUMES.
Claims use since 1935.

Ser. No. 488,122. PARFUMERIE FRAGONARD G. FUCHS & CIE, Paris, France. Filed Sept. 7, 1945.

ZIZANIE

FOR PERFUMES.
Claims use since 1935.

Ser. No. 488,548. PRIMROSE HOUSE, INC., New York, N. Y. Filed Sept. 15, 1945.

Witchery

FOR BATH SALTS, BATH OILS, HAND LOTION, HAND CREAM, TOILET WATER, MASCARA, EYEBROW AND EYELASH DARKENER, BUBBLE BATH—NAMELY, A BATH WATER FRAGRANTER AND SOFTENER—EYEBROW PENCILS, LIP POMADE, FACE LOTIONS AND OILS, ASTRINGENTS, PERFUME, NAIL POLISH, LIPSTICKS, ROUGE, EYE SHADOW, SACHET FOR USE ON CLOTHING IN BUREAUS AND THE LIKE, HAIR SHAMPOO, DUSTING POWDER, MAKE-UP CREAM, DEODORANTS, LEG MAKE-UP, TALCUM POWDER, FACE POWDER, AND COLOGNE.
Claims use since Aug. 14, 1945.

Ser. No. 489,654. LAURETTA G. CHAMBERLIN, Chattanooga, Tenn. Filed Oct. 9, 1945.

TALTICPERIC COLON TREATMENT or T. C. T.

The words "Colon Treatment" are disclaimed apart from the mark.
FOR PREPARATION FOR USE AS AN ENEMA IN THE TREATMENT OF LOCKED BOWELS, HEMORRHOIDS, SHINGLES, STOMACH DISORDERS, ARTHRITIS, AND RHEUMATISM.
Claims use since July 31, 1945.

Ser. No. 491,404. ELECTROMA COMPANY, Los Angeles, Calif. Filed Nov. 10, 1945.

Electroma

FOR VAPORIZING HEAT WAFERS FOR RELIEF OF NASAL CONGESTION DUE TO COMMON HEAD COLDS.
Claims use since Oct. 25, 1945.

Ser. No. 491,521. CLAUDE W. STAFFORD, Florence, Ala. Filed Nov. 13, 1945.

"PENN CHAR"

Stafford's Original

The legend "Stafford's Original" and the word "Penn" are disclaimed apart from the other features of the mark.
FOR DOG MANGE MEDICINE.
Claims use since Oct. 15, 1945.

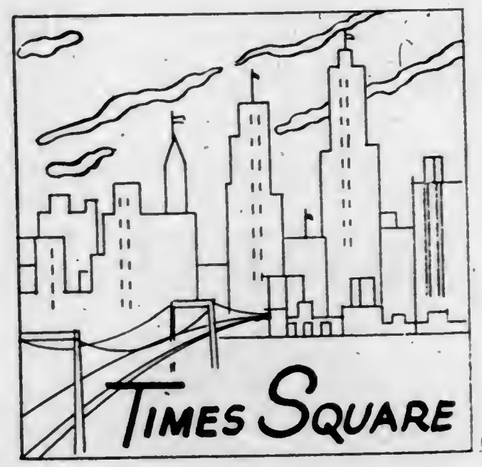
FOR MEN'S TOILETRIES—NAMELY, AFTER-SHAVE LOTION, DRESSINGS AND LOTIONS FOR THE HAIR, DEODORANT, MEN'S COLOGNE AND TALCUM POWDER.
Claims use since Oct. 24, 1945.

Ser. No. 491,657. MAN OF MANHATTAN, INC., New York, N. Y. Filed Nov. 15, 1945.



Applicant disclaims the words "New York" apart from the mark.
FOR MEN'S TOILETRIES— NAMELY, AFTER-SHAVE LOTION, DRESSINGS AND LOTIONS FOR THE HAIR, DEODORANT, MEN'S COLOGNE AND TALCUM POWDER.
Claims use since Oct. 24, 1945

Ser. No. 491,658. MAN OF MANHATTAN, INC., New York, N. Y. Filed Nov. 15, 1945.

Applicant disclaims the word "Towner" apart from the mark.
FOR MEN'S TOILETRIES—NAMELY, AFTER-SHAVE LOTION, DRESSINGS AND LOTIONS FOR THE HAIR, DEODORANT, MEN'S COLOGNE AND TALCUM POWDER.
Claims use since Oct. 24, 1945.

Ser. No. 491,659. MAN OF MANHATTAN, INC., New York, N. Y. Filed Nov. 15, 1945.

FOR MEN'S TOILETRIES—NAMELY, AFTER-SHAVE LOTION, DRESSINGS AND LOTIONS FOR THE HAIR, DEODORANT MEN'S COLOGNE AND TALCUM POWDER.
Claims use since Oct. 24, 1945.

Ser. No. 491,871. MEDI-SYNTH LABORATORIES, Los Angeles, Calif. Filed Nov. 19, 1945.

LIVEX

FOR LIVER AND VITAMIN TONIC FOR HUMAN CONSUMPTION.
Claims use since 1938.

Ser. No. 491,873. THE WM. S. MERRELL COMPANY, Cincinnati, Ohio. Filed Nov. 19, 1945.

BUTAPHYLLAMINE

FOR TABLET FOR USE AS A DIURETIC AND MYOCARDINAL STIMULANT.
Claims use since Nov. 6, 1945.

Ser. No. 492,212. THE WM. S. MERRELL COMPANY, Cincinnati, Ohio. Filed Nov. 26, 1945.

ORAGEN

FOR TABLET FOR ORAL ADMINISTRATION FOR USE IN HEMOGLOBIN REGENERATION.
Claims use since Nov. 15, 1945.

Ser. No. 492,214. THE WM. S. MERRELL COMPANY, Cincinnati, Ohio. Filed Nov. 26, 1945.

PARENCILLIN

FOR INTRAVENOUS SOLUTION FOR THE TREATMENT OF VARICOSE VEINS.
Claims use since Nov. 15, 1945.

Ser. No. 492,775. MAN OF MANHATTAN, New York, N. Y. Filed Dec. 6, 1945.

Two on the AISLE

FOR MEN'S COLOGNE AND AFTER SHAVE LOTION.
Claims use since Sept. 24, 1945.

Ser. No. 493,320. JAMES HOMER BUTLER, doing business as Cà d'Oro, New York, N. Y. Filed Dec. 15, 1945.

CÀDORO

FOR PERFUME.
Claims use since Nov. 26, 1945.

Ser. No. 494,515. PARFUM L'OBLE, INC., New York, N. Y. Filed Jan. 9, 1946.

Embroidery

FOR PERFUMES AND TOILET WATERS.
Claims use since Jan. 4, 1946.

Ser. No. 494,574. WILLIAM PETERMAN, INC., Newark, N. J. Filed Jan. 10, 1946.

FLYOSAN

FOR INSECTICIDE.
Claims use since June 24, 1919.

Ser. No. 495,408. ARTHUR RONAI, doing business as Rose Ronai, New York, N. Y. Filed Jan. 25, 1946.

Rose Ronai

The mark is the autographed signature of Rose Ronai, consent given. Applicant disclaims sole right to the word "Rose" except as a part of the signature.

FOR ROUGE, FACE POWDER, PERFUME, TOILET WATER, SACHET POWDER, BATH POWDER, BATH SALTS, COLOGNE, CAKE MAKE-UP, LIPSTICK, BRILLIANTINE, BUBBLE BATH, CREAM POWDER BASE, EYE MASCARA, TALCUM POWDER, EYE-BROW PENCIL, HAND CREAM, HAND LOTION, WATER SOFTENER, BLEACH CREAM, FRECKLE CREAM, SOFTENING CREAM, FOUNDATION CREAM, CUTICLE REMOVER, DEPILATORY, EYE SHADOW, EYE LOTION, FACIAL MASK, LEG MAKE-UP, NAIL POLISH, NAIL POLISH BASE COAT, NAIL POLISH REMOVER, SUNBURN PREVENTATIVE, SHAMPOO AND HAIR WAVE LOTION.

Ser. No. 495,445. BOSTON DRUG & CHEMICAL CO., doing business as Prince Toiletries, Boston, Mass. Filed Jan. 26, 1946.

PRINCE'S P.M.C. BRAND

No claim is made to the word "Brand" apart from the mark.

FOR CASCARA SAGRADA TABLETS, RUBBING ALCOHOL, ZINC OINTMENT, MINERAL OIL AND PHENOLTHALEN, WITCH HAZEL AND CASTOR OIL.
Claims use since June 1, 1912.

Ser. No. 495,570. CALIFORNIA SPRAY-CHEMICAL CORPORATION, Wilmington, Del., and Richmond, Calif. Filed Jan. 29, 1946.

TAG

FOR PARASITICIDES—NAMELY, INSECTICIDES, FUNGICIDES, AND GERMICIDES, SPRAY, ADJUVANTS, HERBICIDES AND COMPOUNDS WHICH INFLUENCE SPECIFIC PHYSIOLOGICAL PROCESSES IN PLANTS.
Claims use since Dec. 18, 1945.

Ser. No. 496,180. VITAMINS & PHARMACEUTICALS, INC., Dover, Del. Filed Feb. 7, 1946.

AMINOPAN

FOR PREPARATION CONTAINING VARIOUS AMINO ACIDS FOR USE AS A MEDICINAL PREPARATION IN CONJUNCTION WITH ULCER THERAPY, AND AS A DIETARY SUPPLEMENT IN CONDITIONS REQUIRING AN INCREASED INTAKE OF PROTEINS.
Claims use since Nov. 28, 1945.

Ser. No. 496,341. SMITH, KLINE & FRENCH LABORATORIES, Philadelphia, Pa. Filed Feb. 9, 1946.

ESKAY

FOR PHARMACEUTICAL PREPARATIONS MORE PARTICULARLY GENERAL TONIC, MEDICINE FOR DISEASES OF THE NERVOUS SYSTEM, MEDICINE FOR THE STIMULATION OF THE NERVOUS SYSTEM AND OTHER THERAPEUTIC CONDITIONS, EYE DROPS, DERMATOLOGICAL OINTMENTS, ANALGESIC PREPARATION, FERROUS SULFATE ELIXIR, FERROUS SULFATE TABLETS, FERROUS SULFATE, VITAMIN PREPARATIONS, NOSE DROPS, VASOCONSTRICTOR, MEDICINE FOR ARTHRITIS, EYE BATH, SULFONAMIDES, SULFONAMIDE PREPARATIONS, NASAL AND ORAL INHALANTS, AMPHETAMINE SULFATE, AMPHETAMINE SULFATE ELIXIR, PENICILLIN, AMPHETAMINE SALTS, AMPHETAMINE SULFATE SOLUTION, MEDICINE FOR THE TREATMENT OF ANEMIA, DEXTROSE TABLETS, A PREPARATION FOR THE TREATMENT OF AGRANULOCYTOSIS, REMEDY FOR LEUKEMIA, REMEDY FOR INDIGESTION.
Claims use since Jan. 25, 1946.

Ser. No. 496,459. ERNEST T. NUTTER, New York, N. Y. Filed Feb. 12, 1946.

SMOOTHEST KNOWN

No claim is made to the word "Smoothest" apart from the mark.

FOR LIPSTICK, ROUGE, NAIL POLISH, TALCUM POWDER, HAND CREAM, FACE CREAM, FACE LOTION, AND PERFUME.
Claims use since Dec. 12, 1945.

Ser. No. 496,588. VITAMINS & PHARMACEUTICALS, INC., Dover, Del. Filed Feb. 14, 1946.

B-ESTRO-COMPLEX

No claim is made to the letter "B" and the word "Complex" apart from the mark.

FOR B-COMPLEX WITH AMINO ACID HYDROLYSATE AND ESTROGENIC HORMONE, FOR USE IN MENOPAUSE AND DYSMENORRHEA AS WELL AS OTHER CONDITIONS IN WHICH INCREASED INTAKE OF B COMPLEX VITAMINS, AMINO ACIDS AND ESTROGENIC HORMONES ARE INDICATED.
Claims use since Nov. 15, 1945.

Ser. No. 497,131. REQUA MANUFACTURING CO., INC., New York and Brooklyn, N. Y. Filed Feb. 23, 1946.

CHARO

FOR REFRIGERATOR AND ICEBOX DEODORIZERS.
Claims use since April 1912.

Ser. No. 497,360. WILLIAM L. ARMSTRONG, doing business as Armstrong Chemical Company, Fremont, Nebr. Filed Feb. 28, 1946.

Commander Cavity!

No claim is made to the word "Cavity" except as shown.

FOR FLUIDS FOR EMBALMING AND FOR DISINFECTING THE DEAD HUMAN BODY.
Claims use since Oct. 25, 1945.

Ser. No. 497,769. EVELYN B. BENNETT, doing business under the name of Denta-Lava Company, St. Petersburg, Fla. Filed Mar. 7, 1946.

DENTA-LAVA

FOR ANTISEPTIC-DEODORANT AND ASTRINGENT FOR USE AS A MOUTH WASH, GARGLE, SPRAY, OR NASAL DOUCHE.
Claims use since 1926.

Ser. No. 497,816. RIDSDALE & CO. LIMITED, Middlesbrough, England. Filed Mar. 7, 1946.

ANALOID

FOR CHEMICAL SUBSTANCES USED IN ANALYSIS.
Claims use since Oct. 31, 1911.

Ser. No. 497,979. SOCIETE D'ETUDES ET D'EXPANSION DE LA PARFUMERIE DE LUXE, Paris and Asnieres, near Paris, France. Filed Mar. 9, 1946.

FOU

FOR PERFUMES.
Claims use since Nov. 16, 1945.

Ser. No. 498,033. ENNIS NEWTON SEARLES, doing business as Athlophoros Company, Pomfret Center, Conn. Filed Mar. 11, 1946.

ATHLOPHOROS

FOR A SPECIFIC FOR THE TREATMENT OF NEURALGIA AND RHEUMATISM.
Claims use since Mar. 15, 1883.

Ser. No. 498,267. KATHERINE K. BENOLIEL, Philadelphia, Pa. Filed Mar. 15, 1946.

Beam

FOR TARNISH PREVENTIVE BEING A MIXTURE OF CHEMICALS USED TO PREVENT SILVER FROM TARNISHING.
Claims use since October 1940.

Ser. No. 499,584. VAN PATTEN PHARMACEUTICAL CO., Chicago, Ill. Filed Apr. 3, 1946.

Thyrobrom

FOR BROMINATED THYROID PRODUCTS.
Claims use since Mar. 27, 1946.

Ser. No. 499,586. VELSICOL CORPORATION, Chicago, Ill. Filed Apr. 3, 1946.

VELSICOL

FOR INSECTICIDES AND FUNGICIDES.
Claims use since September 1940.

Ser. No. 499,588. VELSICOL CORPORATION, Chicago, Ill. Filed Apr. 3, 1946.

1068

FOR INSECTICIDES AND FUNGICIDES.
Claims use since Feb. 11, 1946.

Ser. No. 499,591. VELSICOL CORPORATION, Chicago, Ill. Filed Apr. 3, 1946.

VELSICOL

FOR INSECTICIDES AND FUNGICIDES.
Claims use since September 1940.

Ser. No. 499,600. AMERICAN CHEMICAL PAINT COMPANY, Ambler, Pa. Filed Apr. 4, 1946.

WEEDEX

FOR CHEMICAL PREPARATIONS FOR EXTERMINATING WEEDS.
Claims use since Aug. 10, 1931.

Ser. No. 499,612. THE DESRON COMPANY, Balboa Island, Calif. Filed Apr. 4, 1946.

Sindosan

FOR COUNTER-IRRITANT MEDICINE.
Claims use since Jan. 31, 1946.

Ser. No. 499,648. PARFAIT, INCORPORATED, Chicago, Ill. Filed Apr. 4, 1946.

Thorobred

FOR COLOGNE, TALCUM POWDER, AFTER-SHAVE LOTION, SKIN LOTION, HAIR DRESSING, HAIR SHAMPOO, AND BUBBLE BATH PREPARATION.
Claims use since Mar. 5, 1946.

Ser. No. 499,720. LES PARFUMS DE DANA, INC., New York, N. Y. Filed Apr. 5, 1946.

INTERVALLE

FOR TOILET PREPARATIONS, PERFUMERY AND COSMETICS—NAMELY, PERFUME, TOILET WATERS, LIPSTICKS, FACE POWDER, TOILET CREAMS, AND ROUGE.
Claims use since Mar. 19, 1946.

Ser. No. 499,746. WINTHROP CHEMICAL COMPANY, INC., New York, N. Y. Filed Apr. 5, 1946.

BUTANEFRINE

FOR BRONCHODILATOR PREPARATION.
Claims use since June 13, 1944.

CLASS 7

CORDAGE

Ser. No. 502,999. PLYMOUTH CORDAGE COMPANY, Plymouth, Mass. Filed May 29, 1946.

PURITAN

FOR ROPE OF SISAL AND OTHER VEGETABLE HARD FIBRE.
Claims use since November 1921.

CLASS 8

SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS

Ser. No. 490,979. SYRACUSE ORNAMENTAL CO., New York, N. Y. Filed Nov. 2, 1945.

SyrocoWood

Applicant disclaims the word "Wood" apart from the mark.
FOR GOODS NOT MADE OF PRECIOUS OR SEMI-PRECIOUS METAL—NAMELY, ORNAMENTAL CIGARETTE, CIGAR, AND TOBACCO BOXES, HUMIDORS, ASH TRAYS, MATCH BOXES, PIPE RACKS, SMOKING STANDS, SMOKING TRAYS AND COMBINATION SMOKERS' SETS FOR HOLDING SMOKING ACCESSORIES.

CLASS 10

FERTILIZERS

Ser. No. 496,152. SHERWOOD MORTLEY PINKERTON, doing business as S. Pinkerton, Toledo, Ohio. Filed Feb. 7, 1946.

TREAT

FOR FOOD FOR ROSES AND PLANTS.
Claims use since May 15, 1936.

CLASS 11

INKS AND INKING MATERIALS

Ser. No. 469,491. BOWERS PRINTING INK COMPANY, Chicago, Ill. Filed Apr. 20, 1944.

Aquaset

FOR PRINTING AND LITHOGRAPHIC INKS.
Claims use since Jan. 20, 1944.

Ser. No. 488,474. THE PARKER PEN COMPANY, Janesville, Wis. Filed Sept. 14, 1945. Under section 5b of the act of 1905 as amended in 1920 as to "Parker."

Parker "51"

FOR WRITING INK.
Claims use since Aug. 29, 1940.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 476,852. L. SONNEBORN SONS, INC., New York, N. Y. Filed Nov. 24, 1944.

FERROLITH

No claim is made to the word "Ferro" apart from the mark.
FOR HARDENING AND WATERPROOFING POWDERED COMPOSITION FOR HYDRAULIC MIXES, COMPRISING COMMINUTED METALLIC FERROUS AGGREGATE, DRY EARTH COLORS AND PORTLAND CEMENT.
Claims use since Sept. 14, 1944.

Ser. No. 486,701. UNIVERSAL ZONOLITE INSULATION CO., Chicago, Ill. Filed Aug. 3, 1945.

Zcrete

FOR ADMIXTURE OF VERMICULITE, PORTLAND CEMENT AND A WATER-PROOFING COMPOUND, SAID ADMIXTURE BEING CONTAINED IN BAGS AND OTHER SUITABLE CONTAINERS AND USED FOR INSULATING UNDERGROUND PIPES AGAINST LOSS OF HEAT CONDUCTED THROUGH SAID PIPES.
Claims use since Feb. 13, 1945.

Ser. No. 499,192. THE B & T METALS COMPANY, Columbus, Ohio. Filed Mar. 29, 1946.

X-Celolite

FOR BUILDING TRIM OF EXTRUDED METALS AND VARIOUS PLASTIC COMBINATIONS AND ADAPTED TO BE USED IN INTERIOR FINISHING AND DECORATING.
Claims use since Jan. 3, 1946.

Ser. No. 499,561. M. B. M. COMPANY, Everett, Wash. Filed Apr. 3, 1946.

HONEYMOON HOMES

The word "Homes" is disclaimed apart from the mark.
FOR PREFABRICATED BUILDINGS MADE PRIMARILY OF WOOD.
Claims use since Mar. 1, 1946.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 487,304. STANLEY V. BOLAND, doing business as Boland Manufacturing Company, Chicago, Ill. Filed Aug. 20, 1945.

Crystalite

FOR SHOWER BATH CURTAINS.
Claims use since Apr. 6, 1945.

Ser. No. 493,816. OAKES & COMPANY, Chicago, Ill. Filed Dec. 22, 1945.

BREAKFAST CLUB

FOR ALUMINUM WARE—NAMELY, GRIDDLES, SKILLETS, STEAK PLATTERS, CHICKEN FRYERS, DUTCH OVENS, TEA KETTLES, SAUCE PANS, COFFEE POTS, COFFEE PERCOLATORS, COFFEE DRIPOLATORS, AND VACUUM TYPE COFFEE MAKERS.
Claims use since Nov. 30, 1945.

CLASS 15

OILS AND GREASES

Ser. No. 489,531. QUAKER CHEMICAL PRODUCTS CORPORATION, Conshohocken, Pa. Filed Oct. 6, 1945.

MICROCUT

Applicant is the owner of Reg. No. 409,149.
FOR CUTTING OILS FOR COOLING AND LUBRICATING CUTTING TOOLS ON METAL MACHINING OPERATIONS.
Claims use since June 2, 1944.

CLASS 16

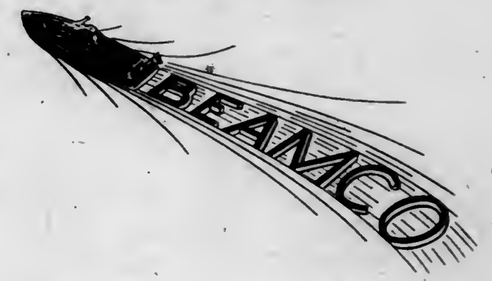
PAINTS AND PAINTERS' MATERIALS

Ser. No. 492,912. HERBERT D. FINE, doing business as Plasti-Kote Company, Cleveland, Ohio. Filed Dec. 8, 1945.

PALLETONE

FOR PAINT IN READY-MIXED FORM.
Claims use since Nov. 27, 1945.

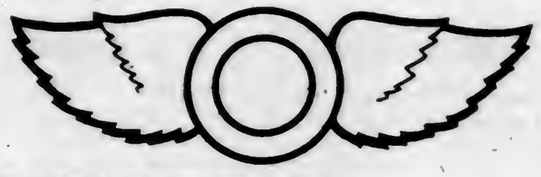
CLASS 19



VEHICLES

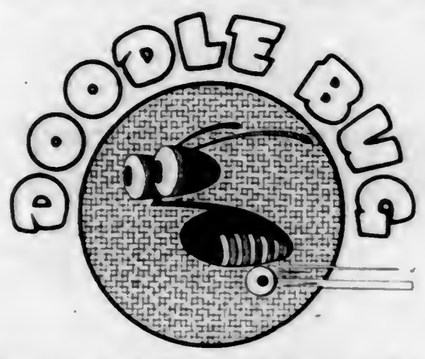
Ser. No. 492,616. CUSHMAN OVERSEAS CO., New York, N. Y. Filed Dec. 4, 1945.

MOTONETA



FOR TWO AND THREE WHEEL MOTOR SCOOTERS AND MOTORCYCLES.
Claims use since June 30, 1943.

Ser. No. 497,161. BLAKEY ENGINEERING AND MARINE CO., Babylon, N. Y. Filed Feb. 25, 1946.



The representation of the boat is disclaimed apart from the mark.
FOR ROW BOATS, SAIL BOATS, AND MOTOR BOATS.
Claims use since Feb. 19, 1946.

Ser. No. 497,342. SENSENICH BROTHERS, Lancaster, Pa. Filed Feb. 27, 1946.

FOR AIRPLANE PROPELLERS.
Claims use since July 6, 1944.

Ser. No. 499,166. SOLAR CORPORATION, Milwaukee, Wis., and Webster City, Iowa. Filed Mar. 28, 1946.

The drawing is lined to indicate the colors yellow and red.
FOR MOTOR SCOOTERS.
Claims use since Mar. 4, 1946.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 481,854. MINERVA CORPORATION OF AMERICA, New York, N. Y. Filed Apr. 7, 1945.

The lining on the drawing indicates shading. The words "Corp. of America" are disclaimed apart from the mark.
FOR RADIO RECEIVING SETS AND RADIO TRANSMITTING SETS.
Claims use since Nov. 1, 1944.

Ser. No. 495,568. ERNST BISCHOFF COMPANY, INC., Ivoryton, Conn. Filed Jan. 29, 1946.

FOR THERMO-PLASTIC POTTING COMPOUNDS FOR SEALING AND INSULATING ELECTRICAL UNITS.
Claims use since Oct. 11, 1945.

Ser. No. 496,862. LOUIS W. ROBINSON, doing business as Lu Rae Plastic Fabricators, Kansas City, Mo. Filed Feb. 18, 1946.

FOR ELECTRIC LAMPS.
Claims use since Feb. 7, 1946.

Ser. No. 498,254. RADIO RECEPTOR COMPANY, INC., New York, N. Y. Filed Mar. 14, 1946.

FOR SELENIUM RECTIFIERS.
Claims use since Nov. 15, 1945.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 468,731. PHILLIPS PETROLEUM COMPANY, Bartlesville, Okla. Filed Mar. 27, 1944.

The drawing is lined to indicate the colors black and mandarin orange. No claim is made to the surname "Phillips" apart from the mark.
FOR GOLF BALLS AND SAVINGS BANKS.
Claims use since April 1938 on golf balls; and August 1941 on savings banks.

Ser. No. 469,307. PHILLIPS PETROLEUM COMPANY, Bartlesville, Okla. Filed Apr. 18, 1944.

The drawing is lined to indicate the colors black and mandarin orange. No claim is made to the surname "Phillips" apart from the mark.
FOR GOLF BALLS.
Claims use since Apr. 1, 1938.

Ser. No. 484,659. NATHAN AXELROD, San Francisco, Calif. Filed June 18, 1945.

T.N.T

FOR CARD GAME.
Claims use since May 15, 1945.

Ser. No. 486,995. THE LA PORTE CORPORATION, Chicago, Ill., and La Porte, Ind. Filed Aug. 10, 1945.

The lining shown on the drawing is used for shading purposes only. The representation of the baby forming a feature of the mark is fanciful. The words "Baby Walker" are disclaimed apart from the mark.
FOR BABY WALKERS.
Claims use since Jan. 2, 1945.

FOR PROTEIN DIGEST PRODUCT.

Claims use since Dec. 10, 1945.

Ser. No. 496,236. G. N. HANGE, Chicago, Ill. Filed Feb. 8, 1946.

Applicant disclaims exclusive right to the words "Butter" and "Delectable Candies" per se.

FOR CANDIES.

Claims use since Dec. 14, 1945.

Ser. No. 497,139. THE THEOBALD INDUSTRIES, Kearny and Harrison, N. J. Filed Feb. 23, 1946.

QUADBERGER

FOR DOG FOOD.
Claims use since Feb. 4, 1946.

Ser. No. 497,192. PARROTT & Co., San Francisco, Calif. Filed Feb. 25, 1946.

VALLEY BELT

FOR CANNED FRUITS AND CANNED VEGETABLES.
Claims use since Apr. 1, 1915.

CLASS 50

MERCHANDISE NOT OTHERWISE CLASSIFIED

Ser. No. 473,945. RICHARD HUDNUT, New York, N. Y. Filed Sept. 7, 1944.

Beauty on Parade

The term "Beauty" is disclaimed except in connection with the mark as shown.

FOR COSMETIC KITS CONTAINING THE FOLLOWING: FOUNDATION LOTION, SKIN FRESHENER, BEAUTY CAKE MAKE-UP, EYE SHADOW, CREAM ROUGE, FACE POWDER, LIPSTICK, SPECIAL SKIN CREAM, CLEANSING CREAM FOR DRY SKIN AND CLEANSING TISSUES.

Claims use since Aug. 25, 1944.

Ser. No. 487,833. ZADEK FELDSTEIN CO., INC., New York, N. Y. Filed Aug. 31, 1945.

Snow Baby

No claim is made to the word "Baby" apart from the mark.

FOR PLASTIC FEEDING SETS CONSISTING OF A SPOON, FORK, PLATE, BOWL, MUG, AND TUMBLER.
Claims use since March 1942.

Ser. No. 493,120. HILCO INCORPORATED, St. Louis, Mo. Filed Dec. 12, 1945.

hilco

FOR PERMANENT WAVE KITS CONSISTING OF FLUID LOTION, FLUID NEUTRALIZER, PAPER CAP AND HAIR RETENTION PAPERS FOR USE IN GIVING SO-CALLED PERMANENT WAVES TO THE HUMAN HAIR.

Claims use since Sept. 25, 1945.

TRADE-MARK REGISTRATIONS GRANTED

[ACT OF FEBRUARY 20, 1905]

SEPTEMBER 3, 1946

423,426. RUBBER TOYS. TILLOTSON RUBBER CO., INC., Needham Heights, Mass.
Filed April 22, 1940, Serial No. 431,096. PUBLISHED JULY 2, 1940. Class 22.

423,427. FRESH VEGETABLES. FRED W. RUSH, doing business as Fred W. Rush Co., Los Angeles, Calif.
Filed December 20, 1943. Serial No. 465,929. PUBLISHED JANUARY 22, 1946. Class 46.

Filed January 27, 1944. Serial No. 466,916. PUBLISHED JUNE 11, 1946. Class 2.

423,429. SEWING THREAD. BEMIS BRO. BAG COMPANY, St. Louis, Mo.
Filed March 2, 1944. Serial No. 467,911. PUBLISHED MAY 28, 1946. Class 43.

423,430. COMPACT AND VANITY CASES, CASES FOR EYEGLASSES, CASES FOR HOLDING WATCHES AND CLOCKS, SOLD EMPTY AND MADE OF BASE AND/OR PLASTIC MATERIALS. ARISTOCRAT LEATHER PRODUCTS, INC., New York, N. Y., assignor to Simon Edmund Knee, New York, N. Y.
Filed April 21, 1944. Serial No. 469,529. PUBLISHED NOVEMBER 14, 1944. Class 2.

423,431. COAL. RED JACKET COAL SALES COMPANY, Columbus, Ohio.
Filed April 28, 1944. Serial No. 469,784. PUBLISHED NOVEMBER 14, 1944. Class 1.

423,432. MOTION PICTURE FILMS PREPARED FOR TELECASTING. RKO TELEVISION CORPORATION, Dover, Del., and New York, N. Y.
Filed August 17, 1944. Serial No. 473,396. PUBLISHED JUNE 11, 1946. Class 26.

423,433. ELECTRICAL MOTORS, DYNAMOTORS, SPEED CONTROLLERS OF THE REACTANCE TYPE FOR ELECTRICAL MOTORS, ETC. A. G. REDMOND CO., Owosso, Mich., assignor to Redmond Company, Inc., Owosso, Mich., a corporation of Michigan.
Filed September 13, 1944. Serial No. 474,178. PUBLISHED MAY 28, 1946. Class 21.

423,434. MATERIAL TREATING MACHINES FOR DESTROYING INSECT LIFE BY MECHANICAL ACTION BY IMPACTING OR OTHERWISE ENGAGING PARTICLES OF THE INSECT LIFE IN A FLOWING STREAM OF THE MATERIAL, ETC. THE SAFETY CAR HEATING AND LIGHTING COMPANY, INC., New York, N. Y.
Filed November 23, 1944. Serial No. 476,818. PUBLISHED MAY 28, 1946. Class 23.

423,435. GAME DEVICES COMPRISING A BOARD WITH INDICIA THEREON AND A SUSPENDED POINTER MOVABLE OVER THE BOARD. ALFRED ARNOLD REES, West Haven, Conn.
Filed November 27, 1944. Serial No. 476,927. PUBLISHED JUNE 11, 1946. Class 22.

423,436. MACHINES FOR THE SEPARATION OF THE ELEMENTS AND CLARIFICATION OF MILK, FRUIT JUICES, MOLASSES, YEAST, STARCH, AND OIL. COLUMBIA MACHINE WORKS, INC., Brooklyn, N. Y.
Filed December 2, 1944. Serial No. 477,140. PUBLISHED JUNE 18, 1946. Class 23.

423,437. UNITARY PORTABLE AUTOMOTIVE SERVICING APPARATUS, COMPRISING LUBRICANT AND AIR TANKS, PUMPS, ETC. LINCOLN ENGINEERING COMPANY, St. Louis, Mo.
Filed December 26, 1944. Serial No. 477,937. PUBLISHED JUNE 18, 1946. Class 23.

423,438. FLEXIBLE METAL HOSE. BENDIX AVIATION CORPORATION, Teterboro, N. J.
Filed January 5, 1945. Serial No. 478,266. PUBLISHED JUNE 11, 1946. Class 35.

423,439. REFRIGERATION CONTROLS—NAMELY, EXPANSION VALVES FOR CONTROL OF DELIVERY OF LIQUID REFRIGERANT TO AN EVAPORATOR, ETC. SPORLAN VALVE COMPANY, Maplewood, Mo.
Filed January 5, 1945. Serial No. 478,296. PUBLISHED JUNE 18, 1946. Class 31.

423,440. STOCK HANDLING MACHINERY—NAMELY, GRABS, HOISTS, CRANES, GRAPPLES, AND BELT, CHAIN, AND ROLLER CONVEYORS, AND PARTS THEREOF. J. B. ENGINEERING SALES COMPANY, New Haven, Conn.
Filed January 10, 1945. Serial No. 478,456. PUBLISHED MAY 21, 1946. Class 23.

423,441. SYNTHETIC RUBBER SLEEVES FOR ELECTRIC INSULATING PURPOSES. HELLERMANN ELECTRIC LIMITED, Oxford, England.
Filed January 24, 1945. Serial No. 478,954. PUBLISHED JUNE 11, 1946. Class 21.

423,442. PUMPS—NAMELY, POWER WATER PUMPS USED FOR ALL TYPES OF PUMPING WHERE SUCTION LIFT IS REQUIRED. MARLOW PUMPS, Wortendyke, N. J.
Filed January 27, 1945. Serial No. 479,081. PUBLISHED JUNE 11, 1946. Class 23.

423,443. CANDY. PAN-AMERICAN CANDY CO., Ashely, Ill.
Filed January 29, 1945. Serial No. 479,140. PUBLISHED APRIL 17, 1945. Class 46.

423,444. HAND SUPPORTED AND CONTROLLED ELECTRIC POWER DRIVEN SHEARS FOR CUTTING METAL, LEATHER, CELLULOID, CARDBOARD, AND THE LIKE. THE BLACK AND DECKER MANUFACTURING COMPANY, Towson, Md.
Filed February 1, 1945. Serial No. 479,274. PUBLISHED OCTOBER 23, 1945. Class 21.

423,445. FRESH MILK, CREAM, BUTTERMILK, AND CHOCOLATE MILK DRINK AND DAIRY ORANGEADE, BOTH OF THE LATTER BEING SOLD AS FOOD BEVERAGES. SOUTHERN DAIRIES, INC., Washington, D. C.
Filed February 19, 1945. Serial No. 479,998. PUBLISHED JUNE 4, 1946. Class 46.

423,446. JAWS FOR ELECTRODE HOLDERS AND CONTACT MEMBERS FOR ELECTRICAL EQUIPMENT GENERALLY. THE LINCOLN ELECTRIC COMPANY, Cleveland, Ohio.
Filed March 19, 1945. Serial No. 481,073. PUBLISHED JUNE 4, 1946. Class 21.

423,447. KALEIDOSCOPIC DISCS FOR KALEIDOSCOPIC PROJECTORS. TELEVISION ASSOCIATES, INC., Chicago, Ill.
Filed March 29, 1945. Serial No. 481,501. PUBLISHED JUNE 18, 1946. Class 26.

423,448. PHOTOSENSITIVE TRANSFERS, COMPRISING BACKING SHEETS HAVING PHOTOSENSITIVE COATINGS DETACHABLY MOUNTED THEREON AND ADAPTED TO BE TRANSFERRED TO OTHER SURFACES. THE DI-NOC COMPANY, Cleveland, Ohio.
Filed April 9, 1945. Serial No. 481,887. PUBLISHED JUNE 18, 1946. Class 26.

423,449. X-RAY APPARATUS FOR THE MAKING OF X-RAY EXPOSURES. WESTINGHOUSE ELECTRIC & MANUFACTURING COMPANY, East Pittsburgh, Pa., and Baltimore, Md., now by change of name Westinghouse Electric Corporation, a corporation of Pennsylvania.
Filed April 14, 1945. Serial No. 482,186. PUBLISHED SEPTEMBER 18, 1945. Class 21.

423,450. CLEAN MILLED RICE. SOUTHERN RICE SALES COMPANY, INC., New York, N. Y.
Filed April 21, 1945. Serial No. 482,445. PUBLISHED JULY 17, 1945. Class 46.

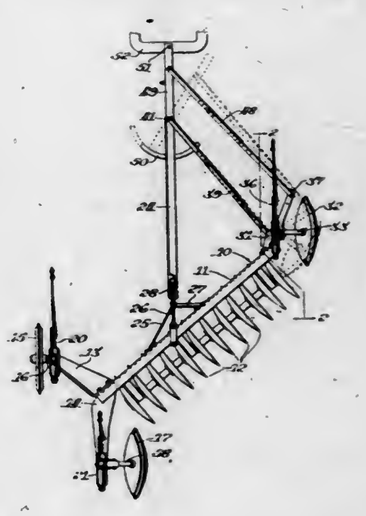
29 Claims. (Cl. 212—21)

1. A crane controlling system for operating a lifting hook in three dimensions of space, comprising three separate reversible driving motors each for operating the hook in one of the respective dimensions, a single controlling member movable in three space dimensions, and reversing switch contacts with independent circuit connections for the motors each arranged to be actuated, operated and controlled by corresponding movement of the controlling member in one or more of said dimensions for respectively actuating any one, two, or all three of the motors at the same time.

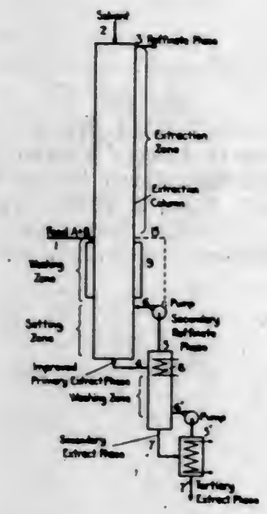


22,786
MANUFACTURE OF HIGH ANTIKNOCK HYDROCARBONS
Arthur R. Goldsby, Beacon, N. Y., assignor, by mesne assignments, to The Texas Company, New York, N. Y., a corporation of Delaware
Original No. 2,303,735, dated December 1, 1942, Serial No. 318,219, February 10, 1940. Application for reissue May 14, 1943, Serial No. 487,037
13 Claims. (Cl. 260—683.4)

11. The method of improving the anti-knock value of a narrow cut normally liquid gasoline fraction of relatively low anti-knock value having an end boiling point not more than about 25 to 75° F. higher than its initial boiling point and containing substantial proportions of normally liquid straight chain olefin and paraffin hydrocarbons, which comprises reacting the said fraction with a low-boiling isoparaffin boiling below the boiling range of said fraction in the presence of an alkylation catalyst under alkylating conditions, whereby the isoparaffin is alkylated by the olefin of said fraction to produce alkylated hydrocarbons of relatively high anti-knock value boiling largely above the boiling range of said charge fraction, fractionating the hydrocarbon reaction products of said alkylation reaction to separate the same into a higher boiling alkylate, lower boiling products, and a fraction of intermediate boiling range approximating the boiling range of the said charge fraction and containing mainly unreacted straight chain paraffin hydrocarbons, subjecting the said intermediate boiling range fraction to a conversion treatment to produce products of higher anti-knock value, and blending at least a portion of said conversion products

of higher anti-knock value with said higher boiling alkylate to produce motor fuel of high anti-knock value.

22,787
PLOW
Arthur A. Scarlett, Hamilton, Ontario, Canada, assignor, by mesne assignments, to International Harvester Company, Chicago, Ill., a corporation of New Jersey
Original No. 2,184,438, dated December 26, 1939, Serial No. 213,635, June 14, 1938. Application for reissue September 12, 1945, Serial No. 615,901
14 Claims. (Cl. 97—53)

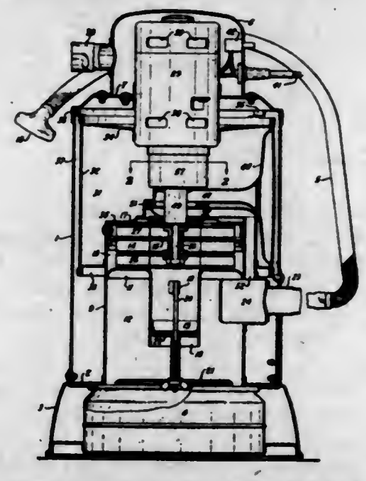


14. A plow construction comprising a plow beam, means supporting the plow beam including a wheel adjacent one end thereof, a stub axle having a portion extending axially from the wheel and a second portion extending at a substantial angle to the first portion and forming means about which the wheel may be swung with respect to the beam, means for elevating the plow beam with respect to the supporting means, a first draw-bar extending from the beam at a point

spaced from the said wheel, a second draw-bar connected to the stub axle of the wheel at a point adjacent the axially extending portion thereof, said second draw-bar extending therefrom in converging relation to the first draw-bar and connected to the latter, a member laterally pivoted on one of the draw-bars, and means connecting the member and the stub axle at a point spaced from the point of connection of the second draw-bar for swinging the wheel with respect to the plow beam for turns.

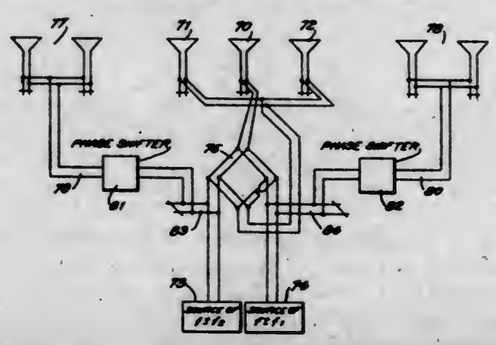
22,788
EXTRACTION PROCESS
Willem Johannes Dominicus van Dijck, The Hague, Netherlands, assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
Original No. 2,081,720, dated May 25, 1937, Serial No. 694,280, October 19, 1933. Application for reissue March 15, 1946, Serial No. 654,663. In the Netherlands November 18, 1930
23 Claims. (Cl. 196—13)

1. In a countercurrent process for extracting a liquid mixture of hydrocarbons wherein a raffinate phase flows in contact with and countercurrently to an extract phase the step of maintaining a gradual temperature drop within the



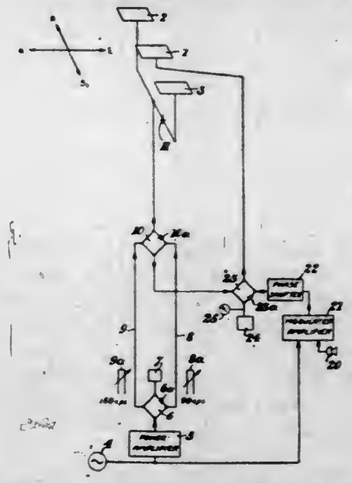
mixture of the two flowing phases in the direction of flow of the extract phase.

PATENTS



GRANTED SEPTEMBER 3, 1946

2,406,733
SUCTION CLEANER
Louis K. Acheson, North Canton, Ohio, assignor to The Hoover Company, North Canton, Ohio, a corporation of Ohio
Application April 26, 1943, Serial No. 484,510
11 Claims. (Cl. 183—57)

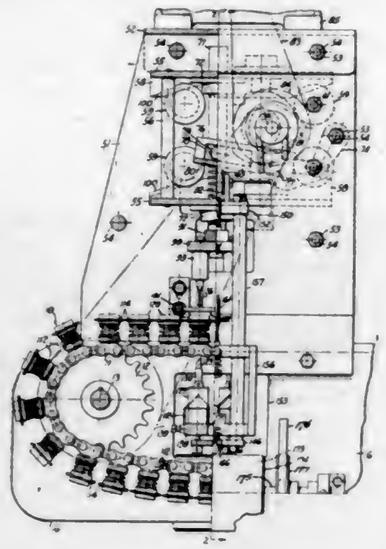


1. In a suction cleaner of the type having an initial dirt separator, suction-creating means to draw air from said initial separator and including a fan and a motor directly connected thereto, and a final dirt separator to receive air from said suction-creating means; a dirt-removing unit to remove dirt from said final separator and to transport it to said initial separator and including a movable element, and power-transmitting and speed-reducing means connecting said movable element to said motor to actuate said element in the operation of said cleaner at a speed less than the speed of fan.

2,406,734
GLIDE PATH BEACON
Andrew Alford, New York, N. Y., assignor to Federal Telephone & Radio Corporation, a corporation of Delaware
Application February 1, 1940, Serial No. 316,732
12 Claims. (Cl. 250—11)

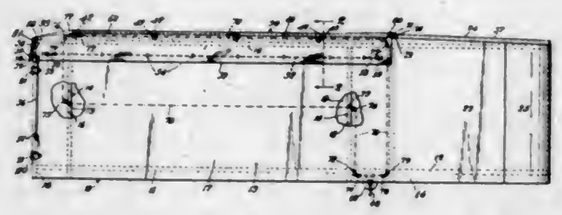
1. The method of producing a desired resultant directive radiation pattern for radio beacons which comprises radiating a given amount of energy to produce a directive radiation pattern having a given center of radiation, superposing on said produced radiation pattern a modifying wave by radiating a smaller amount of energy in the order of from one tenth to one fiftieth of said given amount of energy forming a radiation pattern having a center or radiation displaced with respect to said given center of radiation a distance of several wavelengths at the operating frequency, and variably adjusting the phase relation of said produced patterns to produce the directional desired characteristics of said resultant radiation pattern.

2,406,735
MULTISIGNAL RADIATING SYSTEM
Andrew Alford, New York, N. Y., assignor to Federal Telephone and Radio Corporation, Newark, N. J., a corporation of Delaware
Application January 30, 1943, Serial No. 474,094
13 Claims. (Cl. 250—9)



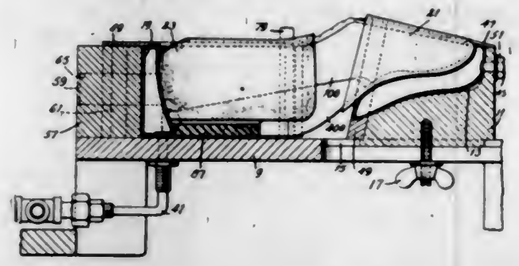
1. A system for simultaneously applying two signals on the same carrier frequency wavelength to a common useful load which comprises a first signaling means for producing a first side band component and a first carrier component, second signaling means for producing a second side band component and a second carrier component, common load means, a balancing dissipating element simulating the impedance of said common load means, a balanced network connected to transfer energy from said first and second signaling means to said common load means and with a relative phase reversal to said balancing element while maintaining substantial conjugacy between said first and second signaling means, and carrier synchronizing means for maintaining said first and second carrier components at the same frequency and in a predetermined phase relation such as to minimize the absorption of carrier energy in said balancing element.

2,406,736
PITTING MACHINE
George W. Ashlock, Jr., Oakland, Calif.
Application March 31, 1944, Serial No. 528,871
16 Claims. (Cl. 146—27)



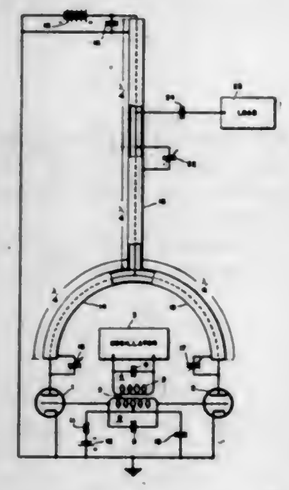
1. In combination, a conveyor movable over a path and having a plurality of receptacles to receive fruit, a plunger movably positioned above the conveyor and adapted to be moved to engage and enter a fruit in a receptacle, a coring knife movably positioned below said conveyor and substantially in alignment with said plunger and

movable to enter a receptacle through its bottom and cut a core into a fruit to the pit therein, means for first substantially simultaneously moving said plunger and said knife toward each other to retain said fruit in position in the receptacle during cutting of said core by said knife and for forcing said pit into seating engagement on said knife in which position it is retained, said



moving means then moving the plunger toward the knife and retracting the knife from the fruit with the pit positioned between the plunger and the knife until the end of the pit engaged by the plunger is free of the fruit, said moving means finally withdrawing the plunger from the fruit, and means for rotating the coring knife during cutting of the core.

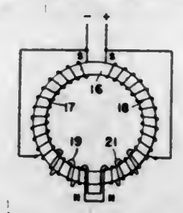
2,406,737
TRAILER TOP
Donald Earl Bramble, Chicago, Ill., assignor of one-half to Theodore Bjorn, Chicago, Ill.
Application January 27, 1944, Serial No. 519,862
7 Claims. (Cl. 296—105)



1. In combination with a vehicle body having an open top, sides extending to the top of the body, a permanent front portion having a roof and a transverse member at the rear of the roof with a vertical portion, a tarpaulin having its front edge anchored to said portion, cross bows having antifriction members movable along the top of the sides and associated therewith to prevent lateral and upward displacement of the cross bows, connections between the cross bows and the tarpaulin, a collapsible ridge-pole extending longitudinally of the body at the bows and movable with certain of the latter to a collapsed position at the front portion, and means connected to the rear cross bow to move the cross bows and tarpaulin to positions to cover and uncover the body.

2,406,738
APPARATUS FOR USE IN STIFFENING UPPERS OF SHOES
John J. Brophy, Salem, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Original application November 22, 1944, Serial No. 564,605. Divided and this application August 10, 1945, Serial No. 610,110
7 Claims. (Cl. 12—51)

1. Apparatus for use in stiffening the front and rear portions of the upper of a lasted shoe, there being incorporated in the two portions non-fused resinous stiffening material capable of being caused to coalesce by heat, said apparatus comprising two supports including yielding members against which the two portions of the shoe rest, means for exerting pressure through the flexible members upon the two portions of the upper to press them against the last, and means for subjecting the pressed portions to the heating effect of a high-frequency field.

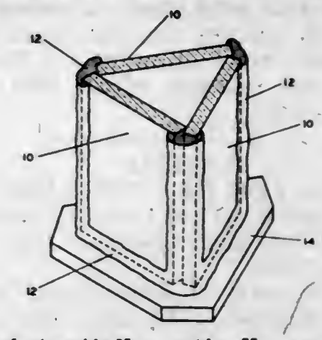


2,406,739
FREQUENCY DOUBLER
William T. Brown, Fort Wayne, Ind., assignor to Farnsworth Television and Radio Corporation, a corporation of Delaware
Application April 12, 1945, Serial No. 588,009
7 Claims. (Cl. 250—36)

1. In a frequency doubler, a resonant system comprising a pair of transmission lines having one terminal of each mutually connected, each of said transmission lines having resonant properties substantially equivalent to a resonant transmission line of an effective length equal to one-quarter of a wave length at a predetermined frequency, a third resonant transmission line having one terminal connected to the mutually connected terminals of said pair of transmission lines and having resonant properties substantially equivalent to a resonant transmission line of an effective length equal to one-half of a wave

length at said predetermined frequency, means for alternately impressing upon the other terminals of said pair of transmission lines voltage impulses at a frequency equal to one-half of said predetermined frequency, and a utilization circuit coupled to said third transmission line.

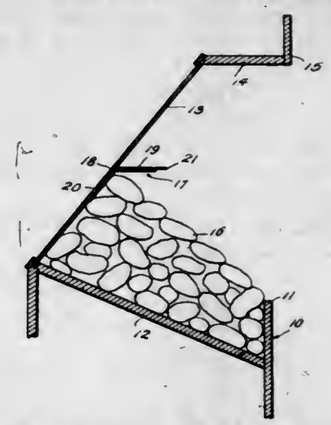
2,406,740
KEYSTONE CORRECTION APPARATUS
John A. Buckbee, Fort Wayne, Ind., assignor to Farnsworth Television and Radio Corporation, a corporation of Delaware
Application February 14, 1944, Serial No. 522,311
3 Claims. (Cl. 250—157)



1. An electromagnet deflecting system for a cathode ray tube comprising, an annular ferromagnetic core disposed about the electron path of said tube, a first deflecting coil wound about said core in a manner to produce within the space enclosed by said core a unidirectional electromagnetic field of substantially uniform intensity distribution, and a second deflecting coil wound similarly to said first coil about only a portion of said core in a manner to produce within the space enclosed by said core a unidirectional electromagnetic field of non-uniform intensity distribution, said two fields being similarly poled and combining to form a composite unidirectional electromagnetic field of divergent intensity distribution.

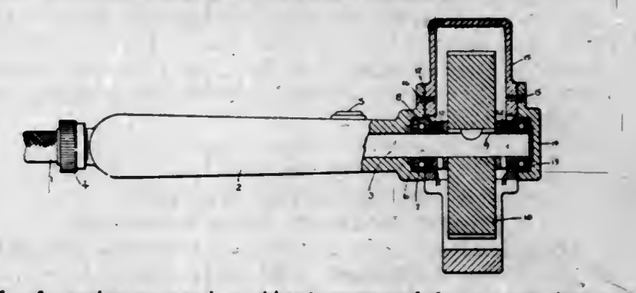
2,406,741
VITAMIN B-COMPLEX TABLET
Walter A. Compton and Richard S. Nicholls, Elkhart, Ind., assignors to Miles Laboratories, Inc., Elkhart, Ind., a corporation of Indiana
No Drawing. Application October 5, 1942, Serial No. 460,832
8 Claims. (Cl. 167—81)

2. A dry tablet of vitamin B-complex comprising in combination essentially, and in intimate admixture, a large quantity of amphoteric milk protein having an isoelectric point below pH of 7 and upwardly from pH of 6 in the base of the tablet, and small quantities of vitamins of the B-complex including at least one which is unstable in alkaline surroundings and selected from the group consisting of thiamin, riboflavin and a salt of pantothenic acid, and including free nicotinamide, the latter being characterized by instability and reversion to nicotinic acid form in a strongly acid medium of a character tending to stabilize said selected vitamin, said protein by its amphoteric character and buffering action at a pH from 6 to and under 7 providing stability to all of said unstable vitamins.



2,406,742
MOLD FOR USE IN THE MANUFACTURE OF OPTICAL ELEMENTS
Dexter P. Cooper, Jr., Cambridge, Mass., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application September 2, 1942, Serial No. 457,032
13 Claims. (Cl. 18—34)

6. A mold for use in the formation of an optical element of polymerized synthetic plastic material or the like which formation is effected at a temperature not exceeding a predetermined temperature, said mold comprising, in combination, a plurality of mold walls having molding



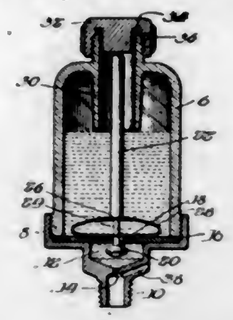
surfaces substantially optically smooth and defining the outer surfaces of the mold cavity, and a fusible cement bonding said walls together, said cement having a melting point not greatly in excess of said predetermined temperature.

2,406,743
REFLECTED PRICE TAG OR THE LIKE
Enoch E. Crowson, Greenville, S. C.
Application July 12, 1944, Serial No. 544,553
7 Claims. (Cl. 40—125)

1. A bin for supporting produce or the like and having a vertically inclined mirror adjacent to its rear, the mirror extending forwardly toward its upper end and extending above the produce, a card, and means mounted upon the front face of the mirror and supporting the card in a generally horizontal position adjacent to the mirror and above the produce, the card having indicia upon its upper face, the arrangement being such that the reflected image of the card is superimposed on the reflected image of the produce.

2,406,744
ROTARY CAST CUTTER
Buford L. Cryar, Albertville, Ala.
Application March 23, 1945, Serial No. 584,310
3 Claims. (Cl. 30—167)

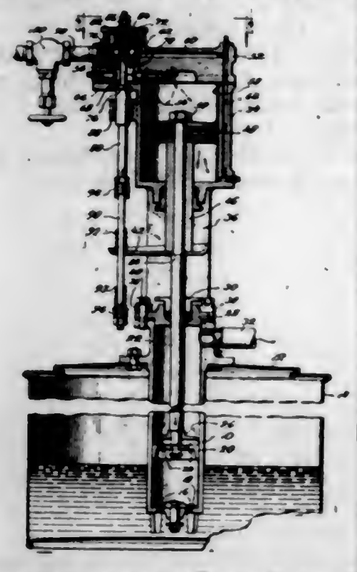
1. A rotary cast-cutter, comprising a rotary cutting blade, a housing for the blade, a shaft



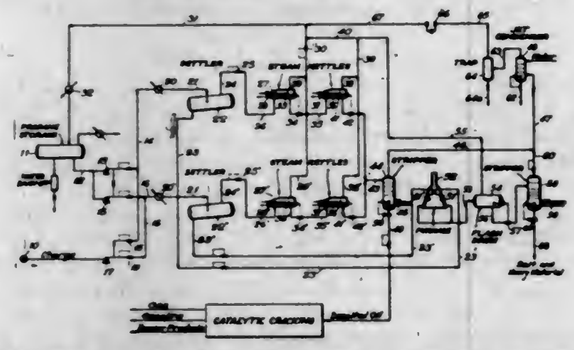
on which the blade is fixed, a side handle forming a bearing for the shaft, anti-friction bearings for the shaft, one carried by the handle and the other supported by the housing, a flexible drive shaft coupled with said shaft, a hollow end handle forming a conduit for dirt and chips and having an outlet connection, and a foot projecting beneath the cutting blade and supported from the housing.

2,406,745
MEANS FOR CAPPING TUBING
Max Curtze, Los Angeles, Calif., assignor to The Scholl Mfg. Co., Inc., Chicago, Ill., a corporation of New York
Application January 21, 1943, Serial No. 473,059
4 Claims. (Cl. 138—89)

1. A device for temporarily capping tubing, including a sheet of material having an adhesive surface for application directly to the tubing over the end of a length of tubing, and a relatively stiff disk carried by said sheet for insertion in the end of the tubing when the sheet is applied.



2,406,746
OIL CUP
Ernest W. Davis, River Forest, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia
Application November 2, 1942, Serial No. 464,179
1 Claim. (Cl. 184—84)

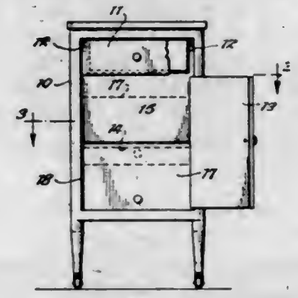


In an oil cup, a receptacle for containing part oil and part air, said receptacle including a transparent body member having a filling opening therein, and a base member attached to said body member; a closure for said filling opening; an oil well in said base member, said oil well having a minute discharge opening therein, a partition separating the interior of said body member and said oil well, said partition having an opening therethrough, and said partition being constructed of relatively yielding material and extending radially to act as a gasket for sealing said body member and said base member; a valve for closing said opening in said partition; and means responsive to movement of said closure for opening and closing said valve.

2,406,747
PNEUMATIC MOTOR
Ernest W. Davis, River Forest, Ill.
Application June 15, 1945, Serial No. 599,664
4 Claims. (Cl. 121—164)

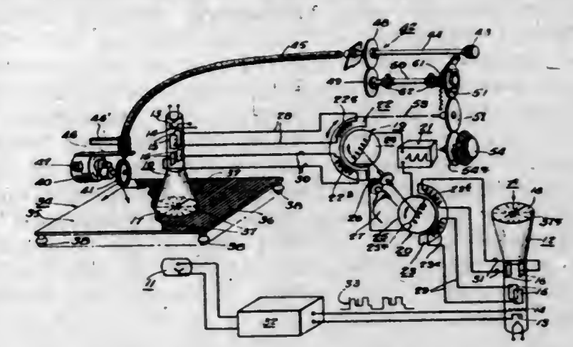
2. A valve mechanism for fluid operated reciprocating piston and cylinder type motors comprising, means forming a pair of valve chambers communicating with the opposite ends of the motor cylinder, having a first valve seat intermediate the chambers, a balancing piston having one side thereof exposed to pressure in one of said valve chambers and having its other side exposed to atmospheric pressure, a second valve seat forming an air outlet port leading from the other of said valve chambers to the atmosphere, a second valve rigidly connected to said first valve and to said piston and cooperable with said second valve seat, said valves operating in opposite directions and spaced so that when one valve is closed the other is fully opened.

2,406,748
DESALTING OF HYDROCARBON OILS
Norman L. Dickinson, Basking Ridge, N. J., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana
Application December 29, 1943, Serial No. 516,057
5 Claims. (Cl. 196—5)



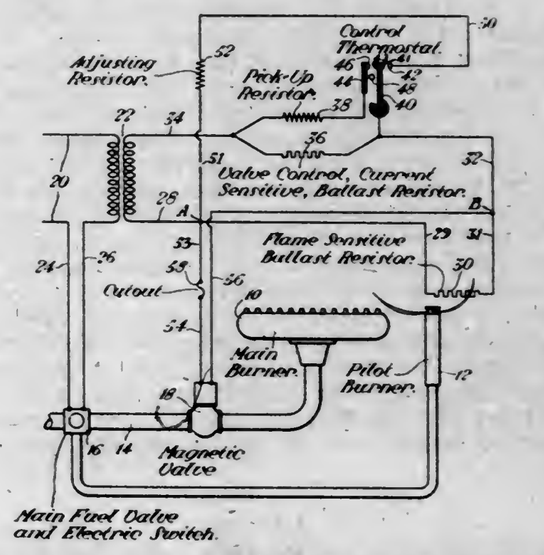
2. The method of desalting a reduced crude which comprises maintaining a quantity of propane in storage at elevated pressure and at an elevated temperature which is substantially below about 140° F., mixing about 3 to 5 volumes of propane from said storage with about 1 volume of a salt-bearing reduced crude, heating said mixture and holding it in a settling zone at a temperature within the range of about 140° to 185° F. under a pressure sufficiently high to prevent vaporization for a time sufficient to effect separation of salt together with undissolved high molecular weight components of the reduced crude from the propane solution of dissolved components in the settling zone, removing the solution from the settling zone, reducing the pressure on the withdrawn solution but maintaining the reduced pressure higher than the propane storage pressure, heating said solution for vaporizing propane therefrom, condensing said vaporized propane and returning it without compression to said storage, reducing the pressure on the remaining propane solution to a level from about atmospheric to about 5 pounds per square inch gauge, stripping said solution at the reduced pressure with steam for removing propane therefrom, condensing the stripping steam from propane vapors liberated in the stripping step and compressing, condensing and returning said propane vapors to said propane storage.

2,406,749
SIZING COMPOSITION AND YARN SIZED THEREWITH
Harry R. Dittmar, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application August 4, 1943, Serial No. 497,366
20 Claims. (Cl. 260—32)



2. A yarn-sizing composition comprising an aqueous solution of a water-sensitive hydroxylated polyvinyl resin, boric acid and a polymer of the class which consists of modified polymers of dioxolane and alkyl substituted dioxolanes, said polymer being a water-soluble waxy solid having a molecular weight within the range of 500 to 1500 and modified by a member of the class which consists of carboxylic acids and esters thereof, the ratio of the total amount of said hydroxylated polyvinyl resin and boric acid to the amount of said polymer being within the limits of 65:35 and 35:65, and the boric acid being present in an amount of from 5% to 25% based on the weight of the hydroxylated polyvinyl resin.

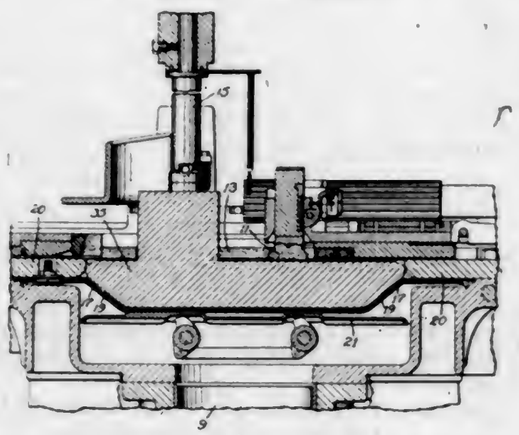
2,406,750
TOILET OR THE LIKE CABINET
James H. Dyett, Buffalo, N. Y., assignor to Hard Manufacturing Company, Buffalo, N. Y.
Application June 5, 1944, Serial No. 538,867
1 Claim. (Cl. 312—189)



In a cabinet having a chambered casing with a front opening, a drawer movable forwardly and rearwardly in the upper portion of said casing, a partition dividing the casing chamber below said drawer into upper and lower compartments, and an outer door arranged to close the front opening of the casing below said drawer, the improved construction comprising a vertical inner door located in the casing in front of said partition and in rear of said outer door when the latter is closed, and guides at the sides of the casing beneath said drawer by which said inner door is guided to slide vertically in front of said partition for covering and uncovering said lower compartment when said outer door is open, the upper ends of said guides being spaced downwardly from the bottom of said drawer, when in position, a distance less than the height of said inner door, whereby said inner door is disengageable from said guides by upward movement only when said drawer has been removed.

2,406,751
DEMONSTRATION APPARATUS
Kenneth H. Emerson, Philadelphia, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application May 27, 1944, Serial No. 537,556
13 Claims. (Cl. 35—1)

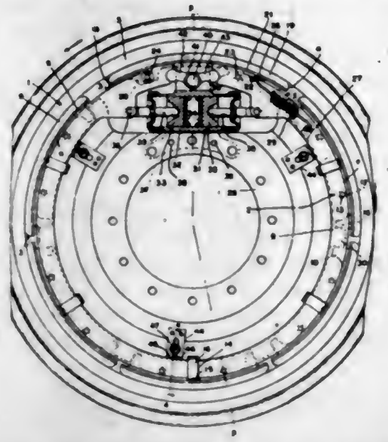
1. In a system of the character described, means simulating a geographical area and having different light response characteristics, means for producing a picture signal corresponding to details in said area simulating means, a picture reconstituting device, means for supplying said picture signal to said device, scanning signal generating means associated with said picture signal producing means and with said picture reconstituting device for controlling and synchronizing the operations thereof, and means operatively associated with said scannnig signal generating means for varying, at will, the scanning of said picture signal producing means relative to the scanning of said picture reconstituting device.



2,406,752
SAFETY CONTROL FOR GASEOUS FUEL BURNERS
Samuel G. Eskin and Charles K. Strobel, Pittsburgh, Pa., assignors to Robertshaw Thermostat Company, Youngwood, Pa., a corporation of Pennsylvania
Application April 10, 1943, Serial No. 482,592
15 Claims. (Cl. 158—117.1)

1. A control system for fuel burners having main and pilot burners comprising in combination, electrically operable control means movable between positions for controlling the main burner, a controller in circuit with said means and responsive to changes in a condition caused by operation of the main burner, a ballast resistor exposed to the heat of the pilot burner flame and

electrically connected to said control means for varying the current value supplied thereto upon variations in the resistivity of said resistor due to the presence or absence of said flame, and a plurality of resistance circuits adapted to be established alternately by operation of said controller and including said control means and said ballast resistor, said resistance circuits having different resistance values for varying the current values to said control means, said means being movable to one position upon establishment of one said resistance circuit for impressing a predetermined current value thereon and maintained in said position upon establishment of another said circuit for impressing a different current value thereon, said resistor being adapted by said variations in resistivity thereof for cooperating with said resistance circuits to determine whether said control means is moved and maintained in said position.

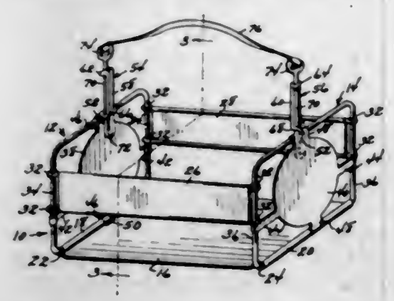


2,406,753
SOLE PRESSING MACHINE
Charles F. Fitzgerald, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application May 7, 1945, Serial No. 592,294
2 Claims. (Cl. 12—38)

1. A machine for pressing a sole against the bottom of a shoe, said machine having, in combination, a pressure-box one wall of which comprises a flexible diaphragm including an inner layer one face of which is exposed to the interior of the pressure-box and an outer layer extending over the inner layer and having one face exposed to the atmosphere, and means for expelling air from between the layers prior to using the machine for pressing soles, said means including an expeller which may be located upon the outer layer of the diaphragm in place of a shoe, a one-way valve in said outer layer constructed and arranged to permit air to flow from the space between the layers and to prevent air from returning to said space, and means for causing the diaphragm and the expeller to be pressed together to expel air through the valve.

2,406,754
BRAKE
Joseph A. Forbes, Detroit, Mich., assignor to Kelsey-Hayes Wheel Company, Detroit, Mich., a corporation of Delaware
Application July 26, 1943, Serial No. 496,192
6 Claims. (Cl. 188—78)

1. A brake comprising a brake drum, an expansible device having separable normally leading and trailing ends, internal brake members movable relative to said device and also movable by said device against said drum, an internal brake member other than said first mentioned members bridging said ends, said bridging member being movable by said device against said



drum and being operatively connected to said device at said normally leading end to transmit its torque when against said drum to said device at said normally leading end, and anchor means for said device and certain of said first mentioned members.

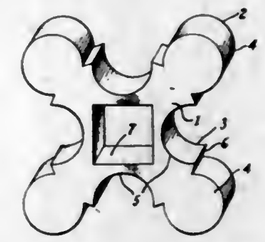
2,406,755
MODIFIED CELLULOSE ESTER FIBERS
Robert E. Fothergill, Julian W. Hill, and Alfred A. Johnson, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application October 6, 1943, Serial No. 505,216
17 Claims. (Cl. 18—47.5)

1. A process which comprises spinning fibers from an organic solvent solution comprising essentially an organic acid ester of cellulose, from 5 to 20 parts by weight of a low molecular weight partial ester of a polysilicic acid and a monohydric aliphatic alcohol having from one to six carbon atoms, per 100 parts of the cellulose ester, and from 0.01 to 0.015% by weight of a mineral acid, and heat treating the fibers for a period of time sufficient to render the same substantially insoluble in tetrachloroethane.

2,406,756
BEVERAGE BOTTLE CARRIER
Martin Fox, Dansville, N. Y.
Application August 1, 1945, Serial No. 608,240
2 Claims. (Cl. 224—48)

1. A device of the character described, comprising wire end frames substantially square shaped with rounded corners, a sheet metal bottom having its opposite ends rolled backward upon themselves in order to be attached to the bases of said frames, sheet metal sides having their opposite longitudinal edges rolled back upon themselves in order to be secured to longitudinally extending wire members, the ends of which are looped in order to be slidably mounted on the sides of said frames, loops formed in the tops of said frames for supporting handle attaching means and a curved metal strap handle attached to said means.

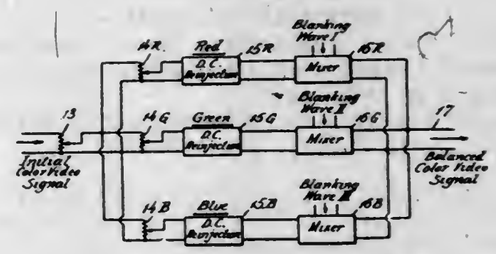
2,406,757
SET STABILIZED PLASTER
Harry F. Gardner, Highland Park, Ill., assignor to Certain-teed Products Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application October 23, 1942, Serial No. 463,068
5 Claims. (Cl. 106—89)



1. Calcined gypsum plaster comprising as a dry mixture for gauging with water calcined gypsum capable of setting with water and in predominant amount, Portland cement, raw gypsum and commercial retarder, the amount of the Portland cement being not substantially less than the amount of the raw gypsum.

2,406,758
CONTAINER MADE OF PAPER AND METHOD OF MAKING THE SAME
Marshall E. Gazette, Boston, Mass., assignor, by mesne assignments, to Continental Can Company, Inc., New York, N. Y., a corporation of New York
Application August 7, 1942, Serial No. 453,918
2 Claims. (Cl. 229—4.5)

1. A fiber container comprising a tubular inner fiber body, a liner within said fiber body covering the entire inner face thereof and extending outwardly over the ends of the inner body, a closure disk for each end of said container body, said closure disks being dimensioned so as to overlie the ends of the inner fiber body, a liner associated with each closure disk and extending throughout the entire inner face of the disk to the peripheral edge thereof and contacting with the body liner, an outer tubular body having telescoping engagement with the inner body and projecting beyond the closure disk, the ends of said outer body being rolled inwardly into contact with the outer face of the peripheral portions of the respective closure disks for forcing said disks into contact with the liners overlying the ends of the inner tubular body for sealing the container.

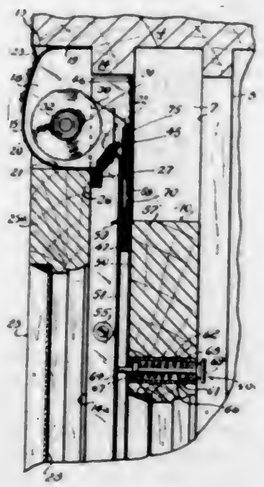


2,406,759
CONSTRUCTION TOY
Bernard Raphael Glukes, Los Angeles, Calif., assignor to The Kinney Company, Los Angeles, Calif., a corporation of California
Application July 31, 1945, Serial No. 608,068
4 Claims. (Cl. 46—25)

1. In a construction toy, a plurality of identical pieces adapted to be assembled together, each of said pieces comprising a block of material having parallel front and rear faces and a peripheral edge formed along a geometrical pattern which includes a plurality of sides, each side having a substantially circular projection and a substantially circular recess of equal diameters, each of said recesses defining an arc of a circle

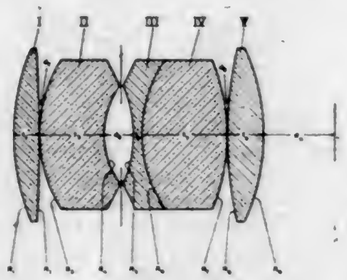
slightly in excess of 180° and each of said projections defining an arc of a circle considerably in excess of 180° whereby assembly of the two pieces together by insertion of one piece into the recess of another piece will permit substantial relative rotary movement between the two pieces while holding the pieces interlocked with each other.

2,406,760
COLOR TELEVISION
Peter C. Goldmark, New York, N. Y., assignor to Columbia Broadcasting System, Inc., New York, N. Y., a corporation of New York
Application September 17, 1940, Serial No. 357,082
46 Claims. (Cl. 178—5.2)

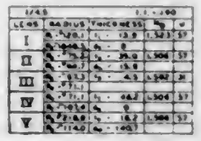


1. In a color television system utilizing an initially produced sequential composite multi-color video signal of which successive portions represent different component colors of the plurality of colors of an image field, the method of changing the color balance of said color video signal which comprises separating therefrom signal portions representing at least one selected color component of said image field, altering the relative magnitudes of the separated portions and those other remaining component portions of the initial color video signal, and recombining the separated and the remaining portions after said altering to obtain a sequential composite multi-color video signal having a desired color balance differing from that of said initially produced signal but otherwise substantially corresponding thereto.

2,406,761
INSECT EXCLUDING MEANS FOR SLIDING WINDOWS
Floyd F. Golkowski, Cleveland, Ohio
Application November 3, 1944, Serial No. 561,682
4 Claims. (Cl. 160—290)



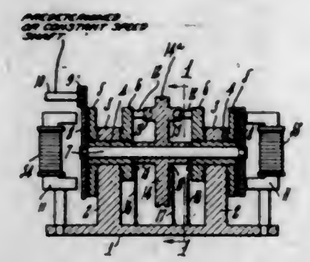
2. The improvement in a sliding window sash, sash frame and spring-roller-supported screen assembly of the type in which the sash carries



manipulatable means for selective engagement and disengagement with a free edge portion of the screen, comprising the employment of a spring actuated latching means mounted in a portion of the sash frame near one horizontal edge of the frame for movement transversely to the

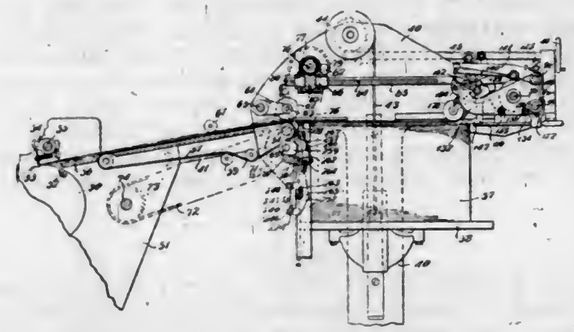
principal plane of the sash frame, a screen reinforcing bar on such free edge portion of the screen, said bar incorporating a cooperating latch means, and one of said latch means having a cam surface oblique to said plane for causing retraction of the first mentioned latching means as part of the latching operation.

2,406,762
OPTICAL SYSTEM
David S. Grey, Cambridge, Mass., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application June 19, 1943, Serial No. 491,493
14 Claims. (Cl. 88—57)



1. A method of forming an athermalized lens system, comprising, providing a lens element of material negligibly subject to thermal effects and having a predetermined index of refraction, dispersion and a power which is related to the power of the system as a whole, optically correcting said element negligibly subject to thermal effects for at least one aberration with a plurality of components appreciably subject to thermal effects each selected to have approximately equal thermal nu values and a predetermined index of refraction, dispersion and a power related to the power of the system as a whole, and arranging said components appreciably subject to thermal effects and said element negligibly subject to thermal effects in axial alignment at spacings which satisfy the condition that the sum of the convergence factors of said components appreciably subject to thermal effects approximately equals zero while the convergence factor for said element negligibly subject to thermal effect approximates the power of the system.

2,406,763
PURIFICATION OF OIL-SOLUBLE SULPHONATES
William K. Griesinger, Drexel Hill, Pa., assignor to The Atlantic Refining Company, Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Application September 29, 1944, Serial No. 556,473
11 Claims. (Cl. 260—504)



1. The method of purifying oil-soluble petroleum sulphonates containing inorganic salts and water, which comprises contacting said sulphonates with from 2 to 6 volumes of low viscosity hydrocarbon solvent which dissolves the sulphonates but not the salts and with 0.02 to 0.1 volume of a lower aliphatic alcohol, and separating the resulting solution of purified sulphonates from the inorganic salts and water.

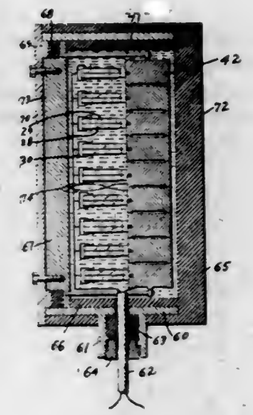
2,406,764
AUTOMATIC GRAPH DRAWING RECORDER
Victor Guillemin, Jr., Dayton, Ohio
Application June 20, 1942, Serial No. 447,840
9 Claims. (Cl. 234—71)

5. A graph drawing machine comprising means for supporting and moving a record receiving member, a marking element movable transverse to the direction of motion of said record receiving member, yielding means tending to hold said element at one limit of motion and tending to return said element to said limit on displacement therefrom, a rotary shaft, a pair of driven rock members, means for slowly rotating said shaft at a uniform speed, yielding means tending to hold each of said rock members in a retracted angular position, means for selectively coupling one of said rock members to said shaft for rotation by said shaft while releasing the other of said members from said shaft, a third rock member, operative connections from said third rock member to said marking element for moving said marking element away from said one limit of motion on turning of said third rock member away from a normal angular position, and a lug on each of said driven rock members positioned to engage a corresponding lug on said third rock member and to turn said third rock member away from its normal angular position and move said element away from said limit on motion of either of said driven rock members away from its retracted angular position, and means actuated by the events to be graphed for actuating said coupling means to couple said driven rock members alternately to said shaft.

2,406,765
SHEET FEEDER
Charles W. Harrold, University Heights, Ohio, assignor to Harris-Seybold Company, a corporation of Delaware
Application June 10, 1942, Serial No. 446,477
43 Claims. (Cl. 271—28)

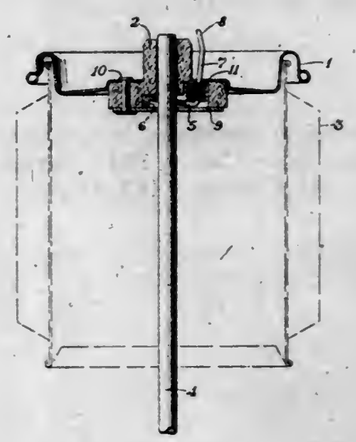
1. The method of separating sheets from a supply and advancing them to forwarding means, which comprises gripping the uppermost sheet near its rear edge, raising and forwarding the gripper in an epicycloidal path, swinging the gripper forwardly and downwardly in a circular arc to advance the sheet, releasing the sheet, and returning the gripper to a position above the rear portion of the next sheet.

5. In mechanism of the character described, an oscillatable gear sector, a sucker, a shaft upon which said sucker is mounted, an arm oscillatable through a given angle about the center of said sector, said shaft being mounted in the free end of said arm, a gear on said shaft rigid with said sucker, said gear being operatively connected with said gear sector, and means for oscillating said sector back and forth while said arm remains stationary at one end of its arc of movement.



2,406,766
SHEET FEEDER
Charles W. Harrold, Cleveland, Ohio, assignor to Harris-Seybold Company, a corporation of Delaware
Application May 5, 1944, Serial No. 534,264
24 Claims. (Cl. 271—27)

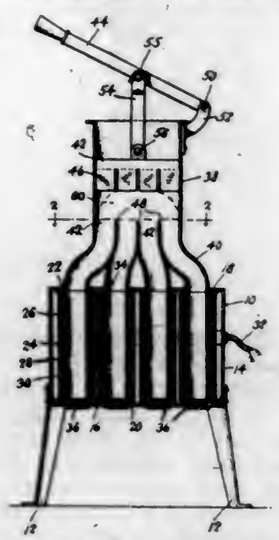
1. The method of separating sheets from the top of a supply comprising gripping the topmost sheet by suction near an edge thereof, forming localized corrugations perpendicular to the edge portion of the sheet in the region of said gripped portion, and moving the gripped portion to form a curved contour in the sheet extending in a direction parallel to said edge.



2,406,767
DIRECTIVE TRANSCEIVER FOR SOUND
Harvey C. Hayes, Washington, D. C.
Application October 22, 1932, Serial No. 639,129
10 Claims. (Cl. 177—386)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

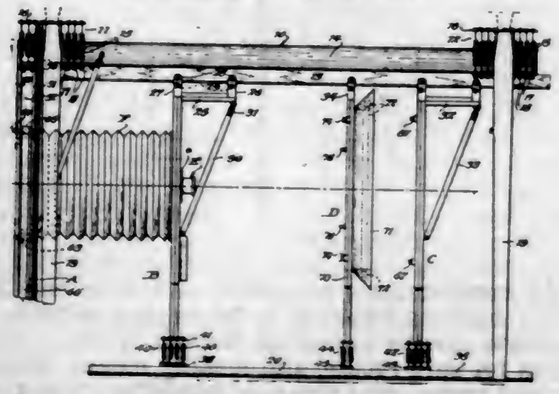
1. A high frequency sound device, comprising a rubber compound casing member having a disk portion and two spaced concentric cylindrical portions extending laterally therefrom, the disk portion being adapted to radiate or receive sound energy and the inner of said cylindrical portions being shorter than the outer one, a cylindrical metal member disposed between said cylindrical portions and extending to the edge of the outer cylindrical portion, a metal disk seated on the edge of the inner of said cylindrical portions, said disk having a rabbet in its edge on its outer face, a flexible rubber ring seated in said rabbet,

a second metal disk seated against the edges of said outer cylindrical portion and said metal member and having an annular rib seated on said rubber ring to compress said ring, said second disk being connected to the first mentioned disk and spaced therefrom, supporting members extending from the first mentioned disk, means to impart vibration to said disc portion carried by said supporting members, and an electrically insulating fluid filling all otherwise unoccupied space in said casing member.



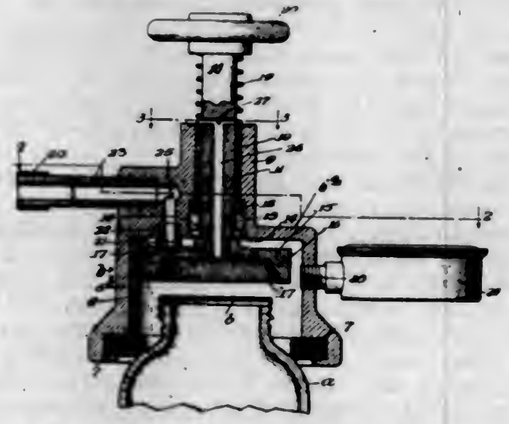
2,406,768
YARN TWISTING APPARATUS
Otha A. Hitt, Chesterfield County, Va., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application July 10, 1945, Serial No. 604,135
1 Claim. (Cl. 57—59)

In combination, a spindle, a bobbin cap having a bushing adapted to fit on said spindle, the bushing having a central bottom recess, a cover plate for said recess, and locking means disposed in said recess, said means comprising an annulus-shaped locking plate resting on said cover plate concentrically disposed with respect to the cap



the inner diameter of said plate being slightly greater than the diameter of the spindle, a downwardly projecting lug at one edge of said locking plate causing said plate to rest in a canted position, a lever positioned diametrically opposite said lug rigidly attached at the edge of said locking plate and extending upwardly through said bushing and cap for manually moving said locking plate, and spring means between the locking plate and cap adjacent said lever for maintaining said locking plate in canted position.

2,406,769
COMBINATION COOKER AND RICER
David Fay Hosman, Omaha, Nebr.
Application August 15, 1944, Serial No. 549,612
8 Claims. (Cl. 99—353)

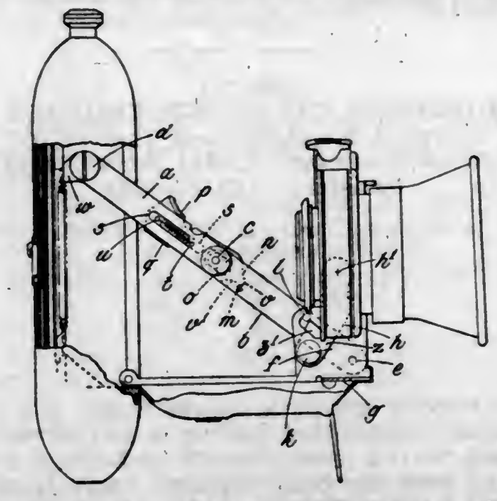


1. A machine of the character set forth, comprising a shell, cooking chambers extending vertically through the shell and having their upper ends formed to provide shoulders, means for heating the cooking chambers, a hopper located above the shell, conduits extending from the lower end of the hopper to the upper end of the cooking chambers and having their lower ends resting on the shoulders of said chambers, the upper ends of the conduits being formed to provide knives, and means for forcing the material from the hopper into contact with the knives into the conduits and through the heating chambers.

2,406,770
CAMERA
William C. Huebner, New York, N. Y.
Application December 6, 1943, Serial No. 513,012
11 Claims. (Cl. 88—24)

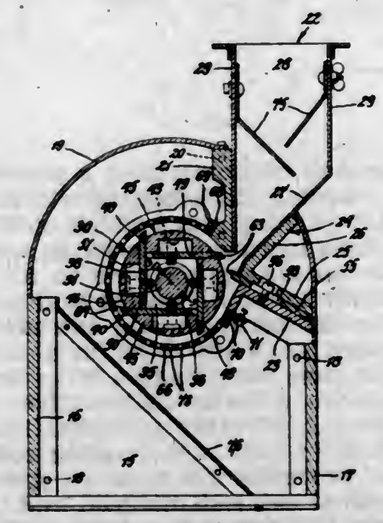
1. In a camera of the character described, comprising a carrier supporting a sensitized plate, and a copy carrier, and a lens carrier with a lens disposed approximately vertically and in planes parallel with that of the sensitized plate, the improvement which comprises an overhead rigid monorail extending lengthwise approximately parallel with and in the vertical plane of the axis of the lens from which rail said carriers are suspended and on which said lens and copy carriers are adjustable along the rail, supports disposed at spaced points lengthwise of said monorail by which said rail is resiliently supported, independent tension means for each of said adjustable carriers, and means with which said tension means cooperates in any adjustment of said carrier to exert a resilient downward tension on the carrier in its various adjustments.

2,406,771
DEVICE FOR VACUUM SEALING CONTAINERS
Edward B. Hughes, Evansville, Ind., assignor to Bernardin Bottle Cap Co., Inc., Evansville, Ind., a corporation of Indiana
Application August 19, 1944, Serial No. 550,177
5 Claims. (Cl. 226—82)



1. In a device for sealing a screw-cap container having a reduced threaded neck and a shoulder beneath the neck, the combination of a portable inverted cup-shaped housing provided with a chamber adapted to receive the neck with a cap thereon, and means for sealing the housing on the shoulder, a chuck in said chamber for gripping, for rotation, a screw-cap on the container while said chamber is under vacuum, a stem on the chuck extending upwardly through and slidable and rotatable in the top of the housing, a handle on the stem whereby the chuck may be slidably shifted and rotated, a vacuum duct in the housing for vacuumizing said chamber and container, a nipple at the terminal of the vacuum duct at said chamber, an elastic seat on said nipple and engageable by the raised chuck for cutting off vacuum from said chamber, spring-means for pressing the chuck into raised position, and a duct in the stem communicatively connected to said chamber and to atmosphere and positioned to be closed by the housing when the chuck is depressed to vacuumize said chamber.

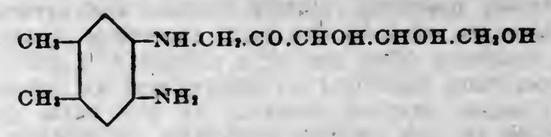
2,406,772
FOLDING PHOTOGRAPHIC CAMERA
Douglas Gordon Hunter, London, England, assignor to Barnet Ensign Limited
Application January 11, 1944, Serial No. 517,771
In Great Britain January 25, 1943
3 Claims. (Cl. 95—40)



1. A folding photographic camera, comprising a camera body, a front baseboard hinged thereto and a pair of folding struts each comprising

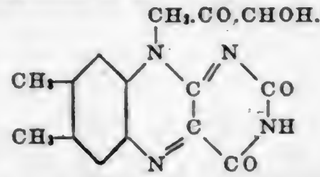
a pair of links pivotally connected together and pivoted at their outer ends respectively to said camera body and to said front baseboard, one of said links being formed with a lateral projection in the vicinity of the pivoted joint, and a catch resiliently mounted on the other of said links and movable lengthwise thereof, said catch being formed with a nose having on one side a cam profile substantially inclined to the line of movement of said catch so as to engage and resiliently to yield under the pressure of said projection when said links are relatively turned in the

direction so as to straighten the same until said links are in straightened position when the nose of said catch passes over said projection and having on the opposite side a profile with an inclination to the line of movement of said catch substantially less than said inclination thereto of said cam profile so as to positively lock the said catch and projection when the nose of said catch is over said projection, and said catch being shaped to form a thumb piece enabling the catch to be drawn away from said projection on the other link.



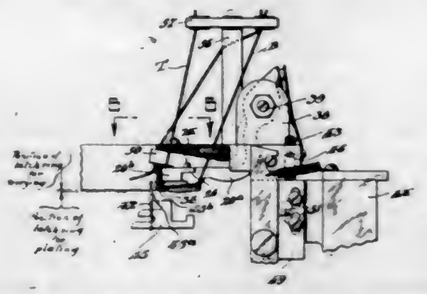
2,406,773
CEREAL CUTTER
Fred C. Ielfield, Silver Creek, N. Y., assignor to Silver Creek Precision Corporation, Silver Creek, N. Y., a corporation of New York
Application October 7, 1944, Serial No. 557,627
1 Claim. (Cl. 146—71.5)

A substantially cylindrical, relatively light weight, skeleton-like rotary cutter head for a cereal cutter, comprising a central shaft, a plurality of similarly shaped heads secured to said shaft at spaced intervals and being polygonal in cross section to provide flat faces which join at an angle to each other, said faces being arranged in common planes, flat cutter blades directly engaging said faces and having cutting edges projecting outwardly from the corresponding angles formed by said faces, a single backing plate for each of said flat cutter blades and each having a flat face engaging the outer face of the corresponding cutter blade along a continuous longitudinal portion of the outer face of the cutter blade immediately adjacent the outwardly projecting cutting edge thereof, and each backing plate also having an opposite curved face meeting said flat face in a feather edge at one side of said backing plate and providing with the curved faces of the other backing plates a substantially cylindrical and continuous periphery for the rotary cuttery with the cutting edges of said blades projecting outwardly from said periphery and each backing plate also having a second flat face opposite said feather edge and arranged at an angle to said first flat face which is complementary to the angles formed by said polygonal flat faces and directly engaging the inner face of the succeeding cutter blade along a continuous longitudinal portion of the inner face of the said succeeding cutter blade immediately adjacent the outwardly projecting cutting edge thereof to form a backing support therefor, said backing plate being also interiorly hollowed out, and means securing each of said backing plates and the corresponding cutter blade to the corresponding face of each of said heads.



2,406,774
SYNTHESIS OF RIBOFLAVIN AND INTERMEDIATES THEREFOR
Jonas Kamlet, New York, N. Y., assignor to Miles Laboratories, Inc., Elkhart, Ind., a corporation of Indiana
No Drawing. Application June 28, 1943, Serial No. 492,622
13 Claims. (Cl. 260—211)

1. In the process of making riboflavin the steps of reacting d-arabinose with 3,4-dimethylaniline and thereby forming the compound 3,4-dimethylphenyl-d-isoarabinosamine, reacting the latter compound with a salt of a diazotized arylamine and thereby forming the compound 3,4-dimethyl, 6-arylazophenyl-d-isoarabinosamine, and reducing the latter compound by the action of a reducing agent selected from the group consisting of alkali metal hydrosulfites in neutral solution and in alkaline solution and nascent hydrogen in acid solution thereby forming 3,4-dimethyl, 6-aminophenyl-d-isoarabinosamine of the formula:



2. In the process of making riboflavin the steps of reacting d-arabinose with 3,4-dimethylaniline and thereby forming the compound 3,4-dimethylphenyl-d-isoarabinosamine, reacting the latter compound with a salt of a diazotized arylamine and thereby forming the compound 3,4-dimethyl, 6-arylazophenyl-d-isoarabinosamine, reducing the latter compound by the action of a reducing agent selected from the group consisting of alkali metal hydrosulfites in neutral solution and in alkaline solution and nascent hydrogen in acid solution thereby forming the compound 3,4-dimethyl, 6-aminophenyl-d-isoarabinosamine, and condensing the latter compound with alloxan

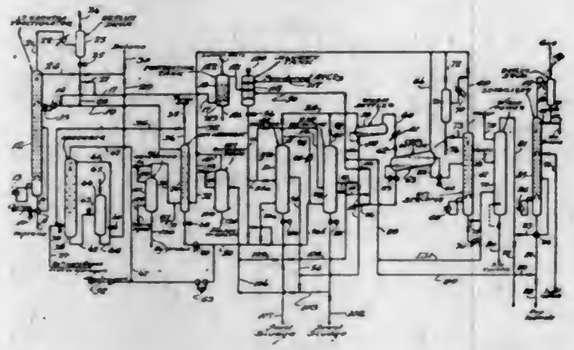
thereby forming 6,7-dimethyl, 9-(d-1'-isoarabityl) isoalloxazine of the formula:

3. A process for the synthesis of riboflavin which comprises submitting 3,4-dimethylaniline and d-arabinose to an Amadori rearrangement, coupling the resultant 3,4-dimethylphenyl-d-isoarabinosamine with a diazonium salt of a diazotized aromatic amine to form the corresponding 3,4-dimethyl, 6-arylazophenyl-d-isoarabinosamine, reducing the latter by the action of a reducing agent selected from the group consisting of alkali metal hydrosulfites in neutral solution and an alkaline solution and nascent hydrogen in acid solution to form 3,4-dimethyl, 6-aminophenyl-d-isoarabinosamine, condensing the latter with alloxan in acid solution to form 6,7-dimethyl, 9-(d-1'-isoaribityl) isoalloxazine, reducing the latter in alkaline solution to the leuco form of riboflavin by the action of hydrogen acting in the presence of a hydrogenation catalyst, and oxidizing said leuco form to riboflavin.

2,406,775
YARN FEED MEANS
Ezekiel Killian, Reading, Pa., assignor, by direct and mesne assignments, of one-fourth to E. Louis Kotzen, one-fourth to Samuel R. Kotzen, one-fourth to Myer E. Kotzen, all of Reading, Pa., and one-fourth to Howard C. Mohn Hosiery Co. Inc., Reading, Pa., a corporation of Pennsylvania
Application October 20, 1944, Serial No. 559,527
18 Claims. (Cl. 66—125)

1. In a machine of the character described yarn feeding means comprising, a yarn feeding finger provided with a yarn guiding tip element associated with the body of the finger so as to be freely movable relative thereto and arranged to feed its yarn to the yarn receiving means of the machine from one of a plurality of different cooperating positions as determined by the pulling action exerted thereon by the yarn when moving in one feeding direction or another.

2,406,776
CATALYTIC ALKYLATION PROCESS
James B. Kirkpatrick, Woodbury, N. J., John J. Somers, Philadelphia, Pa., and Alexander N. Sachanen, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application October 28, 1943, Serial No. 508,062
19 Claims. (Cl. 260—683.4)

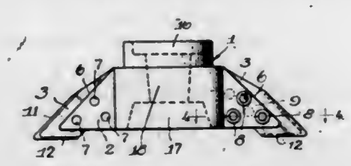


18. In a process of alkylating a paraffinic hydrocarbon with an olefinic hydrocarbon in a reaction zone under alkylating conditions and in the presence of catalytic material; the improvement which comprises contacting said paraffinic hydrocarbon and said olefinic hydrocarbon in gaseous phase and in said reaction zone under alkylating conditions, with an alkylation catalyst consisting essentially of an organic nitro compound which forms with said paraffinic hydrocarbon and said olefinic hydrocarbon, a single, homogeneous gaseous phase under said alkylating conditions, and controlling the concentration of the olefinic reactant so that alkylation is the principal reaction.

2,406,777
BIRTHDAY CAKE CANDLEHOLDER
Murry H. Koretzky, New York, N. Y.
Application November 27, 1943, Serial No. 511,947
4 Claims. (Cl. 67—23)

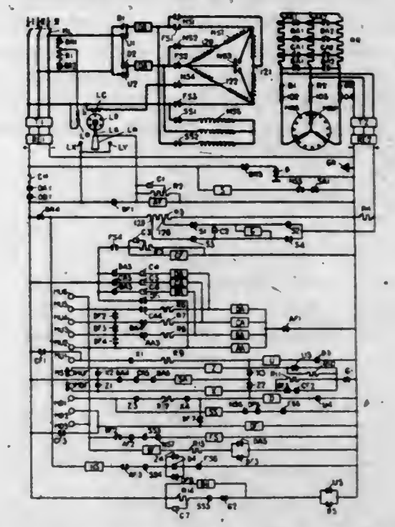
2. A molded one-piece candle holder of a thermoplastic composition having a flaring saucer-like body with a central candle socket and a stem integral with the body tapering away from the body to a point at its lower end.

2,406,778
SLURRYING ALUMINUM CHLORIDE FOR HYDROCARBON CONVERSION PROCESSES
Willard E. Kruse, Chicago, Ill., Cecil W. Nysewander, Highland, Ind., and John A. Bolt, Chicago, Ill., assignors to Standard Oil Company, Chicago, Ill., a corporation of Indiana
Application December 15, 1941, Serial No. 422,981
2 Claims. (Cl. 260—683.5)



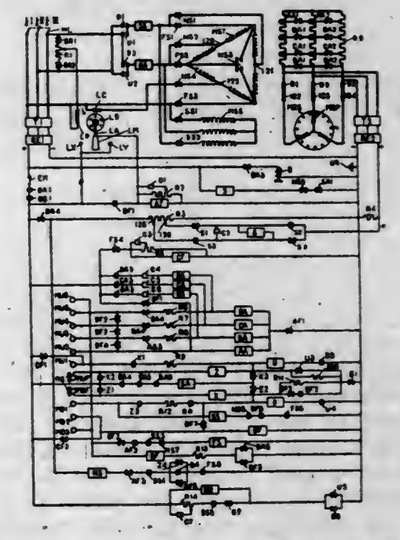
1. The method of isomerizing a paraffinic hydrocarbon charging stock boiling within the butane to hexane boiling range which method comprises absorbing hydrogen chloride in said charging stock in an absorption zone to form a hydrogen chloride solution, heating said solution to isomerization temperature and introducing the heated solution at a low level in a continuous isomerization zone containing a large amount of liquid aluminum chloride-hydrocarbon complex catalyst material, effecting isomerization of said charging stock in said isomerization zone, withdrawing an isomerization product stream containing dissolved catalyst material and hydrogen chloride from the top of the isomerization zone to a settling zone, removing catalyst material from said stream in said settling zone, introducing the stream which still contains hydrogen chloride from said settling zone to a stripping zone, stripping hydrogen chloride from said stream in said stripping zone, returning hydrogen chloride containing gases from the top of the stripping zone to the absorption zone, venting unabsorbed gases from the top of the absorption zone, making up an aluminum chloride slurry of finely divided solid aluminum chloride particles in a portion of the stream after hydrogen chloride has been stripped therefrom and introducing said aluminum chloride slurry into said isomerization zone for maintaining the activity of the liquid aluminum chloride-hydrocarbon complex material contained therein.

2,406,779
FLAME RESISTANT AND WATER REPELLENT FABRICS AND METHOD OF MAKING THE SAME
John L. Kurlychek, Orange, N. J., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application December 30, 1942, Serial No. 470,668
4 Claims. (Cl. 117—65)



1. The method of treating a fabric that is formed predominately of asbestos fibers but contains some inflammable fibers, without changing appreciably its appearance, softness, or weight; which consists in precipitating on the fibers a flame-resistant water-insoluble inorganic oxide, depositing on the fibers over the oxide a compatible water-repellent zinc soap of cocoanut oil acids, and heating the fabric sufficiently to melt or fuse the deposited soap so as to fix this soap and the oxide upon the fibers and render the fabric non-flame supporting and water-repellent in such a way that the treated fabric is pervious to the air and the soap thereupon will not generate obnoxious fumes when exposed to relatively high temperatures.

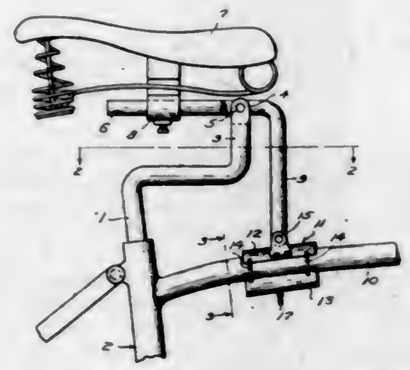
2,406,780
PROFILING MILLING CUTTER
Alois Kutscha, Chicago, Ill.
Application April 22, 1943, Serial No. 484,016
5 Claims. (Cl. 29—105)



1. A cutting tool for a milling machine comprising a cutter head having a plurality of outwardly extending projections, one side of each projection being recessed for the reception of a cutting bit and provided with a shoulder, a cutting bit mounted within the recess and having substantially the shape of a right-angle triangle with the base and hypotenuse provided with cutting edges and the other side seating against the shoulder, a plate for anchoring and retaining the cutting bit within the recess and projection, spaced locking bolts carried by the plate and received in spaced aligned openings in the cutting bit and projection, and other openings provided in the cutting bit to be aligned with and receive certain of the locking bolts for permitting the bit to be adjusted to another position when the initial cutting surfaces thereof become worn, one of the locking bolts providing an abutment against which the rear of the bit seats when in the latter adjusted position.

2,406,781
ELECTRIC MOTOR AND CONTROL SYSTEM FOR MOTORS
Jacob Daniel Lewis, Yonkers, N. Y., assignor to Otis Elevator Company, New York, N. Y., a corporation of New Jersey
Application November 27, 1943, Serial No. 512,023
8 Claims. (Cl. 172—274)

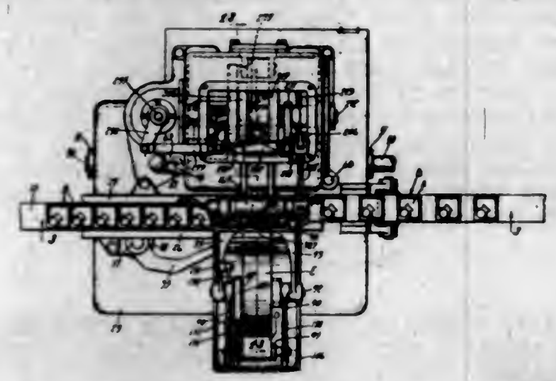
4. A control system for a three-phase induction motor comprising, a source of three-phase alternating current for said induction motor, means for connecting said induction motor to said source, an impedance connected across two of the supply lines from said source to said induction motor, a two-phase torque motor having one exciting winding in series with the other of said supply lines and the other exciting winding connected across said other supply line and a point on said impedance, and circuit controlling means operable by the rotor of said torque motor for controlling the operation of said induction motor.



2,406,782
MOTOR CONTROL SYSTEM
Jacob Daniel Lewis, Yonkers, N. Y., assignor to Otis Elevator Company, New York, N. Y., a corporation of New Jersey
Original application November 27, 1943, Serial No. 512,023. Divided and this application December 7, 1944, Serial No. 567,085
3 Claims. (Cl. 172—274)

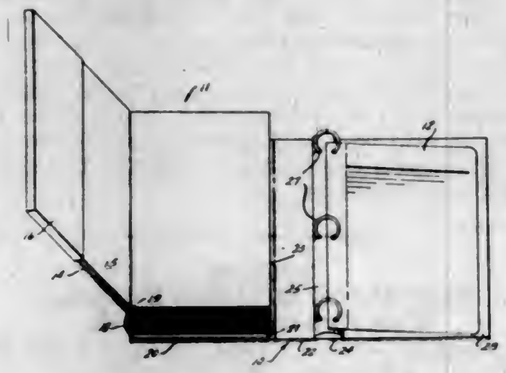
1. A control system for a polyphase induction motor having a wound rotor comprising, a source

of polyphase alternating current for said motor, a polyphase rectifier for deriving direct current from said source, a second polyphase rectifier for deriving direct current from said rotor and connected in series with the first named rectifier so that the direct current voltages thereof are in opposition, potentiometer resistance having a portion thereof connected across the first named rectifier and the remaining portion connected across the second rectifier, an electromagnetic switch having a single coil, and means connecting said coil across such portion of said potentiometer resistance that the voltage applied thereto is substantially zero with the motor connected to said source and at standstill.



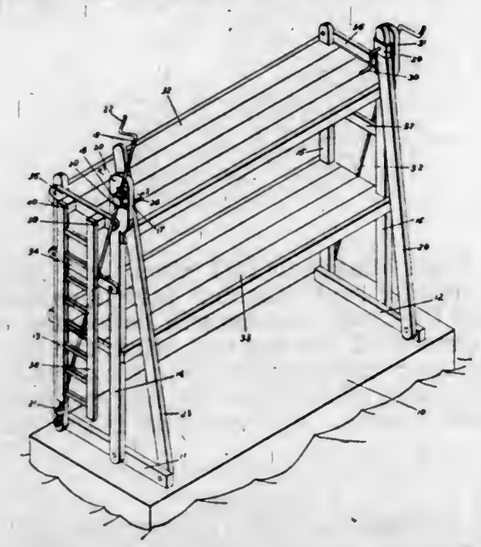
2,406,783
BICYCLE SEAT
George Lively, Pueblo, Colo.
Application June 19, 1944, Serial No. 540,910
2 Claims. (Cl. 155—5.20)

1. In a bicycle comprising a frame including a substantially horizontal bar, a post mounted on the frame and including a forwardly offset upper end portion, an angular lever pivotally mounted at an intermediate point for vertical swinging movement on said upper end portion of the post, a seat adjustably mounted on one end portion of the lever, the other end portion of said lever terminating adjacent said bar, a saddle pivotally mounted on said other end portion of the lever and engaged on top of the bar, a saddle suspended from the first-named saddle in spaced relation below the bar, and an inflated cushion mounted in the second-named saddle and engaged beneath the bar.



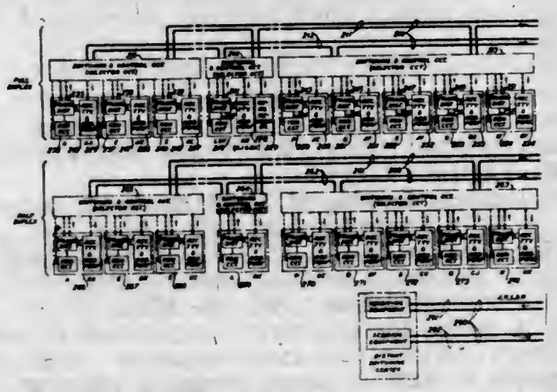
2,406,784
OVERCAP APPLYING MACHINE
August E. Almgren, Hillside, N. J., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Application March 19, 1942, Serial No. 435,394
5 Claims. (Cl. 164—48)

1. In a machine for applying protective overcaps to moving containers, said machine including an overcap applying head, a pair of swing arms located adjacent said head and means for effecting relative movement between the containers and said head for applying an overcap to a said container: the combination of gripper fingers mounted on said swing arms for pulling a continuous web of overcap material to measure off a predetermined length of the web, cutting devices disposed adjacent the path of travel of said web for severing the gripped measured-off portion of the web from the remainder of the web to produce an individual overcap, and actuating means cooperatively associated with said swing arms, said actuating means operating to shift the arms to first measure off the overcap



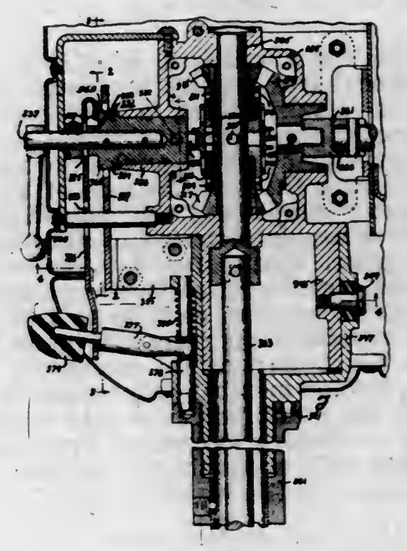
and thereafter to locate the held cut-off overcap in position between the container and the applying head.

2,406,785
BINDER FOR CONTAINING A TEXTBOOK AND NOTE SHEETS
Norman R. Atwood, St. Johnsbury, Vt.
Application January 8, 1945, Serial No. 571,894
2 Claims. (Cl. 281—17)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



2. A binder for carrying a textbook and note sheets therein, comprising a front cover section of proper size to engage and overlie the front cover of a book and including holding means thereon to provide a pocket between said means and said section for receiving and embracing part of said front cover, thus adapting this binder for books of different sizes, an edge section extending from said front section for covering the bound edge part of the book, a back section on said edge section for engaging and covering the back cover of the book, another edge section which is larger than the first said edge section to cover the open edge part of the book and to provide a strip which extends above said book, a binder secured on said strip and including snap-rings for removably holding loose leaf sheets therein adapted to be superposed on said book, and a substantially rigid panel section extending from said strip, constituting an outer front cover for the binder and which, when in its open position, provides a table means for the note sheets to lie upon while taking down the notes, whereby the book can be retained open at the subject under discussion at the same time that the notes on said subject are being written on said sheets, and the sheets can also be placed between the pages of the book to mark a subject therein and the binder then be closed therewith.

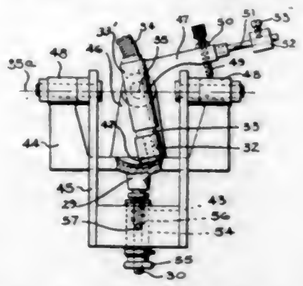
2,406,786
ADJUSTABLE STAGING
Olav Aukland, New York, N. Y.
Application August 6, 1945, Serial No. 609,309
1 Claim. (Cl. 304—2)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



A base adapted to float upon a liquid surface, a vertically disposed supporting structure secured to said base, multiple horizontal platforms secured at spaced intervals along said supporting structure, multiple braces pivotally secured at an angle to said base and slidably secured to said vertically disposed structure, said braces serving to buttress said vertically disposed supporting structure, turn-buckles pivotally secured to said base along the sides of said supporting structure, rotatable rods disposed diagonally along said vertically disposed framework and engaging said turn-buckles, the turning of said rotatable rods changing the inclination of said vertically disposed supporting framework, means to rigidly hold said rotatable diagonally disposed rods to said vertically disposed structure, and locking means to secure said framework after the required angle of inclination has been obtained.

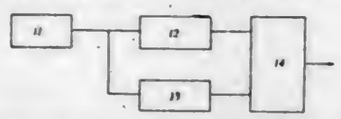
2,406,787
TELEGRAPH SYSTEM
Walter M. Bacon, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application April 7, 1943, Serial No. 482,075
8 Claims. (Cl. 178—3)

1. A teletypewriter system in which messages are directed to their destinations by address codes associated with each message comprising one outgoing line, switching apparatus at a central office, a plurality of sets of one or more storage transmitters individual to said line, means controlled by address codes for directing preferred messages through said switching apparatus to one of said sets of transmitters, and other means whereby such transmitters transmit all messages in their storage over said line prior to transmission of messages from other transmitters individual to said line.



2,406,788
CLOTHES WRINGER
Anthony P. Barcus, Dayton, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Application October 31, 1942, Serial No. 464,047
6 Claims. (Cl. 68—255)

1. A wringer including a frame, rolls mounted in the frame, a bevel gear driving mechanism for the rolls having an operative position for operating the rolls and an inoperative position for rendering the rolls inoperative, said drive mechanism including a substantially vertical drive shaft, a pivotal support for said frame including a pivotal connection providing a substantially vertical pivot eccentric to said drive shaft having its axis located substantially in alignment with a point of contact of the bevel gears of the driving mechanism for pivotally mounting the entire frame and the driving mechanism, and means responsive to the pivoting of said frame and driving mechanism upon said eccentric vertical pivot for moving the driving mechanism from operative to inoperative position.



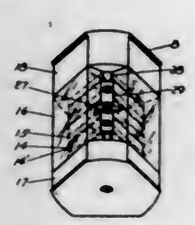
6. A swinging wringer having a frame, rolls mounted in the frame, a gear case connected to the frame containing reversing gearing for driving the rolls, a control device including a rotatable operating shaft parallel to the axes of the rolls protruding from the side of said gear case, a swing lock including a swing lock releasing member, a handle on said shaft for normally operating said control device, to forward, reverse and neutral positions, and means located at the side of said gear case operatively connecting said releasing member and said protruding portion of said shaft for rotating said shaft to the neutral position upon operation of the releasing member.

2,406,789
ABRADING MACHINE
Ralph F. Bardwell, Southbridge, and John H. Smith, Taunton, Mass., assignors to American Optical Company, Southbridge, Mass., a voluntary association of Massachusetts
Original application October 11, 1939, Serial No. 299,006, now Patent No. 2,310,925, dated February 16, 1943. Divided and this application January 4, 1943, Serial No. 471,249
7 Claims. (Cl. 51—124)

7. A device for grinding a blank for a one-piece multifocal lens having a pivoted member supporting a blank holder, a tool supporting member pivoted for tilting movement about an axis substantially at right angles to and substantially passing through the axis of the pivot of the member supporting the blank holder, a tool spindle rotatably mounted in said tool supporting member, means for rotating the tool while retaining said tool supporting member in a given angular position relative to the pivotal axis of said member supporting said blank holder, and means for imparting an oscillatory movement to the pivoted member supporting the blank holder while the blank holder is held against rotation, said oscillatory movement being along a single arcuate path about the pivotal axis of said member supporting the blank holder.

2,406,790
SYSTEM FOR THE ELECTRIC TRANSMISSION OF SOUND AND OTHER WAVES
William Arnold Beatty and Leslie Wilfred Houghton, London, England, assignors to International Standard Electric Corporation, New York, N. Y.
Application January 16, 1941, Serial No. 374,660
In Great Britain January 16, 1940
10 Claims. (Cl. 179—1.5)

1. The method of transmitting two kinds of intelligence simultaneously by means of a single train of pulses of constant amplitude, comprising time modulating said pulses in one sense to transmit one of said kinds of intelligence, and time modulating said impulses in a different sense to transmit the other of said two kinds of intelligence.

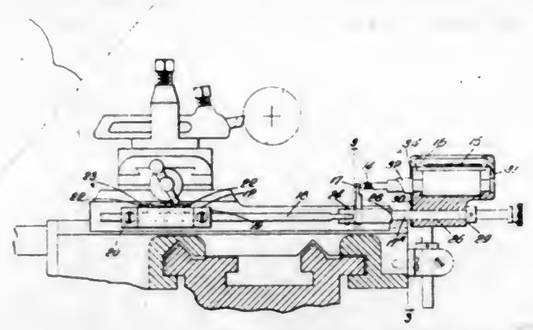


2,406,791
METHOD OF CLOSING BAG TUBE ENDS
Daniel Belcher, Minneapolis, Minn., assignor to Bemis Bro. Bag Co., Minneapolis, Minn., a corporation of Missouri
Application January 15, 1943, Serial No. 472,493
6 Claims. (Cl. 93—35)

1. The method of closing and sealing an open end of a flexible walled tubular bag body, which consists in pressing the walls of the bag end into flat-wise relation with the edge walls intucked between the side walls, whereby the flattened bag end is provided at each side edge with juxtaposed corners each comprising at least two plies, adhering together the plies of each corner, folding said juxtaposed corners against their respective side

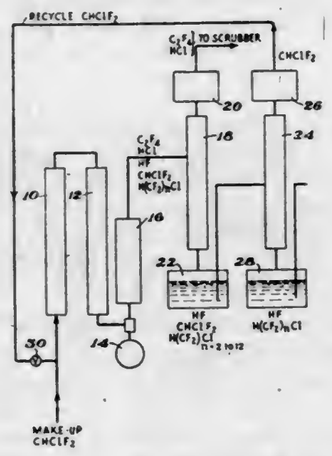
walls along diagonal fold lines and adhering them thereto, said diagonal fold lines being so disposed that said corners will be located within the perimeter of the bag end, when the bag body is filled, and subsequently folding a strip of tape over the edges of the flattened bag end walls and said folded corners and adhering it thereto.

2,406,792
PIEZOELECTRIC OSCILLATOR
Hugo Benioff, La Canada, Calif., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Application July 8, 1940, Serial No. 344,363
18 Claims. (Cl. 177—386)



17. A piezoelectric oscillator adapted to be used for transmission and reception comprising waves including a vibrator comprising a resonant longitudinally vibratable element having recesses forming mass portions at each end of said element and Rochelle salt piezoelectric crystals mounted within said recesses and having their ends abutting and acoustically joined to the shoulders of said recesses with the mechanical axes of the crystals parallel to the longitudinal direction of said element whereby the crystals and said element form a unitary longitudinal vibrator having a natural fundamental resonant frequency with a node between the ends of the vibrator.

2,406,793
DEVICE FOR MEASURING CHANGES OF DISTANCE BETWEEN TWO RELATIVELY MOVABLE PARTS
Ivan Benkoe, London N. W. 3, England, assignor to Erwin Benkoe, Bronx, N. Y.
Application April 9, 1943, Serial No. 482,490
In Great Britain April 15, 1942
4 Claims. (Cl. 33—125)

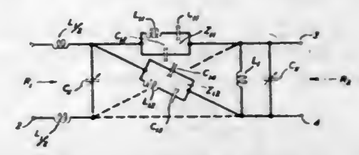


4. A device for measuring changes of distance between two relatively movable parts, comprising a gauge of limited range mounted upon one of said parts and a stop mounted upon the other part, said stop comprising a rod, frictionally mounted so as to be slidable within a block which

is secured to one of said parts, collars being provided on said rod which cooperate with a fixed

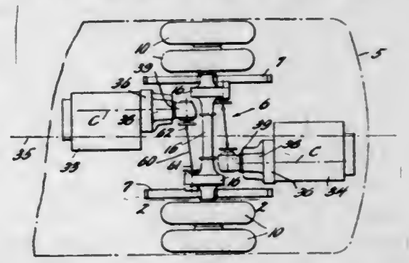
member to limit the normal travel of the rod to the range of distance measurable by the gauge.

2,406,794
PROCESS OF SEPARATING PYROLYSIS PRODUCTS OF CHLORODIFLUOROMETHANE
Anthony F. Benning, Woodstown, and Frederick B. Downing, Carneys Point, N. J., and Joseph D. Park, Wilmington, Del., assignors to Kinetic Chemicals, Inc., Wilmington, Del., a corporation of Delaware
Application February 14, 1945, Serial No. 577,871
7 Claims. (Cl. 202—51)



1. The process of separating valuable components from a reaction mixture comprising mainly HCl, C_2F_4 and $CHClF_2$ and small proportions of HF and higher boiling organic products, of the character of that obtained by pyrolyzing $CHClF_2$, the steps which comprise subjecting the reaction mixture to anhydrous fractional distillation under pressures of from about 50 to about 150 pounds per square inch absolute and at temperatures adjusted to distill off HCl and C_2F_4 simultaneously in a molar ratio of about 2 to 1 while retaining the rest of the mixture in the still.

2,406,795
LITHOGRAPHIC PRINTING INK
Dominic J. Bernardi and Robert T. Florence, Bronx, N. Y., assignors to Interchemical Corporation, New York, N. Y., a corporation of Ohio
No Drawing. Application June 25, 1943, Serial No. 492,310
2 Claims. (Cl. 106—29)

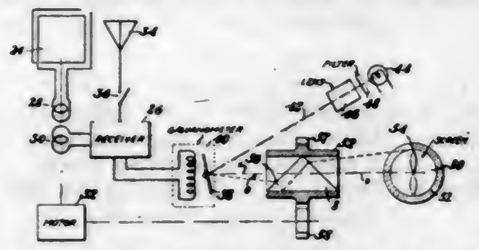


1. A lithographic printing ink which shows considerably reduced greasing as compared to a similar ink made with bodied linseed oil, comprising pigment dispersed in a vehicle, the essential basis of which is the ester of pentaerythritol and tall oil, the ratio of ingredients being such that the composition has the typical stiff body of lithographic printing inks.

2,406,796
WAVE FILTER
Frank R. Bies, Springfield, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application March 23, 1944, Serial No. 527,764
17 Claims. (Cl. 178—44)

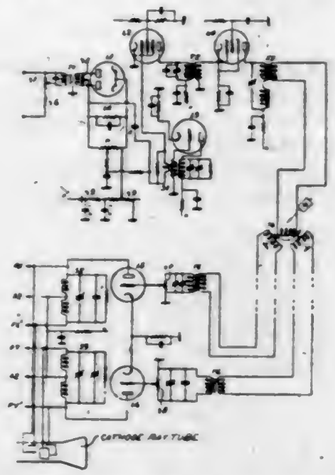
1. An impedance-transforming wave filter comprising a lattice network and two inductances of equal value, one of said inductances being connected in series at one end of said lattice and the other of said inductances being connected in shunt at the other end of said lattice.

2,406,797
VEHICLE DRIVING MECHANISM
Lawrence R. Buckendale, Detroit, Mich., assignor to The Timken-Detroit Axle Company, Detroit, Mich., a corporation of Ohio
Application April 7, 1944, Serial No. 530,025
7 Claims. (Cl. 180—54)



1. In combination with a pair of vehicle driving wheels, a connecting axle unit between said wheels including independently operable driving differentials for said wheels on relatively opposite sides of the vehicle center line, a pair of engines mounted in the vehicle frame at relatively opposite sides of said axle unit, power transfer means associated with each engine comprising a power-take-off unit at the opposite side of the vehicle center line from one of said differentials and having a power output shaft in closely adjacent relation to the other differential, and propelling means individual to the respective engines operatively connecting the said power output shafts to the respective differentials.

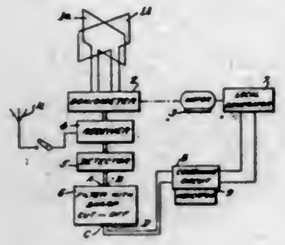
2,406,798
DIRECTION FINDER
Gordon S. Burroughs, Forest Hills, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application January 26, 1944, Serial No. 519,779
16 Claims. (Cl. 250—11)



13. In a direction finder system of the type in which a signal received by a rotating scanning device causes a beam of energy to be linearly displaced, the amount of displacement being a function of the strength of the received signal, the combination of a rotatable optical system in the path of the displaced beam, said optical system

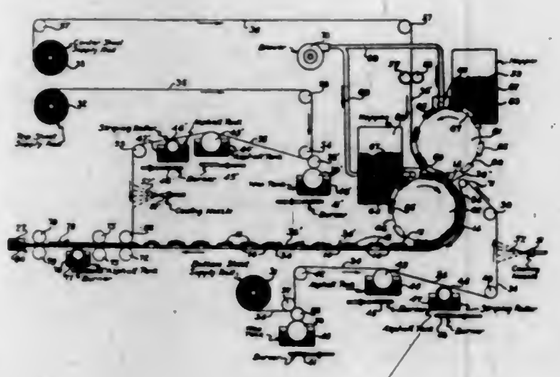
comprising one or more elements having an odd number of reflecting plane surfaces, and means for rotating said optical system about its neutral axis and synchronously with said scanning de-

vice, whereby said linearly displaced beam will be translated by said optical system into a polar diagram indicating the direction of the received signal.



2,406,799
DISTORTION CORRECTIVE ARRANGEMENT
Henri G. Busignies, Forest Hills, N. Y., assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application March 6, 1941, Serial No. 381,938
6 Claims. (Cl. 250—27)

2. Means for coupling a source of fluctuating unidirectional potential to an amplifier for said potential comprising a resistance-capacity network, means for coupling said network to said source, means for coupling said network to the input of said amplifier, an impedance network, means for coupling said impedance network to said source, and means for coupling said impedance network to the input of said amplifier, said networks being so related that the effective potential produced on said impedance network is substantially equal in magnitude and opposite in polarity to the effective potential produced in the portion of said resistance-capacity network coupled to the input of said amplifier.

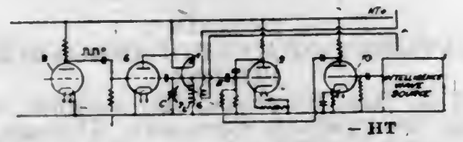


2,406,800
DIRECTION FINDER WITH FILTER
Henri G. Busignies, Forest Hills, N. Y., assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application March 13, 1941, Serial No. 383,111
11 Claims. (Cl. 250—11)

1. A radio direction finder comprising pick-up means effectively rotating at a predetermined frequency for picking up signals modulated in accordance with such rotation, means for detecting said signals, means for non-directionally picking up signals and for adding them to said signals modulated in accordance with said rotation whereby the resultant signals after detection contain a component of said predetermined frequency, indicator means for giving a directional indication under the control of such detected signals, means for applying said detected signals to

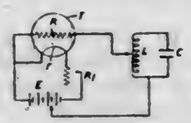
said indicator means, and a tuned filter proportioned to pass said predetermined frequency while discriminating strongly against frequencies ten per cent above and below said predetermined frequency before application to said indicator means.

2,406,801
METHOD OF MAKING INSULATING BLANKETS
William B. Byers, Kansas City, Mo.
Original application August 2, 1940, Serial No. 350,023, now Patent No. 2,342,839, dated February 29, 1944. Divided and this application March 1, 1943, Serial No. 477,609
17 Claims. (Cl. 154—28)



1. In the method of making an insulating blanket, forming loose bodies of fluffy fibrous insulating material, depositing the same in spaced relation on a continuous web of flexible sheet material in slack condition, placing a continuous web of sheet material in position over said web having said bodies thereon, inverting said webs with said bodies therebetween to place said web in slack condition over said bodies, forming other loose bodies of fluffy fibrous insulating material, and depositing the same on said slack continuous web of sheet material in staggered relation to said first mentioned bodies.

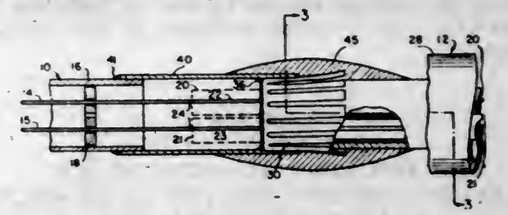
2,406,802
2-ETHYLHEXYL PHOSPHATES
Thomas F. Carruthers, South Charleston, W. Va., assignor to Carbide and Carbon Chemicals Corporation, a corporation of New York
No Drawing. Application February 18, 1942, Serial No. 431,449
2 Claims. (Cl. 260—461)



1. As a new chemical compound, tri-2-ethylhexyl phosphate.

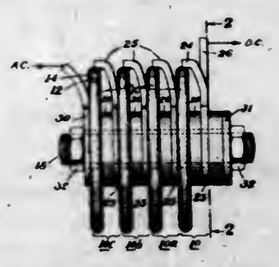
2,406,803
HIGH-FREQUENCY ELECTRICAL COMMUNICATION SYSTEM
Prafulla Kumar Chatterjea and Leslie Wilfred Houghton, London W. C. 2, England, assignors to Standard Telephones and Cables Limited, London, England, a British company
Application December 10, 1942, Serial No. 468,572
In Great Britain December 16, 1941
13 Claims. (Cl. 250—17)

5. The method of electrical carrier wave signal transmission which comprises generating short damped trains of carrier waves, angularly modulating the carrier waves comprising the respective trains in accordance with the instantaneous amplitude of an intelligence wave to be transmitted, and amplitude modulating the initial amplitude of the respective trains also in accordance with the instantaneous amplitude of said intelligence wave.



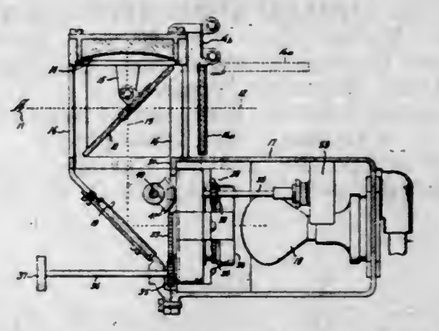
2,406,804
NEGATIVE RESISTANCE DEVICE FOR GENERATING OSCILLATIONS OR REDUCING DAMPING
Prafulla Kumar Chatterjea and Charles Thomas Scully, London, England, assignors, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application November 6, 1943, Serial No. 509,188
In Great Britain January 8, 1943
1 Claim. (Cl. 250—36)

Electrical circuit including, connected in series, an indirectly heated, negative characteristic thermistor, a source of direct current, and at least part of an inductance, also including a capacity shunting said inductance and forming therewith a resonant circuit, said series connected circuit also including a variable resistance connected in series with the heater of said thermistor, whereby the characteristic voltage-current curve of said thermistor may be altered in shape and position, so that a given current flow therethrough may be made to lie at a predetermined point of said curve, said point being located at a portion of said curve having sufficient negative slope to cause said resonant circuit to oscillate.



2,406,805
CONDUCTOR JOINT AND METHOD OF MAKING SAME
Trevor H. Clark, New York, N. Y., assignor to Federal Telephone and Radio Corporation, a corporation of Delaware
Application June 27, 1942, Serial No. 448,737
14 Claims. (Cl. 174—21)

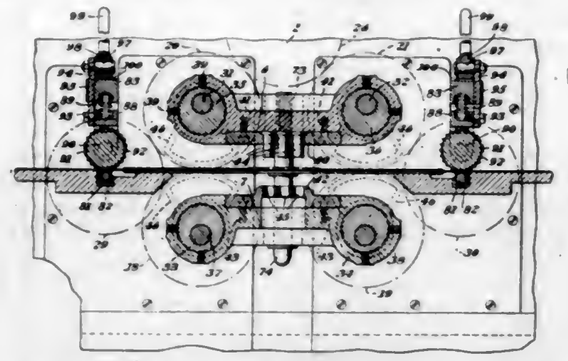
1. In a connection joining a cable having a sheath shielding a pair of conductors to a twin coaxial cable having a sheath shielding the coaxial conductors thereof, means connecting together the sheaths of the two cables, means including a disc-like portion having openings therein disposed about said coaxial conductors, and said disc-like portion being secured to the outer conductors of said coaxial conductors about the



peripheral surfaces thereof and to the connected sheaths along the peripheral edge of said disc-like portion.

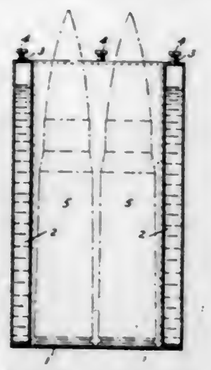
2,406,806
RECTIFIER
Carole A. Clarke, Glen Ridge, N. J., assignor to Federal Telephone and Radio Corporation, Newark, N. J., a corporation of Delaware
Application July 16, 1943, Serial No. 494,913
11 Claims. (Cl. 175—366)

1. A rectifier comprising a relatively thin metal disk having an inner exposed contact area, a layer of selenium upon the periphery of said disk, a counter-electrode alloy on the selenium, and a contact arm bearing against the alloy.



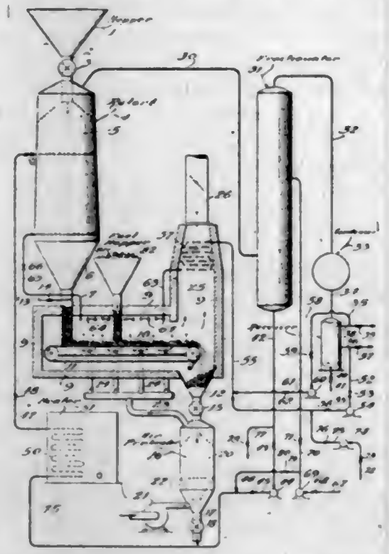
2,406,807
SIGHTING APPARATUS
Dan L. Colbath, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application December 17, 1943, Serial No. 514,591
5 Claims. (Cl. 88—2.3)

1. In an optical sighting device, a transparent member through which a target may be observed, a light-projecting system for producing a virtual image of a variable sized stadia figure in the line of sight of the observer by reflecting an image of said figure on said member, said system comprising a source of light, a collimator, a pair of superimposed opaque masking plates disposed between said source of light and said transparent member and located in approximately the focal plane of said collimator, said masking plates having a series of light-conducting portions arranged to intersect and thereby produce a luminous stadia figure, the proportions of which may be varied by relative movement of said masking plates, means for rotating one of said plates in



accordance with the known dimensions of said target, and means for rotating the other of said plates to vary said proportions of said stadia figure to cause said stadia figure to coincide with said target and thereby determine the range of said target.

2,406,808
FORMING MACHINE
Guy O. Conner, Wheeling, W. Va.
Application August 7, 1943, Serial No. 497,792
44 Claims. (Cl. 164—89)

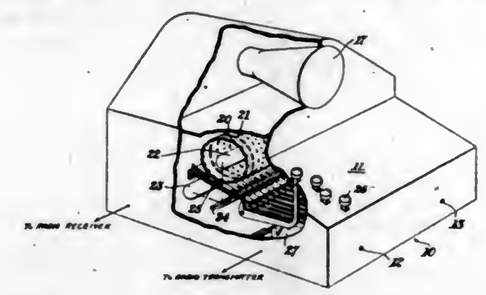


1. A forming machine comprising opposed cooperating forming heads each mounted for generally rotary movement while being guided so as to maintain substantially fixed orientation, said heads during operation of the machine moving toward and away from each other and when closest together moving also laterally generally in the same direction, work controlling means between and separate from said heads, means for guiding said work controlling means for substantially rectilinear movement, said movement being substantially in the direction of lateral movement of said heads when they are closest together, and means for oscillating said work controlling means synchronously with operation of said heads and at a speed which at the time said heads are closest together is substantially equal to the lateral speed of said heads.

2,406,809
WATER-COOLED AMMUNITION RACK
John H. Davis and Robert W. Matthews, Aberdeen Proving Ground, Md., and Nathaniel G. McLean, Memphis, Tenn.
Application July 15, 1944, Serial No. 545,172
3 Claims. (Cl. 220—13)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

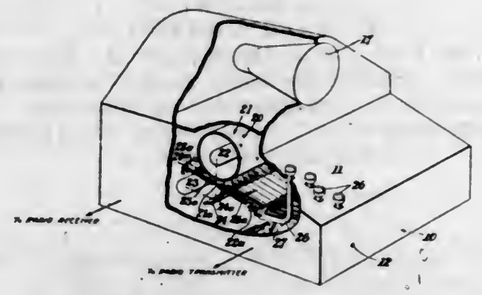
1. An ammunition receptacle comprising a plurality of substantially identical hollow elongated fluid-tight vertically-extending parallelopiped units each having a length equal to the predetermined, desired height of said receptacle and being of elongated rectangular cross section, said units being secured together along their vertical sides of lesser cross-sectional dimension, to form four walls, corresponding vertical ends of two opposed spaced walls being secured to the contiguous sides of the remaining two side walls, respectively, and a bottom secured to the coplanar lower ends of all said four walls, whereby to form a double-walled, fluid-tight receptacle.

2,406,810
TREATMENT OF HYDROCARBONACEOUS SOLIDS
Roland B. Day, Riverside, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application March 18, 1944, Serial No. 527,128
7 Claims. (Cl. 196—56)



1. The method of distilling volatile hydrocarbons from hydrocarbonaceous solids which comprises passing the solid material in subdivided state and in the form of a bed downwardly through an externally unheated distilling retort, therein effecting the evolution of volatiles from the bed and leaving a combustible heavy residue in the solid material discharged from the bed and retort, burning combustibles from the solid material discharged from the retort and preventing admixture of the resultant combustion gases with the vapors evolved in the retort, passing hydrocarbon fluid in indirect heat exchange with hot combustion gases produced by said burning step to heat said fluid to a high temperature and introducing the heated fluid into the distilling retort and into direct contact with said bed therein to supply heat to the latter for effecting the evolution of volatiles from the said solid material.

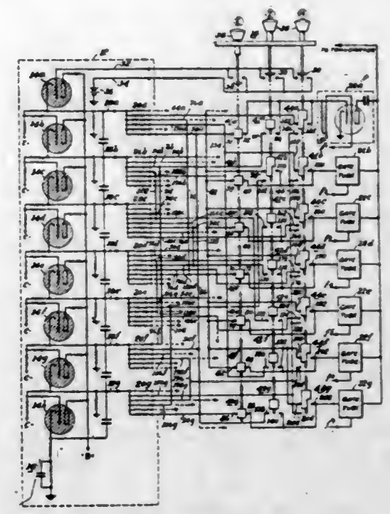
2,406,811
FACSIMILE SYSTEM
Edmond M. Deloraine, New York, Henri G. Busignies, Forest Hills, and Louis A. de Rosa, Staten Island, N. Y., assignors to Federal Telephone and Radio Corporation, Newark, N. J., a corporation of Delaware
Application December 15, 1942, Serial No. 469,056
8 Claims. (Cl. 178—6.7)



1. A transmission system comprising transmitter means for transmitting a plurality of times in succession a series of signal elements related to a selected signal character to be transmitted, receiving means, and oscillograph means for superposing and cumulating the successive series of

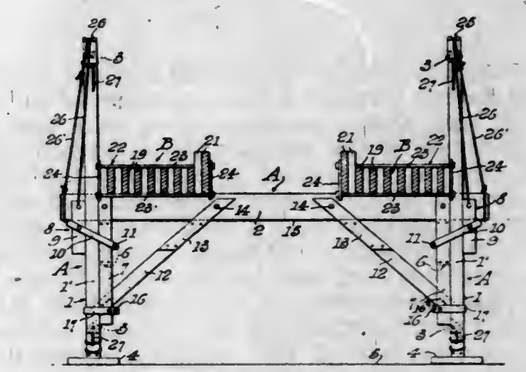
signal elements for reproducing in superposed relation the selected signal character, whereby the effect of interference on the received signals is

minimized because the interference does not superpose in time and as a consequence does not cumulate.



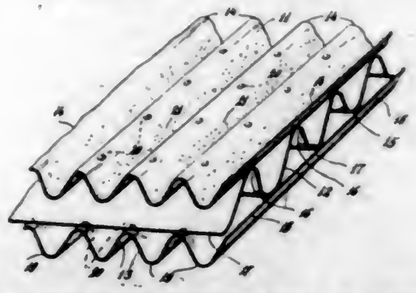
2,406,812
FACSIMILE SYSTEM AND METHOD
Edmond M. Deloraine, New York, Henri G. Busignies, Forest Hills, and Louis A. de Rosa, Staten Island, N. Y., assignors to Federal Telephone and Radio Corporation, Newark, N. J., a corporation of Delaware
Application January 30, 1943, Serial No. 474,144
11 Claims. (Cl. 178—5)

1. A communication system comprising transmitter means for transmitting a series of impulses defining a character during a period of time which is short relative to the time between characters, a series of signal elements related to a selected signal character to be transmitted, said pulses having a sharp wave front and a high ratio of peak to average power, receiving means for receiving said series of pulses, interference minimizing means at said receiver for eliminating all energy below a predetermined level substantially lower than the peak energy level of said signal elements, and reproducing means for reproducing the character represented by said signal elements.



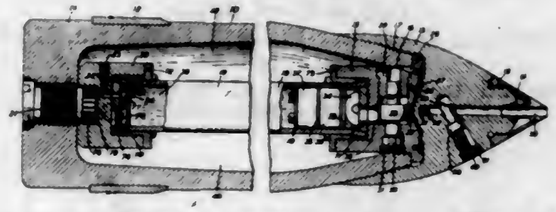
2,406,813
INTELLIGENCE TRANSMISSION SYSTEM
Louis A. de Rosa, West Brighton, Staten Island, N. Y., assignor to Federal Telephone and Radio Corporation, Newark, N. J., a corporation of Delaware
Application June 18, 1943, Serial No. 491,287
10 Claims. (Cl. 178—30)

1. In a system for the transmission and reception of intelligence, the combination of an electronic counter circuit including a plurality of sequentially firing gaseous discharge tubes, means deriving a series of sequentially timed pulses from said gaseous discharge tubes, a corresponding plurality of normally non-conductive gate tubes, an actuating circuit for each gate tube, a separate energy source for each gate tube, the frequency of each source being different, transmitting means connected to the outputs of said gate tubes, means for starting and stopping said electronic counter circuit, switching means respectively interconnecting the outputs of said gaseous discharge tubes to the actuating circuits of said



gate tubes to apply the sequentially timed pulses thereto in accordance with the intelligence-signifying signals desired, and a receiver, said receiver including means converting the received pulsed signals into intelligence.

2,406,814
TRESTLE BRIDGE
James A. Dorst, United States Army, Geiger Field, Wash.
Application December 17, 1943, Serial No. 514,613
2 Claims. (Cl. 14—1)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



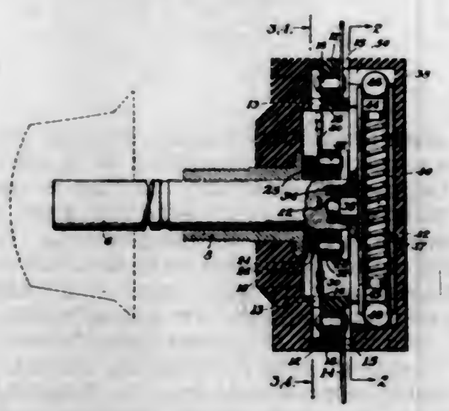
1. In a bridge structure of the class wherein a roadway is supported by a vertically adjustable transom arranged transversely between a pair of trestle columns positioned at opposite sides of said roadway, the combination with a trestle column and a transom, of a vertically adjustable transom support comprising a pair of friction blocks slidably disposed on opposite sides of said trestle column, one of said friction blocks being adapted to support said transom, suspension means for supporting the other friction block at a predetermined point on said trestle column and link means pivotally connecting said friction blocks, said link means being operably responsive to the weight of said transom on said transom supporting friction block for clamping each of said friction blocks on said trestle column.

2,406,815
MULTILAYER INSULATION
Thore Martin Elfving, Nockeby, Sweden
Application July 9, 1943, Serial No. 494,013
In Sweden January 10, 1938
6 Claims. (Cl. 154—45)

1. Heat insulation comprising a plurality of sheets of insulating material arranged to provide air spaces therebetween, said sheets comprising as a base material a cellulose ester in the form of foil having a thickness not exceeding approximately 0.1 mm., said foil including a non-metallic substantially non-reflecting heat absorbing agent in finely divided particle form in an amount not exceeding by weight approximately 25% of the weight of the foil.

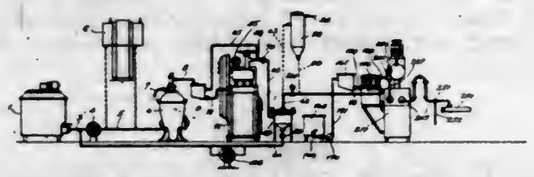
2,406,816
SOUND RECORDING PROJECTILE
Lloyd A. Elmer, Summit, and Clarence A. Lovell, Maplewood, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 19, 1941, Serial No. 423,668
14 Claims. (Cl. 274—1)

1. In combination with a casing or shell adapted to be moved through a fluid medium, of mechanism in said shell operative when said shell is in motion, two closed compartments within said shell having a constricted passageway therebetween, one of said compartments being of variable capacity and having a fluid filling, and means for utilizing pressure generated in said medium by the movement of said shell therethrough to cause inward movement of one wall of said last-mentioned compartment to operate said mechanism under control of the resulting passage of fluid through said passageway.



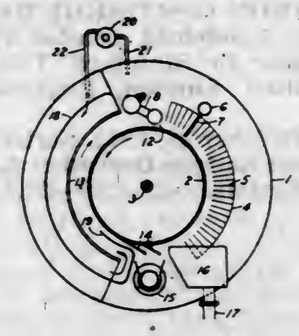
2,406,817
HAMMER SLOT AND FLOATING PIN ASSEMBLY FOR AUTOMATIC PUSH RODS
Herbert H. Engemann, Cleveland Heights, Ohio
Application June 2, 1944, Serial No. 538,455
8 Claims. (Cl. 123—90)

1. An extensible and contractable link member comprising threaded-together male and female members, a torsion spring reversely rotating said members for lengthening the link, an inertia hammer freely slidable on said link having diametrically opposed slots with substantially vertical first ends and inclined second ends, a pin freely carried by one of said threaded-together members projecting into said slots, and means holding said pin in assembled relation whereby movement of the sleeve in one direction will impart an axial impact on the pin while movement of the sleeve in the reverse direction



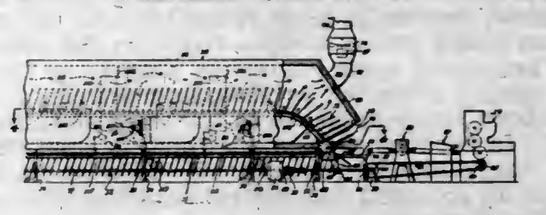
will cause a rotative impact on the pin resisting said torsion spring to thread the male and female members together for shortening the link.

2,406,818
ROTARY SWITCH
George H. Erb, South Orange, N. J., assignor to Federal Telephone and Radio Corporation, Newark, N. J., a corporation of Delaware
Application May 7, 1943, Serial No. 485,969
1 Claim. (Cl. 200—6)



In a compact rotary switch and indexing mechanism, a housing having a substantially dust-proof recess therein, said recess comprising two portions, one portion being substantially cylindrical and containing a plurality of radially projecting contacts, and the other portion being substantially the shape of two opposing sectors wherein the arcuate surface of one sector is smooth and the surface of the other sector contains a plurality of spaced-apart axial grooves, a rotatable shaft supported by said housing coaxial with said recess, one or more conducting elements carried by said shaft for bridging adjacent radially projecting contacts in said cylindrical portion of said recess, and an indexing mechanism within said other dual-sector-shaped recess portion comprising a transverse bearing holder mounted on the said shaft and a pair of bearings, one of said bearings directly engaging said axially grooved arcuate surface, and the other of said bearings directly engaging said smooth arcuate surface.

2,406,819
BUTTER MANUFACTURE
Arthur W. Farrall, Wilmette, Ill., assignor to The Creamery Package Mfg. Company, Chicago, Ill., a corporation of Illinois
Application June 12, 1944, Serial No. 539,969
32 Claims. (Cl. 99—119)



1. A process for manufacturing butter comprising; heating cream to a temperature at which the milk fat is substantially liquefied; separating the heated cream to produce a portion containing fat in high concentration; subjecting the concentrated cream to forces effective to break the normal fat-in-serum cream emulsion and produce a reversed phase serum-in-fat mixture having its fat and serum phases in unstable readily separable relation; separating serum therefrom to further concentrate the fat in greater proportion than is desired in the butter; adding butter composition ingredients to the concentrated fat portion in amount requisite to establish the proportion of fat desired in the butter; emulsifying the mixture of fat, serum and composition ingredients; and cooling, agitating and working the emulsion to effect crystallization of the fat, stabilization of the emulsion and granulation of the forming fat crystals for the production of butter.

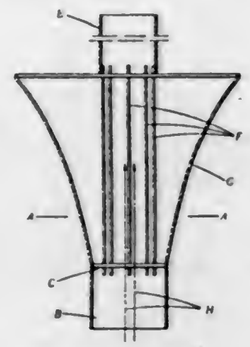
2,406,820
METHOD FOR REMOVING SUSPENDED MATTER FROM SUSPENSIONS
Harmon F. Fisher, Palo Alto, and Albert C. Peck, Los Altos, Calif., assignors, by mesne assignments, to The Permanente Metals Corporation, a corporation of Delaware
Application April 19, 1943, Serial No. 483,564
4 Claims. (Cl. 204—184)

1. The method of separating finely divided electrically conducting solids from suspensions thereof in non-conducting liquids which comprises, passing a slurry of said suspension onto a continuously moving electrode, cataphoretically depositing the finely divided solids thereon by the effect of a unidirectional electric field between said electrode and a second ionizing electrode of opposite polarity, withdrawing the electrode from the electric field, blowing included liquid from the deposit by subjecting it to the action of a jet of high pressure gas, and then removing the deposit from the electrode.

2,406,821
HEAT PROCESSING MACHINE
Vernie A. Fox, Detroit, Mich.
Application February 20, 1942, Serial No. 432,541
6 Claims. (Cl. 34—66)

1. In a heat processing machine, an elongated oven having a downwardly inclined inlet end with a substantially horizontal inlet, a conveyor movable upwardly through said inlet end and through said oven, rack members carried by said conveyor for supporting sheet material on edge while being conveyed through said oven and to extend transversely of said inlet end and partially close said inlet, heating means in said oven, a series of blowers arranged beneath the conveyor in said oven for directing heated air upwardly between said conveyor and the sheet material thereon, one of said blowers being disposed adjacent said inclined inlet end to direct a blast of heated air transversely thereacross, and an exhaust fan disposed in one of the walls of said inclined inlet end for removing combustible gases from said oven.

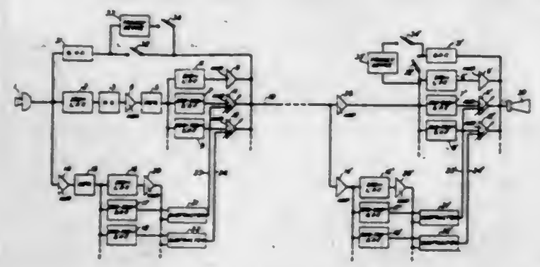
2,406,822
CONTROL SYSTEM AND MECHANISM FOR HEAT PROCESSING MACHINES
Vernie A. Fox, Detroit, Mich.
Original application February 20, 1942, Serial No. 432,541. Divided and this application February 26, 1945, Serial No. 579,755
19 Claims. (Cl. 263—8)



1. In a heat processing machine, an oven, a burner in said oven, means for supplying fuel to said burner, normally closed means for controlling the flow of fuel through said fuel supplying means, an air circulator positioned to move heated air from said burner through said oven, means for driving said air circulator, time delay means responsive to the lapse of a predetermined time period following the starting of said air circulator driving means for opening said fuel flow controlling means, and means for additionally delaying the opening of said fuel flow control means whereby to remove inflammable gases from said oven before permitting igniting of said burner.

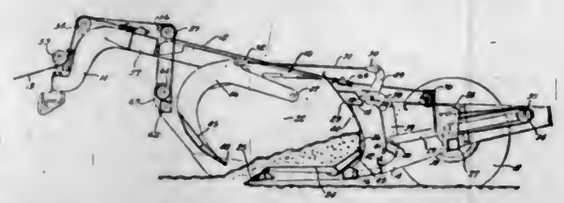
2,406,823
BITUMINOUS EMULSIONS
Joseph E. Fratis, Berkeley, and Eugene H. Oakley, El Cerrito, Calif., assignors to American Bitumuls Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Continuation of application Serial No. 262,566, March 17, 1939. This application July 26, 1941, Serial No. 404,196
6 Claims. (Cl. 252—311.5)

1. A method of producing an asphalt which is emulsifiable in hot, dilute aqueous caustic soda



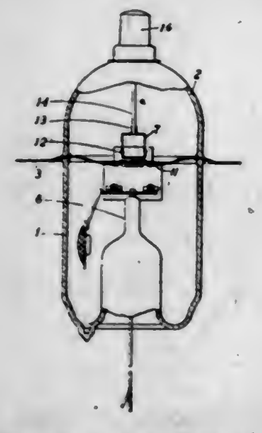
solution from an asphalt which is not so emulsifiable, which comprises adjusting the petroleum acid content of the asphalt not so emulsifiable, without otherwise substantially changing the composition of the asphalt, so as to produce an asphalt having at least about 1% and not more than about 3% by weight, based on the asphalt, of petroleum acids having an average molecular weight of about 500 to 1200, said petroleum acid content being adjusted to an amount sufficient only to produce an asphalt which is emulsifiable in hot, dilute aqueous caustic soda solution to form an emulsion which breaks quickly on contact with aggregate.

2,406,824
ELECTRON DISCHARGE APPARATUS
John Heaver Fremlin, London, England, assignor to International Standard Electric Corporation, New York, N. Y.
Application June 25, 1941, Serial No. 399,598
In Great Britain June 21, 1940
6 Claims. (Cl. 250—163)



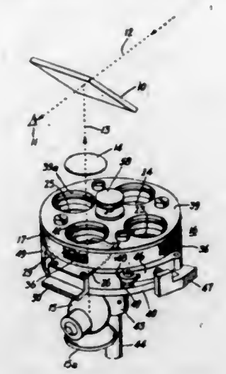
1. Electron discharge apparatus comprising, as a focussing system adapted when suitable potentials are applied to provide a desired potential gradient along the path of an electron beam, a foraminate tubular electrode surrounded by a coaxial tube capable of influencing the field within the foraminate tubular electrode, said electrode and tube being coextensive throughout at least part of their length and at least one of said tubular elements being of non-uniform diameter along the coextensive length of the system.

2,406,825
PRIVACY SYSTEM FOR SPEECH TRANSMISSION
Norman R. French, Pleasantville, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application March 18, 1943, Serial No. 479,571
11 Claims. (Cl. 179—1.5)



1. The method of transmission of the voiced sounds of speech comprising comparing the amplitude of the voice fundamental with the amplitude of each of a series of harmonics of the voice fundamental to derive a series of differential values, generating a series of harmonics of the voice fundamental, controlling the relative amplitude of each latter harmonic frequency wave with respect to the strength of the voice fundamental in accordance with a respective differential value derived from comparison of the corresponding voice harmonic and voice fundamental and transmitting said generated and controlled harmonics and voice fundamental.

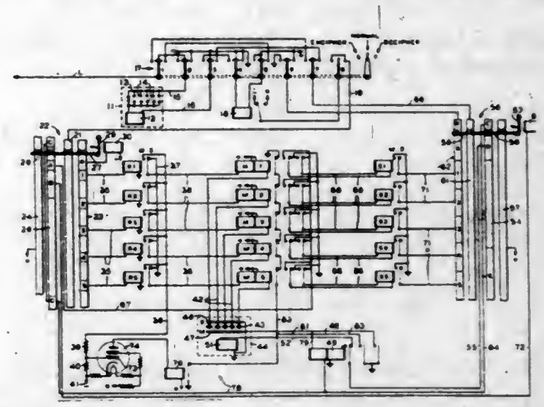
2,406,826
SCRAPER
Henry C. French, Elm Grove, and Norman V. Kuehlman, Milwaukee, Wis., assignors to The Heil Co., Milwaukee, Wis., a corporation of Wisconsin
Application September 28, 1944, Serial No. 556,113
14 Claims. (Cl. 37—129)



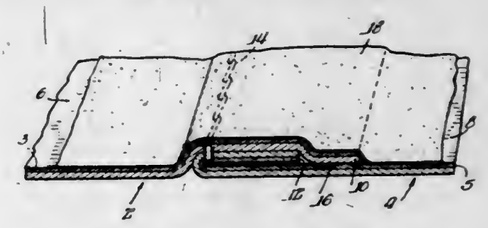
1. In a scraper, a front frame, a bowl frame pivotally connected with the front frame and including a bowl structure open at its front end, a wheeled support on which the bowl frame is pivotally mounted, said bowl structure including a rigidly mounted forward earth cutting blade, a movable bowl floor hingedly connected with said blade, and an apron pivotally mounted relative to the bowl structure and controlling the open front end thereof, oscillatable means mounted on the bowl frame, and means for transmitting motion from the oscillatable means to the apron to move the same so as to expose the front end of the bowl structure, the oscillatable means being spaced from but movable into engagement with the bowl floor to tilt the latter to a dumping position.

2,406,827
ELECTRON DISCHARGE DEVICE
Frank Douglas Goodchild, London W. C. 2, England, assignor to Standard Telephones and Cables Limited, London, England, a British company
Application October 28, 1942, Serial No. 463,697
In Great Britain December 2, 1941
3 Claims. (Cl. 250—27.5)

1. An electron discharge tube comprising an envelope, a metallic screening disc sealed across and extending outside said envelope whereby the input and output sides of the tube are effectively screened, said screening disc having an aperture, a grid across said aperture and electrically connected with said screening disc, a cathode on one side of said grid and an anode on the other side thereof, and means on one side of said screening disc supporting said grid, cathode and anode together with an anode lead as a unitary structure in said envelope, said anode lead being sealed through the envelope on the opposite side of said screening disc.



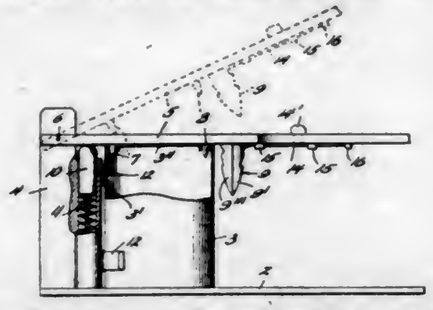
2,406,828
OPTICAL SIGHTING APPARATUS
Charles S. Grimshaw, Scotia, N. Y., assignor to General Electric Company, a corporation of New York
Application May 15, 1942, Serial No. 443,031
14 Claims. (Cl. 88—2.3)



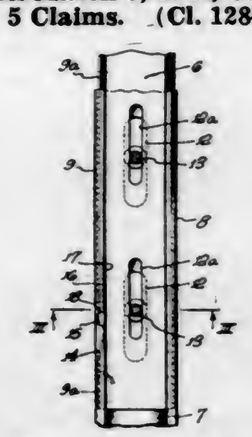
1. In an optical sighting device, a transparent member through which a target may be observed, a light projecting system for producing a virtual image of a variable size stadia figure in line of sight of the observer by reflecting an image of said figure on said member, said system comprising a source of light, a collimating lens, and a pair of superimposed opaque masking plates disposed between said source of light and said lens and located in approximately the focal plane of said lens, said masking plates having a series of light conducting portions arranged to intersect and thereby produce a luminous stadia figure comprising a plurality of points of light defining a luminous circle, the diameter of which may be varied by relative movement of said masking plates.

2,406,829
TELEGRAPH SYSTEM
Hakon H. Haglund, Pelham, and Albert W. Breyfogel, Howard Beach, N. Y., assignors to The Western Union Telegraph Company, New York, N. Y., a corporation of New York
Application June 27, 1942, Serial No. 448,722
34 Claims. (Cl. 178—22)

23. In a telegraph system, a line circuit including simplex operated terminal sections and at least one intermediate multiplex operated section, signal repeaters at the junctions of said multiplex and simplex operated sections which operate to fortuitously insert predetermined code groups into the code groups repeated, cyclically operable simplex message character send-receive mechanisms at the terminals of said circuit, means at the terminals of the line for enciphering and deciphering messages transmitted and received respectively over said line, means for normally operating said enciphering means concomitantly with each message character code group transmitted, means for normally operating said deciphering means concomitantly with each character code group received, and means for preventing the operation of said deciphering means on receipt of the predetermined code groups inserted at said repeaters.



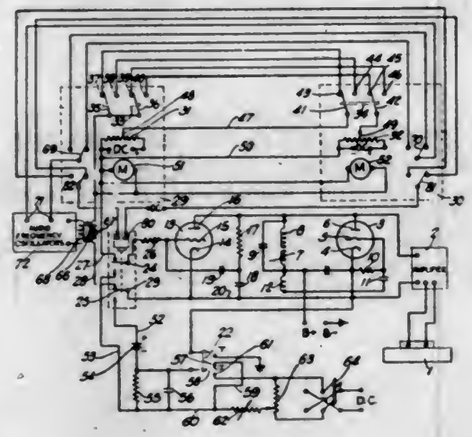
2,406,830
METHOD OF SEALING TOGETHER TWO PIECES OF WATERPROOF FABRIC, AND THE SEAM FORMED THEREBY
Howard H. Haman and Charles E. Whalen, Three Oaks, Mich., assignors to The Warren Featherbone Co., Three Oaks, Mich., a corporation of Michigan
Application June 9, 1944, Serial No. 539,456
2 Claims. (Cl. 154—42)



1. A method of forming a seam in waterproof fabric including the steps of superposing one piece of fabric having a marginal edge on another piece of fabric having a marginal edge with the marginal edge of the upper fabric piece spaced inwardly from the marginal edge of the lower fabric piece with the edges in substantially parallel relation, stitching said pieces of fabric together along a line substantially parallel to but spaced inwardly from the marginal edge of the uppermost piece of fabric, covering the area including the line of stitching and the marginal edge of the upper piece of fabric with waterproof material whereby to seal the line of stitching and the upper marginal edge to the upper surface of the lower piece of fabric, swinging the lower piece of fabric approximately 180 degrees around the line of stitching and swinging the marginal edges substantially 180 degrees around the line of stitching to bring the bottom surface of the lower piece of fabric substantially into a plane with the upper surface of the upper piece of fabric with the tab of the lower piece of fabric extending from the stitching to its marginal edge overlapping and extending beyond the marginal edge of the upper piece of fabric, then covering the area including the upper surface of the upper piece of fabric and the lower surface of the lower piece of fabric adjacent the juncture of the marginal edge of the lower piece of fabric and the line of stitching with waterproof material.

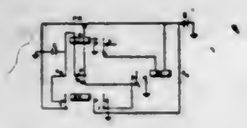
2,406,831
CAN PUNCHING DEVICE
Jack Hansen, Everett, Wash.
Application August 9, 1945, Serial No. 609,898
5 Claims. (Cl. 30—10)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

5. A can punching device including an operating lever and a small punch thereon adapted to punch a pouring aperture in a can-head upon actuation of the operating lever, a large punch movable on the operating lever into and out of operative position, said large punch having one of its sides formed arcuately to conform substantially to the contour of the side wall of a can and provided with a cavity to house the small punch therein when the large punch is moved into can-punching position.



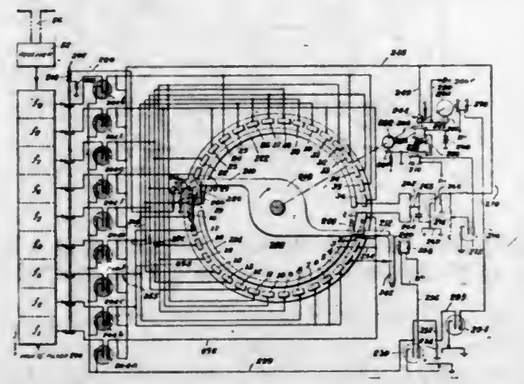
2,406,832
FRACTURE PLATE
Mervyn G. Hardinge, Loma Linda, Calif.
Application March 5, 1945, Serial No. 581,075
5 Claims. (Cl. 128—87)

1. In a fracture plate to be secured to a pair of bone fragments and to extend across the fracture line, a pair of plate elements extending in overlapping relation to each other, means intercoupling said plates for telescopic movement relative to each other between an extended position and a contracted position, and means for resisting movement of said plates toward said extended position but permitting substantially free movement of said plates toward said contracted position.



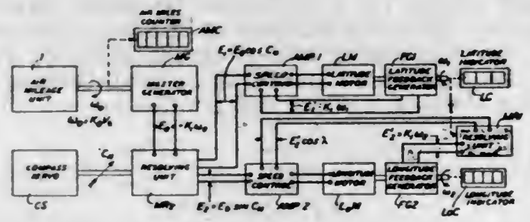
2,406,833
SUBMARINE SIGNALING
Bertram M. Harrison, Wellesley Hills, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Original application June 11, 1940, Serial No. 339,922. Divided and this application December 11, 1942, Serial No. 468,865
2 Claims. (Cl. 177—386)

2. In a submarine signaling system having a submarine projector and an oscillatory circuit for operating the same, remote control means for operating said system from more than one station including electrical potentiometer control means located and operated at each station for varying the oscillator frequency at will, said potentiometer control means being connected in common on one side to a point in said oscillatory circuit, a double-pole, two-position switch



at each station with the contacts correspondingly interconnected, the double poles of one switch being connected together and to a point in the oscillatory circuit and the double poles of the other switch connected one to each of the variable taps on the potentiometer control means, whereby at will each station may take control for varying the oscillator frequency at will.

2,406,834
ARRANGEMENT FOR RECEIVING PREDETERMINED TRAINS OF ELECTRIC IMPULSES
George Clifford Hartley, Leonard Powell Lowry, and Frederick Harry Bray, London, England, assignors to Standard Telephones and Cables Limited, London, England, a British company
Application May 28, 1943, Serial No. 488,868
In Great Britain June 4, 1942
12 Claims. (Cl. 177—353)

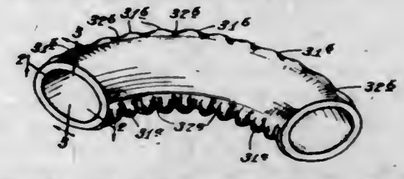


1. In an automatic signaling system, a polarized relay having an armature electromagnetically controlled by two opposite windings each establishing any one of two switching positions in accordance with current polarity, a first circuit means connected to one of said windings, means for supplying current to said first circuit means, a second circuit means connected to the second of said windings and comprising capacitance means, means for supplying current to said second circuit means to cause charging of said capacitance means, a first switching means controlled by said relay for reversing the direction of current in said first circuit means and for discharging said capacitance means in said second circuit means, and a second switching means controlled by said relay to open and close periodically in accordance with the charging and discharging of said capacitance means.

2,406,835
METHOD AND MEANS FOR TRANSMITTING INTELLIGENCE
John A. Herbst, Oradell, N. J., assignor to Federal Telephone and Radio Corporation, Newark, N. J., a corporation of Delaware
Application August 20, 1943, Serial No. 499,341
22 Claims. (Cl. 178—32)

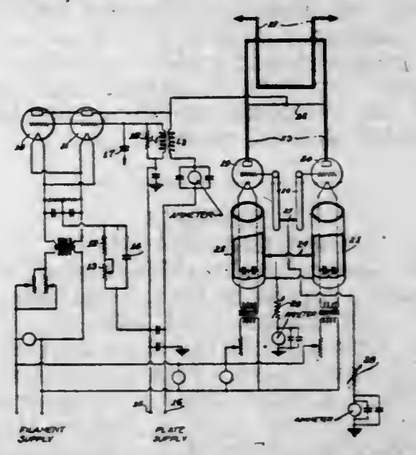
1. In an intelligence transmission system wherein the intelligence is transmitted by a combination of frequencies selected from a number thereof, a receiving station having a receiver, filter means connected to said receiver for separating the combination of transmitted frequencies, intelligence reproducing means, variable energy control means between the filter means and the reproducing means and means responsive to the output of said filters for controlling said reproducing means to reproduce the intelligence transmitted.

2,406,836
ELECTRIC AIR POSITION INDICATOR
William H. T. Holden, Woodside, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application March 24, 1944, Serial No. 527,998
5 Claims. (Cl. 235—61)



1. In an air position indicator for an aircraft, an indicator for indicating the instant number of air miles flown, an indicator for indicating the instant latitude position of said aircraft, an indicator for indicating the instant longitude position of said aircraft, means for operating said first indicator in accordance with the air speed of the aircraft, means for generating a potential commensurate with the air speed of said aircraft, means controlled in accordance with the true compass course of the flight for deriving values of said potential which vary in accordance with the sine and cosine of the course angle, means controlled by said cosine potential for operating said latitude indicator, means controlled by said latter means for generating a potential which varies in accordance with the cosine of the latitude angle, and means controlled jointly by said latter potential and by said sine potential for operating said longitude indicator.

2,406,837
STABILIZED POLYVINYL FLUORIDE
Frederick L. Johnston, Claymont, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application November 19, 1943, Serial No. 510,962
2 Claims. (Cl. 260—88)

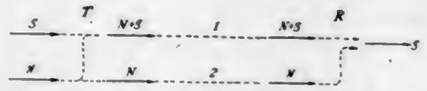


1. A composition of matter comprising polyvinyl fluoride which is stable against discoloration and decomposition when heated 5 minutes at 225° C., said composition comprising polyvinyl fluoride having dicyclohexylamine intimately dispersed therethrough in amount of 0.1% to 5% by weight of the polyvinyl fluoride.

2,406,838
METHOD OF FORMING BENT TUBING
Francis M. Kepler, Upper Darby, Pa.
Application June 28, 1943, Serial No. 492,547
10 Claims. (Cl. 153—54)

1. A method of forming bent tubing which comprises forming a generally straight length of tubing having a uniform inner bore and having integral raised shoulders extending along the sides thereof, forming diametrically opposed series of peripherally extending corrugations along said shoulders while supporting said inner bore against distortion, and bending said tubing to deepen the corrugations along one of said shoulders on the inner side of the bend and to flatten the corrugations along the other of said shoulders along the outer side of the bend, while supporting said inner bore against distortion, thereby to provide bent tubing having a generally smooth and uniform inner bore and having minimum wall thickness not substantially less than that of the original straight tubing.

2,406,839
IMPEDANCE MATCHING DEVICE
Emile Labin, New York, and James H. Nye, Jackson Heights, N. Y., assignors to Federal Telephone and Radio Corporation, a corporation of Delaware
Application January 12, 1942, Serial No. 426,455
4 Claims. (Cl. 250—17)

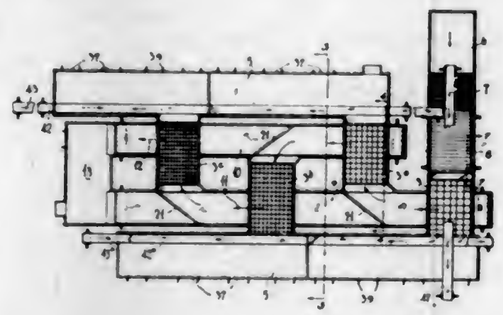


4. An impulse transmitter comprising an impulse modulator and a radio frequency oscillator, said oscillator including vacuum tube means hav-

ing an anode circuit to ground, a cathode circuit to ground, a grid circuit to ground, and means coupling said anode circuit to said modulator, said grid circuit having a biasing resistance means, said cathode circuit having an adjustable resistance means adjustment of which operates to vary the impedance of the anode circuit for impedance matching with respect to the modulator impedance while negligibly affecting the grid biasing adjustment.

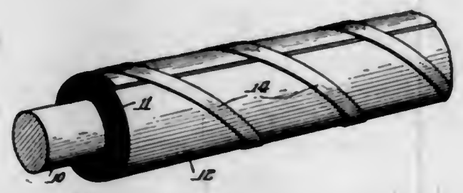
2,406,840
METHOD OF PREPARING PECTASE
Herbert T. Leo and Clarence C. Taylor, Anaheim, Calif.
No Drawing. Application October 23, 1943, Serial No. 507,454
2 Claims. (Cl. 195—62)

1. A method of preparing from growing leguminous plant material a clear colorless pectase extract which comprises mechanically disintegrating said vegetable material, steeping the disintegrated material with water, separating the steeped vegetable material from the resulting green aqueous pectase extract, incorporating with the resulting extract sufficient calcium carbonate to effect in the extract a pH value of at least 6.00, incorporating with the chalk containing extract an amount of a soluble aluminum salt capable of effecting in said extract a pH ranging from 4.00 to 4.50, and separating the resulting precipitate from the extract.



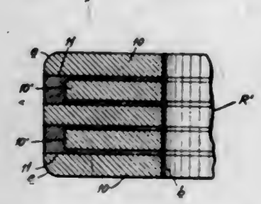
2,406,841
SECRET TRANSMISSION SYSTEM
Maurice Moise Levy, London W. C. 2, England, assignor to Standard Telephones and Cables Limited, London, England, a British company
Application September 11, 1942, Serial No. 458,061
In Great Britain July 9, 1941
8 Claims. (Cl. 179—1.5)

1. Secrecy system comprising separate first and second signal channels, a transmitting station, means at said transmitting station for transmitting over said first channel a first set of unintelligible signals, means for transmitting over said second channel a second set of different unintelligible signals, at least one of said sets of signals containing all wave components from which a desired message signal is derivable, a receiving station, means at said receiving station for combining said two sets of signals, and means for utilizing the resultant of the combined signals to derive the desired message.



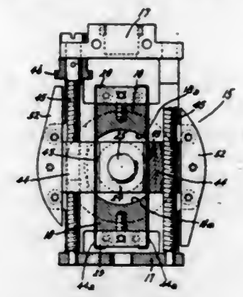
2,406,842
GRADING MACHINE
McSherry Lupton, Winchester, Va.
Application August 9, 1941, Serial No. 406,177
14 Claims. (Cl. 209—84)

1. In a fruit grading machine of the class set forth, the combination with parallel main conveyor belts of a plurality of grading units spaced along said conveyor belts to receive fruit therefrom, each of said grading units extending from a belt to receive fruit therefrom and bridging a next adjacent belt to discharge fruit thereon, said units being in staggered relation in that alternate units extend from the same belt, each grading unit comprising an endless sizing chain and sup-



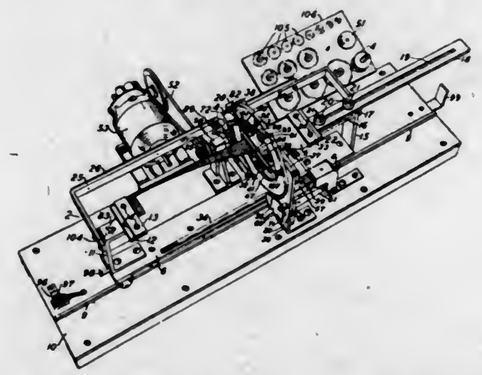
porting and driving means therefor, and a bin for each grading unit for receiving graded fruit.

2,406,843
PROCESS FOR MOLDING MATERIALS UNDER HEAT AND PRESSURE
Harold J. Luth, Herman B. Scheidemantel, and Sydney R. Krupnick, Muskegon, Mich., assignors to The Brunswick-Balke-Collender Company, Chicago, Ill., a corporation of Delaware
Application April 19, 1943, Serial No. 483,540
7 Claims. (Cl. 154—83)



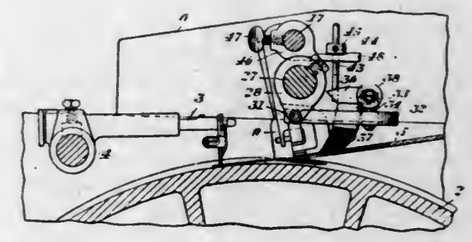
1. A process for making molded plywood articles having external curved surfaces, comprising fitting the plywood material over a form having the desired shape, covering the plywood material with a sheet of vulcanized rubber, stretching said rubber sheet in a direction to apply pressure against the entire surface of the plywood material, and increasing said pressure solely by heating the assembled parts while maintaining the rubber sheet in a stretched condition.

2,406,844
PISTON RING
Charles A. Marien and Melvin W. Marien, St. Louis, Mo., assignors to Ramsey Accessories Manufacturing Corporation, St. Louis, Mo., a corporation of Missouri
Application July 12, 1943, Serial No. 494,292
13 Claims. (Cl. 309—44)



1. A composite piston ring comprising at least two superposed annular metallic segments permanently joined into an integral structure by a cohering metallic substance lower in the scale of hardness than the segments.

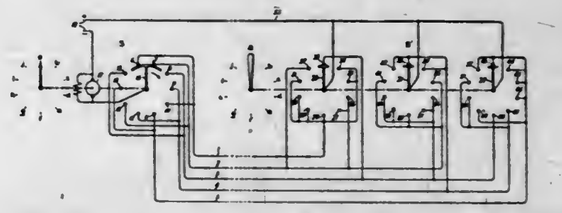
2,406,845
GYROSCOPIC DEVICE
John R. Moore, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application January 22, 1943, Serial No. 473,156
1 Claim. (Cl. 175—21)



A magnetic device comprising a magnet for generating a magnetic flux, means defining a flux path threaded by said flux and constituting a first magnetic circuit, means forming a second flux path constituting a second magnetic circuit parallel to said first magnetic circuit, and including a member aligned with said magnet, and movable elements on opposite sides of said member having surfaces facing along the side surfaces of said member, said movable elements being movable in opposite directions away from registry with said side surfaces, and means for shifting said elements simultaneously with reference to said side surfaces in order to vary the reluctance of said second magnetic circuit.

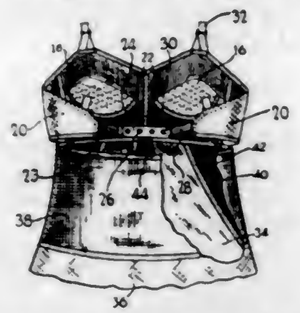
2,406,846
WINDING MACHINE
Arno H. Muller, Wood-Ridge, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application June 28, 1940, Serial No. 342,885
4 Claims. (Cl. 242—9)

1. A machine for winding strand material onto a support comprising a longitudinally movable carriage, spaced and relatively movable arms mounted on said carriage, each of said arms being equipped with a clamp for holding an end of said support and one of said clamps being adjustable so that said support may be held in a taut condition, a rotatable ring encircling the line of travel of said support, means to operate said carriage and said ring, a spring operated windlass carried by said ring and extending normal to the plane of said ring, said windlass being adapted to support a supply of said strand material, said windlass comprising a rod supported on said ring, a sleeve rotatably supported on said rod, means supported on said rod and normally pressing said sleeve into sufficient frictional engagement with said ring to prevent rotation of said sleeve on said rod, a spool and spool holding means rotatably supported on said sleeve, a wind-up spring attached to said sleeve and to said spool holding means and said windlass being adapted to maintain said strand material taut during the winding operation and being also adapted to slip around on said rod to prevent overtensioning of said strand material when said spring is wound up to a predetermined extent and a further pull is applied to said strand material.



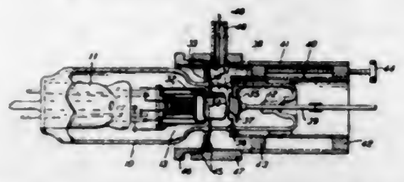
2,406,847
REGISTERING SHEETS
Andrew Neuhart, Pittsburgh, Pa., assignor to Miller Printing Machinery Co., Pittsburgh, Pa., a corporation of Pennsylvania
Application June 30, 1941, Serial No. 400,367
43 Claims. (Cl. 271—58)

1. A method of registering a sheet to front and side guides comprising moving the sheet toward said guides and operating upon the sheet by a brush moving relatively to the sheet and having certain bristles continuously in engagement therewith in a direction generally toward both of said guides.



2. Sheet registering apparatus comprising a support upon which a sheet is adapted to move toward front and side guides and brush means having certain bristles continuously engaging the sheet and movable to sweep over the sheet generally toward both front and side guides.

2,406,848
REMOTE-CONTROL SYSTEM
Robert L. Novak, Devon, Conn., assignor to General Electric Company, a corporation of New York
Application October 7, 1944, Serial No. 557,657
4 Claims. (Cl. 172—239)

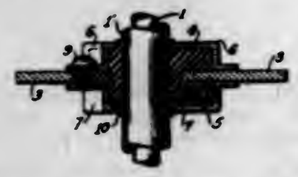


1. In a remote control system in which two remote points are interconnected by n control conductors and a common return conductor where n represents four or more, means at one of said points for selectively impressing a voltage between said common return conductor and a plurality of different groups of n—2 control conductors, and means at the other of said points selectively operable to different predetermined positions in response to the energization of said different groups of n—2 control conductors.

2,406,849
BRASSIÈRE SLIP
Abe Novick, South Orange, N. J., assignor to Lewel Manufacturing Co. Inc., Newark, N. J., a corporation of New Jersey
Application March 20, 1944, Serial No. 527,203
6 Claims. (Cl. 2—73)

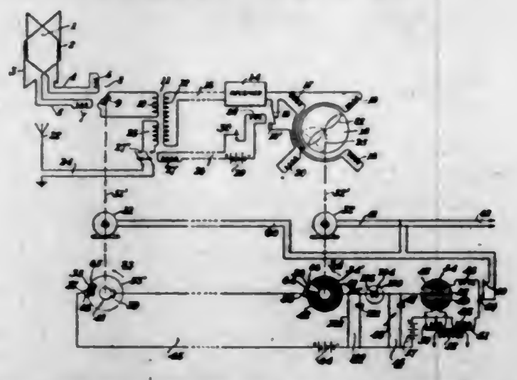
4. A brassière slip comprising a breast molding and supporting brassière top and a half-slip, said brassière top including a bust encircling brassière band having two ends provided with means for mutual detachable attachment at the rear of a wearer, a circumferentially resilient, waist encircling band around the upper edge of the half-slip which interconnects said brassière top and half-slip only at the front of the brassière slip and is adapted to cling to the wearer, and a strip of material interconnecting said bust encircling band adjacent said ends with the rear of said circumferentially resilient band.

2,406,850
ELECTRON DISCHARGE APPARATUS
John R. Pierce, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application April 11, 1941, Serial No. 388,043
9 Claims. (Cl. 315—5)



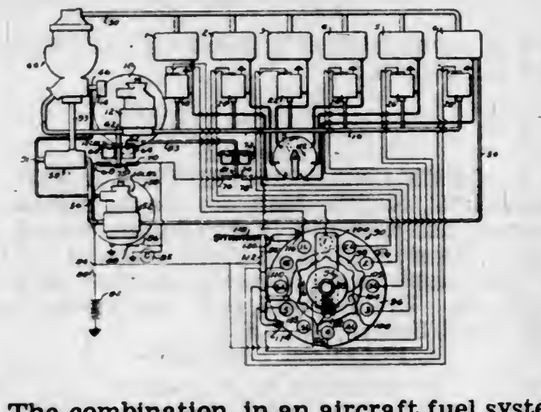
1. Electron discharge apparatus comprising a pair of spaced electrodes having juxtaposed reticulated portions defining a gap, an electron gun opposite one of said electrodes and in alignment with said gap, and a reflecting electrode opposite the other of said electrodes and in alignment with said gap, said reticulated portions being dished in the direction away from said electron gun.

2,406,851
FISCHER SYNTHESIS
Aaron K. Redcay, Baton Rouge, La., assignor, by mesne assignments, to Standard Catalytic Company, a corporation of Delaware
Application August 15, 1941, Serial No. 406,947
5 Claims. (Cl. 260—449.6)



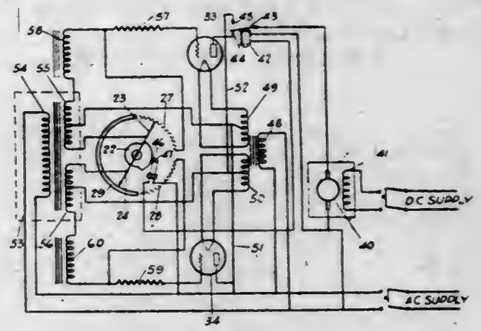
1. Improved process for the production of hydrocarbons boiling within the motor fuel boiling range which comprises passing a synthesis gas stream containing oxides of carbon and hydrogen and containing suspended therein a powdered catalyst upwardly through a reaction zone, maintaining temperature and pressure conditions in said reaction zone adapted to hydrogenate the oxides of carbon and to form hydrocarbons containing more than one carbon atom in the molecule, removing the reaction products overhead and segregating a portion of the hydrocarbons boiling within the motor fuel boiling range, and returning said segregated portion to said reaction chamber at a point where it will be substantially completely vaporized.

2,406,852
CONDUCTOR GROMMET ASSEMBLY
Reginald T. Relf, Chatham, N. J., assignor to Federal Telephone and Radio Corporation, a corporation of Delaware
Application October 5, 1942, Serial No. 460,895
4 Claims. (Cl. 174—153)



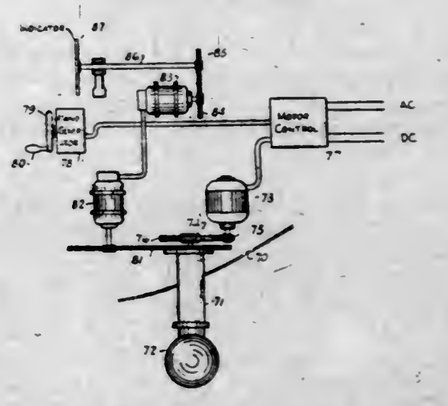
2. A grommet assembly for supporting an electric conductor passing through a hole in a plate comprising an elastic grommet, a flange at each end of said grommet having a plurality of indentations formed in the edges thereof to aid in the inserting of the grommet in said hole, an axially disposed opening in said grommet adapted to receive closely a conductor extended therethrough, a cup-shaped ring disposed over each flange and having an aperture in spaced relation to the conductor and of lesser diameter than that of the plate aperture, a plurality of screws extended through said plate and connecting said cup-shaped rings for clamping said flanges with a compressive force, and said cup-shaped rings being formed with internal bosses which enter the indentations in the edges of said flanges.

2,406,853
ROTARY POSITION CORRECTOR
Avery G. Richardson, Boonton, N. J., and Frank O. Chesus, Islip, N. Y., assignors to Federal Telephone and Radio Corporation, Newark, N. J., a corporation of Delaware
Application February 6, 1943, Serial No. 474,984
12 Claims. (Cl. 172—293)



1. Means for impelling a given angular relationship between two rotating members, comprising a first synchronous motor for rotating one of said members, a second synchronous motor for rotating the other of said members, both motors being of the salient pole type, a power supply for both motors, a first contactor operated by one of said motors, a second contactor operated by the other of said motors, both of said contactors having open and closed durations, the open duration of one contactor being equal to the closed duration of the other contactor, when both motors are revolving at synchronous speed, a series circuit comprising an energy source, said first and second contactors and an energy translator, a means for causing one of said motors to slip one of said salient poles whenever said translator is energized from said series circuit, and means for repeating the action of said first means until said given angular relationship is attained.

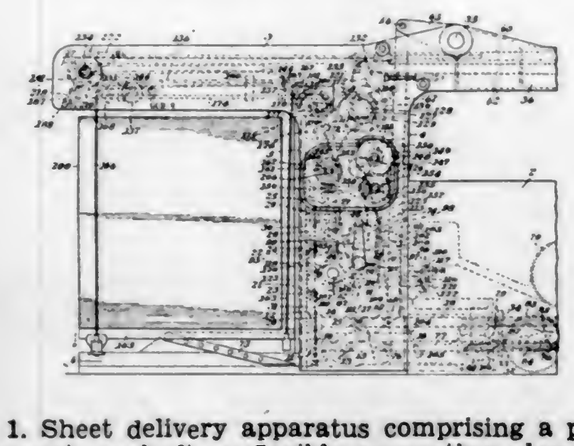
2,406,854
MULTIPLE TANK FUEL SYSTEM
David Samiran, Osborn, Ohio
Application February 12, 1943, Serial No. 475,683
9 Claims. (Cl. 158—36.4)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. The combination, in an aircraft fuel system, of an engine, a main fuel pump driven by said engine, a plurality of fuel tanks each connected to the suction side of said pump, an electromagnetically operated valve interposed in each of the lines which connect a tank to the pump, a solenoid for holding the valve open, a carburetor connected to the discharge side of said pump, an auxiliary fuel pump having its suction side connected to one of said tanks independently of the electromagnetically operated valve and having its discharge line connected to the discharge side of said main pump, a check valve in said discharge line biased to prevent flow from the discharge side of the main fuel pump to the discharge side of the auxiliary fuel pump, an electric motor for driving said auxiliary fuel pump, an electric current source, a switch for connecting said electric motor to said source, a pressure operated means connected to the discharge side of said main fuel pump for holding said switch open by said discharge pressure, a rotatable switch having circumferentially spaced insulated current supplying contacts for directing current to the coils of the electromagnetically operated valves, an electric motor for rotating said rotatable switch, a cam rotatable by said motor, said cam having a series of lobes and a series of detent notches, each corresponding to the number of electrically operated valves, a cam operated switch, successively operable to open position by each of said lobes upon rotation of said cam, a current supplying arm rotatable about the axis of said cam, a detent member carried by said arm for resiliently engaging in any selected one of said detent notches, said notches and said lobes being so spaced on said cam that when the arm engages a valve holding solenoid contact, the cam operated switch is open, electrically conductive means for connecting the current source in parallel through the fuel pressure operated switch and through the cam operated switch to the rotatable switch electric motor, electrically conductive means for connecting the current source to the arm of the rotatable switch, and electrically conductive means for connecting the current source through the fuel pressure operated switch to the auxiliary pump motor.

2,406,855
APPARATUS FOR CONTROLLING ROTATION
Howard A. Satterlee, Sharon, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Application March 2, 1936, Serial No. 66,634
6 Claims. (Cl. 181—0.5)

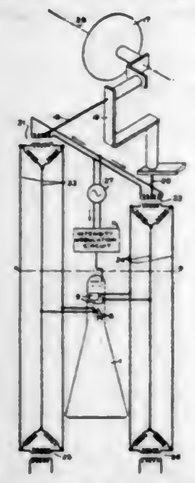
5. In a submarine signaling system having a signaling head, means for controlling the position of said signaling head including in combination with said signaling head, a shaft for turning the same, an electric motor for rotating said shaft, a control switch means for starting and stopping said motor and controlling the direction of rotation thereof and a differential system operating said control switch means, said system including means for manually turning said control switch in either direction, means for returning the control switch to its normal position, said means including means operatively associated with the signaling head shaft, said control switch including means for applying direct current impulses to said motor to rotate the motor in the direction desired.



2,406,856
APPARATUS FOR CONTROLLING ROTATION
Howard Avery Satterlee, Needham, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Application February 11, 1937, Serial No. 125,280
5 Claims. (Cl. 181—0.5)

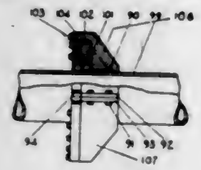
1. In an acoustic signaling device means for controlling the speed and rotation of said device

comprising an electric motor, means connecting said motor to said device for rotating the same, a source of electric power connected to said motor having means electrically operable to control the speed and rotation of said motor, and a hand generator connected to said electrically operable means for controlling the operation of said motor at speeds corresponding proportionally to the speeds of rotation of said hand generator.



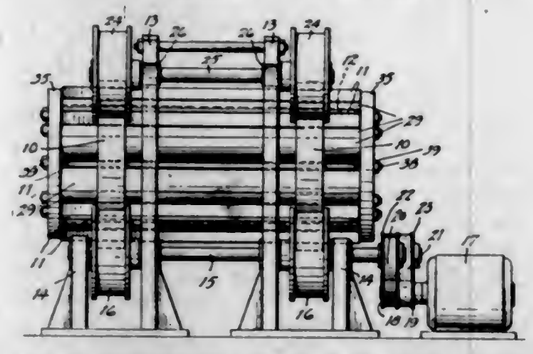
2,406,857
SHEET HANDLING APPARATUS
August A. Saul, Pittsburgh, Pa., assignor to Miller Printing Machinery Co., Pittsburgh, Pa., a corporation of Pennsylvania
Original application April 3, 1941, Serial No. 386,652. Divided and this application May 25, 1944, Serial No. 537,222
12 Claims. (Cl. 271—88)

1. Sheet delivery apparatus comprising a pile support, a shaft, a flexible supporting element connected with the pile support and wound about the shaft so that the mass of the pile support acting through the flexible supporting element tends to turn the shaft in such a direction as to cause lowering of the pile support, a pawl connected with the shaft, a ratchet mounted upon the shaft and with which the pawl engages so that the pawl tends to turn the ratchet about the axis of the shaft in the direction of turning of the shaft to cause lowering of the pile support and means turning the ratchet in said direction, thus permitting the pawl and consequently the shaft actuated by the mass of the pile support to turn about the axis of the shaft in said direction to lower the pile support.



2,406,858
VISUAL POSITION AND PHASE SENSE INDICATOR
James E. Shepherd, Hempstead, and John D. Mallett, Garden City, N. Y., assignors to Sperry Gyroscope Company, Inc., a corporation of New York
Application April 15, 1943, Serial No. 483,218
24 Claims. (Cl. 177—351)

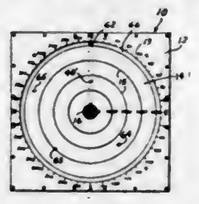
1. In a visual position indicator, the combination with a displaceable member of means for producing a pulsating signal voltage proportional in amplitude to the magnitude of displacement of said member relative to a reference position, a cathode ray tube provided with means electrically connected with said signal-producing means and operable in accordance with the voltages supplied thereto to control the angular position of the path traced by the fluorescent spot due to the cathode ray relative to the electrical axis of the tube, and means for decreasing the intensity of said cathode ray for a portion of its trace path to render the figure traced by said



spot of asymmetrical appearance with respect to said electrical axis.

2,406,859
COMMUNICATION IN PIPE LINES
Edward W. Smith, Melrose, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Original application January 10, 1934, Serial No. 706,159. Divided and this application August 12, 1936, Serial No. 95,567
10 Claims. (Cl. 179—1)

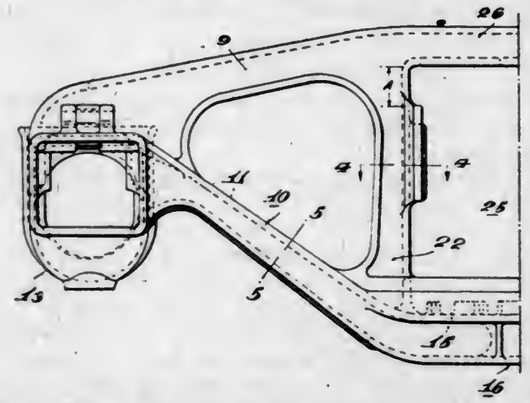
1. A means for transmitting vibrations along a metallic pipe comprising a collar formed on the pipe and a Rochelle salts oscillator formed in part with said collar for transmitting and receiving compressional wave vibrations.



2,406,860
CENTRIFUGAL CASTING
Harry G. Specht, Montclair, N. J.
Application June 18, 1943, Serial No. 491,305
11 Claims. (Cl. 22—65)

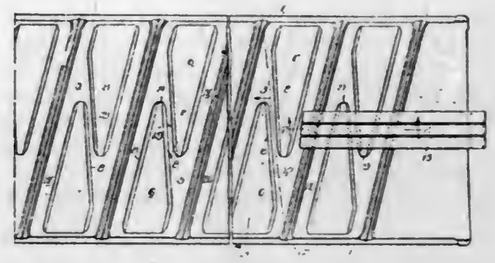
1. In a centrifugal casting machine, a mould carrier adapted for rotation about a longitudinal axis including a series of circumferentially spaced mould support members extending longitudinally in substantially parallel alignment with said axis, there being open spaces between said mould support members extending longitudinally in substantially parallel alignment with said axis, and a plurality of longitudinally disposed mould units

carried within said carrier in concentric relation about and in parallel alignment with said axis, respectively disposed in said longitudinal spaces of said carrier and each supported along its longitudinal edge portions by said mould supporting members.



2,406,861
PLOTTER INDICATOR FOR HARBOR DEFENSE
Earl W. Springer, Silver Hill, Md.
Application April 9, 1943, Serial No. 482,509
8 Claims. (Cl. 177—386)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

5. Means for locating an unknown object in a harbor or similar limited area comprising a sound projector and echo detector located in the area, a range and azimuth plotting means located in a convenient position, range and azimuth indicating means forming part of said plotting means, means connecting said sound projector and echo detector to said plotting means causing said sound projector to project a sound which, when echoed, causes said echo detector to actuate said range and azimuth indicating means of said plotting means, and means for synchronously training said range and azimuth indicating means over the plotting means and said sound projector and echo detector over the area.



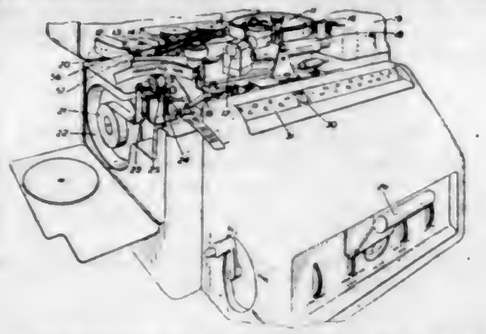
7. A method for detecting the location or passage of an unknown object in a limited area comprising selectively projecting a sound over all the various portions of the limited area, plotting the range and azimuth of echoes produced by all known echo-producing objects within such area, continuing to selectively project sounds over the various portions of the area and plotting any echoes whose range and azimuth do not agree with the range and azimuth of the echoes already plotted from the known objects to thereby detect an unknown object.

2,406,862
SIDE FRAME FOR RAILWAY CAR TRUCKS
Harry W. Stertzbach, Columbus, Ohio, assignor to The Buckeye Steel Castings Company, Columbus, Ohio
Application November 29, 1943, Serial No. 512,191
6 Claims. (Cl. 105—206)

2. A railway car truck side frame comprising compression and tension members, each of inverted channel shape, said members converging toward an end of the frame, a journal box arranged at said end of the frame and integral with said members, said box having a top and the tension member having a top web merging with said top, the bottom of the top having four symmetrically placed beveled inner surfaces spaced from the front and rear ends of the journal box, each pair of which transversely of the frame is spaced a distance equal to the width of the tension member.

2,406,863
PANELED STEEL ROOF
James S. Swann, Homewood, Ill., assignor to Standard Railway Equipment Manufacturing Company, Chicago, Ill., a corporation of Delaware
Application July 9, 1945, Serial No. 603,860
26 Claims. (Cl. 108—5.4)

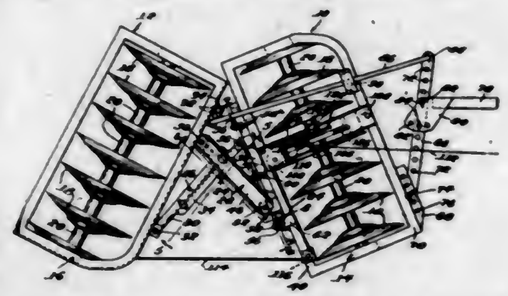
20. A railway car roof sheet having a pair of substantially triangular panels formed therein, the bases of said triangular panels located adjacent opposite ends of the sheet, said panels overlapping each other sufficiently to develop the bending moment requirement of the two panels so as to form, in effect, a single beam between the opposite ends of the sheet, and the space between the panels forming a diagonal stiffener between the ends of the sheet.



2,406,864
MANUFACTURE OF HYDROCARBONS
Charles L. Thomas, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
No Drawing. Application May 31, 1939, Serial No. 276.553
14 Claims. (Cl. 260—449.6)

1. In the synthesis of hydrocarbons by reaction of carbon monoxide and hydrogen in the presence of a hydrogenating catalyst consisting essentially of thoria and at least one of the metals of group VIII of the periodic system, the method of increasing the anti-knock value of the hydrocarbons produced by the synthesis which comprises associating with said catalyst an isomerizing and cracking catalyst consisting essentially of a major proportion of silica and a minor proportion of at least one of the oxides of the group consisting of alumina and zirconia.

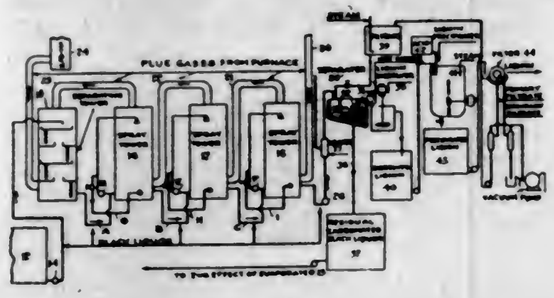
2,406,865
MEANS FOR PREPARING FACSIMILE MESSAGES FOR TRANSMISSION
Alfred Edward Thompson and Reginald Dennis Salmon, Croydon, England, assignors to Creed and Company Limited, Croydon, England, a British company
Application May 18, 1942, Serial No. 443,441
In Great Britain April 18, 1941
15 Claims. (Cl. 178—5)



1. In facsimile transmitting apparatus a type unit including a plurality of characters, an in-

dex member carrying said characters arranged in series, an indicator movable along the index member, means for selecting said characters in accordance with characters on the index member in register with the indicator, means for printing a selected character in one predetermined position, means including a common manually operated member for actuating both the indicator

and the printing means, means for driving a recording tape, including means for intermittently driving said tape past said predetermined position in accordance with the manual operation of said common member, and means for continuously driving said tape past another predetermined position at a speed substantially independent of that at said one predetermined position.



2,406,866
DISK HARROW
Ernest S. Thompson, Stockton, Calif.
Application March 21, 1944, Serial No. 527,428
8 Claims. (Cl. 55—83)

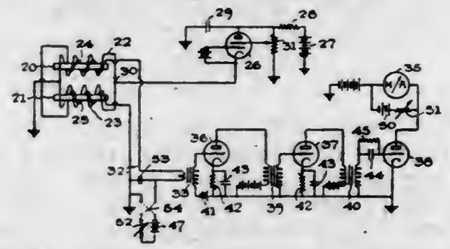
1. A disk harrow comprising a front frame and a rear frame each having a rotative soil cultivating disk means, crossed bars pivotally connected with said frames, a draw bar means pivotally connected with one end of the front frame and with the other end of the rear frame to swing the frames to a predetermined angular position, and means actuated by cultivating movement of one of said rotative soil cultivating disk means for moving said frames to different angular positions.

2,406,867
METHOD OF TREATING LIGNOCELLULOSIC MATERIAL
George H. Tomlinson, Montreal, Quebec, and George H. Tomlinson, Jr., Cornwall, Ontario, Canada, assignors to Howard Smith Paper Mills Limited, Montreal, Quebec, Canada
Application December 31, 1943, Serial No. 516,406
18 Claims. (Cl. 260—124)

1. The process of producing lignin material from black liquor comprising carbonating the same with oxygen and carbon dioxide-containing gases, controlling the reaction to accelerate the carbonation by providing continuously a large and constantly changing interface between liquid and gas, the area of liquid surface exposed at any time relative to liquor volume in the carbonating vessel and the speed with which said liquid surface is changed in contact with the gas during carbonation in such vessel being such that the desired carbonation reaction is completed before the relatively slower oxidation reaction has proceeded to an appreciable extent, and then, while the carbonated black liquor has a temperature above the melting point of the lignin material and the lignin material is present as a distinct flowable viscous liquid layer, flowing the

said layer of lignin material from the liquor while the lignin material is in such flowable viscous condition, and producing a water insoluble lignin material by dissolving the thus isolated lignin material in hot water, acidifying the hot aqueous solution with concomitant agitation, the acidifying agent being a mineral acid and the acidification and agitation being continued until the solution has a pH below about pH 5 and the lignin is precipitated out as finely divided insoluble particles, and filtering the product.

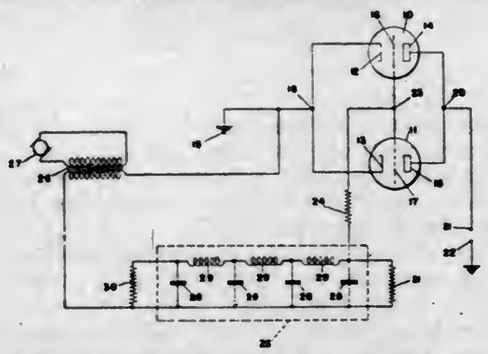
2,406,868
PARAFFIN ISOMERIZATION PROCESS
Carl O. Tongberg, Westfield, and Homer J. Hall, Roselle, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application August 15, 1941, Serial No. 407,008
18 Claims. (Cl. 260—683.5)



1. A process which comprises contacting at least one normal paraffin containing at least 4 carbon atoms per molecule in the presence of an aluminum halide under isomerization reaction conditions and in the presence of a halogen-containing promoter and a small amount of a naphthene taken from the group consisting of cyclopropane, cyclobutane and alkyl derivatives thereof, said three- and four-membered ring naphthenes being substantially the only naphthenes present.

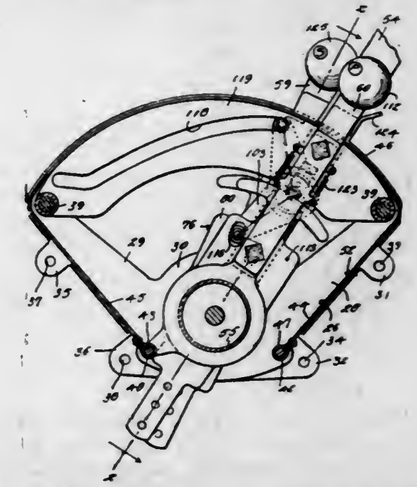
2,406,869
CATALYST PREPARATION
John D. Upham, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
No Drawing. Application August 18, 1942, Serial No. 455,241
7 Claims. (Cl. 252—211)

1. The process of preparing a catalyst which comprises dissolving a normally solid anhydrous metal halide of the Friedel-Crafts type in a liquid anhydrous hydrogen halide, and volatilizing substantially all of the hydrogen halide from the resulting solution by spray drying under conditions to effect precipitation of solid metal halide in the form of finely divided solid particles having intimately associated therewith less than about 5 weight per cent residual hydrogen halide in substantial and effective catalyst-activating amount.



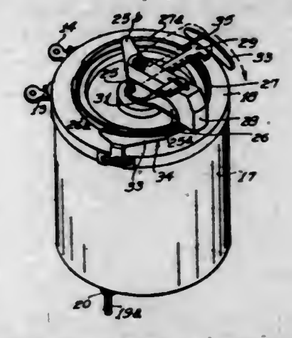
4. The process of preparing a catalyst which comprises filling the pores of a solid adsorbent particulate carrier material with gaseous anhydrous hydrogen halide, contacting the resulting carrier with a solution of a normally non-gaseous anhydrous halide of the Friedel-Crafts type in a liquid anhydrous hydrogen halide and thereby impregnating said carrier with at least part of said solution, the presence of said gas in said pores facilitating said impregnation, and volatilizing hydrogen halide from the mixture to effect precipitation of said non-gaseous halide in and upon said carrier.

2,406,870
APPARATUS FOR RESPONDING TO MAGNETIC FIELDS
Victor V. Vacquier, Oakmont, Pa., assignor to Gulf Research & Development Company, Pittsburgh, Pa., a corporation of Delaware
Application July 21, 1941, Serial No. 403,455
9 Claims. (Cl. 177—380)



1. An apparatus responsive to magnetic fields comprising a pair of cores of material of high permeability and characterized in that the hysteresis loop thereof exhibits a sharp knee where saturation is reached, means for generating periodic saw-tooth wave forms and for cyclically energizing said cores therewith to saturation whereby each core abruptly reaches saturation at a phase of the energizing cycle which is shifted by changes in the ambient field at said core, windings adjacent said cores connected in opposition to deliver the difference between the voltages induced by said cores, whereby said phase shifts cause production of sharp voltage pulses which vary in magnitude with a change in field at either one of the cores, and transducing means selective to said pulses, in energy-receiving relation to said windings.

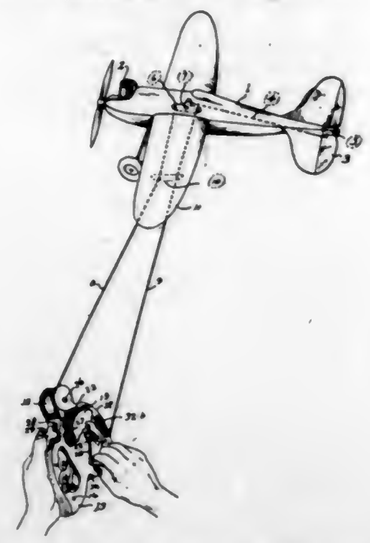
2,406,871
TRIODE OSCILLATOR CIRCUIT
Arthur A. Varela, Washington, D. C.
Application September 22, 1941, Serial No. 411,887
4 Claims. (Cl. 250—36)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In an oscillator circuit for generating radio frequency pulses, an electron discharge device having a cathode, anode and at least one control electrode, means interconnecting said cathode, anode and control electrode in such a manner as to cause said device to oscillate whereby rectified control electrode current is generated, and a filter network composed of inductance and capacitance connected between said control electrode and said cathode for determining and maintaining, by the action of said rectified control electrode current thereon, the angle of the plate current flow substantially constant throughout a period of time following the initial flow of rectified control electrode current thereto and thereafter for causing the angle of the plate current to rapidly decrease to an extinction point.

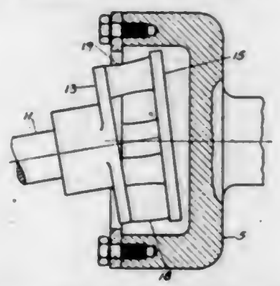
2,406,872
THROTTLE CONTROL
Philip M. Waite, Corry, Pa.
Application December 4, 1942, Serial No. 467,882
4 Claims. (Cl. 74—471)

1. A control device comprising a main lever, a secondary lever, an operator for said secondary lever, latch means connecting said operator with said secondary lever, a bell crank pivotally carried by said main lever, means carried by said bell crank engageable with said operator for moving said operator upon rocking of said bell crank, and stationary cam means engageable with said bell crank to effect rocking of the latter upon movement of said main lever.



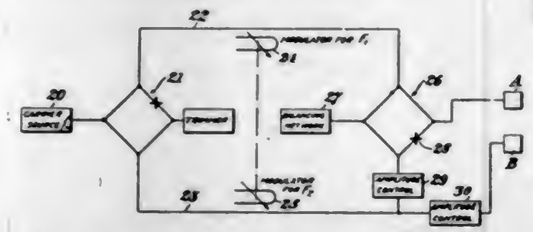
2,406,873
ELECTRICALLY OPERATED CONTROL
Nevilles E. Walker, Portland, Oreg.
Application November 9, 1942, Serial No. 464,990
7 Claims. (Cl. 192—.02)

1. A control including an electrically operated device characterized by being receptive to and energized by interrupted electric impulses, resistance elements in electric series with the power circuits leading to said device, said resistance elements being electrically balanced with respect to each other to maintain said device at any position



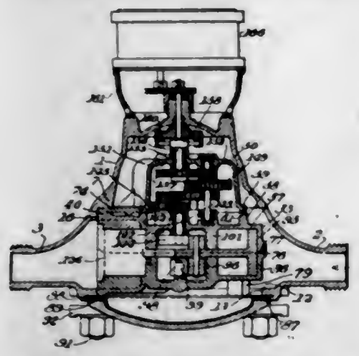
to which it has been moved, said resistance elements having movable contacts electrically connected with said circuits and physically joined together and to said device, and a self-engaging clutch mechanism adapted operatively to engage said movable contacts when said clutch mechanism is in engaging position.

2,406,874
RETRACTABLE CONTROL ELEMENT FOR TOY AIRPLANES
Nevilles E. Walker, Portland, Oreg.
Application May 22, 1944, Serial No. 536,664
7 Claims. (Cl. 46—77)



1. The combination with a self-propelled toy airplane, having a pair of control and flight limiting wires secured thereto, adjustable elevators operatively connected to one end of said wires, and a distant control handle secured to the other end thereof, of means associated with said handle for reeling in and paying out said control wires simultaneously from two points, respectively, sufficiently spaced to permit the gripping of the handle intermediate said points, for varying the radius of flight of said toy airplane without disturbing the control effected by said handle through said wires.

2,406,875
FLEXIBLE COUPLING
Leon Wallerstein, Jr., Erie, Pa., assignor to Lord Manufacturing Company, Erie, Pa., a corporation of Pennsylvania
Application October 24, 1944, Serial No. 560,140
4 Claims. (Cl. 64—11)

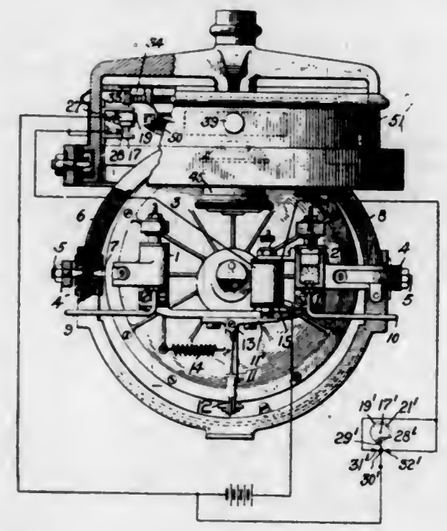


1. A flexible coupling, comprising a driving shaft provided with angularly spaced radially-disposed arms, a driven shaft provided with angularly spaced radially-disposed arms positioned between those of the driving shaft, each of said arms being provided with a flat face lying in a plane substantially perpendicular to the drive axis, a coupler provided with flat faces substantially parallel to those of said arms and positioned opposite thereto to cooperate therewith in torque-transmitting pairs, and a body of resilient material such as rubber connected to the opposed faces of each of said pairs formed to transmit torque in shear from the driving shaft through the coupler to the driven shaft and yieldingly to accommodate misalignment of said shafts.

2,406,876
INSTRUMENT NAVIGATION SYSTEM
Chester B. Watts, Jr., East Orange, N. J., assignor to Federal Telephone and Radio Corporation, a corporation of Delaware
Application May 29, 1942, Serial No. 444,988
16 Claims. (Cl. 250—11)

1. Glide path apparatus suitable for instrument landing of aircraft, comprising a first antenna means and a second antenna means disposed one generally above the other, a first wave-translating means operating at a predetermined carrier frequency, means coupling said first and said second antenna means to said wave-translating means, a second wave-translating means also operating at said frequency, and means coupling said second wave-translating means solely to said first antenna means.

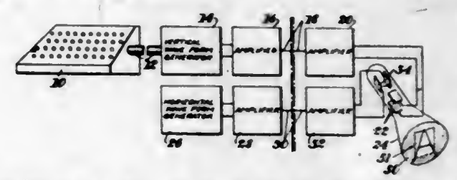
2,406,877
OSCILLATING DISK METER
Alexander R. Whittaker, New York, N. Y., assignor to Pittsburgh Equitable Meter Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application November 27, 1943, Serial No. 511,931
17 Claims. (Cl. 73—257)



1. In an oscillating piston meter, a measuring chamber providing top and bottom walls and a cylindrical wall with a substantially radial outlet opening therethrough, a metering element in said chamber, outlet depressions in the top and bottom walls of said measuring chamber merging into said radial opening, an outer casing, means locating said meter chamber within the outer casing in spaced relation thereto to provide an annular inlet chamber, an inlet connection in the outer casing communicating with said annular chamber, inlet openings in the top and bottom walls of said measuring chamber, co-operating means on the outer casing and measuring chamber sealing the radial opening from said annular inlet chamber, and an outlet connection in the outer casing communicating directly with said radial opening.

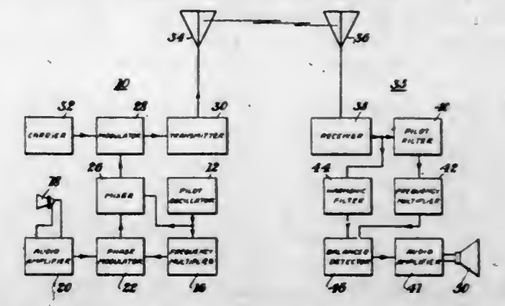
2,406,878
PRINTING INK
Paul Whyzmuzis, Corona, Long Island, N. Y., and Harry Linkletter, Englewood, N. J., assignors to Interchemical Corporation, New York, N. Y., a corporation of Ohio
No Drawing. Application July 10, 1943, Serial No. 494,242
3 Claims. (Cl. 106—28)

1. A printing ink characterized by improved drying when exposed to ultra violet energy, comprising pigment dispersed in a vehicle capable of being dried by ultra violet energy, and containing a binder having a conjugated system of double bonds, and containing from about 1 to 10% of dicinnamal acetone, whereby drying by ultra violet is substantially accelerated.



2,406,879
DAMPING ELIMINATOR FOR GYROSCOPIC COMPASSES
Bruno A. Wittkuhns, Summit, and Pierre Chantemerle, Fort Lee, N. J., assignors to Sperry Gyroscope Company, Inc., Brooklyn, N. Y., a corporation of New York
Application April 20, 1939, Serial No. 268,944
2 Claims. (Cl. 33—226)

1. In a ship's gyro-compass having a damping eliminator, an automatic ship's speed correction device for said compass having a part which is readjusted upon change of the ship's speed, a speed responsive device connected to said part, and means actuated thereby for bringing said damping eliminator into action.

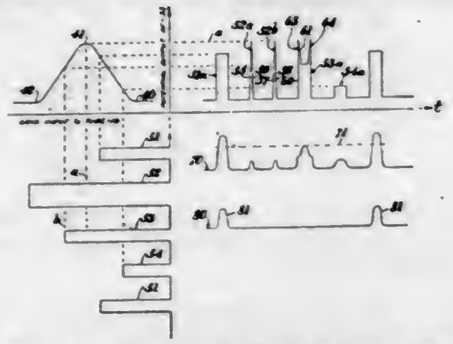


2,406,880
INTELLIGENCE TRANSMISSION SYSTEM
Norman H. Young, Jr., Jackson Heights, N. Y., assignor to Federal Telephone and Radio Corporation, a corporation of Delaware
Application August 29, 1942, Serial No. 456,651
19 Claims. (Cl. 178—18)

1. An intelligence transmission system comprising, in combination, means for producing a first predetermined wave form corresponding to one parameter of a character to be transmitted, means for producing a second predetermined waveform corresponding to another parameter

and common to all of the characters to be transmitted, and means for combining said waveforms into a legible character.

2,406,881
METHOD AND SYSTEM FOR COMMUNICATING INTELLIGENCE
Norman H. Young, Jr., Jackson Heights, N. Y., assignor to Federal Telephone and Radio Corporation, a corporation of Delaware
Application September 19, 1942, Serial No. 458,934
8 Claims. (Cl. 179—1.5)

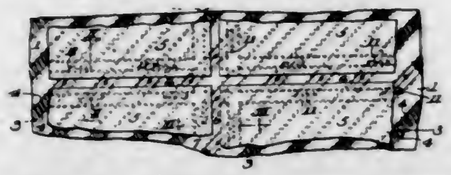


1. A transmission system comprising, in combination a transmitting station including a transmitter, a source of carrier waves, a modulator connected between said transmitter and carrier wave source, a pilot oscillator, a frequency multiplier connected to said pilot oscillator, a phase modulator fed by said frequency multiplier, a mixer connected to said carrier modulator, means for feeding the output of said pilot oscillator and said phase modulator to said mixer, and an audio frequency source connected to said phase modulator, and a receiving station including a receiver adapted to receive signals from said transmitter, a pilot frequency filter and a harmonic frequency filter both connected to the output of said receiver, a frequency multiplier connected to said pilot frequency filter, a balanced detector fed from said harmonic filter and said frequency multiplier, and audio output means connected to said balanced detector.

2,406,882
RADIO IMPULSE SYSTEM
Norman H. Young, Jr., Jackson Heights, N. Y., assignor to Federal Telephone and Radio Corporation, Newark, N. J., a corporation of Delaware
Application December 15, 1942, Serial No. 469,044
6 Claims. (Cl. 178—44)

6. A method of eliminating from a wave modulated with substantially unidirectional pulses of different amplitude having a predetermined fundamental frequency content, those pulses having amplitude greater or lesser than a predetermined level, comprising distorting pulses above a given amplitude thereby producing sharp pulse portions and relatively increasing the harmonic content in varying degree, from the leading and trailing edges of the pulses above the given amplitude, filtering said waves to eliminate the higher harmonics of the pulses thereby reducing the

amplitude of the distorted pulses substantially proportionally to their harmonic content, and



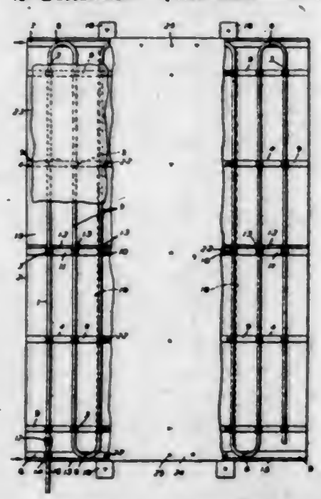
clipping the output pulses at a level above that of the greater amplitude pulses after reduction.

2,406,883

MEANS FOR SECURING PRINTING PLATES TO THEIR BASES

Hans J. Luehrs, Westerly, R. I., assignor to C. B. Cottrell & Sons Company, Westerly, R. I., a corporation of Delaware

Application February 17, 1943, Serial No. 476,198
6 Claims. (Cl. 101—388)



1. A base having spaced grooves along its surface, a printing plate having intersecting grooves along its back adjacent all of its marginal edges, plate register hooks engaging said base and plate grooves, and means for propelling the hooks along the base groove in directions to secure the plate to the base under tension comprising propelling gears within said hooks and a suitable removable instrument insertable into the hooks for operative engagement with said propelling gears.

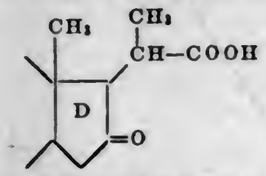
2,406,884

ELECTRIC HEATING SYSTEM FOR BUILDINGS

Walter Noah Mann, Sutton Coldfield, and Ernest Lawrenson, Prescot, England, assignors to British Insulated Cables Limited, Prescot, England, a British company

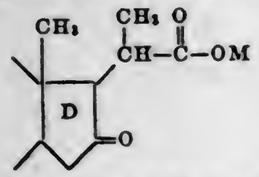
Application May 2, 1944, Serial No. 533,700
In Great Britain June 7, 1943
2 Claims. (Cl. 219—19)

1. An electric heating panel suitable for installing in the floor, wall or ceiling of a building, comprising in combination, a plurality of spaced metal longitudinal members, a plurality of spaced cross-members disposed in front of the longitudinal members and substantially at right angles thereto and welded to the longitudinal members to form a frame, the cross-members having flat faces of appropriate width directed towards the front of the panel, metal clips welded to those faces for opening on the front side of the panel, an electric heating element comprising a continuously insulated electric wire attached to the frame by being held in the clips, and a heat-diffusing material in which the whole of the element is embedded.



2,406,885

SAPOGENIN OXIDATION PRODUCTS AND PROCESS FOR PREPARING THE SAME



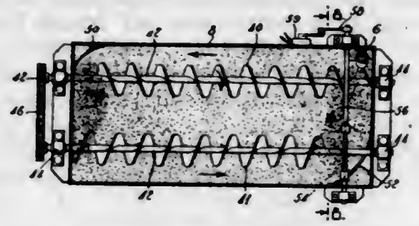
Russell Earl Marker, State College, Pa., assignor to Parke, Davis & Company, Detroit, Mich., a corporation of Michigan

No Drawing. Original application August 3, 1940, Serial No. 351,147. Divided and this application November 22, 1943, Serial No. 511,340
5 Claims. (Cl. 260—397.1)

1. Process for obtaining sapogenin oxidation products which comprises subjecting a member of the class consisting of steroidal sapogenins, sapogentic acids, dihydrosapogenins, sapogenoic acids, and C_{22} lactones, to vigorous oxidation at 40–100° C. by treatment with a strong oxidizing agent after previously protecting hydroxyl groups therein with a member of the class consisting of acylating agents, aralkylating agents, and halogenating agents, thereby producing a C_{22} keto acid having in ring D the structure

separating the alkali soluble fraction, thereby obtaining an alkali metal salt of a steroid acid having in ring D the structure,

where M represents an alkali metal, and hydrolyzing said fraction.



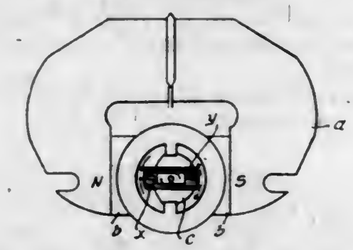
2,406,886

COFFEE BIN

Douglas M. McBean, Rochester, N. Y., assignor to Beech-Nut Packing Company, Canajoharie, N. Y., a corporation of New York

Original application March 19, 1940, Serial No. 324,843, now Patent No. 2,321,838, dated June 15, 1943. Divided and this application December 9, 1942, Serial No. 468,379
1 Claim. (Cl. 214—17)

In an apparatus of the class described, the combination of a bin, screw-conveyors located at the upper end portion of the bin arranged horizontally, and spaced from opposite walls of the bin and from each other, means for feeding finely divided material into the upper end of the bin, the material entering the bin adjacent the receiving end of one of said conveyors, and means for driving said conveyors whereby the material thus entering the bin tends to be fed longitudinally of the first-mentioned conveyor in one direction and then tends to be fed by the other



conveyor in the opposite direction so as to tend to maintain the top of the material in the bin substantially level.

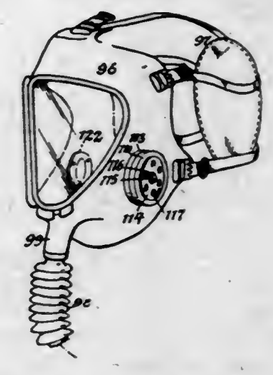
2,406,887

ELECTRICAL RATIOMETER

Maurice Graham McBride, Enfield, Middlesex, England, assignor to Sangamo Electric Company, Springfield, Ill.

Application July 22, 1943, Serial No. 495,775
In Great Britain August 5, 1942
6 Claims. (Cl. 171—95)

1. In a ratiometer or the like, the combination of a magnet comprising first and second pole pieces, a solid core disposed between said pole pieces, coil means rotatably mounted on a stationary pivot axis and surrounding said core, a first pair of inner and outer surfaces on said first pole piece and on said core respectively defining a first air gap therebetween at one side of said core, said first pair of surfaces being concentric with respect to the stationary pivot axis of said coil means so that said first air gap is of uniform width and acts with a substantially uniform magnetic field on one side of said coil means, and a second pair of inner and outer surfaces on said second pole piece and on said core respectively defining a second air gap therebetween substantially at the opposite side of said core, one of said surfaces of said second pair being non-concentric with respect to the stationary pivot axis of said coil means so that said second air gap is of non-uniform width throughout substantially the entire length of gap traversed by the other side of said coil means and acts with a substantially non-uniform magnetic field on the other side of said coil means.



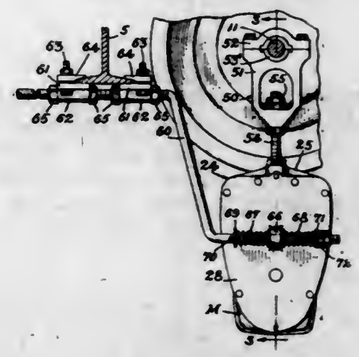
2,406,888

BREATHING APPARATUS

Phillip E. Meidenbauer, Jr., Lancaster, N. Y., assignor to Scott Aviation Corporation, Lancaster, N. Y., a corporation of New York

Application June 6, 1944, Serial No. 538,923
1 Claim. (Cl. 128—142)

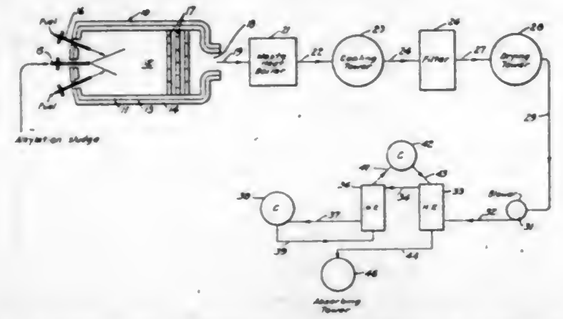
A breathing apparatus, comprising a high pressure fluid chamber adapted to receive sustaining fluid from a high pressure source, a low pressure chamber which receives fluid at reduced pressure from said high pressure chamber, a respiration chamber which receives fluid from said low pressure chamber, a mask which communicates with said respiration chamber and whereby sustaining fluid is supplied to a person, exhalation valve means through which fluid is discharged from the mask and which comprises one unit having a lightly loaded outwardly opening check valve member and another unit having a heavily loaded outwardly opening check valve member, manually operated means for positively holding said lightly loaded check valve member in its closed position, pressure regulating valve means



interposed between said high and low pressure chambers, demand valve means interposed between said low pressure chamber and said respiration chamber and adapted to be opened in response to inhalation of the person using the apparatus, and manually operated retaining means for holding the demand valve means in open position and bypassing said pressure regulating valve means.

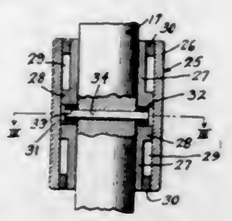
2,406,889

POWER UNIT FOR TRAVELING CRANES



George A. Mitchell, Muskegon, Mich., assignor to Manning, Maxwell & Moore, Inc., Muskegon, Mich., a corporation of New Jersey

Application December 14, 1942, Serial No. 469,017
8 Claims. (Cl. 105—163)

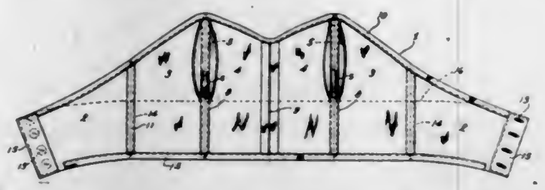


1. A power unit for a traveling bridge crane or the like having a horizontally disposed transverse drive shaft with a hand chain wheel fast thereon, said unit comprising a rigid frame structure, hangers anchored to said frame structure in spaced relation each including a bearing element engageable with the drive shaft on opposite sides of the chain wheel and operative to support the unit on the shaft, a shaft journaled on said frame structure, a sheave fast on said last mentioned shaft, an endless driving chain connecting said sheave with said wheel, a motor secured to said frame structure, and means drivingly connecting said motor with the shaft carrying said sheave.

2,406,890
PRODUCTION OF SULPHUR DIOXIDE
Albert C. Mohr, Arcadia, Calif., assignor, by mesne assignments, to Chemical Construction Corporation, New York, N. Y., a corporation of Delaware
Application February 1, 1943, Serial No. 474,343
6 Claims. (Cl. 23—177)

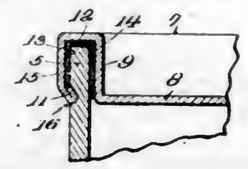
1. A process for converting an alkylation sludge containing sulphuric acid and sulphur compounds to sulphur dioxide in a combustion chamber having an extensive internal surface and brick checkerwork at one end thereof through which gases issuing from the chamber must pass, said checkerwork brick carrying catalytic material promoting combustion of carbon and hydrogen with oxygen, said process comprising burning a fuel with excess air in said combustion chamber to heat said extensive surface and said brick checkerwork and to supply radiant heat to said chamber at a temperature of above 1500° F., spraying the sludge into said combustion chamber to evaporate water thereform and burn with said excess air substantially all carbon, hydrogen and sulphur compounds respectively to carbon dioxide, water, and sulphur dioxide, passing the resulting gases through said checkerwork to ensure completion of the carbon and hydrogen oxidation, cooling the gases issuing from said furnace after passage through said checkerwork to condense the major portion of water in said gases, separating said condensed water and drying the remaining gases with concentrated sulphuric acid to remove substantially all the water therefrom.

2,406,891
SHAFT BEARING ASSEMBLY
John A. Newton and Norman Hoertz, Cleveland, Ohio, assignors to Thompson Products, Inc., Cleveland, Ohio, a corporation of Ohio
Application July 28, 1944, Serial No. 546,983
6 Claims. (Cl. 308—123)



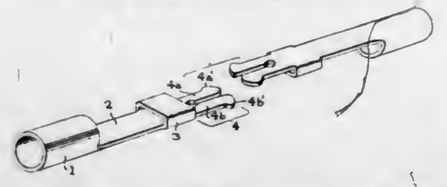
6. In a bearing structure for a shaft and the like, an outer cylindrical one-piece sleeve, with spaced but aligned bushings telescoping opposite ends of said sleeve in tight interfitted engagement therewith and having their innermost ends spaced apart inside said sleeve, said bushings being made of porous lubricant retaining material, an end thrust washer inside said space within said sleeve, said washer being provided with means for securing it to a shaft on which the bearing is mounted so that the washer is rotatable with the shaft and relative to said bushings and sleeve, said bushings having their adjoining innermost ends shouldered adjacent said washer, the remaining outer surface of each of said bushings being spaced from the inner surface of the sleeve to provide longitudinally spaced annular lubricant chambers between the sleeve and the bushings and end closure rings tightly fitted between the sleeve and the ends of the bushings to close and seal off the ends of said chambers at the opposite ends of said sleeve.

2,406,892
N-BENZYL-N-ALKYL MORPHOLINIUM COMPOUNDS
Joseph B. Niederl, Victor Niederl, and Martin E. McGreal, Brooklyn, N. Y.
No Drawing. Continuation of application Serial No. 393,672, May 15, 1941. This application January 1, 1943, Serial No. 471,024
1 Claim. (Cl. 260—247)



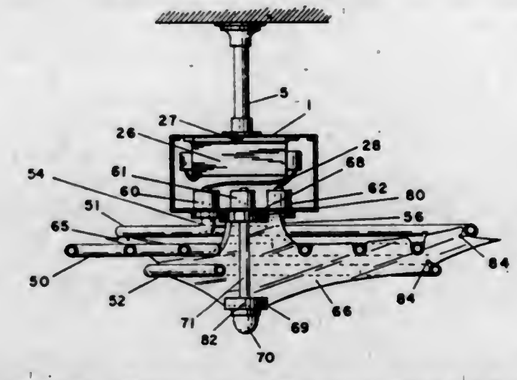
N-benzyl-N-cetyl morpholinium ethosulfate.

2,406,893
GARMENT
Elizabeth Teresa Nunn, Cleveland, Ohio, assignor of one-half to Josephine C. Corcoran, Rocky River, Ohio
Application September 13, 1943, Serial No. 502,134
6 Claims. (Cl. 2—42)



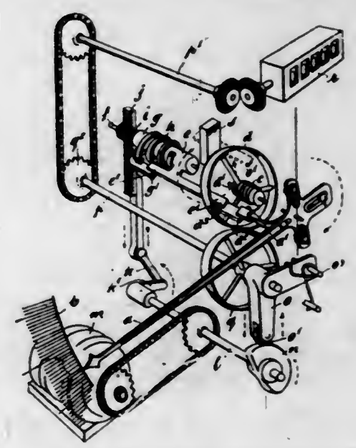
1. A garment of the strapless brassière type comprising a waist band part adapted to snugly fit the wearer with a lower portion substantially at the wearer's waist line and an upper portion adjacent to and below the wearer's breasts, and a breast part of maximum height in the front of the garment and adapted to rise above the breasts when worn and diminishing in height to the upper portion of the waist band part at the back of the garment, transversely flexible stays secured to the fabric of both said parts and extending from substantially the lower portion of the waist band part to substantially the top of said breast part at substantially right angles to said waist band part and being spaced in said garment to be substantially aligned with the nipples of the wearer's breasts, the said breast part having a front fullness adjacent said stays with the fullness restricted from the bottom edge of the breast part to about the middle height of the breasts, whereby to draw the lower portion of said breast part and adjacent portions of said stays snugly against the lower parts of the breasts with decreasing snugness at increasing heights, and with the said fullness increased thereabove to permit substantial freedom of movement between the surfaces of the upper parts of the breasts and the inner surface of the fabric of the upper portion of said breast part of the garment, the upper edge of said breast part being in a state of tension opposing the tendency of said stays to stand away from the curved surface of the upper parts of the breasts and drawing the upper parts of said stays and adjacent fabric of the breast part of the garment back to substantially no more than free sliding contact with the surfaces of the upper parts of the breasts.

2,406,894
CLOSURE FOR PAPER CONTAINERS
Frank J. O'Brien, Pelham, N. Y., assignor to Continental Can Company, Inc., New York, N. Y., a corporation of New York
Application February 28, 1944, Serial No. 524,252
4 Claims. (Cl. 229—5.5)



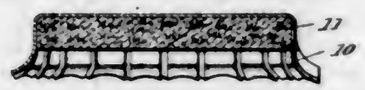
1. As an article of manufacture, a container end closure having a central body portion and a heel insertible in the end of a container body and a peripheral portion adapted to embrace a container body end and press it against said heel to effect a closure thereof, and an adhesive carrier attached to said peripheral portion and heel and having a constantly tacky adhesive on the exposed face thereof and disposed to adhere to the container body internally and externally and over its end extremity when embraced by said peripheral portion to provide a seal.

2,406,895
ELECTRIC CONNECTOR
Raymond G. Olson, Chevy Chase, Md.
Application November 17, 1944, Serial No. 563,875
6 Claims. (Cl. 287—76)



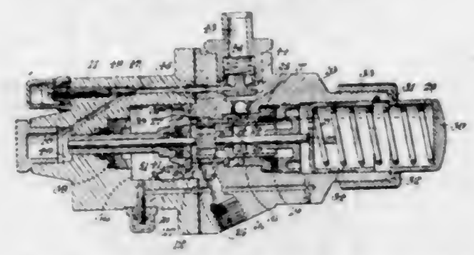
1. A connector part comprising a flat blade-like element having a bifurcated end, and a sleeve-like structure formed on one side of said blade-like element adjacent said bifurcated end.

2,406,896
GASEOUS DISCHARGE TUBE LIGHTING FIXTURE
Harold Ray Owen, Los Angeles, Calif., assignor to Electrical Products Corporation, Los Angeles, Calif., a corporation of California
Application June 15, 1943, Serial No. 490,926
1 Claim. (Cl. 240—78)



A lighting fixture including: a central housing provided with receptacles to receive and make contact with the ends of a pair of gaseous conduction lighting tubes, a pair of gaseous conduction lighting tubes extending outward from and around the same along a pair of adjacent parallel planes in a decorative design of radiating arms and concentric figures; the first of said tubes being convoluted in a design of double branched radiating arms with the return bends at the extremities of the same, and the second of said tubes being convoluted in a design of concentric circuitous figures starting from the center and following a portion of the innermost figure and proceeding to the next outer figure along a course closely paralleling a portion of a single branch of one of the said radiating arms of the first said tube, thence following a portion of the next outer figure and proceeding to the third figure along a course closely paralleling a single branch of a different one of said radiating arms of the first said tube and ultimately returning from the outermost figure to the center of the design by following a course closely paralleling the opposite branch of the same individual arm of the first said tube from that followed by the second tube in each passage from one figure to the next, whereby the interruptions of continuity of the circuitous figures occur between the two branches of individual arms and of a different arm from one of said circuitous figures to the next; and tube support members supported from the housing and extending in vertical planes between the two branches of each of the radiating arms of the first said tube and supporting said tubes.

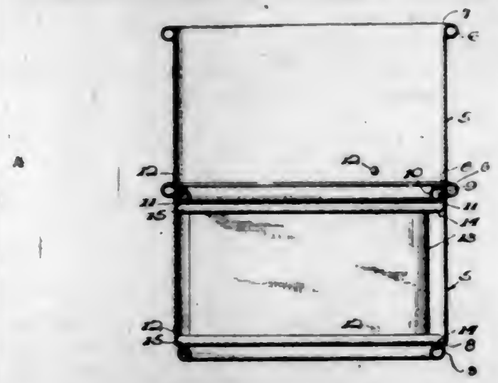
2,406,897
AUTOMATIC WEIGHING APPARATUS EMBODYING A TOTALIZING MECHANISM
Alfred Ernest Page, Birmingham, England, assignor to W. & T. Avery Limited, Birmingham, England
Application October 8, 1943, Serial No. 505,438
In Great Britain October 29, 1942
6 Claims. (Cl. 235—91)



1. In an automatic weighing apparatus comprising a totalizing mechanism, in combination, a load-responsive member, weighing mechanism for positioning the load-responsive member in accordance with the weight of the load, said weighing mechanism having a lost-motion connection with the load-responsive member, flexible resilient means for normally taking up the lost motion in said connection, a driving member, which normally is out of engagement with the load-responsive member, for moving the load-responsive member in a direction that is the reverse of the direction in which it is moved by application of a load, means for actuating the driving member to move the load-responsive member from a load-responsive position back to its normal no-load position, and a driven member, for operating the totalizing mechanism, which is brought by said actuating means into driven engagement with the load-responsive member prior to engagement of the driving member with the load-responsive member.

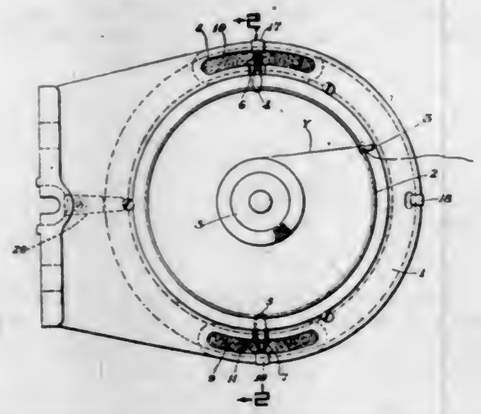
2,406,898
CAP LINING MATERIAL AND METHOD OF PRODUCING THE SAME
Wilson G. Palmer, Chicago, Ill., assignor to Continental Can Company, Inc., New York, N. Y., a corporation of New York
Application August 18, 1943, Serial No. 499,123
6 Claims. (Cl. 288—34)

1. The method of preventing objectionable discoloration of cap lining material containing a tannin through contact with a ferrous cap, which comprises treating the said material with an acid aqueous solution containing a salt of the group consisting of metaphosphoric and pyrophosphoric acids.



2,406,899
HYDRAULIC CUTOUT DEVICE
Cyril Alphonso Pugh, Ilford, and Alan William Say, Upminster, England, assignors to The Plessey Company Limited, Ilford, England, a British company
Application July 1, 1943, Serial No. 493,076
In Great Britain July 22, 1942
18 Claims. (Cl. 137—153)

1. A hydraulic cut-out device comprising a valve casing having an inlet, a delivery outlet and a by-pass outlet, a by-pass valve normally blocking flow from the inlet to the by-pass outlet, a piston subject to the pressure in said delivery outlet adapted to shift said valve initially, a second piston effective on displacement to increase the pressure on said first-mentioned piston, and a pilot valve actuated by said by-pass valve and controlling the admission of fluid from said inlet to one side of said second piston to cause displacement thereof.



2,406,900
ADHESIVE TAPE CONTAINER WITH NESTING FEATURE
William F. Punte, Passaic, N. J., assignor to Continental Can Company, Inc., New York, N. Y., a corporation of New York
Application June 30, 1944, Serial No. 542,959
1 Claim. (Cl. 220—97)

A container for an adhesive tape spool comprising a cylindrical body portion open at both ends and having the wall thereof at its upper end rolled outwardly into a hollow bead and having its wall at the lower end thereof offset inwardly and inwardly rolled into a hollow bead, said inwardly offset portion being dimensioned so as to frictionally engage within the open end of a companion container for the securing of one container to another in stacked relation, said offset portion where it joins the remainder of the body wall providing a shoulder for limiting the extent to which the offset portion of the wall can be inserted within the open end of the companion container, said shoulder being substantially in the plane which tangentially contacts the upper surface

of the bead at the open end of the companion container.

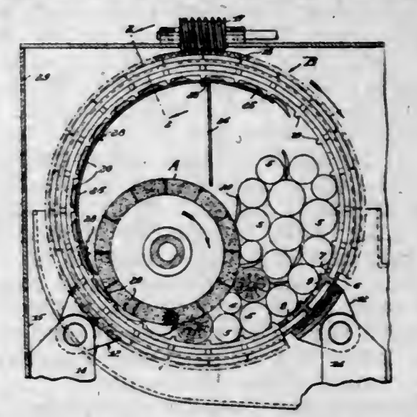
2,406,901
LUBRICATED TRAVELER RING
Frank S. Pollock, Jr., Martinsville, Va., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application July 13, 1945, Serial No. 604,872
4 Claims. (Cl. 57—120)

1. A twister ring assembly comprising in combination a ring rail, a traveler ring mounted on the ring rail, means for conducting lubricant to the face of said traveler ring, lubricant collecting means disposed immediately below said traveler ring and in the path of lubricant thrown from said traveler ring, said lubricant collecting means comprising an annular felt pad and means for conducting lubricant from said collecting means to said means for conducting lubricant to the face of said traveler.

2,406,902
SOAP-LIKE PREPARATIONS
Albert L. Rawlins, Grosse Pointe Woods, Mich., assignor to Parke, Davis & Company, Detroit, Mich., a corporation of Michigan
No Drawing. Application November 23, 1942, Serial No. 466,671
8 Claims. (Cl. 252—152)

1. A lathering soap-like preparation comprising a germicidal mixture, free from skin-irritating properties, consisting of a substantially non-lathering germicidal water-soluble high molecular weight quaternary ammonium compound and a substance of the class consisting of a water-soluble acid addition salt of hexadecyl amine, a water-soluble acid addition salt of octadecyl amine and mixtures of said acid addition salts, said germicidal mixture being free from skin-irritating compounds and salts of amines of higher molecular weight than octadecyl amine and lower molecular weight than hexadecyl amine, and the weight of said substance in said germicidal mixture ranging from about three times to about four times the weight of said quaternary ammonium compound.

2,406,903
FUEL CONTAINER AND METHOD OF MAKING SAME
Scott Rethorst, Los Angeles, Calif., assignor, by mesne assignments, to Consolidated Vultee Aircraft Corporation, a corporation of Delaware
Application July 29, 1940, Serial No. 348,098
14 Claims. (Cl. 154—139)

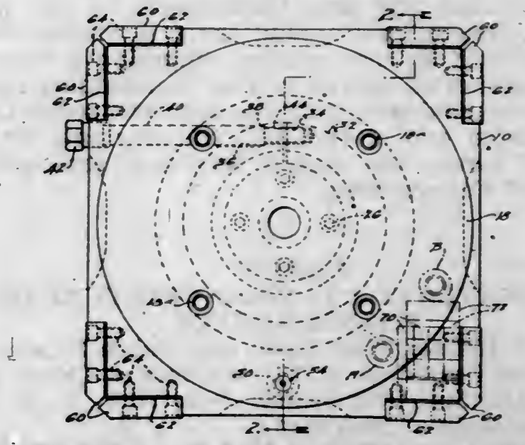


2. Container-forming material comprising a self healing intermediate layer of milled uncured rubber possessing comparatively high cohesiveness but substantially no tackiness or vulcanizing material, and having a plasticity of approximately 80 as measured by a Williams parallel plate plastometer, a coextensive outer layer of tough elastic material bonded to the outer face of, and serving to reenforce, the self healing intermediate layer, and adapted in connection with puncture of the container to have its punctured portions spring together or contract and draw together the punctured portion of said self healing layer, and a coextensive normally fluid impervious or non-porous inner layer formed of flexible elastic material that is insoluble in, and unaffected by, hydrocarbon.

3. Container-forming material comprising a self healing intermediate layer of masticated raw rubber having pronounced cohesiveness but substantially no adhesive tendency or vulcanizing material, an outer layer of tough highly elastic vulcanized rubber vulcanized in situ on the outer face of, and serving to reenforce, the self healing layer and adapted in connection with puncture of the container wall to have its punctured portion spring together or contract and draw together the punctured portion of the self healing layer, and an inner layer bonded to the inner face of said self healing layer and formed of flexible elastic material that is normally fluid impervious or non-porous and also insoluble in, and unaffected by, hydrocarbons.

2,406,904
WOOD GRINDING MACHINE
Frederick W. Roberts, Lockport, N. Y.
Application May 5, 1944, Serial No. 534,179
2 Claims. (Cl. 241—97)

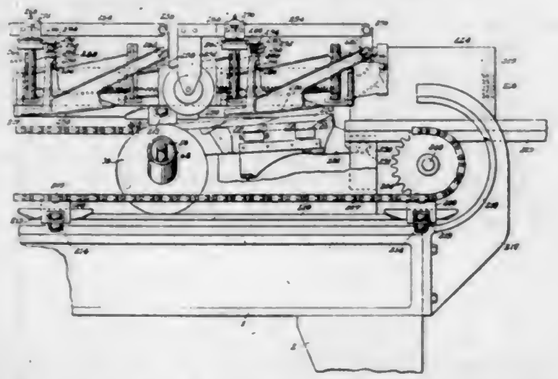
1. In a wood grinding machine including a rapidly revolving grindstone and a feed ring arranged eccentrically about said grindstone with a portion of its inner surface in close proximity to but out of contact with said grindstone and rotatable slowly to press wood against one side of the grindstone, that improvement which comprises a shield at the other side of said grindstone and extending substantially coaxially with said feed ring and spaced therefrom to receive shims which have passed through the space between said feed ring and said grindstone, said shield extending at its receiving end into close proximity to the grindstone to receive shims immediately after they are moved out of contact with the grindstone and having its discharge end extending over the grindstone to discharge the shims at the first mentioned side of the grindstone to be again fed to the grindstone by the feed ring for regrinding, and cleats on said feed ring for engaging the



wood which is fed to the grindstone and which feed the shims through the space between said feed ring and said shield.

2,406,905
METHOD FOR PRODUCING CELLULOSIC STRUCTURES
Henry Shirley Rothrock, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application May 6, 1941, Serial No. 392,116
2 Claims. (Cl. 117—145)

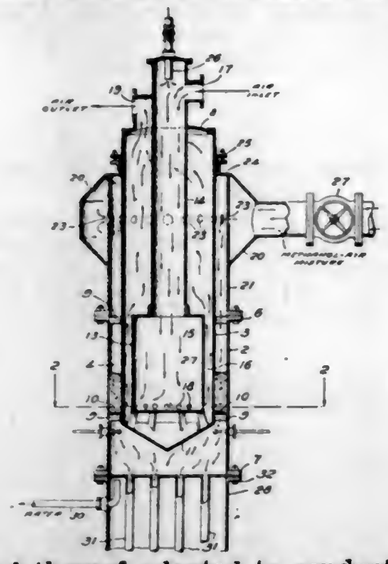
1. The process which comprises passing a flexible regenerated cellulose pellicle in a highly swollen condition through an aqueous bath containing, dissolved therein, between 4% and 15% of a synthetic linear polymer having a molecular weight above 400 and a boiling point of at least 170° C. at a pressure of 1 millimeter of mercury, said pellicle being maintained in contact with the bath liquid for a sufficient period of time to impregnate the same with from 8% to 25% of said polymer.



2,406,906
ROTARY SINE INDEX PLATE
Enos P. Saunders, Berkley, Mich., assignor to Triangle Engineering Company, Ferndale, Mich., a partnership composed of George L. Atherholt, Sr., Enos P. Saunders, and C. M. Smillie, Jr.
Application April 23, 1945, Serial No. 589,837
3 Claims. (Cl. 33—174)

1. In a rotary sine index plate, in combination, a base having parallel sides and a flat upper face portion, a table rotatably mounted for rotation about a line midway between said sides and extending perpendicularly with respect to said face

portion, a pin fixed to said table and arranged with its axis parallel to and spaced from the axis of rotation of said table and positioned in overlying relationship with respect to said face portion on said base, a plurality of anvils fixed with respect to said base in surrounding relationship with respect to said table, said anvils each having a locating face, the locating face of each of said anvils being arranged in a plane parallel to the axis of rotation of said table on said base and said planes of all of said anvils being arranged at an equal distance from the axis of rotation of said table, the planes of said locating faces of said anvils being arranged in a square whose center is coincident with said axis of rotation of said table, said anvils projecting upwardly above said face portion of said base and above the lower end of said pin, whereby measuring instrumentalities of the block type resting on said face portion may be interposed between said pins and an adjacent one of said anvils regardless of the rotatable position of said table on said base to determine the angular relationship of said table with respect to said base.



2,406,907
METHOD AND APPARATUS FOR TREATING FISH
Charles M. Savrda, Bay Shore, N. Y., assignor to The Atlantic Coast Fisheries Company, New York, N. Y., a corporation of Maine
Application March 8, 1944, Serial No. 525,546
13 Claims. (Cl. 17—3)

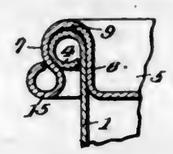
1. A method of treating fish which comprises advancing a decapitated fish, tail leading and back downward, along a defined path of travel, making a pair of incisions in the back on opposite sides of the dorsal fins as the fish is travelling, severing the skin transversely of the incisions, thereafter gripping the free end of the strip defined by the incisions, imposing a downward tension on said strip, and maintaining said tension on said strip until the incisions reach the decapitated end of the fish, whereby said strip together with the dorsal fins and associated knuckles are removed.

2,406,908
APPARATUS FOR THE MANUFACTURE OF FORMALDEHYDE
Pierre Schideler, New York, and Ralph S. Richardson, Scarsdale, N. Y., assignors to Chemical Construction Corporation, New York, N. Y., a corporation of Delaware
Application November 28, 1942, Serial No. 467,258
2 Claims. (Cl. 23—288)

1. Apparatus for the manufacture of formaldehyde comprising in combination inner and outer concentric shells defining a catalyst annulus, means for passing a reaction gas mixture containing methanol and oxygen vertically through said catalyst annulus, and a vertical tube within said inner shell having openings at the

lower end thereof adapted to conduct a flow of a temperature regulating gas along the inner surface of said inner shell adjacent the catalyst-containing area.

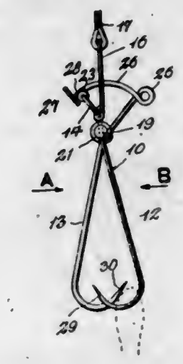
2,406,909
PLASTIC BONDING BASIC REFRACTORIES
Robert A. Schoenlaub, Tiffin, Ohio, assignor to Basic Refractories, Inc., Cleveland, Ohio, a corporation of Ohio
No Drawing. Application November 30, 1942, Serial No. 467,386
12 Claims. (Cl. 106—58)



1. A refractory composition, comprising a pulverulent mixture of ground dry magnesian clinker and a small amount of dry substantially aluminum-free hectorite of the character of that from San Bernardino County, California.

2,406,910
TREATMENT OF REFRACTORY MATERIALS
Robert A. Schoenlaub, Tiffin, Ohio, assignor to Basic Refractories, Inc., Cleveland, Ohio, a corporation of Ohio
No Drawing. Application January 6, 1943, Serial No. 471,455
6 Claims. (Cl. 117—123)

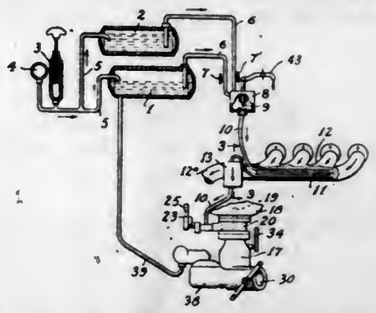
1. A process of treating refractory material, which comprises coating the surface of basic refractory material particles with an alkaline earth compound of the group consisting of magnesium and calcium hydroxides and oxides, and to react therewith a substantially non-aluminous gel-forming hydrous magnesium silicate of the composition of hectorite from San Bernardino County, California, and contacting the reaction mixture with water for swelling the gel-forming material, and compacting the coated particles together.



2,406,911
METHOD OF CLOSING SHEET METAL CONTAINERS
Herbert Schrader, Wheeling, W. Va., assignor to Continental Can Company, Inc., New York, N. Y., a corporation of New York
Original application May 28, 1940, Serial No. 337,696, now Patent No. 2,338,013, dated December 28, 1943. Divided and this application December 2, 1943, Serial No. 512,606
1 Claim. (Cl. 113—121)

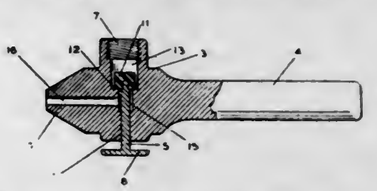
A method of closing and sealing sheet metal containers consisting in rolling the body wall of the container outwardly, inwardly and upwardly into a hollow bead, forming a closure with a central depression surrounded by a vertical wall and a continuous unbroken depending skirt offset from the vertical wall to receive a gasket and the bead on the container body, said skirt being of greater length than the diameter of the bead

and having a laterally projecting flange at the lower edge thereof, placing the closure member on the container body and while said gasket is firmly pressed against the bead applying a curling roll to the flange of the closure and progressively rolling the flange into a bead and forcing a portion of said bead as it is formed beneath the hollow bead on the body wall.



2,406,912
AUTOMATIC FISHHOOK
Fred Schwarzer, Pottstown, Pa.
Application March 7, 1945, Serial No. 581,401
6 Claims. (Cl. 43—36)

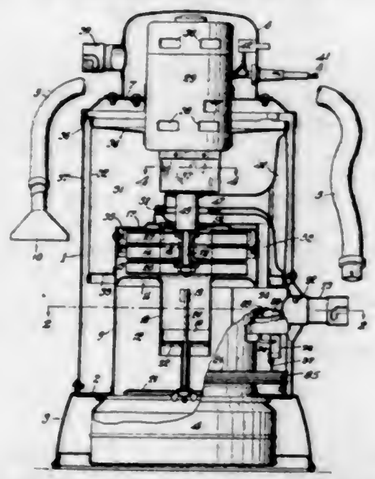
6. An automatic fish hook comprising a strand of spring wire bent intermediately the length thereof to form an eye and a pair of hook members, a swinging hook member mounted between said pair of hook members including spring means for tensioning said hook member, and means on said strand of spring wire cooperable with the spring means of the swinging hook for holding the latter normally between said pair of hooks, but releasable upon application of pressure on said hooks.



2,406,913
CARBURATION SYSTEM FOR INTERNAL-COMBUSTION ENGINES
Liberto Alfonso Serrano, Barcelona, Spain
Application June 26, 1942, Serial No. 448,569
In Spain March 12, 1942
3 Claims. (Cl. 261—15)

3. In a system for generating and supplying superheated gasiform vapors of a heavy liquid fuel to a carburetor type internal combustion engine during periods when said engine is operating under load conditions and for supplying a light liquid fuel to said engine during idling periods and in starting, said engine having an intake manifold, a carburetor connected therewith, a throttle valve controlling flow through the carburetor to the intake manifold, an exhaust manifold, and an accelerator for the engine; in combination, means for supplying liquid fuels of different vaporizing characteristics to the engine comprising two sources of fuel, means for conducting fuel from one of said sources directly to the carburetor and to an idling jet discharging into the intake manifold intermediate the throttle valve and the fuel intake ports of said engine, a fuel feed bowl connected with both of said sources of fuel, a heat exchanger having passages therethrough in communication with said exhaust manifold, a fuel feed line connected to said feed bowl and at its opposite end terminating in a pipe extending lengthwise of the inlet pipe of the intake manifold and discharg-

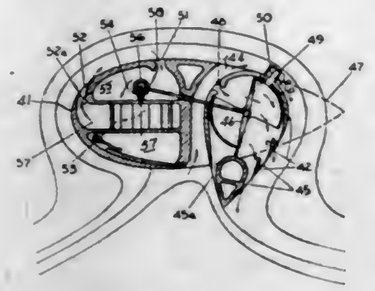
ing into the intake manifold, said line having an intermediate portion thereof traversing said exhaust manifold and said heat exchanger in series, a valve controlling flow of fuel through said fuel line from said feed bowl to said heat exchanger, a second valve in said fuel line adjacent its point of entry into said inlet pipe of said intake manifold, and means responsive to movements of the accelerator for actuating the throttle valve and said second valve simultaneously in coordinated relation when operating under load conditions.



2,406,914
DISPENSING NOZZLE, VALVE, AND VALVE DISK FASTENING MEANS
Carl F. Sievers, Pontiac, Mich., assignor to Phillips Petroleum Company, a corporation of Delaware
Application August 16, 1943, Serial No. 498,795
1 Claim. (Cl. 251—135)

A poppet valve for controlling flow of a fluid under pressure from a source of such fluid comprising in combination a valve body having a conduit with an inlet and an outlet, a valve seat formed in said conduit, said conduit being divided by said valve seat into a low pressure portion between said seat and said outlet and a high pressure portion between said seat and said inlet, a unitary valve stem of rigid material, a unitary cylindrical valve head of resilient material, connecting means between the stem and the valve head comprising a spear head formed as an integral part of said stem, said spear head projecting part way through said valve head along the axis of said cylindrical valve head, said valve head being disposed in said high pressure portion of said conduit with said valve stem extending into said low pressure portion of said conduit, said valve seat being disposed entirely in a plane which is parallel to the plane of the adjacent plane end of said cylindrical valve head, and said valve head sealing against said valve seat along a plane an-

nular zone adjacent the circumference of the face of said cylinder that is disposed around said valve stem, whereby the pressure of the fluid in said high pressure portion of said conduit acts to increase the sealing action between said valve head and said seat, and whereby said valve head is normally free of pressure by said spear head tending to split said valve head during the long periods of time said valve head is held against said seat, said fluid pressure against the top of said cylindrical valve head being normal to said sealing portion of said valve head and said valve seat, whereby forces tending to distort or flow the material of said valve head are minimized.

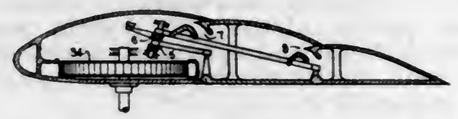


2,406,915
SUCTION CLEANER
Donald G. Smellie, Canton, Ohio, assignor to The Hoover Company, North Canton, Ohio, a corporation of Ohio
Application April 26, 1943, Serial No. 484,515
7 Claims. (Cl. 15—16)

5. In a suction cleaner, a main cleaning nozzle through which cleaning air enters at a rate variable with the contact of the nozzle with a surface being cleaned, an initial dirt separator connected to said nozzle, a final dirt separator, a second cleaning nozzle for said final separator, air-conducting means to conduct air from said second nozzle continuously during normal surface cleaning operation, suction-creating means to move air through said nozzles, air-conducting means and said separators, valve means to control the flow of air through said nozzles, pressure-operated means to determine the flow of air through said main nozzle, and means connecting said pressure-operated means to said valve means to move the latter to reduce the flow of air through the main nozzle and to increase the flow of air through the second nozzle upon the flow of air through said main nozzle exceeding a predetermined rate.

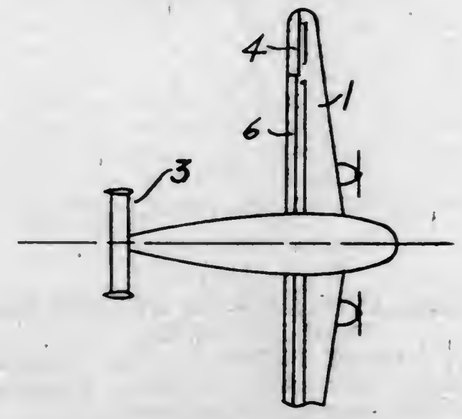
2,406,916
WINGS AND OTHER AERODYNAMIC BODIES
Edward A. Stalker, Ann Arbor, Mich.
Application March 18, 1939, Serial No. 262,801
6 Claims. (Cl. 244—42)

1. A wing structure adapted to produce high lift in one position and having low drag in another position comprising a wing main body having an upper and a lower airfoil surface terminating in a recessed portion at the trailing end thereof, a lift increasing device adapted to be received within said recess including a part having a curved end, means for mounting said device for adjustment to a high speed position in which said curved end is received within the outline of said wing main body, said curved end part substantially conforming to the depth of the adjacent wing, said device being also adjustable to a high lift position in which said curved end is exposed at the rear of said wing forming a smooth continuation of said upper airfoil surface and extending in a continuous and regular curve to the lower side of the wing and forwardly of the



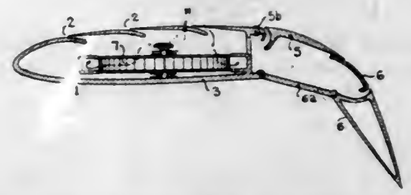
rearmost point of the device providing a rounded blunt end at the rear of the wing, said rounded end having a slot therein adjacent the lower part thereof in the high lift position of said device and opening in the direction of the air circulation, and means within said wing for discharging air from said slot around the blunt end thereof to cause forward advance of the circulation flow and relative closer approach of the front and rear stagnation points.

2,406,917
WING
Edward A. Stalker, Ann Arbor, Mich.
Application January 2, 1940, Serial No. 312,175
6 Claims. (Cl. 244—42)



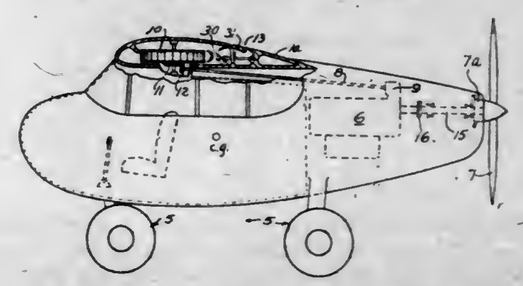
1. A wing structure comprising a wing fore body having an upper and a lower airfoil surface and an inwardly curved recessed end portion, a lift increasing device having a curved surface of a radius comparable with the semi-thickness of said end of the fore body and having an end tapering to a relatively thin edge, means for mounting said device at the rear of said fore body providing for adjustment in the relative position thereof, means for adjusting said device from a high speed position in which said curved surface is received within said recessed end and said thin edge is extended rearwardly to a high lift position in which said curved surface is exposed at the rear of said wing forming a smooth continuous curve extending from the upper wing surface around the end and to the lower wing surface, said thin edge being moved against said fore body in said high lift position, means forming a slot on the upper exposed surface of said device in the high speed position thereof, and means within said wing for discharging a flow of air through said slot in a generally rearward direction in the high speed position of said device, said slot in the high lift position of said device being located on the lower side of said wing and acting to direct a flow of air outwardly thereof and with a forward component of velocity for causing closer approach of the front and rear stagnation points.

2,406,918
WING
Edward A. Stalker, Ann Arbor, Mich.
Application January 15, 1940, Serial No. 313,967
13 Claims. (Cl. 244—42)



1. A wing structure comprising a wing main body the upper surface of which is defined by a curve of a radius longer than the maximum thickness of the wing, a lift flap portion having an upper surface defined by a curve of a radius greater than the thickness of the wing adjacent the end of said main body, the lower surface of said main body and of said flap being closed to through passage of air from the region below to the region above the wing in all relative positions of the wing and flap, means enclosed by said wing and flap for mounting said flap for adjustment about a radius of less length than the thickness of the wing at said end of the main body providing for changing its position with respect to said main body from a raised high speed position in alignment therewith forming a regularly curved lower airfoil surface to a lowered high lift position at a substantial angle with respect thereto, the forwardly projecting portion of said upper curved flap surface lapping the trailing end of said main body in the raised position of said flap, said forwardly projecting portion being movable into position closely adjacent the end of said main body exposing said curved upper surface thereof when the flap is in lowered position to provide a substantially continuous upper curved surface for said combined wing and flap of substantial radii.

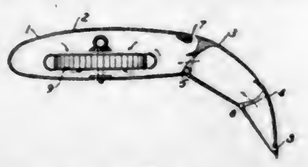
2,406,919
CONTROL OF AIRCRAFT
Edward A. Stalker, Ann Arbor, Mich.
Application August 22, 1940, Serial No. 353,712
10 Claims. (Cl. 244—90)



1. In combination in an aircraft, a wing on each side of the aircraft having a flap and slot, ailerons at the outer ends of the wings, each said slot leading into the wing interior and being located in the rear half of the wing, and a blower within the aircraft in communication with the wing interior to discharge outward power jets through said slots, said discharge slot being the rearmost slot in said wing and being formed to direct the slot flow rearward substantially along the wing surface, control means operable coincidentally to vary the slot flows differentially and to rotate the flaps differentially both with respect to opposite wings, said control means being adapted to provide the strongest discharge slot jet on the wing with the down aileron, said power jets serving to produce a rolling moment accompanied by a favorable yawing moment.

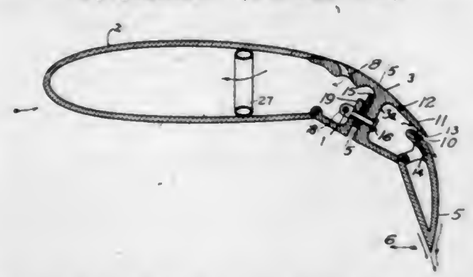
2,406,920
WING
Edward A. Stalker, Ann Arbor, Mich.
Application February 19, 1941, Serial No. 379,812
In Canada October 30, 1940
22 Claims. (Cl. 244—42)

1. In combination to form a wing, a main body, a flap adjustable from a raised high speed position to a lowered high lift position, the upper contour of said wing section in the raised position of said flap having a main body extrados and a flap extrados, said extradoses forming between them a concavity exterior to the wing section, the maximum depth of said concavity below the tangent to both said extradoses being greater than 5.5 per cent of and less than the tangent length between the said points of tangency, said length of said tangent being substantially greater than 21 per cent of the wing chord length and less than 90 per cent thereof, means to adjust said flap to its said high lift position to produce a great camber of the wing upper surface, the minimum radius of curvature of the said depressed flap extrados which forms a part of the wing upper contour being greater than the maximum thickness of the wing, said concavity having a slot therein opening into the wing interior, and a blower means in substantially closed communication with said interior to induce a flow through the slot, said slot extending along a major portion of the wing semi-span to be significant in altering the lift of the wing.



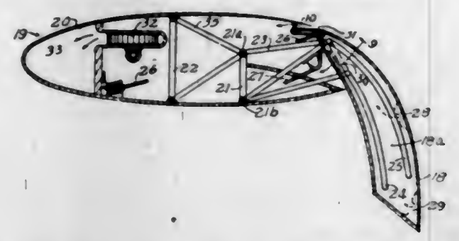
2,406,921
AIRCRAFT
Edward A. Stalker, Ann Arbor, Mich.
Application August 16, 1941, Serial No. 407,252
4 Claims. (Cl. 244—13)

1. In combination in an aircraft, a fuselage, a tail plane, a wing, means for supporting said wing and tail plane in predetermined fixed relation with respect to said fuselage, said wing having a slot in its upper surface in communication with the wing interior, a lift augmenting flap articulated to said wing, means to depress said flap to provide a highly cambered wing section, a blower within the aircraft in communication with the wing interior to induce a flow through said slot,



a propeller supported from said fuselage behind the trailing edge of the wing and flap, means operably connecting said propeller with said blower for operation of the latter when the propeller is extracting energy from the relative wind, all lift producing portions of said wing lying ahead and out of the effective range of the pressure generated by said propeller when extracting energy from the relative wind so that the wing remains subject to the full velocity of the relative wind across its surface resulting in substantially normal lift distribution along the wing span.

2,406,922
WING
Edward A. Stalker, Ann Arbor, Mich.
Application January 9, 1942, Serial No. 426,099
8 Claims. (Cl. 244—42)

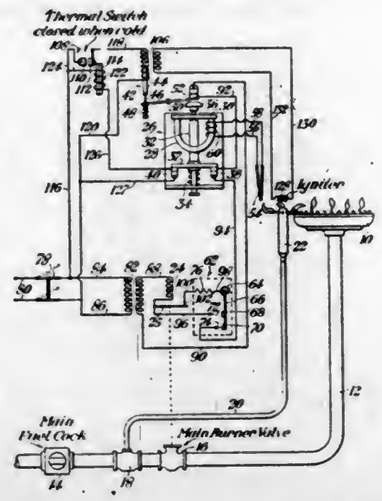


1. An aircraft wing of the character described which comprises a wing main body, a flap, means for adjustably supporting said flap from said wing main body providing for movement thereof from an upper raised position to a lowered position effecting an increase in the mean camber height of the wing, means forming a forward induction slot in the upper camber surface of the wing at a point intermediate the leading and trailing edges of the wing, means forming another induction slot in predetermined spaced relation with respect to said forward slot and located substantially along the trailing edge of said flap, and power operated means within said wing for inducing a flow of air through both said slots with the induction through said rearward slot restraining the tendency to cause forward flow of the air on the trailing portion of said wing as a result of said forward slot.

2,406,923
AIRCRAFT HAVING BOUNDARY LAYER CONTROLLED WINGS
Edward A. Stalker, Bay City, Mich.
Application May 14, 1943, Serial No. 486,953
16 Claims. (Cl. 244—42)

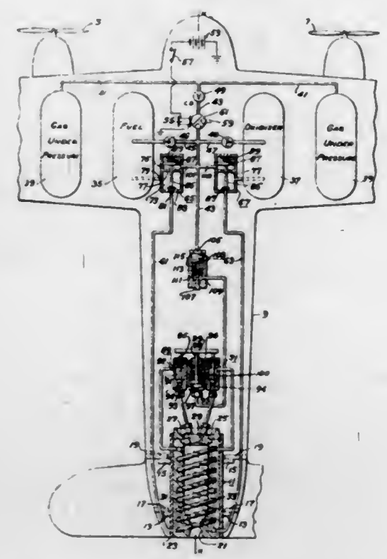
1. In combination in an aircraft, a supporting wing, an aileron on the wing, means for depressing said aileron to a position where the rear portion thereof is substantially normal to the forward portion of the wing, a blower housed within the aircraft, said wing having a narrow spanwise slot in its upper surface in communication with the inlet of said blower for the induction of boundary layer air providing for augmenting the lift of the wing, said wing having a narrow spanwise discharge slot in its upper surface in communication with the discharge of said blower for discharge of a jet therefrom, said induction slot being located ahead of said discharge slot to cause the main flow to follow the wing surface to the discharge jet, the walls of said discharge slot being formed to direct the discharge jet downstream substantially along said rear portion of the depressed aileron surface to provide a jet having a substantial component perpendicular to the front portion of the wing thereby providing a rolling moment, and means to control the volume of said discharge slot flow to control said rolling moment.

2,406,924
AIRCRAFT
Edward A. Stalker, Bay City, Mich.
Application May 21, 1943, Serial No. 487,875
8 Claims. (Cl. 244—42)



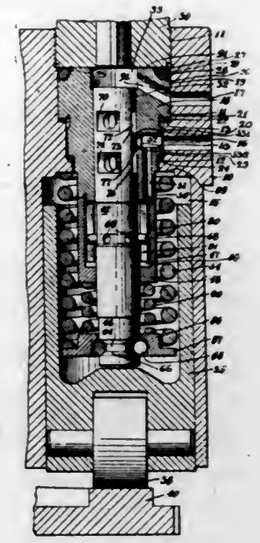
1. A wing structure comprising a wing forebody having an upper and a lower airfoil surface and an open end portion, the upper surface of said body being defined by a curve of a radius longer than the maximum thickness of the wing, a lift flap having an upper surface defined by a curve of a radius greater than the thickness of the wing adjacent the end of said main body, means for mounting said flap at the end of said forebody providing for adjustment in the relative position thereof from a retracted high-speed position to a lowered high-lift position at a substantial angle with respect to said forebody, said flap in the high-speed position being in major part nested within said open end portion between the upper and lower surfaces thereof, said flap in the high-lift position having its nose adjacent the end of said forebody exposing said curved upper surface thereof to provide a substantially continuous upper-curved surface for said combined wing and flap of substantial radii, said upper curved surface of the flap having a slot therein in communication with the interior thereof, means within the wing forebody establishing communication with the interior of the flap and with said slot, and means for causing a flow of air through said slot to increase the velocity of air flow in the boundary layer on said upper curved surface.

2,406,925
CONTROL AND IGNITION SYSTEM FOR FUEL BURNERS
Charles K. Strobel, Pittsburgh, Pa., assignor to Robertshaw Thermostat Company, Youngwood, Pa., a corporation of Pennsylvania
Application June 15, 1945, Serial No. 599,634
15 Claims. (Cl. 158—117.1)



1. In a control system for fuel burners having main and pilot burners and a source of electrical energy, comprising in combination, electrically operable means movable between fuel flow permitting and preventing positions for controlling the supply of fuel to the main burner, an electromagnetic device having contacts operable between open and closed positions for causing movement of said means between said positions, a first circuit including the source, said means and said contacts, a second circuit including the source and

resetting means for said device operative to cause closure of said contacts, holding means operatively associated with said device for maintaining said contacts closed independently of said resetting means, means responsive to a flame at the

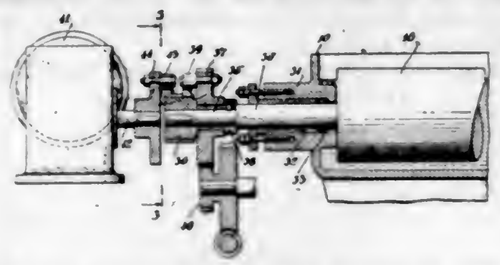


pilot burner for rendering said holding means operative upon completion of said resetting operation, and timing means in said second circuit for rendering the same inoperative after a predetermined period during which said flame responsive means has time to become responsive.

2,406,926
SYSTEM OF JET PROPULSION
Martin Summerfield, Pasadena, Calif., assignor to Aerojet Engineering Corporation, Azusa, Calif., a corporation of Delaware
Application August 6, 1943, Serial No. 497,625
7 Claims. (Cl. 60—35.6)

7. In a jet propulsion system the combination comprising a jet motor, a propellant container, a conduit connecting the container to the jet motor, means for forcing the propellant through the conduit, a first normally closed valve in the conduit adjacent to the container, a second normally closed valve in the conduit adjacent the motor, and means for initiating the opening of both said valves simultaneously while causing the second valve to open more gradually than the first valve during the initiation of the flow of propellant into the motor.

2,406,927
HIGH-PRESSURE FLUID PUMP GASKETING
Warner T. Tabb, Plainfield, N. J., assignor to Eisemann Corporation, Brooklyn, N. Y., a corporation of Delaware
Application March 6, 1945, Serial No. 581,289
11 Claims. (Cl. 309—2)

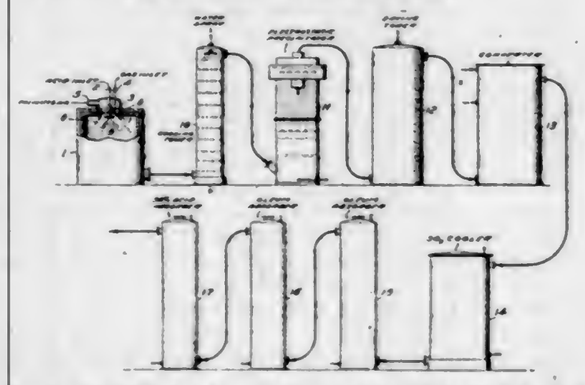


7. In a high pressure fluid pump the combination comprising, a casing having a bore and a relatively low pressure fluid passage communicating therewith, said bore being counterbored to provide two shoulders, one on each side of the fluid passage, a bushing in said bore fitted thereto inwardly of the pair of shoulders and having a fluid passage extending therethrough for communication with the casing fluid passage and two shoulders, one on each side of the bushing fluid passage and with each paired for cooperation with one of the bore shoulders and a high pressure end, a high pressure seal being provided at the cooperating pair of shoulders inward of the passages, a low pressure sealing gasket of deformable material between the cooperating pair of shoulders outward of the passages, said pair of shoulders at the high pressure seal solely cooperating to limit movement of said bushing into the bore for proper location thereof, said bushing having its high pressure end provided with gasket seating surfaces, a plug forced into the bore and having seating surfaces, and a gasket of deformable material compressed between said bushing and said plug seating surfaces, one of the bushing and plug seating surfaces being initially of a certain area and of increased area as said plug is forced to final location determined by such seating of increased area.

2,406,928
FOUNTAIN INKER DRIVE MECHANISM
Auburn Taylor, Charleston, W. Va., and Emory W. Worthington, Chicago, Ill., assignors to The Goss Printing Press Company, Chicago, Ill., a corporation of Illinois
Application March 2, 1943, Serial No. 477,686
11 Claims. (Cl. 101—350)

1. In an inking mechanism for a printing press having a driving gear train said mechanism having rollers to transfer ink from an ink source to members to be inked, means for driving certain

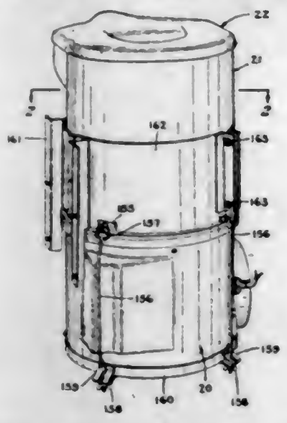
of the rollers from the printing press gear train and independent means for driving the said cer-



tain of the rollers at a higher speed at relatively slow press speeds.

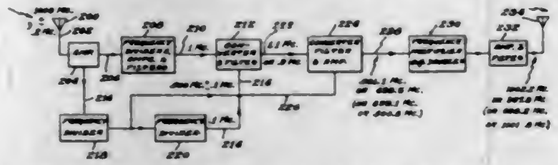
2,406,929
CATALYST
John W. Teter, Chicago, Ill., assignor to Sinclair Refining Company, New York, N. Y., a corporation of Maine
No Drawing. Application May 22, 1942, Serial No. 444,096
1 Claim. (Cl. 252—207)

An amination catalyst comprising about 40% to 60% cobalt in suspension on a carrier of hydrated magnesium silicate in which the molar ratio of SiO_2:MgO is approximately 2:1.



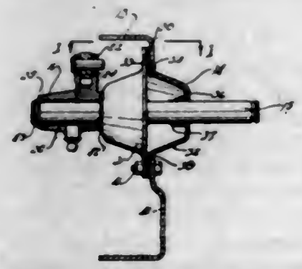
2,406,930
SULPHURIC ACID REGENERATION
Nicolay Titlestad, White Plains, N. Y., assignor to Chemical Construction Corporation, New York, N. Y., a corporation of Delaware
Application June 12, 1942, Serial No. 446,719
6 Claims. (Cl. 23—172)

6. A method of regenerating relatively concentrated sulphuric acid which comprises injecting said acid in finely divided condition into a combustion zone while simultaneously introducing air and fuel into said zone in amounts sufficient to maintain oxidizing conditions and a temperature of at least 1600° F., to obtain a gaseous mixture containing SO_2 and oxygen in amounts suitable for catalytic oxidation to form SO_3 without further addition of SO_2, catalytically oxidizing the SO_2 to SO_3 without such further addition, and recovering SO_3 as concentrated sulphuric acid.



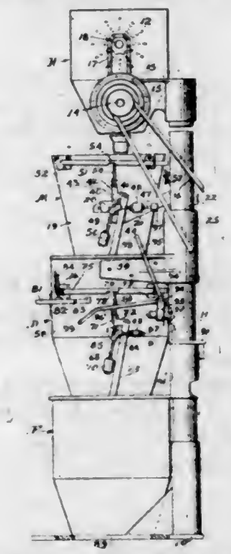
2,406,931
AIR CLEANER
Charles G. Troxler, Canton, Ohio, assignor to The Hoover Company, North Canton, Ohio, a corporation of Ohio
Application October 18, 1943, Serial No. 506,625
3 Claims. (Cl. 183—57)

1. An air cleaning device, comprising a housing having an inlet for dirt-laden air and an outlet for cleaned air adapted to be connected to a source of suction, a plurality of spaced filters for removing the dirt from said dirt-laden air prior to discharge through said outlet, a movably mounted filter cleaning nozzle having opposed nozzle inlets, each of said nozzle inlets being mounted on a flexible diaphragm forming a part



of said nozzle, resilient means interiorly of said nozzle and exerting a force on said diaphragms to urge said nozzle inlets into engagement with the adjacent filter during movement of said nozzle inlets along said filters, and suction creating means for said filter cleaning nozzle inlets to remove the dirt accumulated on said spaced filters during the filtering of the dirt-laden air.

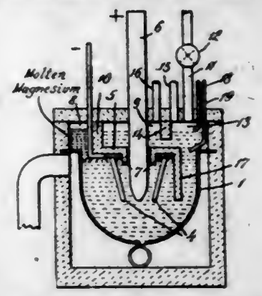
2,406,932
WAVE CONVERSION
Harry Tunick, Rye, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application June 16, 1942, Serial No. 447,225
27 Claims. (Cl. 250—15)



5. The method which includes frequency dividing one portion of alternating wave energy, frequency dividing to a greater degree another portion of said alternating wave energy, and combining the divided energies.

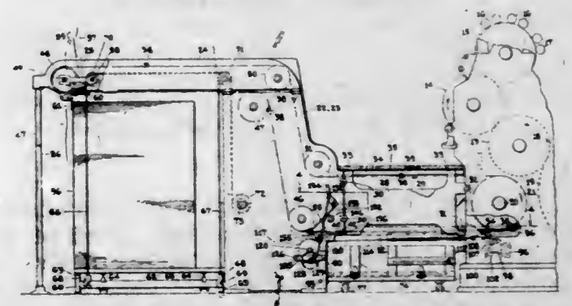
2,406,933
CROSS SHAFT MOUNTING
John J. Wharam and Charles P. Pinardi, Dearborn, Mich., assignors to Ford Motor Company, Dearborn, Mich., a corporation of Delaware
Application March 16, 1945, Serial No. 583,101
3 Claims. (Cl. 180—77)

1. In a motor vehicle construction, a frame comprising a side sill and an X member having one end secured to said sill adjacent the forward portion thereof, an auxiliary frame member having its rear end secured to said X member and extending forwardly therefrom substantially parellel with the longitudinal axis of said vehicle to said sill and having its forward end secured thereto, a cross shaft mounting secured to said auxiliary frame member and having shaft portions extending transversely on each side thereof, an anchorage for a clutch actuating cross shaft secured to one side of said auxiliary frame member, a brake master cylinder secured to the other side of said auxiliary frame member, operating pedals mounted on said extending shaft portions, and linkage operatively connecting said pedals with said clutch actuating shaft and said master brake cylinder.



2,406,934
WEIGHING AND DISPENSING APPARATUS
Ralph E. Williams, River Forest, and Leon J. Nowak, Jr., Chicago, Ill., assignors to B. F. Gump Co., Chicago, Ill., a corporation of Illinois
Application January 10, 1944, Serial No. 517,642
11 Claims. (Cl. 249—38)

11. In a dispensing and weighing apparatus, means for feeding material into a weighing area, means at said area for weighing the fed material, means for discharging a weighed quantity of material from said weighing means into a dispensing area, means at said dispensing area for dispensing said weighed quantity of material, means for arresting further feed of material into the weighing means until the weighed quantity of material has been fed into the dispensing means and means controlling the opening of said dispensing means for discharge of weighed material therefrom and for, coincidentally with said opening, effecting resumption of feed to the weighing means.

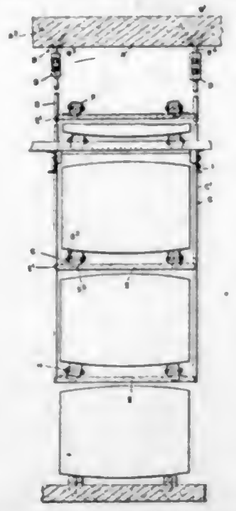


2,406,935
PREPARATION OF FUSIONS CONTAINING MAGNESIUM CHLORIDE
Joseph Leonard Wood and Robert B. MacMullin, Niagara Falls, N. Y., assignors to The Mathieson Alkali Works, Inc., New York, N. Y., a corporation of Virginia
Application October 16, 1941, Serial No. 415,270
7 Claims. (Cl. 204—70)

1. In the preparation of anhydrous fusions containing magnesium chloride, the improvement which comprises maintaining a fused body consisting essentially of halide diluent and magnesium chloride, the body having a density somewhat exceeding that of magnesium metal at the temperature of said fused body and containing magnesium chloride in proportions not exceeding about 50% by weight, introducing into said body

through its upper surface a charge of briquetted hydrous magnesium chloride, the briquettes of the charge being wettable by the fusion and having a density approximating 0.9–1.5, and taking off the thus liberated water.

2,406,936
SHEET DELIVERY MECHANISM
Arthur B. Woodruff, Brecksville, Ohio, assignor to Harris-Seybold Company, a corporation of Delaware
Continuation of application Serial No. 412,390, September 26, 1941. This application June 13, 1945, Serial No. 599,151
5 Claims. (Cl. 271—79)



1. In a machine of the class described, a sheet conveyor comprising a plurality of sets of sheet grippers, a first delivery platform, means for opening said grippers to deposit sheets on said first delivery platform, a second delivery platform, and means for depositing sheets on said second delivery platform or permitting conveyance of sheets to said first delivery platform according to the desire of the press operator, said last-mentioned means comprising a cam for opening said grippers, sheet supporting means adapted to occupy a position over said second platform to support sheets in their passage thereover, and connections enabling said cam and sheet supporting means to be placed into or out of position for depositing sheets on said second platform.

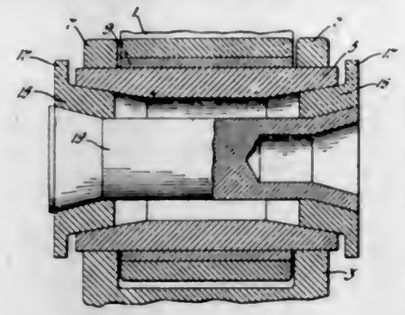
2,406,937
BARREL STORAGE RACK
William F. Zabriskie, Detroit, Mich., assignor to Gabriel Steel Company, Detroit, Mich., a corporation of Michigan
Application June 19, 1944, Serial No. 541,107
6 Claims. (Cl. 20—1.13)

1. A storage for barrels or the like comprising a building of one or more stories, a series of freely suspended hangers each including a pair of spaced vertically extending rods and a plurality of cross members between said rods welded thereto, runway strips extending the length of the series of hangers above each of said cross

members and attached thereto, anchors secured to the ceiling of said building positioned in alignment with the rods of said hangers, and attach-

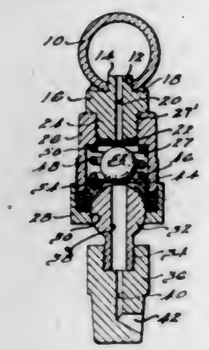
ment means between said anchors and rods permitting individual adjustment in the height of the latter.

2,406,938
METHOD OF REAMING
Edgar L. Zehrbach, Lima, Ohio
Application October 7, 1943, Serial No. 505,284
2 Claims. (Cl. 77—72)



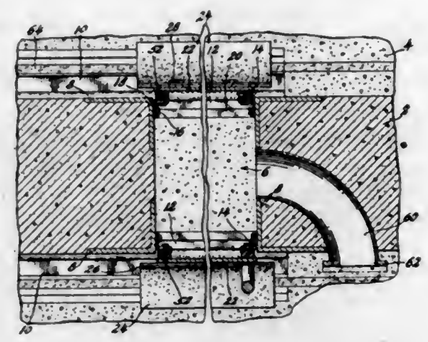
1. The method of reaming which consists in providing a reamer with a cutting head of substantially less length than the depth of the hole to be reamed and of less diameter than the diameter of such hole, offsetting angularly the axis of the reamer relative to the axis of the hole an amount predetermined according to the desired size of the reamed hole, and imparting relative translatory and rotary movements between the reamer and the work with the cutting head in such offset position.

2,406,939
LAMINATED GLASS GLAZING UNIT
James H. Boicey, Toledo, Ohio, assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a corporation of Ohio
Application January 27, 1942, Serial No. 428,382
2 Claims. (Cl. 20—56)



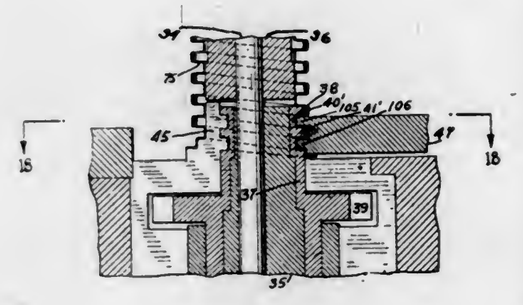
1. A laminated glass glazing unit, comprising two sheets of glass and an interposed layer of thermoplastic bonded thereto to form a composite structure, said plastic interlayer being of greater area than either of the glass sheets and extending outwardly therebeyond to provide a flexible attaching flange that is of lesser thickness than and offset from the center of the main body of the plastic interlayer lying between the two glass sheets, and a metal reinforcing member carried by the said attaching flange, one of said glass sheets extending outwardly beyond the edge of the other glass sheet and terminating inwardly of the outer edge of the said offset attaching flange and cooperating with the attaching flange to provide a slot therebetween.

2,406,940
PIVOT PIN
William E. Brill, Cleveland, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application June 19, 1944, Serial No. 541,106
7 Claims. (Cl. 287—96)



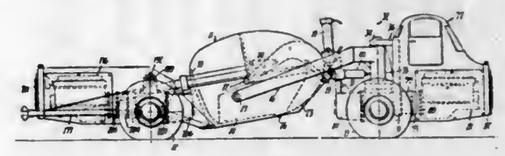
1. A pivot pin assembly comprising a pivot pin having a cylindrical exterior surface, internally tapered end portions and tapered plugs adapted to be pressed into said tapered end portions of said pin to expand the ends of the pin.

2,406,941
COMBINATION VALVE STRUCTURE
John A. Brooks, Detroit, Mich., assignor to Howard Foundry Company, Chicago, Ill., a corporation of Illinois
Original application February 22, 1943, Serial No. 476,781. Divided and this application September 18, 1944, Serial No. 554,573
3 Claims. (Cl. 251—8)



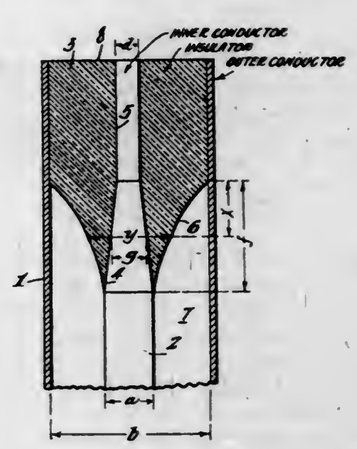
1. In a device of the type described, in combination, a main body having a bore therethrough and a counterbore forming an internal shoulder therein, a valve seat portion in said bore, an apertured cap member threadably mounted upon said main body for movement axially thereof, a discharge member carried by said cap member for a limited amount of universal movement with respect thereto, an annular sealing element within said counterbore of said main body in sealing engagement with respect to the wall of said counterbore and said discharge member, a spring within said counterbore maintained under compression between said shoulder and said sealing element, and a valve in said counterbore between said discharge member and said valve seat portion cooperable with said valve seat portion to vary the flow of liquid through said device.

2,406,942
SEALED DOORS
Horace J. Buttner, Indianapolis, Ind., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application October 23, 1943, Serial No. 507,399
6 Claims. (Cl. 20—16)



2. In a wall having an opening therethrough, a closure for said opening comprising doors secured to the sides of the wall and controlling access into said opening, peripheral sealing means mounted near the edges defining said opening and adapted to be contacted by said doors when closed, the doors when closed being spaced and closing said opening to define with the wall a closed space, and a conduit communicating with said closed space to enable changing the air pressure therein to cause the doors to be pressed against the sealing means in substantially gastight relation.

2,406,943
MEANS FOR FORMING CORRUGATED TUBE FROM A STRIP
Shirley J. Carter, Hayward, Calif., assignor to Titeflex, Inc., a corporation of New Jersey
Application August 18, 1943, Serial No. 499,085
11 Claims. (Cl. 113—35)

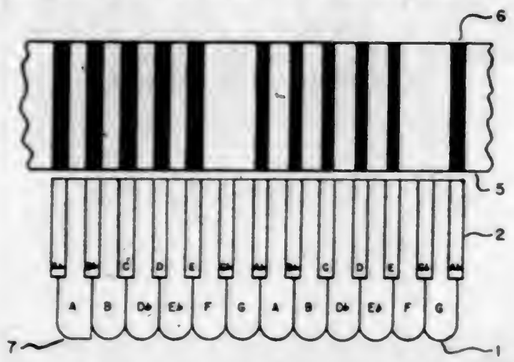


1. A mechanism for forming a corrugated tube from a strip comprising in combination a member about which the strip passes, a rotatable reaction roller embraced by said member, said roller being eccentric with relation to said member and said member having an opening at one side permitting cooperation of said reaction roller with a sealing roller, and a rotatable sealing roller, said sealing and reaction rollers having cooperating grooves and ridges adapted to interfold marginal portions of the strip.

2,406,944
VEHICLE
Roy E. Choate and Ellsworth W. Austin, Cedar Rapids, Iowa, assignors to LaPlant-Choate Manufacturing Company, Incorporated, Cedar Rapids, Iowa, a corporation of Delaware
Original application September 21, 1940, Serial No. 357,672, now Patent No. 2,347,882, dated May 2, 1944. Divided and this application September 13, 1943, Serial No. 502,114
12 Claims. (Cl. 180—51)

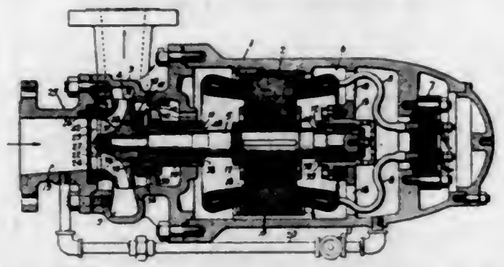
1. A vehicle comprising: a frame; rear wheels for supporting said frame; a first means connected to drive said rear wheels; front wheels for supporting and steering said frame; a second means connected to drive said front wheels; means for steering said front wheels; and means responsive to the steering of said front wheels for altering the driving connection of said second means to said front wheels.

2,406,945
INSULATOR FOR CONCENTRIC TRANSMISSION LINES
William F. Fell, Merchantville, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application February 16, 1943, Serial No. 476,123
10 Claims. (Cl. 178—44)



1. In a concentric high frequency transmission line comprising an outer cylindrical conductor and an inner cylindrical conductor having regions of varying diameters coaxial therewith, insulating means interposed between predetermined varying diameter regions of said conductors, said insulating means and said inner conductor having complementary conformations to provide substantially constant surge impedance along said line.

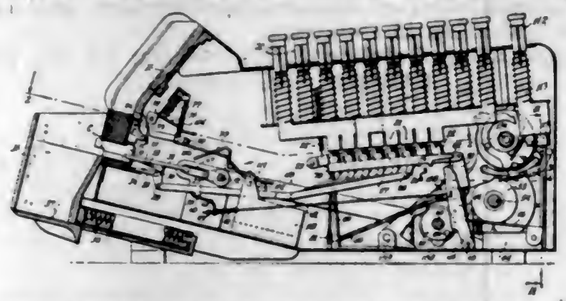
2,406,946
MUSIC TEACHING DEVICE
Floyd A. Firestone, Ann Arbor, Mich.
Application January 28, 1944, Serial No. 519,997
8 Claims. (Cl. 84—423)



1. A device for teaching the playing of a musical instrument having a duplex whole tone key-

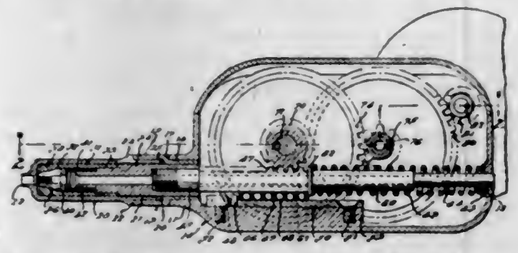
board of two or more levels, comprising: a staff consisting of groups of five equi-spaced lines, the space between adjacent groups being equal to the space between alternate lines of a group as if a line had been omitted; notes, which written on the lines indicate keys of one of the whole tone scales and written in the spaces indicate

keys of the other whole tone scale, notes on the successive lines and spaces of the staff indicating successive keys of the two whole tone scales; with the result that the lateral spacing of the fingers in playing a chord is graphically exactly indicated by the spacing of the notes which indicate the chord.



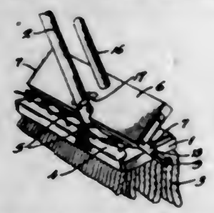
2,406,947
CENTRIFUGAL PUMP
Anatol J. Harlamoff, South Gate, Calif., assignor to A. O. Smith Corporation, Milwaukee, Wis., a corporation of New York
Application August 30, 1944, Serial No. 551,809
3 Claims. (Cl. 103—112)

1. In a pump of the class described, a housing, a pump shaft therein, an impeller mounted on said shaft, axial thrust bearings carried by the housing and engaging the forward and rear faces of said impeller to prevent axial movement of the same, cylindrical wear rings carried by the impeller, and complementary wear rings secured to the housing for sealing the impeller against leakage of fluid along its faces, and said wear rings being of substantially the same diameter to give a balanced construction and seal for the impeller.



2,406,948
COIN HANDLING MACHINE
Otis E. Hoffman, Earl W. Quirk, and William H. Sprenger, Watertown, Wis., assignors to Brandt Automatic Cashier Company, Watertown, Wis., a corporation of Wisconsin
Application September 7, 1942, Serial No. 457,556
14 Claims. (Cl. 133—4)

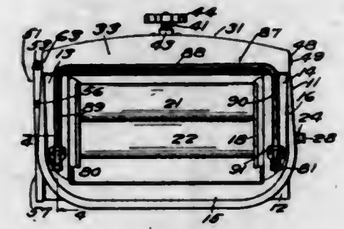
5. In a coin delivery machine having coin holders for coins of different denominations, the combination of a motor, a carrier reciprocated by said motor, a coin ejector member for each holder pivotally mounted on said carrier, an ejector raising lever yieldingly engaging with each ejector member to raise and yieldingly hold the same in coin ejecting position as said carrier moves toward said holder, key controlled mechanical means for selectively operating said



raising levers, means for holding the selected raised levers in raised position, and means operated by said motor for releasing said holding means after a single reciprocation of said carrier.

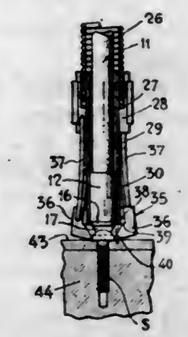
2,406,949
RIVETING GUN
Louis C. Huck, Grosse Pointe, Mich., assignor to Huxon Holding Corporation, Detroit, Mich., a corporation of Michigan
Application July 31, 1944, Serial No. 547,397
10 Claims. (Cl. 218—19)

1. A mechanism for relatively moving a tubular element and a pin element extending through it, comprising a casing, an anvil on the casing for applying reaction forces to the tubular element, means engageable with the pin for pulling it, a rack connected to said means, a pinion engaging the rack, resilient means opposing rivet pulling movement of the rack, hand-operated means for turning the pinion and releasable means for normally preventing reverse turning of the pinion.



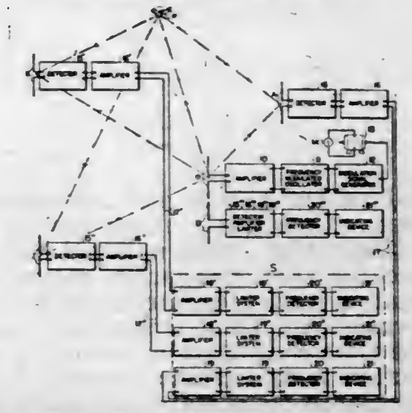
2,406,950
SELF-SQUEEZING MOP
Pearl M. Jackson, Chicago, Ill.
Application October 4, 1944, Serial No. 557,085
1 Claim. (Cl. 15—119)

A mop comprising a head member having a handle, a body of absorbent material dependingly attached to said head member, a presser member having a pressing face for squeezing the absorbent material against said head, a pair of longitudinally disposed and axially alined trunnions projecting from opposite ends of said head member, parallel lever arms rigidly attached to opposite ends of said presser member, being disposed transversely to the pressing face thereof and having spaced bearing apertures to rotatably engage said trunnions at selective distances from



said pressing face, and a handle on said presser member, said trunnions having circular cross sectional contours correspondingly flattened at opposite sides in substantially parallel relation to said pressing face, and said lever arms each having a contracted slot connecting its said bearing apertures and proportioned to permit the passage of the respective trunnion from one bearing aperture to another only when said slot registers with the flattened sides of said trunnions.

2,406,951
WRINGER
Gustave H. Jantz, Cincinnati, Ohio, assignor to Lovell Manufacturing Company, Erie, Pa., a corporation of Pennsylvania
Application October 25, 1934, Serial No. 749,977
51 Claims. (Cl. 68—263)

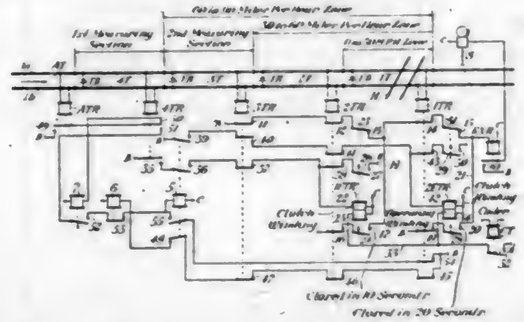


50. In a clothes wringer, separable roll pressure applying members, means for maintaining said members in pressure applying relation including unstable toggle links pivoted respectively to the pressure applying members and each other and forming in pressure maintaining position an acute angle at the common pivot, a latch for maintaining the toggle links in pressure maintaining position, and safety release means for moving the latch from the pressure maintaining position.

2,406,952
SAFETY SCREW DRIVER
Anatol Marco Josepho, Pacific Palisades, Calif.
Application June 7, 1943, Serial No. 489,909
3 Claims. (Cl. 145—52)

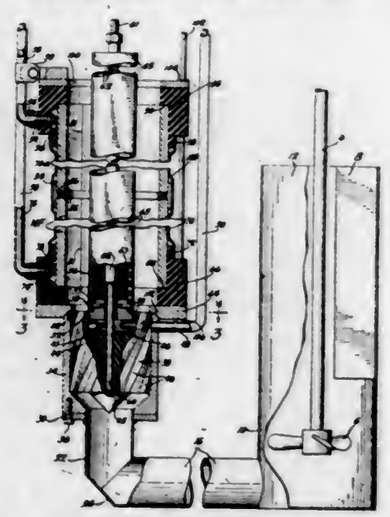
1. In a device of the character described, the combination of: a screw driving element comprising a shaft having a blade on one end, a handle on the other end, and one part of a coupling device intermediate the end, and a tubular screw guide and retaining element for retaining a screw in operative engagement with said blade comprising a plurality of tapered jaws enclosing said blade and diametrically yieldable under wedging action of either the blade end of said shaft or the head of said screw as they advance relatively to said jaws and releasing said screw head when the latter is advanced into its final seat, said jaws being spring mounted on a collar which encloses said shaft, a tubular member depending from said collar for guiding a screw and for centering said jaws, a complementary part of said coupling device adapted to cooperate with said first part to releasably retain said elements in assembled relation, and a helical spring interconnecting said complementary part and said tubular member.

2,406,953
SYSTEM FOR DETERMINING THE POSITION OF AN OBJECT IN SPACE
Harold M. Lewis, Allenhurst, N. J., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois
Application August 21, 1941, Serial No. 407,732
28 Claims. (Cl. 250—11)



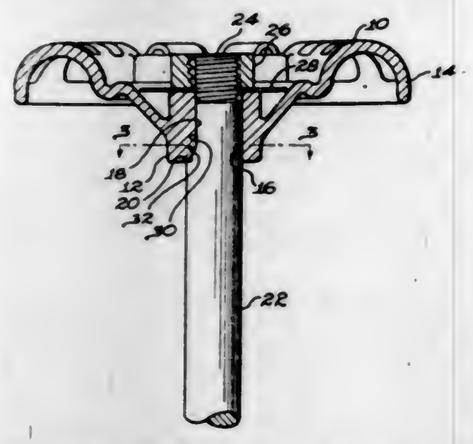
1. A system for determining the position in space of an object comprising, a plurality of related antennas having space displacements with respect to each other and to said object, said antennas forming at least three pairs, a source of high-frequency carrier waves, means for generating a modulation signal for periodically varying a characteristic of said carrier waves, means including said antennas for translating said modulation signal over paths corresponding to each of said space displacements, means responsive to signals translated over said paths to derive for each of said pairs of antennas a control signal having a characteristic which is dependent upon the relative space displacements of said object from individual ones of said antennas, each of said pairs of antennas having the characteristic that its equal-valued control-signal loci are represented by geometric surfaces of revolution, the position in space of said object defining the point of intersection of surfaces of revolution of at least three of said pairs of antennas, and means for utilizing said control signals to determine said point of intersection, thereby to determine the position in space of said object.

2,406,954
ALKYLATION OF ISOPARAFFINIC HYDROCARBONS
Carl B. Linn, Riverside, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
No Drawing. Application September 20, 1943, Serial No. 503,105
8 Claims. (Cl. 260—683.4)



1. An alkylation process which comprises reacting an isoparaffin with an olefin in the presence of a liquid hydrogen fluoride catalyst having dissolved therein a minor proportion of an inorganic compound soluble in liquid hydrogen fluoride and boiling below about 300° C., said inorganic compound being selected from the group consisting of the fluorides and oxyfluorides of sulfur, selenium, nitrogen, phosphorus, molybdenum, titanium, tungsten, vanadium, and silicon.

2,406,955
APPARATUS FOR THE CONTROL OF HIGHWAY CROSSING SIGNALS
Carl F. Lower, Edgewood, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application December 15, 1944, Serial No. 568,288
5 Claims. (Cl. 246—130)

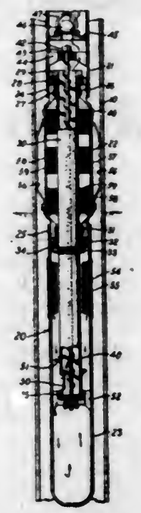


1. In combination, a speed measuring track section provided with a track circuit having a normally energized track relay, a signal controlling electroresponsive time measuring means, a line circuit including a back contact of said track relay to energize said time measuring means to measure the time consumed by a train in traveling said section, a first traffic controlled contact closed in response to a train approaching said section, a second traffic controlled contact which becomes open when a train passes beyond said section, a first relay energized through said second contact, a slow release relay energized through said first contact and a front contact of said track relay, a stick relay having a pick-up circuit including a back contact of said track relay and a front contact of each of said first relay and said slow release relay, a stick circuit for said stick relay, and a front contact of said stick relay interposed in said line circuit to avoid energizing said time measuring means due to a failure of said track circuit.

2,406,956
APPARATUS FOR ELECTROPLATING OF BEARING SHELLS
Carroll F. Matthews, Indianapolis, Ind., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application October 27, 1942, Serial No. 463,484
10 Claims. (Cl. 204—272)

7. In a cathode apparatus for electroplating the bearing shells of bearings of crankshafts used on internal combustion engines, a first mask, a second mask, a plurality of superimposed aligned pairs of bearing half shells positioned between the masks and spacing them from each other, a cover of nonconducting material over the outside of the shells, means removably to hold the masks and shells in assembled relation, and current conducting leads mounted in the masks and connected with the end pairs of bearing shells.

2,406,957
HANDWHEEL ATTACHING MEANS
Harry McCarthy, Kewanee, Ill., assignor to Walworth Patents, Inc., Boston, Mass., a corporation of Massachusetts
Application August 8, 1944, Serial No. 548,618
4 Claims. (Cl. 287—53)



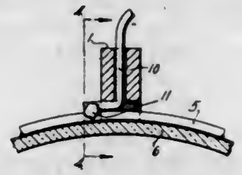
1. Securing means of the character described comprising a handle having an aperture therethrough longitudinally flattened on one side thereof defining a segmental-circular cross-section, a stem having a flattened side defining a complemental segmental-circular portion engaging the walls of said aperture and projecting therebeyond, said projection being threaded on the unflattened side thereof, and a nut engaging said threaded portion of said projection for retaining said handle on said stem.

2,406,958
CHEMICALLY MODIFIED WOOL
David Malcolm McQueen, Newark, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 9, 1943, Serial No. 494,075
8 Claims. (Cl. 8—127.6)

2. A process which comprises reacting dry wool in an essentially anhydrous inert liquid medium with from 104 to 6650 parts, per 2060 parts of wool, of styrene in the presence of from 21.6 to 126.9 parts, per 2,060 parts of wool, of iodine.

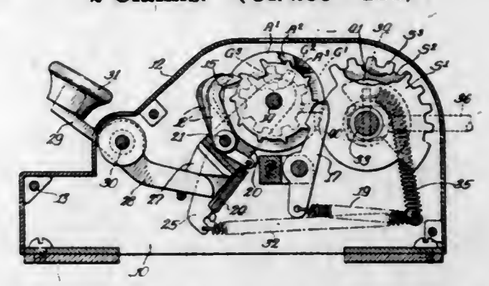
2,406,959
ROTARY PUMP
Dwight H. Millard, Norwalk, Calif.
Application August 21, 1944, Serial No. 550,426
6 Claims. (Cl. 103—87)

1. In hydraulic pumping, a pump comprising a housing, a rotatable tubular impeller member in said housing having an inlet opening and a gear adjacent an end thereof, motor means in said housing for said impeller, a web member forming an idler gear bearing bracket, an idler gear mounted on said bracket, a rotatable complementary impeller member within said tubular impeller member and having a driving gear engageable with said idler gear, said bearing bracket having a fluid passage registering with said tubular impeller member inlet opening, said tubular impeller



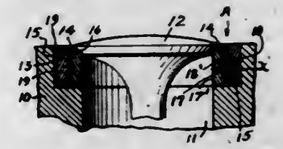
member having an internal spiral blade, and an external spiral blade adapted to direct fluid toward said inlet opening.

2,406,960
PREPARATION OF HEAVY METAL SALTS OF DITHIOCARBAMIC ACIDS
Arthur M. Neal, Wilmington, Del., and Bernard M. Sturgis, Pitman, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application August 22, 1942, Serial No. 455,784
17 Claims. (Cl. 260—239)



1. The process of preparing a heavy metal salt of a dithiocarbamic acid which comprises adding from about 1% to about 20% of a water-soluble salt of a strong base and a weak acid to an aqueous solution of a water-soluble salt of the dithiocarbamic acid having a pH above 7 and then adding a water-soluble salt of the heavy metal to the solution in sufficient amount to precipitate the heavy metal salt of the dithiocarbamic acid.

2,406,961
DEVICE FOR USE WITH HELICALLY-WOUND COILS
Arthur V. Nichol, Elkins Park, Pa., assignor to Philco Radio and Television Corporation, Philadelphia, Pa., a corporation of Delaware
Application July 15, 1943, Serial No. 494,856
4 Claims. (Cl. 175—359)

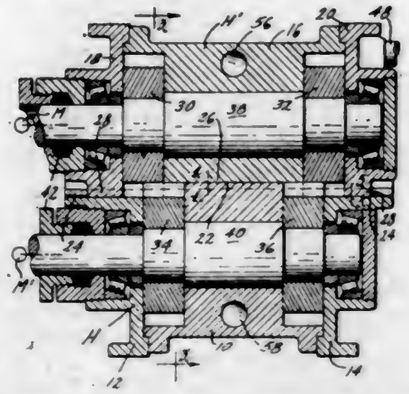


4. In combination with a helically-wound coil structure, an insulating member extending longitudinally of said coil structure externally of the same and secured thereto, said member having spaced recesses receiving the successive turns of the coil, said member also having at least one aperture or passage extending from a predetermined one of said recesses, and a tap connection extending through said aperture and having its end bent and securely held in said one recess in firm engagement with the coil turn therein, the said end of said tap connection being electrically joined to the associated coil turn.

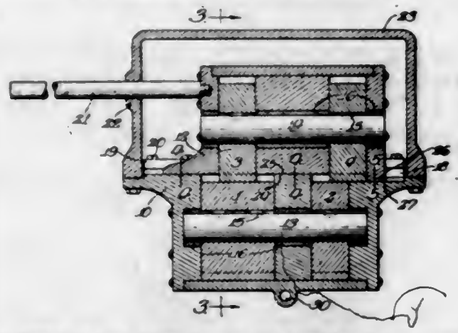
2,406,962
COUNTER
John Noonan, St. Louis, Mo., assignor to D. H. Finke, Chicago, Ill.
Original application May 31, 1941, Serial No. 396,040. Divided and this application December 13, 1944, Serial No. 568,033
2 Claims. (Cl. 235—144)

1. In a counter, a plurality of indicia carrying elements, an actuating element for said indicia carrying elements, means for returning each of said indicia carrying elements to its initial position comprising a gear element for each indicia carrying element, a return gear cooperable with each of said gear elements, means biasing said return gear to non-cooperating position with relation to said gear elements, each gear element having a position, when its respective indicia carrying element is at its initial position, where an elongated element of the gear element is bent out of the plane of the remaining teeth to discontinue actuation of said indicia carrying elements by said return gear, and a stop for said elongated element operable to prevent movement of the elongated element past initial position of the respective indicia carrying elements as they are moved in a return direction, said stop being carried by said return gear to effect removal of said stop from its stopping position when the indicia carrying element is to be moved in a counting direction.

2,406,963
VALVE SEAT INSERT ASSEMBLY, AND ASSEMBLY METHOD AND MEANS
Samuel H. Norton, Cleveland, Ohio, assignor to Thompson Products, Inc., Cleveland, Ohio, a corporation of Ohio
Application August 16, 1943, Serial No. 498,900
9 Claims. (Cl. 123—188)



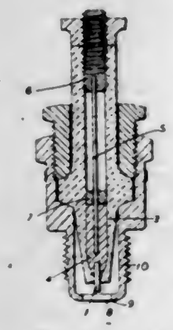
1. A preformed valve seat insert comprising an annular seat member and an annular surrounding retainer member, said seat member having annular teeth on its outer side and said retainer member having annular complementary teeth on its inner side, said teeth on said members having overlapping faces in planes at right angles to the axis of the members, and the outer surfaces of the teeth on said members having clearance space therebetween for permitting relative expansion or contraction of the members.



2,406,964
VARIABLE DELIVERY AND REVERSING PUMP
Donald J. Orr, Arnolds Park, Iowa
Application February 19, 1943, Serial No. 476,376
2 Claims. (Cl. 103—120)

2. In a variable delivery and reversing pump, a pair of housings arranged side by side, a guide

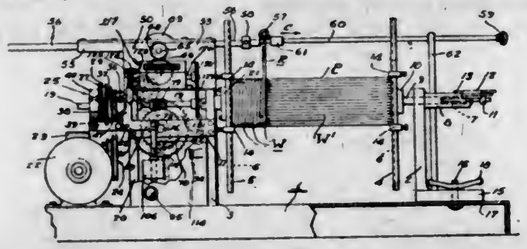
connection between said housings to permit sliding of one relative to the other, a pair of pump rotors in each housing, one pair of said rotors variably meshing with the other pair thereof to form sets of intermeshing rotors, each set of intermeshing rotors having an inlet and an outlet, one pair of said rotors being offset relative to the other pair whereby the degree of meshing of one rotor of one pair with one rotor of the other pair increases as the degree of meshing of the other two rotors decreases when one of said housings is slid relative to the other, means for changing the mesh of said rotors, means for connecting the outlet of each set of meshing rotors with the inlet of the other set of meshing rotors, and motor means for driving each of said pairs of pump rotors.



2,406,965
VARIABLE DELIVERY FLUID HANDLING DEVICE
Donald J. Orr, Arnolds Park, Iowa
Application March 30, 1943, Serial No. 481,120
3 Claims. (Cl. 103—120)

1. A device of the type described comprising a two-section housing, first and second transmission gears in one section thereof, third and fourth transmission gears in the other section thereof, said first and third gears meshing with each other and the first one being wider than the third one, said second and fourth gears meshing with each other, a shaft operatively connecting said first gear with said second gear, a shaft operatively connecting said third gear with said fourth gear, one of said housing sections being movable axially of the other one to vary the position of mesh of said first gear with relation to and between the limits of width of said third gear and to vary the degree of mesh of the second and fourth gears relative to each other, an inlet hydraulically connected with the intake side of said first and third gears, said first and third gears being driven by the fluid supplied to said inlet from a source of fluid supply, a power delivering outlet hydraulically connected with the outlet side of said first and third gears, an inlet and an outlet connected to the inlet side and the outlet side respectively, of said second and fourth gears, a single by-pass connection between said first-named outlet and the inlet of said second and fourth gears, said second and fourth gears being driven by said shafts and by fluid from said by-pass connection, and a return pipe hydraulically connected with the outlet of said second and fourth gears and returning fluid to the source of supply of said first-named inlet.

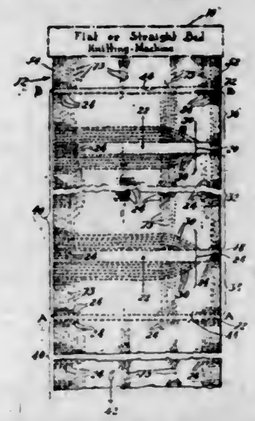
2,406,966
SPARK PLUG ELECTRODE
Leonard Bessemer Pfeil, Edgbaston, Birmingham, England, assignor to International Nickel Company Inc., New York, N. Y., a corporation of Delaware
Application May 5, 1943, Serial No. 485,704
In Great Britain May 15, 1942
5 Claims. (Cl. 123—169)



1. A spark plug ready for service and having an electrode made from a precious metal alloy, at least the unsupported part of said electrode having a non-recrystallized fibrous microstructure made up of crystals having longitudinal lengths much greater than their widths.

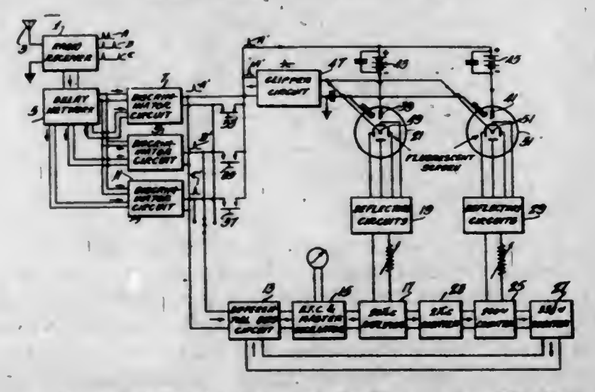
2,406,967
ISOMERIZATION OF SATURATED HYDROCARBONS
Herman Pines, Riverside, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
No Drawing. Application November 19, 1943, Serial No. 510,915
12 Claims. (Cl. 260—683.5)

2. An isomerization process which comprises contacting a normally liquid paraffin hydrocarbon with an isomerizing catalyst comprising a free metal halide of the Friedel-Crafts type under isomerizing conditions and in the presence of an aromatic hydrocarbon containing at least one polynuclear aromatic group of the fused ring type.



2,406,968
PLATE WINDING MACHINE
Henry W. Scher, Elkins Park, Pa., assignor to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application April 5, 1945, Serial No. 586,785
8 Claims. (Cl. 242—1)

1. In a machine for winding a ribbon about a storage battery plate, battery plate holding and rotating mechanism, ribbon traversing mechanism mechanically associated with said holding and rotating mechanism and operable to lay the ribbon on the plate in timed relation with the rotation thereof to form overlapping wraps progressing axially of the plate, and control mechanism operatively related to said plate holding and rotating mechanism and to the ribbon traversing mechanism, said control mechanism comprising electro-mechanical means adapted to be set in accordance with the number of wraps



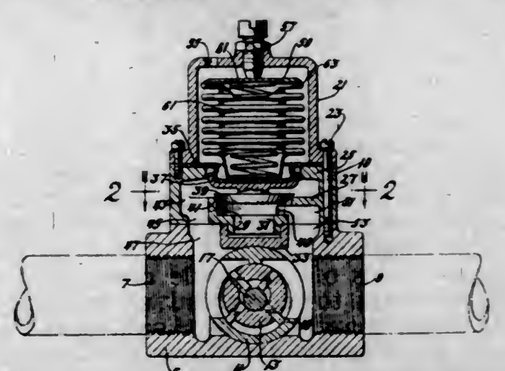
to be formed on the plate and operable to terminate the ribbon winding and traversing functions of the machine upon completion of said number.

2,406,969
FULL-FASHIONED KNITTED GARMENT AND METHOD OF MANUFACTURING THE SAME
Leon Silman, New York, N. Y.
Application October 26, 1944, Serial No. 560,385
32 Claims. (Cl. 66—176)

1. A full fashioned girdle constructed from a unitary knitted fabric blank, having shaped panels, at the side of the girdle, separated by an intervening section of the fabric, the courses of yarn comprising the shaped panels knitted in the fabric so that they do not form a part of any course of yarn comprising an intervening section of the fabric.

2,406,970
RADIO PULSE INDICATOR
John P. Smith, Erlton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application November 29, 1941, Serial No. 420,919
6 Claims. (Cl. 315—24)

1. A pulse indicator including a cathode ray tube having a fluorescent screen, a grid electrode, a radial deflecting electrode, and a source of cathode rays, means for sweeping said rays at a predetermined timing rate, means for blanking said rays off said screen, means for applying pulses to be indicated to said grid electrode to overcome said blanking means and to apply said rays to said screen, and means for applying said pulses to said radial deflecting electrode simultaneously with said application of said pulses to said grid electrode to deflect said ray radially on said screen.

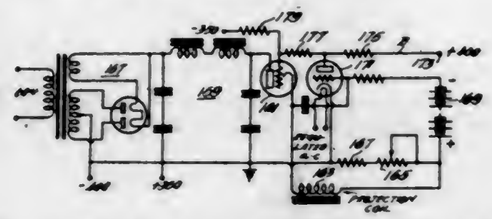


2,406,971
LUBRICANT AND PROCESS OF LUBRICATING SURFACES THEREWITH
Frank J. Sowa, Cranford, N. J.
No Drawing. Application May 16, 1942, Serial No. 443,303
6 Claims. (Cl. 252—49.6)

1. A lubricant comprising a non-lubricating organic liquid and an organic silicon compound selected from the class of hydrolysis products of organic silicanes and polymers of said hydrolysis products, said organic silicon compound being present in an amount sufficient to impart lubricating properties to said liquid.

2,406,972
PROCESSES FOR PRODUCTION OF PYRIDINE 3-SULPHONIC ACID AND ITS SALTS
Edmond T. Tisza and Bernard F. Duesel, Yonkers, N. Y., assignors to Pyridium Corporation, Yonkers, N. Y., a corporation of New York
No Drawing. Application February 24, 1943, Serial No. 476,908
4 Claims. (Cl. 260—290)

1. In a process of sulphonating pyridine in the 3 position, the step which comprises the periodical additions of oleum and a member of the group of catalysts consisting of mercury, aluminum, magnesium and vanadium and their sulphates to a solution of pyridine sulphate in oleum under sulphonating temperatures and recovering the 3 pyridine sulphonic acid.

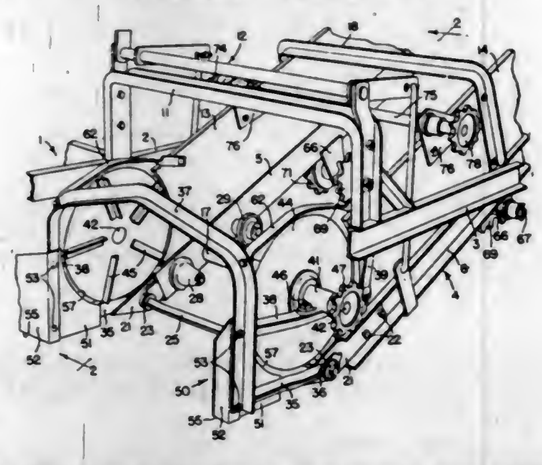


2,406,973
ALTITUDE COMPENSATOR FOR FUEL PUMPS
Milton A. Trisler, Indianapolis, Ind., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application November 27, 1942, Serial No. 467,134
5 Claims. (Cl. 103—42)

1. In a fuel pump having a pressure regulator by-pass, a valve therefor, a spring and an altitude sensitive aneroid jointly operable on said valve, an air vented chamber containing said spring and aneroid and a flexible diaphragm connected to said valve and separating said aneroid chamber from said bypass the dimensions of the

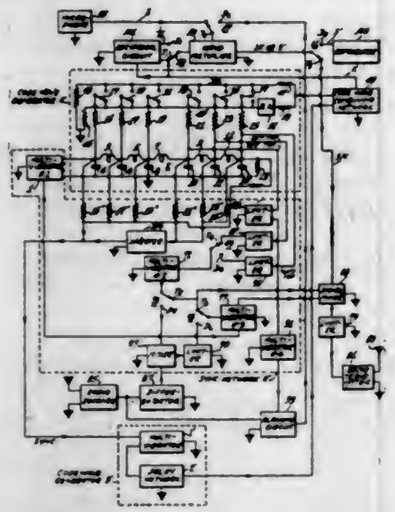
aneroid and the diaphragm being such that the air pressure within the chamber exerts a force on the diaphragm tending to close the valve substantially equal to the force of said air pressure acting on the aneroid in a direction to open the valve.

2,406,974
POWER SUPPLY FOR ELECTRON MICROSCOPES
Arthur W. Vance, Cranbury, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application April 28, 1942, Serial No. 440,771, which is a division of application Serial No. 365,750, November 15, 1940, now Patent No. 2,302,900, dated November 24, 1942. Divided and this application April 17, 1943, Serial No. 483,488
1 Claim. (Cl. 171—312)



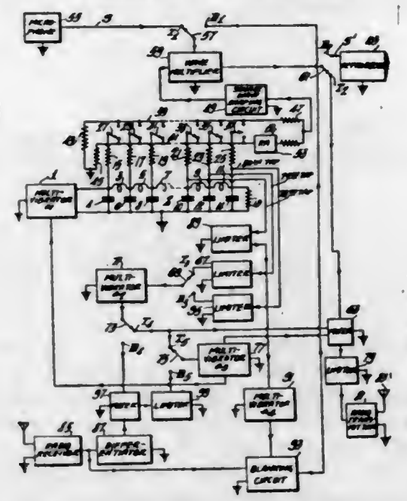
In a stabilized power supply system including a plurality of separate direct current power supply units energized by a common power line, one of said units having its positive terminal grounded and the other units having their negative terminals grounded, regulating means for stabilizing the negative voltage output of said one unit, means for applying said negative voltage to other units of said system, means for comparing the positive output voltages of said other units with said negative voltage to obtain a difference voltage of substantially zero amplitude, and means responsive to changes in the amplitude of said difference voltage for controlling the output voltages of one of said other units.

2,406,975
PROCESS OF MAKING SLIP LASTED SHOES
John J. Walsh, Des Peres, Mo., assignor to Penaljo Company, St. Louis, Mo., a firm
Application May 18, 1944, Serial No. 536,069
3 Claims. (Cl. 12—142)



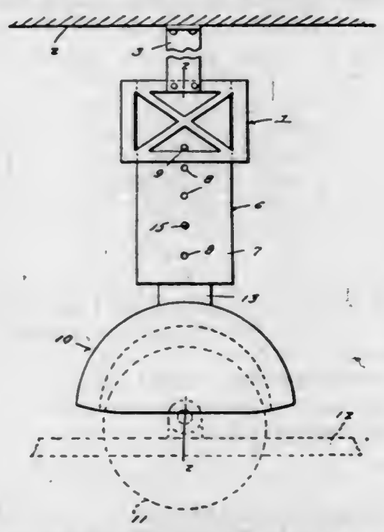
1. That process of making slip-lasted shoes which includes forming an insole having approximately the contour of the finished shoe, forming an upper also having the approximate dimensions and shape corresponding to those of the finished shoe and being adapted to be ultimately secured to opposite sides of the insole along continuous lines between the toe and shank of the shoe, folding the upper marginally over and upon the under face of the insole, initially stitching said upper to the insole prior to lasting and only in limited areas adjacent the toe and shank portions of the insole while leaving the margins of the upper free between such limited areas of securement, placing the partially completed shoe upon a last and thereupon pulling over and cementing down the unstitched margins of the upper and applying a sole member.

2,406,976
BEET LOADER
Claude W. Walz and Robert D. Griff, Rock Island, Ill., assignors to Deere & Company, Moline, Ill., a corporation of Illinois
Application June 26, 1944, Serial No. 542,154
7 Claims. (Cl. 198—9)



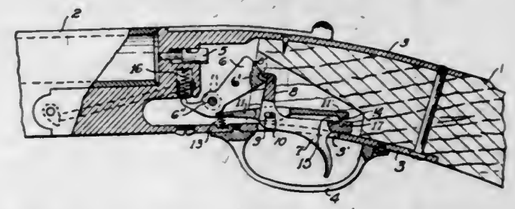
1. In a crop loader, a conveyor comprising a framework having sides and an elevating element constituting the bottom thereof, forwardly disposed extensions carried at the front of said framework, stationary guides fixed to said extensions, and a pair of driven disks disposed between the sides of said conveyor and said stationary guide members and also mounted on said extensions, each of said disks being disposed in the plane of the front of the associated frame side and the rear portion of the associated extension, the space between said disks above said elevating element being substantially unobstructed.

2,406,977
SYNCHRONIZING SYSTEM
Karl R. Wendt, Hightstown, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application July 29, 1944, Serial No. 547,225
12 Claims. (Cl. 179—1.5)



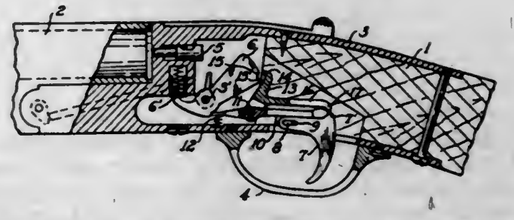
1. A device including a plurality of wave generators, a delay network excited by waves from one of said generators, means for deriving from said network different successively delayed components of said exciting waves, predetermined ones of said derived delayed wave components being successively reversed in polarity, means for combining said derived wave components of both polarities to generate a wave which is a predetermined harmonic of said exciting wave frequency, and means for synchronizing at least one other of said generators at a predetermined sub-harmonic of said generated harmonic wave.

2,406,978
SQUARE CODING WAVE GENERATOR FOR SECRET TELECOMMUNICATION SYSTEMS
Karl R. Wendt, Hightstown, and Alda V. Bedford, Princeton, N. J., assignors to Radio Corporation of America, a corporation of Delaware
Application August 12, 1944, Serial No. 549,216
18 Claims. (Cl. 179—1.5)



1. In a secret telecommunication system for a communication signal, means for producing a complex square coding wave having equal amplitude positive and negative wave increments with respect to its A.-C. axis, and means for combining said coding wave with said communication signal to provide a coded transmission signal.

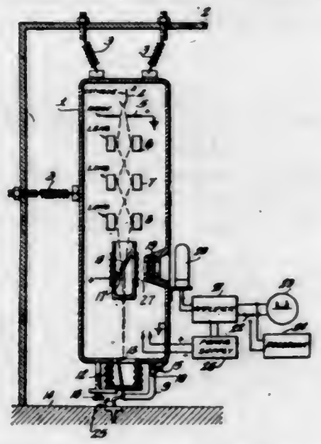
2,406,979
CIRCULAR SAW AND DADO COVER
John F. Wolfe, Lapeer, Mich.
Application September 20, 1943, Serial No. 503,133
1 Claim. (Cl. 143—159)



A circular saw cover comprising a skeleton box-like guide including upper and lower transverse bars, and vertically spaced pairs of upper and lower longitudinal bars extending between the transverse bars and forming therewith a vertical passage in said guide, means for suspending the guide from a support, a substantially flat tubular hanger slidably disposed in the passage and provided with vertically spaced openings therein, a pin insertable in openings in said hanger above and below the lower pair of longitudinal bars, selectively, said pin when inserted in openings above said lower pair of longitudinal bars suspending said hanger from said lower pair of bars for adjustment of the hanger upwardly in said passage and being adapted to coact with the upper pair of longitudinal bars to limit upward adjustment of said hanger, said pin when inserted in openings below the lower pair of longitudinal bars coacting with said lower pair of bars to prevent upward adjustment of the hanger, a guard, a substantially flat shank rising from said guard and vertically adjustable slidably in the lower part of the hanger, said shank having an opening and a vertical slot therein vertically spaced apart and adapted to be registered, respectively, with openings in said hanger, and a second pin insertable selectively in the opening and slot in the shank and in openings in the hanger with which said opening and slot in the shank may be registered to thereby connect the shank to the hanger against vertical movement relative thereto or for vertical slidable adjustment in said hanger.

2,406,980
COMBINED RELEASE FIRE AND STRAIGHT FIRE GUN
Charles A. Young, Springfield, Ohio
Application December 7, 1942, Serial No. 468,088
6 Claims. (Cl. 42—69)

2. In a gun of the character described, an impact member, a sear for holding said member cocked, a trigger engageable with the said sear to disengage the sear from the impact member at all times when the trigger is retracted, a detent rigidly connected to said trigger to hold said impact member cocked when the gun is to be used for release firing, said trigger having a limited movement in a longitudinal direction of the gun to position said detent out of operative relation with said impact member when the gun is to be used for straight firing.

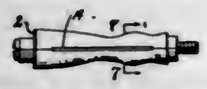


2,406,981
COMBINED RELEASE FIRE AND STRAIGHT FIRE GUN
Charles A. Young, Springfield, Ohio
Application December 7, 1942, Serial No. 468,089
4 Claims. (Cl. 42—69)

1. A firearm convertible from straight fire to release fire operation and vice versa, said fire arm

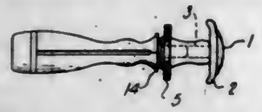
comprising an impact member, a trigger, a sear, a detent separate from the sear and trigger temporarily holding the impact member cocked independently of the sear under certain conditions, said trigger being common to said sear and detent, and a mount therefor upon which the trigger is bodily slidable into alternate operative positions, in one of which upon manual retraction it will disengage the sear to release the impact member independently of actuation of the detent and in the other of which the trigger is operative upon manual retraction to disengage the sear from the impact member and simultaneously engage the detent with the impact member, from which latter it is automatically disengaged upon release of the trigger.

2,406,982
ELECTRONIC VIBRATION DETECTING APPARATUS
Vladimir K. Zworykin, Philadelphia, Pa., and James Hillier, Cranbury, N. J., assignors to Radio Corporation of America, a corporation of Delaware
Application June 20, 1942, Serial No. 447,864
9 Claims. (Cl. 177—351)



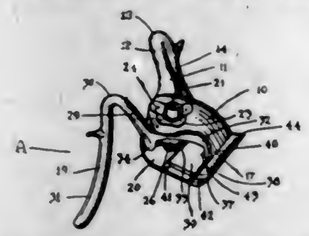
1. An electronic device for detecting vibration in a body, said device including a relatively heavy evacuated envelope enclosing means for generating an electron beam, and means for deriving from said beam an electron probe of small cross-sectional area, a movable element having a sharply defined edge enclosed within said envelope responsive to said vibration of said body, means for focusing said electron probe at said edge of said element, and means including electron responsive means enclosed within said envelope responsive to said movement of said edge of said element for deriving an electric current of amplitude proportional to a function of said movement.

2,406,983
RAZOR
John W. Anderson, Gary, Ind.
Application July 1, 1944, Serial No. 543,067
23 Claims. (Cl. 30—85)



16. A safety razor including a blade carrying head, rigid means extending from said head, a handle rotatably mounted on said rigid means, and said handle being provided with breaking means actuatable to retard relative rotation between said handle and rigid means.

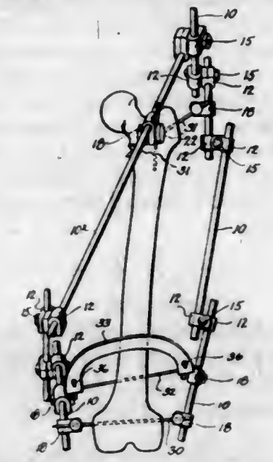
2,406,984
HANDLE FOR SAFETY RAZORS
John W. Anderson, Gary, Ind.
Application July 31, 1944, Serial No. 547,404
12 Claims. (Cl. 30—85)



6. A handle for a safety razor comprising, a spindle, a plurality of longitudinal sections rotatably mounted on said spindle, and means holding said sections in assembled relationship whereby at least a portion of each section is free to move with relation to each other section in response to pressure to retard movement of the handle relative to said spindle.

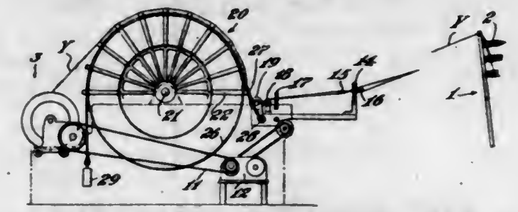
2,406,985
RAZOR
John W. Anderson, Gary, Ind.
Application April 19, 1945, Serial No. 589,213
8 Claims. (Cl. 30—85)

8. In a safety razor of the type having a blade carrying head, the combination of a shaft, a handle comprising a plurality of longitudinal sections rotatably mounted on said shaft, a ring positioned over one end of said handle for loosely retaining the handle sections together, an enlarged end portion on said shaft for retaining said ring in position over the end of said handle sections, an enlarged recessed member secured to the other end of said shaft and arranged to receive the other end of said handle for loosely retaining the handle sections on said handle whereby the handle sections respond to pressure to effect a braking action between the handle and the said shaft to retard relative rotation therebetween.



2,406,986
HAIR CLIPPER
Reuben B. Anderson, St. Paul, Minn.
Application March 24, 1945, Serial No. 584,525
8 Claims. (Cl. 30—212)

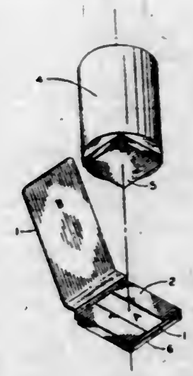
1. A hair clippers construction including a body including a pair of relatively slidable clipper plates, handles secured to said plates to cause relative reciprocation, said handles extending downwardly and rearwardly to extend below the level of the cutter blades.



2,406,987
FRACTURE SPLINT
Roger Anderson, Seattle, Wash.
Application January 4, 1943, Serial No. 471,227
7 Claims. (Cl. 128—85)

1. In fracture treating equipment of the character described; in combination, a rigid transfixion member, a frame extension rod, and a transfixion mounting clamp member applied to the rod for rotation thereon and for sliding adjustment along the rod to accommodate it to the particular disposition of the transfixion member; said clamp member having a tightening means adjustably applied thereto equipped to engage

the transfixion for its functional securement to the rod and whereby, upon tightening of the said means, the extension rod and transfixion member will be rendered relatively rigid and whereby, upon loosening of the clamp member, the rod, clamp and transfixion will be rendered relatively adjustable.

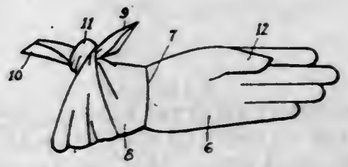


2,406,988
METHOD OF AND APPARATUS FOR USE IN PREPARING WEAVING WARPS
James Bolton, New Bedford, Mass.
Application August 22, 1944, Serial No. 550,540
11 Claims. (Cl. 28—32)

1. In apparatus for winding a warp on a loom beam in combination, means for supporting yarn masses in number at least equal to the number of ends in the desired warp, a comb operative to dispose the yarns in side by side relation, the length of the comb being substantially equal to the width of the desired warp, a loom beam and means for rotating the beam, the axis of the beam being parallel to the length of the comb, and a series of spaced yarn-positioning elements which move with the yarns as the latter approach the winding mass on the beam, said positioning elements being constructed and arranged to prevent the yarn from rolling.

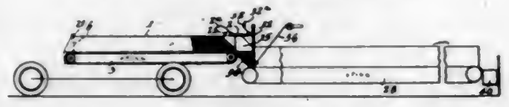
2,406,989
TACK TESTING DEVICE
Rowland E. Bonner, Stamford, Conn., and Morris D. Brewster, Wilmington, Del., assignors to Atlas Powder Company, Wilmington, Del., a corporation of Delaware
Application July 1, 1944, Serial No. 543,110
2 Claims. (Cl. 73—150)

1. A device for determining whether or not a coating is tack-free comprising a base member having an upper surface for carrying a weight and a flat under surface adapted to lie flat on said coating for a predetermined period of time, renewable, flexible sheet material stretched across said under surface, and a counterbalancing member rigidly attached to said base member and disposed at an angle thereto, the angle between the



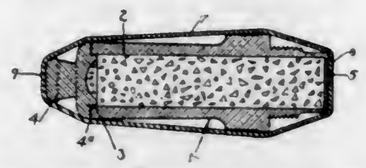
base member and the counterbalancing member bearing a predetermined relation to the particular weight employed, said counterbalancing member, after removal of the weight, being adapted to strip the base member from the coating within a predetermined period of time if the coating is tack-free.

2,406,990
ANTIFUNGUS WRAPPER, ETC.
George C. Borden, Jr., and Karl R. Karlson, Easton, Pa., assignors to Riegel Paper Corporation, New York, N. Y., a corporation of New Jersey
No Drawing. Application November 17, 1944, Serial No. 563,988
6 Claims. (Cl. 117—154)



1. An anti-fungus wrapper made of moisture-resistant coated paper, having as an effective high boiling anti-mycotic agent a small percent of a lower dialkyl dichloro succinate incorporated in the coating, said anti-mycotic agent slowly vaporizing over a prolonged period of time.

2,406,991
GAUNTLET GLOVE
Henrietta E. Boyce, New York, N. Y.
Application January 31, 1944, Serial No. 520,390
2 Claims. (Cl. 2—162)

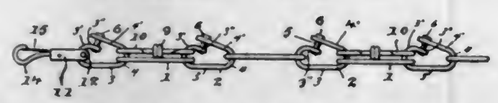


1. A glove provided with a gauntlet cuff extending from the wrist line thereof, said cuff being of a length of the order of the glove length and being provided with a split along substantially its entire length to facilitate the folding of the outer portion of the cuff, said cuff tapering outwardly from said wrist line to such a substantial degree that the free ends of the cuff are adapted to be tied together in a knot to provide a pulse warmer and afford substantial protection against cold, rain and snow.

2,406,992
METHOD AND APPARATUS FOR LOADING AND STORING PINEAPPLES
Bernard J. Butler, San Francisco, Calif., assignor to Maui Pineapple Company, Ltd., Honolulu, Territory of Hawaii, a corporation of Hawaii
Application February 7, 1944, Serial No. 521,372
6 Claims. (Cl. 214—44)

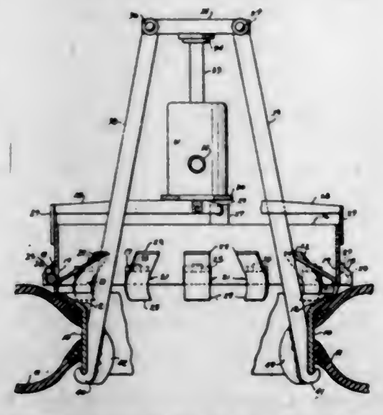
1. The method of loading easily bruisable objects, such as pineapples, gently one upon another into the lading carrying space of a vehicle defined in part by having relatively movable front and rear walls, which consists in first positioning said front and rear walls comparatively close to each other to provide an initial relatively small receiving compartment open at the top for loading the objects from above into the said initial receiving compartment, separating said walls longitudinally of the vehicle to enlarge said compartment and thereby enabling the load to settle down so as to present a depressed upper surface on which other objects may be subsequently deposited, and loading additional ones of said objects from above onto the depressed surface of the load already in the enlarged receiving compartment up to a level substantially uniform transversely of the lading receiving space of the vehicle.

2,406,993
ANTICORROSION PLUG
Milton E. Chandler, New Britain, Conn., assignor to Chandler-Evans Corporation, a corporation of Delaware
Application February 18, 1942, Serial No. 431,401
8 Claims. (Cl. 206—46)



1. The step in preparing for immediate shipment an anti-corrosion plug containing dehydrating material and including an air inlet and a material retaining member, and also having an adhesive connection to said plug requiring a drying period for the adhesive connection to set, which consists in, resiliently wrapping the plug longitudinally for shipment while in the same operation sealing said inlet and holding said member in place during drying.

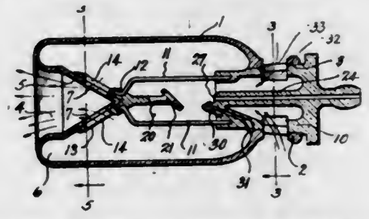
2,406,994
ALTERNATING CLOTH DOLL AND METHOD OF CONSTRUCTING SAME
Hing F. Chu and Helga M. Chu, Larchmont, N. Y.
Application October 9, 1944, Serial No. 557,816
3 Claims. (Cl. 46—151)



1. A doll of the character described comprising a rectangular blank of fabric rolled forwardly from opposite side edges towards the center of the blank over elongated cores of soft material and knotted in spaced relation to its upper end to provide rolled upper and lower portions divided by the knot, the said upper portion being partially unrolled and folded forwardly and downwardly to dispose its unrolled portion in covering relation to the knot and the upper end of the said lower portion to provide a head of the covered knot and a blouse of the covered upper end of the said lower portion, the rolls of the said upper portion being disposed at opposite sides of the head and blouse to provide a hood for the head and arms for the blouse, and a ribbon tied about the doll under the head to secure the said upper portion in its folded condition and provide a necktie for the doll.

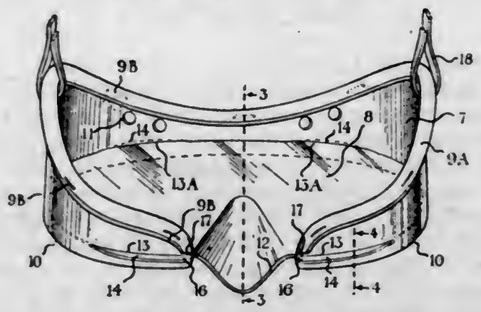
2,406,995
ANTISKID CHAIN
George O. Coates, Washington, D. C.
Application April 7, 1942, Serial No. 438,042
2 Claims. (Cl. 59—85)

1. A chain link comprising a strip of flat metal bent to form a first arcuate end portion, a straight side leg extending from said arcuate portion, a second arcuate portion formed at the opposite end of said leg, a second relatively short straight leg extending outwardly from that end of the first arcuate portion opposite the first leg and in the direction of the second arcuate potrion, a third straight leg extending inwardly from that end of the second arcuate portion opposite the first leg in the direction of the first arcuate portion, said second and third legs having their free ends fixedly disposed in overlapping transversely spaced parallel relation to provide a gap therebetween, the respective overlapping parallel ends having aligned openings therein, and a fastening element removably extending through said openings to bridge the gap.



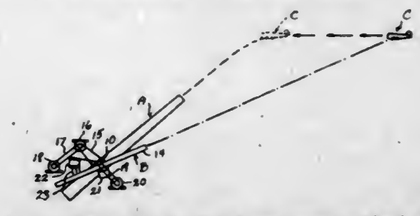
2,406,996
TIRE REMOVING APPARATUS
George F. Colley, Augusta, Ga., assignor to Wade R. Bedingfield, Augusta, Ga.
Application August 1, 1944, Serial No. 547,544
1 Claim. (Cl. 157—6)

A tire tool comprising an annular cylindrical member having a plurality of notches in its lower edge and having an outwardly projecting ear on each side of each notch, an L-shaped dog pivoted intermediate its ends between each pair of said ears and having one end adapted to rest on



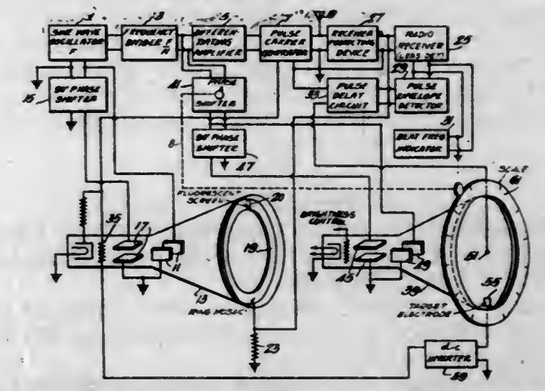
top of a pneumatic casing mounted on a wheel and lying in prone position and the other end of each of said dogs projecting radially inwardly through the notches in said annular member and adapted to engage the inner wall thereof, thus to limit the pivotal motion of said dogs, means disposed above the annular member and having hooks depending therefrom for engaging the lower side of the wheel, and means between the annular member and the member having hooks thereon for forcing the annular member and the member having hooks thereon away from each other to thereby cause the annular member and its L-shaped dogs to move downwardly to force the upper bead of the casing away from the flange of the rim of the wheel.

2,406,997
ATOMIZER
Harold E. Curry, Seattle, Wash.
Application December 26, 1944, Serial No. 569,782
8 Claims. (Cl. 299—88.5)



1. An atomizer of the character described comprising a container of flask-like form adapted to contain a supply of liquid to be atomized and forming a chamber in which said liquid may be atomized to produce a fog-like vapor; means in the chamber for the atomization of liquid drawn from the supply, to produce said fog-like vapor; said container having, at one end, an open neck portion for easy draining of the chamber of its supply of liquid and the neck wall having an air port therein, and at its other end, having a wall formed with a discharge port for easy outflow of the fog-like vapor from the chamber, and a stopper rotatably fitted in the neck portion of the container, having a valve passage therein that is movable from and into registration with said neck wall port.

2,406,998
EYESHIELD
Joseph E. Du Bois, Detroit, Mich., assignor, by direct and mesne assignments, of one-fifth to Virginia I. Du Bois, Detroit, Mich., one-fifth to Lauriene T. Holzworth, North Tonawanda, N. Y., one-fifth to Rita C. Sterne, one-fifth to Eileen Silbert, and one-fifth to Florence E. Taylor, all of Buffalo, N. Y.
Application January 22, 1943, Serial No. 473,167
10 Claims. (Cl. 2—14)



9. In an eye shield of the character described, the combination of a rim member shaped to extend part way about the vicinity of the eyes of the wearer and open at its bottom across the wearer's nose, a one piece lens member of shatterproof transparent material detachably fitted in said rim member with the lower portion thereof bridging the open bottom of the rim member and shaped to fit the contour of the wearer's nose, and means formed in the contiguous portions of the rim and lens members for detachably interlocking said members to each other.

2,406,999
CONTINUOUS RANGE FINDER
Franklin W. Durgin, Washington, D. C.
Application April 23, 1943, Serial No. 484,279
4 Claims. (Cl. 33—49)

1. The combination with a gun rotatable about a given axis, of a range finder mounted for rotation about the axis of rotation of the gun, said range finder provided with a movable distance-indicating element, a single power actuated means for controlling the angular relationship of the gun and range finder substantially in accordance with the amount of power actuating said control means, a source of energy for actuating said control means, a speedometer driven by rotation of the range finder, and plural jointly acting means for varying the amount of energy delivered to said control means including means controlled by said speedometer, means controlled by said movable element, and means responsive to changes in the angular position of the range finder.

2,407,000
RADIO DEVICE FOR INDICATING DOPPLER EFFECT
John Evans, Palmyra, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application October 31, 1941, Serial No. 417,230
10 Claims. (Cl. 250—1)

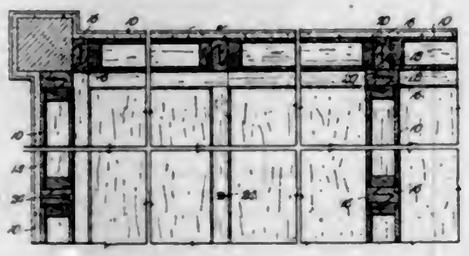
1. A radio pulse echo system including a source of oscillations, means connected to said source for decreasing the frequency of said oscillations, means responsive to said oscillations of decreased frequency for transmitting pulses of radio frequency energy, an electronic device including a mosaic for storing electronic charges, means including said source of oscillations for applying charges corresponding to the components of said radio frequency energy to said mosaic, a radio

pulse receiver, and means connecting said receiver to said electronic device for releasing said applied charges to derive therefrom currents corresponding to the original components.

2,407,001
SUGAR DERIVATIVES
William C. Griffin, Tamaqua, Pa., assignor to Atlas Powder Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 16, 1943, Serial No. 494,973
17 Claims. (Cl. 260—209)

1. A process for producing sugar derivatives which comprises heating a sugar containing from 5 to 6 carbon atoms with a compound of the class consisting of glycols with 2 to 3 carbon atoms and the dihydric inter-ethers of said glycols with not more than 6 carbon atoms, in substantially equimolecular proportions, in the presence of a strong mineral acid catalyst, said heating being conducted at a temperature sufficient to cause the reaction mixture to clear and not over about 140° C. and under conditions in which volatile reactants and volatile reaction products are retained in the reaction mixture, and continuing the heating until the reaction substantially reaches equilibrium.

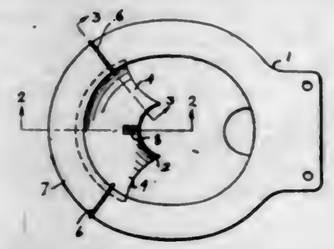
10. As a new composition the reaction product produced by the process of claim 1.



2,407,002
GLYCOL GLUCOSIDES AND DERIVATIVES THEREOF
William C. Griffin, Newport, Del., assignor to Atlas Powder Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application October 21, 1944, Serial No. 559,843
21 Claims. (Cl. 260—210)

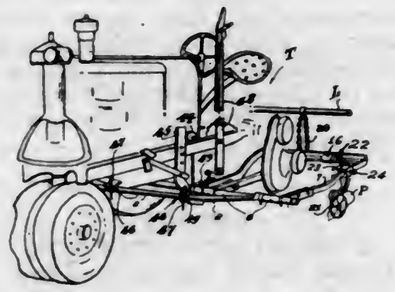
1. The process which comprises heating a sugar containing from 5 to 6 carbon atoms with a dihydric compound of the class consisting of glycols with 2 to 3 carbon atoms and the dihydric inter-ethers of said glycols with not more than 6 carbon atoms, in substantially equimolecular proportions, in the presence of a strong mineral acid catalyst, and under conditions in which volatile reactants and volatile reaction products are retained in the reaction mixture, until an equilibrium is substantially attained, and thereafter continuing the heating of the reaction mixture under conditions permitting the escape of volatile materials until the product contains not more than about 5% of residual sugar.

2,407,003
EMULSIFYING AGENTS PRODUCED FROM GLYCOL GLUCOSIDES AND PROCESS FOR THEIR PRODUCTION
William C. Griffin, Newport, Del., assignor to Atlas Powder Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application October 30, 1944, Serial No. 561,156
10 Claims. (Cl. 260—210)



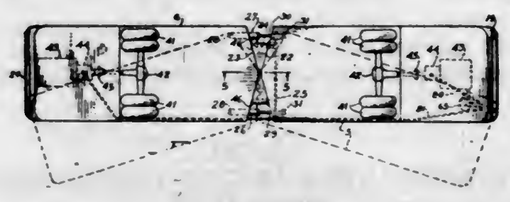
1. The process which comprises heating a sugar containing from 5 to 6 carbon atoms with a dihydric compound of the class consisting of glycols with 2 to 3 carbon atoms and the dihydric inter-ethers of said glycols with not more than 6 carbon atoms, in substantially equimolecular proportions, in the presence of a strong mineral acid catalyst, and under conditions in which volatile reactants and volatile reaction products are retained in the reaction mixture, until an equilibrium is substantially attained; continuing the heating of the reaction mixture under conditions permitting the escape of volatile materials until the product contains not more than about 5% reducing bodies; reacting the last said product with an oxyethylating compound in the ratio of 1 mol of said product to from 4 to 12 mols of the oxyethylating compound to form an oxyethylene ether; and reacting said oxyethylene ether with from 4 to 5 molecular equivalents of oleic acid.

2,407,004
SECTIONAL BUILDING
Emile S. Guignon, Jr., Kansas City, Mo.
Application November 30, 1942, Serial No. 467,303
2 Claims. (Cl. 20—4)



1. In a sectional building of the character described, a plurality of units arranged in edge-to-edge relation to form a wall or the like, an interlocking strip between the proximal edges of the units, said strip comprising a pair of mating members respectively secured to an adjoining pair of units, each of said members being L-shaped in cross section and having a plurality of inclined faces directed toward the unit to which it is secured for interlocking engagement with the faces of the other member to produce a strip having a combined thickness equal to the thickest portion of either member of said pair and equal to the distance between the proximal units, the width of the combined mating members being the same as the thickness of said units, each mating member having an exposed side and a side against a unit, said sides being planar and perpendicular to each other.

2,407,005
ATTACHMENT FOR TOILETS
Joe B. Haley, Houston, Tex.
Application July 27, 1944, Serial No. 546,768
1 Claim. (Cl. 4—231)

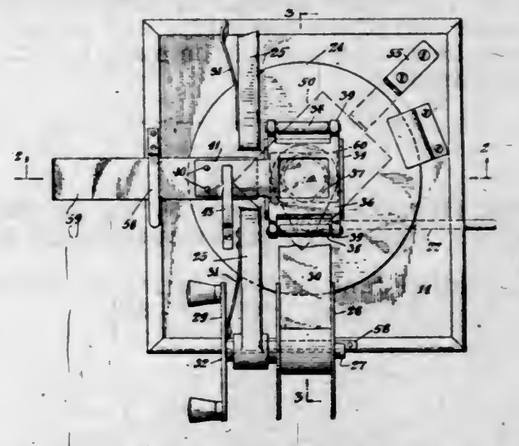


A commode attachment comprising, a baffle which is arcuate from end to end in plan and which is arcuate in cross section from end to end and whose center is elevated, the ends forming discharge chutes which decline each way from the elevated portion, the forward margin of the baffle being shaped to fit against the inside of the front wall of the commode from end to end and the baffle extending rearwardly beyond the commode rim but only part of the way across the commode bowl so as to leave the rear portion of the bowl unobstructed and means for attaching the baffle to the commode.

2,407,006
BUSTER GANG PLOW
Henry Clayton Harris, Pittsburg, Tex.
Application November 30, 1942, Serial No. 467,326
6 Claims. (Cl. 97—47)

1. In combination with a tractor having a pair of driving wheels, an implement attaching frame therefor, comprising a transverse member having a pair of spaced implement carrying frame members extending rearwardly therefrom and hingedly secured thereto, each adapted to enclose one of the drive wheels of the tractor, and hoisting means carried by the tractor for raising and temporarily supporting the transverse member to permit more permanent attachment of the implement frame to the tractor, other supporting means carried by the tractor for subsequently retaining the transverse member in the raised position, and a draw bar member hingedly secured to the transverse member and adapted to be secured beneath the front end of the tractor, and means for adjusting said other supporting means.

2,407,007
ARTICULATED BUS
Knut Henrichsen, Los Angeles, Calif., assignor to North American Aviation, Inc.
Application March 27, 1944, Serial No. 528,205
3 Claims. (Cl. 180—79.2)

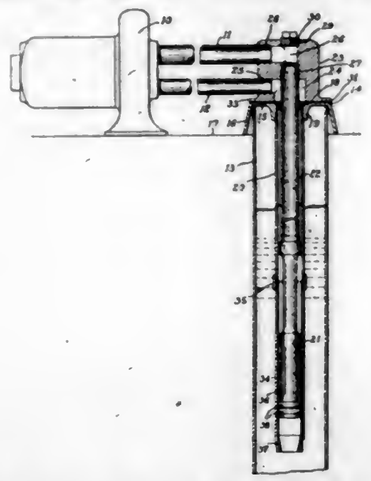


3. In an articulated vehicle wherein at least two sections are interconnected together by a single pivotal connection located substantially at the longitudinal centerline of the sections, and wherein each section is supported on a pair of wheels, steering means for the vehicle including actuating devices interconnecting each of the respective sections and effective to change the angularity of the sections relative to each other in accordance with the selected direction of travel, including cylinder and piston elements interconnecting such sections, the cylinder being operatively connected to one of said sections and the piston being operatively connected to the other of said sections, a fluid pressure supply source, and a valve mechanism including a moveable valve member and a housing, manual means for operating said valve member to supply fluid pressure to the pistons, and means acting in response to the relative movement of the sections for moving the valve housing to offset the movement of said valve member by the manually operated means.

2,407,008
RECOVERY OF VANADIUM
Arthur W. Hixson, Leonia, N. J., and Ralph Miller, New York, N. Y., assignors to The Chemical Foundation, Incorporated, a corporation of Delaware, as trustee
No Drawing. Application July 12, 1940, Serial No. 345,104
2 Claims. (Cl. 204—90)

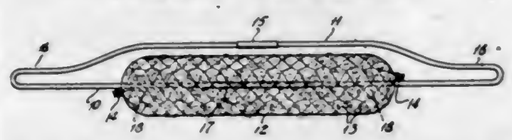
1. The process of recovering vanadium as vanadophosphate from vanadium-containing phosphoric acid solutions consisting in electrolyzing such solutions at about 25° C. and an acid concentration of about 65% phosphoric acid to form a vanadium-containing solid at the anode, and separating such solid from the acid solution.

2,407,009
MICROFILM VIEWER
John K. Holbrook, New York, N. Y., assignor to Micropat, Inc., New York, N. Y., a corporation of Delaware
Application August 16, 1943, Serial No. 498,804
3 Claims. (Cl. 88—24)



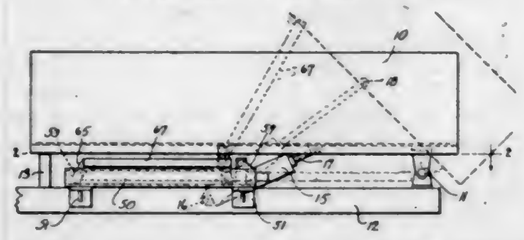
1. A micro-film viewer including in combination a lens mount, a plate having an elongated slot pivotally and laterally movable on said mount, a pressure plate alined with the lens axis, an apertured member above and resiliently urged towards said plate, means for leading the film towards and away from said pressure plate and between said pressure plate and member whereby tension on the film lifts the member and film from the pressure plate, said slotted plate having the pressure plate, member and film leading means secured to it whereby movement of the slotted plate similarly moves the film relatively to the lens.

2,407,010
ADAPTER HEAD FOR WELLS
Lester C. Hudson, Big Prairie, Ohio
Application August 8, 1945, Serial No. 609,514
10 Claims. (Cl. 103—5)



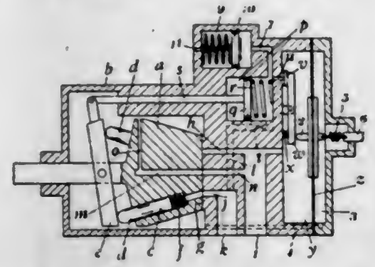
1. In combination with a pump having a suction pipe and a pressure pipe, and a well having an outer pipe within the well and an inner pipe within the outer pipe and a jet unit upon the lower end of the inner pipe forming a seal between the lower end of the inner and outer pipes and providing a flow passage between the inner and outer pipes to the jet unit, an adapter head comprising a base member located upon the ground at the top of the well, an internally screw threaded portion in said base member into which the upper end of the outer pipe is screwed, an upper member detachably connected to the base member, and having a passage therein communi-

cating with the upper end of the outer pipe, means connecting the pressure pipe of the pump to said passage, an internally screw threaded portion in said upper member into which the upper



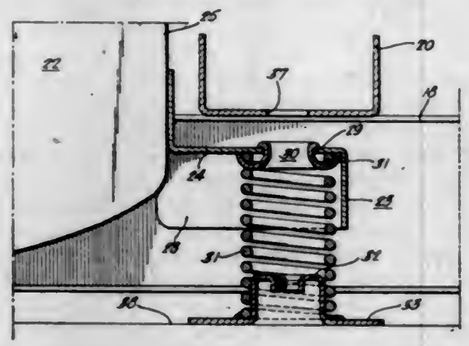
end of the inner pipe is screwed, there being a passage in the upper member communicating with the upper end of the inner pipe and means connecting the suction pipe of the pump to said last named passage.

2,407,011
HAIR ROLL
William Huppert, New York, N. Y., assignor to Delamere Company, Inc., a corporation of Delaware
Application June 30, 1945, Serial No. 602,580
2 Claims. (Cl. 132—55)



2. A hair roll comprising a length of wire formed in elongated loop-shape with the ends of the wire connected together, a roll of batting mounted on the middle portion of one arm of the wire loop, means for anchoring the roll intermediate its ends to said arm, and an envelope of netted material encasing the roll of batting, said wire loop having end portions that extend outwardly from the ends of the roll of batting and that are freely bendable at any point throughout their length.

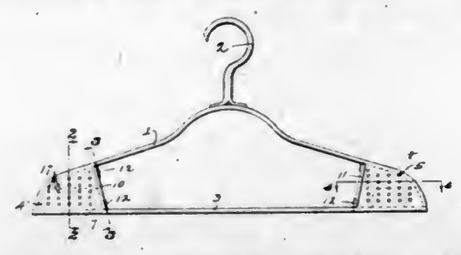
2,407,012
SAFETY DEVICE FOR DUMP TRUCKS
Archibald D. L. Hutchinson, Seattle, Wash.
Application March 1, 1944, Serial No. 524,551
9 Claims. (Cl. 298—22)



1. In combination, a supporting frame structure, a dump body mounted on the frame structure, powered mechanism for effecting the raising, lowering and holding of the body in a raised position, a manually movable member for controlling the operation of the powered mechanism and movable to different positions to effect the raising, lowering or holding of the body, and a safety supporting mechanism for the body, comprising a ratchet bar and pawl, means causing their relative movement upon raising and lowering the body, a device normally holding the pawl disengaged from the ratchet having operative connection with the said manually movable member for releasing the pawl incident to the positioning of the said manually movable member in position to effect the body lowering operation by the powered mechanism.

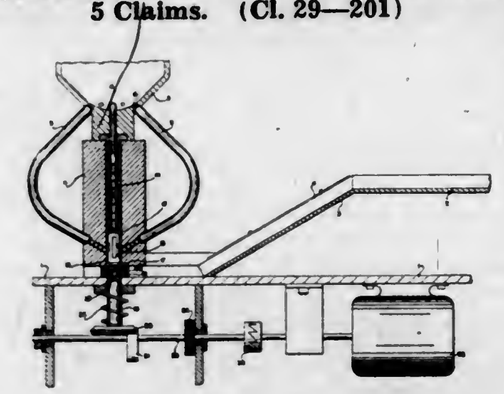
2,407,013
FUEL PUMP GOVERNOR
Richard Joseph Ifield, Ealing, London, England, assignor to Joseph Lucas Limited, Birmingham, England
Application November 15, 1944, Serial No. 563,587
In Great Britain October 15, 1942
2 Claims. (Cl. 121—38)

1. Governing means of the kind specified, having in combination a fluid pressure responsive member, a main chamber containing said member, a passage for admitting an unrestricted supply of pressure fluid to said main chamber at one side of said member, a restricted passage for admitting pressure fluid to said main chamber at the other side of said member, a pressure-fluid release valve situated at the side of said main chamber to which pressure fluid is admitted through said restricted passage, and a variable-volume chamber arranged in communication with the release valve side of said main chamber to permit movement of said member in response to a pressure change independently of said valve.



2,407,014
REFRIGERATOR MOTOR-COMPRESSOR MOUNTING
Welton Paul Jones, Rydal, Pa., assignor to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application November 6, 1943. Serial No. 509,283
10 Claims. (Cl. 248—21)

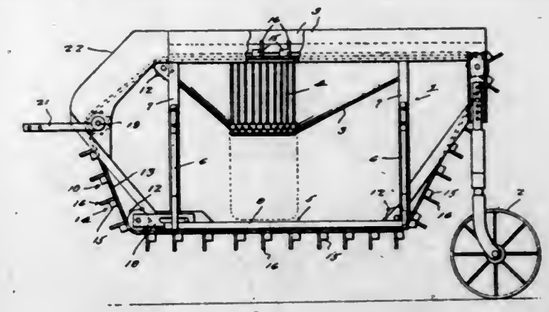
1. In a refrigerator, a frame structure, a motor-compressor unit adjacent said frame structure, and means interconnecting said frame structure



and unit to secure the latter to said frame structure, said means being operative when released to disconnect and vibrationally isolate the unit from said frame structure.

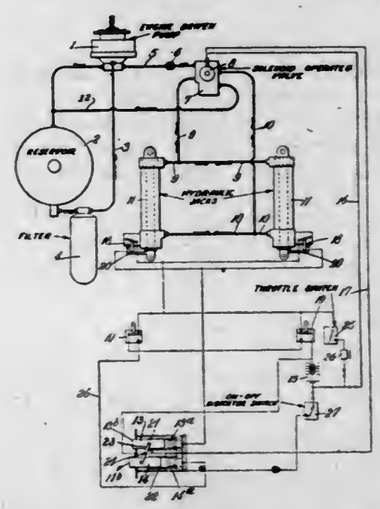
2,407,015
COAT HANGER
Harrison O. Joseph, Los Angeles, Calif.
Application August 4, 1944, Serial No. 548,071
4 Claims. (Cl. 223—86)

3. A garment hanger comprising: a supporting bar, pockets formed at the extremities of and extended below said bar in the direction of each other, and a second bar cross connecting the extremities of the supporting bar, said bars forming the upper and lower walls of said pockets and perforated side walls connecting said bars for defining the lateral margins of the pockets, and closures detachably mounted at adjacent ends of said pockets for affording access thereto.



2,407,016
BALL LOADING MACHINE
Frank B. Kalister, Cleveland, James O. Stafford, Painesville, and Frank J. Konyvka, Maple Heights, Ohio, assignors, by mesne assignments, to Jack & Heintz Precision Industries, Inc., Cleveland, Ohio, a corporation of Delaware
Application April 30, 1945, Serial No. 591,132
5 Claims. (Cl. 29—201)

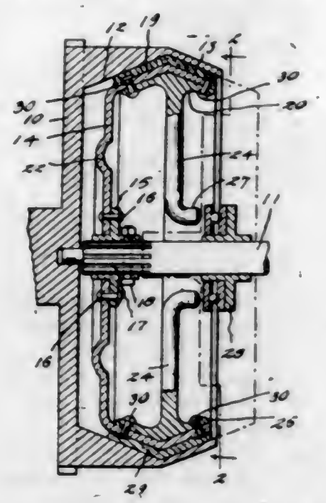
1. A ball loading machine comprising a ball loading chamber, a hopper feed for supplying balls to said chamber in radial directions thereabout, means for feeding ball cage and bearing race sub-assemblies one at a time to a station adjacent said loading chamber, and means for moving said cages out of said bearing races into said loading chamber with a longitudinal and rotary motion so as to bring said cages into proper registry with said ball feeding means.



2,407,017
POTATO SACKER
Herman L. Keller, Decherd, Tenn.
Application October 5, 1943, Serial No. 505,080
1 Claim. (Cl. 55—51)

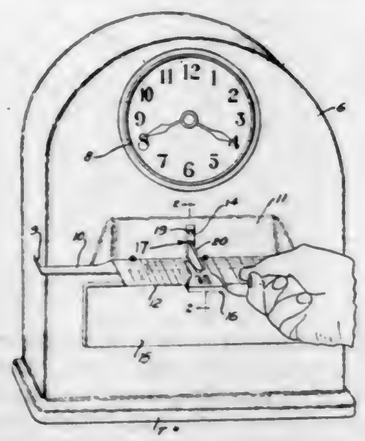
A unitary potato screening and sacking trailer attachment for a potato digging and elevating machine, comprising an elongated rigid frame, wheeled supporting means for the rear end of the frame, a hopper mounted in the upper portion of said frame and including an intermediate portion in the form of a laterally inclined screening discharge chute, an endless screening conveyor carried by the frame and guided for travel to provide a flight moving upwardly and rearwardly at the front of the frame, a flight moving rearwardly and horizontally over the hopper, a flight moving downwardly at the rear of the frame, and a flight moving forwardly and horizontally at the bottom of the frame in spaced

relation to and below the hopper, means to hitch the front end of the frame to the rear of the potato digging and elevating machine to be drawn and supported by the latter, means at the front of the frame to facilitate driving the conveyor, running boards along the sides of the frame near the bottom of the latter and at opposite sides of the last named flight to accommodate sacks and workmen, and means to support a sack in position on one of the running boards to receive potatoes from the discharge chute.



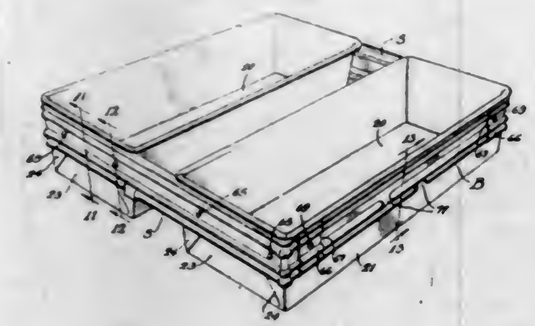
2,407,018
FLUID-ACTUATED CONTROL SYSTEM
Donald MacKenzie, Cheltenham, England, assignor to Dowty Equipment Limited, Cheltenham, England
Application June 30, 1941, Serial No. 400,539
In Great Britain October 15, 1940
9 Claims. (Cl. 177—311)

1. Control means for an operating system incorporating two cooperating jacks and jack operating means, comprising means operable to control simultaneous movement of both jacks, terminal position indicator means, means operable only by movement of both jacks into a terminal position to energize said terminal position indicator



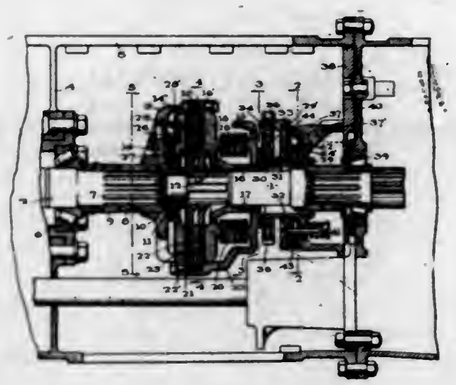
means, intermediate position indicator means, means operable during such time as either jack is in a position intermediate its fully extended position and its fully retracted position to operate said intermediate position indicator means, and means operable by movement of both jacks into terminal positions to deenergize said intermediate position indicator means.

2,407,019
CLUTCH
J. Edward Kostur, Amarillo, Tex.
Application June 17, 1943, Serial No. 491,201
4 Claims. (Cl. 192—75)



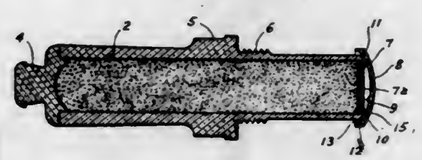
1. A clutch comprising inner and outer coefficient members, the inner member consisting of a flexible plate provided with a peripheral portion adapted to engage the inner side of the outer member, said peripheral portion being formed with transverse slots dividing the same into segments, said slots extending radially into the plate whereby to weaken the plate and permit flexibility thereof, and means operative against the said inner member adapted to flex the same in order to effect a disengagement of the peripheral portion from the outer member.

2,407,020
TIME RECORDER ATTACHMENT AND CARD GUIDE
William A. Kraus, Richmond, Va.
Application June 6, 1945, Serial No. 597,842
6 Claims. (Cl. 234—43)



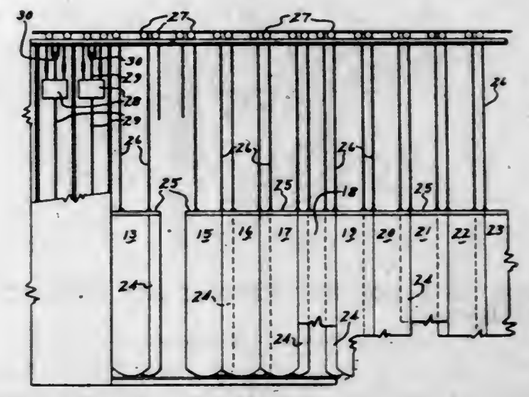
1. In combination, a time recording device having a card-receiving slot and an indicator in fixed relation to the recording mechanism, a projection on said indicator, and a guide adapted for being detachably mounted on a card for slidably engaging said projection to position the card endwise when the card is inserted sidewise into said slot.

2,407,021
MULTIPLE BAKING PAN
Adrien L. Langel, Chicago, Ill., assignor to Chicago Metallic Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application December 4, 1943, Serial No. 512,877
1 Claim. (Cl. 220—23.2)



A baking pan set consisting of a plurality of aligned pans having at the wall edges thereof wires forming beads around which certain of the wall edges are curled and then depended in the form of skirts lying adjacent the exterior of the pan walls, the pan walls including an exteriorly disposed wing to the inside of each skirt, a strap extending lengthwise of the pan set along the outside of the skirts, and fastening devices piercing the strap, skirts and wings and interconnecting said strap, skirts and wings in a straight line, said strap being formed longitudinally with a narrow central web in flat engagement with the pan walls and a pair of outwardly extended ribs below the web in engagement with the pan walls in two separated substantially parallel lines of contact, and a second pair of outwardly extended ribs above the web also in engagement with the pan walls in two other separated substantially parallel lines of contact, the central web of narrow width affording the only surface of substantial area in engagement with the pan walls and the connections with the several pans being confined to this same area, the strap being turned substantially at right angles near its two ends to provide ears for partially overlapping the outer sides of the end pans, and a pair of bands extended along opposite sides of the end pans, each formed longitudinally with a narrow central web in flat engagement with the pan walls and a pair of outwardly extended ribs below the web in engagement with the pan walls in two separated substantially parallel lines of contact and a second pair of outwardly extended ribs above the web also in engagement with the pan walls in two other separated substantially parallel lines of contact, said bands being outset in their end regions for overlap with the strap ears and secured to the same in meshing engagement therewith, the narrow web and line contacts of the strap and bands providing minimum contact between the pans and the strap and bands and preventing temperature lag in the pans when the latter are subjected to heat.

2,407,022
MULTIPLE DISK ENERGIZING CLUTCH
Homer T. Lambert, St. Joseph, Mich., assignor to Lambert Brake Corporation, St. Joseph, Mich., a corporation of Michigan
Application October 30, 1944, Serial No. 561,128
8 Claims. (Cl. 192—54)



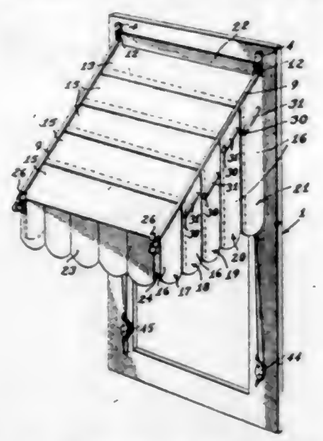
1. Clutch mechanism of the class described comprising a driving shaft, a driven member, a rotary disk carried by said driving shaft, a primary disk contiguous to said rotary disk, a relatively stationary secondary plate journalled on said driving shaft at one side of said disks, a power plate secured to the driven member at the opposite side of said disks and connected to the secondary plate, and spring-actuated means coacting with said secondary plate and fixedly connected with the primary disk for effecting frictional engagement of the primary disk with the rotary disk to operate the driven member from said driving shaft through the power plate.

2,407,023
ANTICORROSION PLUG
Harry A. Lockwood, Meriden, Conn., assignor to Chandler-Evans Corporation, a corporation of Delaware
Application June 25, 1942, Serial No. 448,443
4 Claims. (Cl. 215—37)

1. A sealable container comprising a casing member of plastic material having an aperture therein and a sharp-edged peripheral surface surrounding said aperture, and a closure member of said material having a greater diameter than said peripheral surface and a concave surface disposed toward said aperture, said surfaces permitting a limited angularity of the axes of said members while a continuous, substantially circular line contact is maintained therebetween, said members being adapted when placed in contact and upon the application of a solvent for said material to the contacting surfaces thereof to dissolve slightly in said solvent so that upon evaporation of said solvent, a narrow, easily frangible annular sealing connection is formed between said casing and closure members.

2,407,024
THEATER CURTAIN
Bernard H. Lohmuller and Genevieve W. Lohmuller, North Hollywood, Calif.
Application August 17, 1944, Serial No. 549,886
23 Claims. (Cl. 160—126)

2. In a composite theatre curtain, a plurality of curtain panels, means to raise and lower each panel independently of the others, and means to limit the raising and lowering, respectively, of each of said panels.



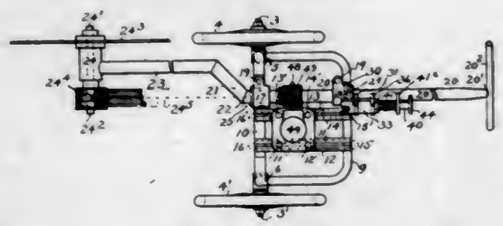
2,407,025
WALL SURFACE SHEET OR TILE
Daniel C. Luse, Chicago, Ill.
No Drawing. Application September 28, 1945, Serial No. 619,249
3 Claims. (Cl. 18—47.5)

1. The method of producing a sheet or tile for use as a wall surface, said sheet or tile being rigid, porous, dry and compressed, said method comprising combining approximately 9 parts by weight of finely divided magnesite, approximately 1¼ parts by weight of finely divided clay, approximately 1¼ parts by weight of finely divided silica, approximately 1 part by weight of finely divided chalk, and approximately 24 parts by weight of 17° to 21° Baumé magnesium chloride water solution, mixing the resultant mass for providing a mineral binder, introducing into the mineral binder approximately 12 parts by weight of wood excelsior, mixing the resultant mass, molding the resultant mass, subjecting the molded mass to the action of pressure of approximately 300 to 500 pounds per square inch to increase the density of the mass, allowing the mass to remain without handling for about 5 to 6 hours so that the chemical reaction between the magnesite and the magnesium chloride will produce sufficient heat to harden the mass so that it may be handled without breakage, and then drying the mass.

2,407,026
AWNING
Herman Mashmeyer, Jacksonville, Fla.
Application June 13, 1945, Serial No. 599,243
7 Claims. (Cl. 160—62)

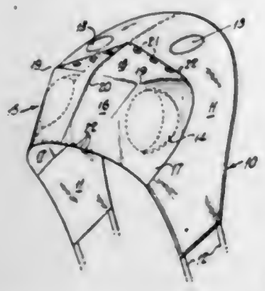
1. An awning comprising a plurality of relatively flat, slidably connected sections, a frame member on which said sections are supported, a strip overlying the sections, and means for moving said sections relative to each other and

along said frame member and beneath said strip, from a position wherein the sections are ex-



tended, to a position wherein the sections are superimposed.

2,407,027
MANUFACTURE OF CREAM SUBSTITUTES
Reginald Dean Mason, Richmond, and Aage Christian Justesen, Heston, England
No Drawing. Application January 5, 1943, Serial No. 471,387. In Great Britain November 18, 1942
10 Claims. (Cl. 99—63)



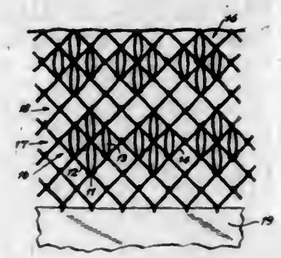
1. The method of making a whippable cream substitute, comprising the steps of preparing an aqueous serum containing edible vegetable flour which is a member selected from the group consisting of glycinae and graminosae, and further containing as stabilizing agent an added ionizable salt of a tribasic acid, preparing a fat base which is a member selected from the group consisting of edible vegetable fats and oils and edible animal fats and oils, injecting said fat base in fine jets into said serum under a pressure of the order of 200 kilograms per square centimeter, and pasteurizing the emulsion thereby produced.

2,407,028
PORTABLE TIMBER CUTTING SAW APPARATUS
Edmond Carlton McLean, Palatka, Fla.
Application September 19, 1945, Serial No. 617,350
2 Claims. (Cl. 143—43)

2. In a portable timber cutting saw apparatus having a driven circular saw assembly unit and a motor mounted on the frame to operate the saw of said unit, a saw supporting and positioning means comprising two approximately parallel members spaced a considerable distance apart, an angularly disposed member integrally connecting said parallel members beyond the forward part of said machine frame, one of said parallel members comprising an elongated shaft journaled fore and aft on said frame, and the other parallel member being laterally off-set from said elongated member and supporting the driven circular saw assembly unit at its forward end, comprising a saw, saw arbor, and means to drive said saw by said motor, the center of the driven means on the arbor being disposed approximately in line with the axis of the first parallel member, means to turn said off-set parallel member and thereby oscillate said saw assembly to different angular positions, and means to lock said off-set parallel member and said saw assembly against oscillation.

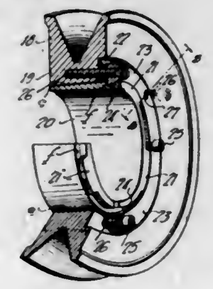
2,407,029
HORSE EYESHIELD
Kent Miller, Aiken, S. C.
Application November 5, 1943, Serial No. 509,100
2 Claims. (Cl. 54—80)

1. A horse eye shield comprising a fabric hood adapted for attachment to a horse's head in the region of the eyes, and a sheet of transparent plastic material secured along its upper and lower edges to the hood, said plastic sheet being shaped to form a relatively flat front portion covering both eyes and spaced outwardly therefrom, a top portion and rearwardly curved lateral wings, said wings being free from attachment to the hood to prevent clouding of the shield.



2,407,030
RAZOR
William L. Mills, Waco, Tex.
Application October 6, 1944, Serial No. 557,440
4 Claims. (Cl. 30—62)

3. A razor comprising a cap plate, a guard plate having an opening, a handle, said cap plate being provided with a threaded member disposed through the guard plate into the handle, said guard plate being provided with an inwardly curved guard bar and a neck member connected to the intermediate portion of the bar to the guard plate.

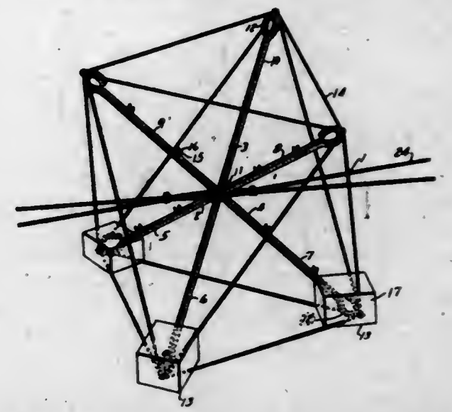


2,407,031
KNOTTED NEEDLEWORK WITH TIED LOOPS
Rosaria Forlano Morcaldi D', East Boston, Mass.
Application May 17, 1945, Serial No. 594,344
5 Claims. (Cl. 87—11)

1. An article of manufacture from a single, continuous strand consisting of a foundation needlework of tightly knotted meshes forming open squares, and loops within certain of the

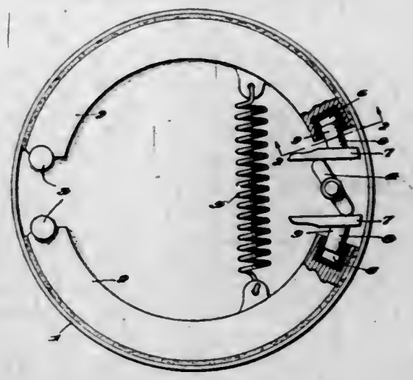
squares secured between opposite knots in such squares.

2,407,032
SHEAVE MOUNTING
Bernard L. Myers, Dallas, Tex.
Application August 20, 1943, Serial No. 499,342
5 Claims. (Cl. 287—52.06)



3. A sheave and mounting including a body having an inseparable hub provided with a conical bore, a single piece, split sleeve having a substantially thin wall and a tapered exterior disposed in said bore, circumferentially spaced segments on one end of said sleeve, a flange ring connected to an extended end of said sleeve, a series of spaced lugs on said flange ring for interlocking engagement with the segments of said sleeve and means for moving said flange ring in relation to said hub to effect corresponding movement and resultant contraction and expansion of said sleeve.

2,407,033
CATALYTIC ALKYLATION PROCESS
Arlie A. O'Kelly, Woodbury, and Julius Plucker, III, Pitman, N. J., and Robert H. Work, Philadelphia, Pa., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application December 10, 1943, Serial No. 513,720
16 Claims. (Cl. 260—683.4)

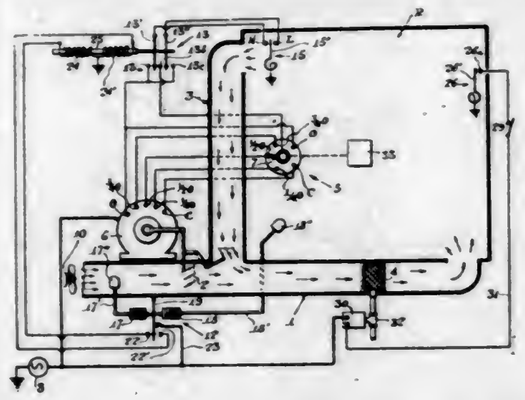


9. The process of alkylating a paraffinic hydrocarbon with an olefinic hydrocarbon, which comprises contacting said paraffinic hydrocarbon with said olefinic hydrocarbon, in gaseous phase and in a reaction zone under alkylating conditions including temperatures varying between about 590° F. and about 850° F., and pressures upwards of 500 pounds per square inch, in the presence of an organic cyclic oxygen compound wherein oxygen is part of the ring, which forms with said paraffinic hydrocarbon and said olefinic hydrocarbon, a single homogeneous gaseous phase under said alkylating conditions, and maintaining said paraffinic hydrocarbon in excess over said olefinic hydrocarbon in said reaction zone so that alkylation is the principal reaction.

2,407,034
JETTY WITH STABILIZER
George W. Rehfeld, Manhattan, Kans.
Application September 4, 1943, Serial No. 501,244
5 Claims. (Cl. 61—3)

1. A jetty including a plurality of rod-like members arranged in crossed relation and having curved terminals, bearing means for supporting the jetty, and means connecting the bearing means with the curved terminals of the rod-like members.

2,407,035
BRAKE SHOE
William T. Rossell, New York, N. Y., assignor to Transit Research Corporation, New York, N. Y., a corporation of New York
Application January 22, 1945, Serial No. 573,832
4 Claims. (Cl. 188—1)



1. The combination of a vehicle brake comprising a fixed and a relatively movable friction element, brake applying means operable to apply said movable element to said fixed element, means for retracting said movable element from said fixed element, and thermally responsive means interposed between said brake applying means and said movable element operative upon the attainment of a predetermined temperature of said movable element to cause the operation of said retracting means and also to prevent reapplication of the brake by said applying means.

2,407,036
AIR-CONDITIONING CONTROL
Earl R. Snavely, Roselle, N. J., assignor to Thomas A. Edison, Incorporated, West Orange, N. J., a corporation of New Jersey
Application August 21, 1942, Serial No. 455,564
22 Claims. (Cl. 257—3)

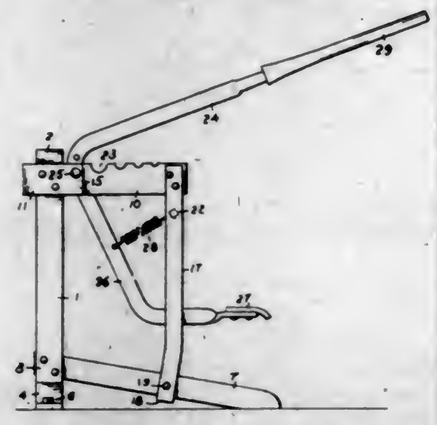
22. The method of conditioning the air within an enclosed space which comprises adjustably admitting outside air at predetermined minimum

rates dependent upon the relative occupancy of the space, and controlling the admission of further outside air at varying rates depending on the

inside temperature and on whether the outside temperature is above or below the inside temperature.

2,407,037
LUBRICANT AND PROCESS OF LUBRICATING SURFACES THEREWITH
Frank J. Sowa, Cranford, N. J.
No Drawing. Application October 21, 1939, Serial No. 300,555
6 Claims. (Cl. 252—53)

1. The method of lubricating relatively moving metallic surfaces which comprises maintaining between the bearing surfaces a lubricant film comprising a hydrolysis product of an organic silicane.



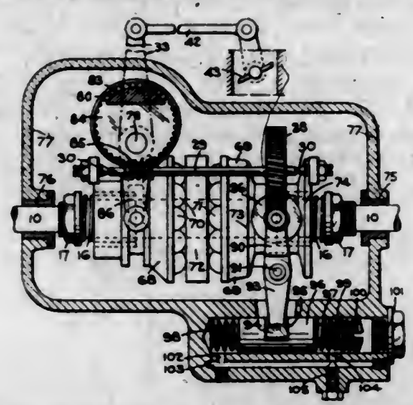
2,407,038
ADHESIVE
Paul Stamberger, Dover, Del.
No Drawing. Application January 11, 1943, Serial No. 472,021
18 Claims. (Cl. 260—23)

1. A composition of matter comprising polymerized 2-chloro-butadiene 1,3, and from about 5% to about 70% (based on the content of said butadiene material) of a preformed, vulcanized, thermoplastic, sticky, oil-resin mix having from about 5% to about 20% of sulfur, a rosin, and a long chain unsaturated fatty oil, the rosin component comprising from about 10% to about 60% of the mixture of oil and resin and the fatty oil component constituting the balance thereof, said composition being characterized by a high degree of surface tack and adhesive strength.

2,407,039
MANUFACTURE OF VINYL CHLORIDE
Herbert Muggleton Stanley, Tadworth, England, assignor to The Distillers Company Limited, Edinburgh, Scotland, a British company
No Drawing. Application September 23, 1942, Serial No. 459,441. In Great Britain July 1, 1941
5 Claims. (Cl. 260—656)

1. A process for the manufacture of vinyl chloride which comprises passing acetylene and hydrogen chloride into a suspension of active carbon impregnated with mercuric chloride in an inert diluent, selected from the group consisting of hydrocarbons and chlorinated hydrocarbons which are liquid between 120° and 150° C. and which do not dissolve mercuric chloride, which inert diluent is maintained at a temperature between 120° and 150° C.

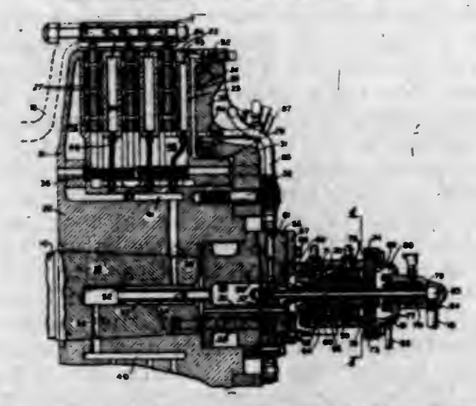
2,407,040
CABLE STRAIGHTENER
Angelo Taramaschi, San Carlos, Calif.
Application July 18, 1944, Serial No. 545,478
1 Claim. (Cl. 153—39)



A cable straightener comprising a supporting tripod having an upright standard; a pair of stationary jaws composed of a length of rigid material bent back upon itself, offset laterally and having converging end portions, with said standard fixed between said bent back portions; a U shaped leg looped around a foot of said tripod and attached to the opposite ends of said jaws respectively; a lever pivoted between said jaws adjacent said offset portions; and a lower extension of said lever, guided in said leg and having a foot treadle thereon.

2,407,041
INSECTICIDE
Benjamin H. Thurman, Charlotte, N. C., assignor, by mesne assignments, to Benjamin Clayton, Houston, Tex., doing business as Refining, Unincorporated
No Drawing. Application October 10, 1941, Serial No. 414,519
6 Claims. (Cl. 167—15)

1. An insecticide of the stomach poison type consisting essentially of an aqueous dispersion of a crude vegetable oil phosphatide and a stomach poison comprising a finely divided slightly water soluble compound selected from the group consisting of arsenates and arsenites of polyvalent metals, the proportions of phosphatide and polyvalent metal compound ranging between approximately 1 part phosphatide and 2 to 8 parts polyvalent metal compound.



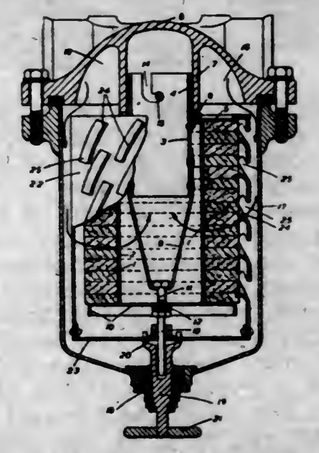
2,407,042
GOVERNING GEAR FOR ENGINES AND OTHER MACHINES
Frank John Tippen, Coventry, England, assignor to Leonard Pelham Lee, near Stratford-on-Avon, England
Application November 7, 1942, Serial No. 464,899
In Great Britain December 23, 1941
13 Claims. (Cl. 264—3)

3. Governing gear for engines or machines comprising a pair of governor sleeves, driving means for said sleeves actuated by the engine or machine, centrifugal means for displacing said sleeves endwise during increases of speed of the engine or machine, loading means acting on said sleeves in opposition to said displacements, a regulator for the engine or machine, actuating means connecting one of said governor sleeves to the regulator, correcting means for said actuating means, and a coupling operating between the other governor sleeve and said correcting means, said coupling being engaged when said one governor sleeve is displaced to either side of the normal position, said coupling operating to drive the correcting means in one direction when said

one governor sleeve is moving endwise in one direction, and to drive the correcting means in the opposite direction when said one governor sleeve is moving endwise in the opposite direction, said coupling including a resilient member.

2,407,043
AIR OPERATED CLUTCH
Guglielmo R. Tremolada, Los Angeles, Calif., assignor to Emsco Derrick & Equipment Company, Los Angeles, Calif., a corporation of California
Application July 5, 1944, Serial No. 543,546
11 Claims. (Cl. 192—85)

1. In a power device of the character described, the combination of: a shaft member; an outer member in turning relation to said shaft member and having an outer cylindric wall projecting therefrom toward the end of said shaft member; an inner cylindric wall member fixed on said shaft member within said outer wall member; an inner flange extending from the inner end of said inner wall member toward said outer wall member; an assembly of first and second annular friction plates disposed around said inner wall member in alternate order, said first plates being connected to said inner wall member and said second plates being connected to said outer wall member but having axial movement relatively thereto, the outer of said plates having an inner cylindric wall with an outwardly presented cylindric surface and an outer cylindric wall with an inwardly presented cylindric surface so as to form an annular recess in its outer face; an outer flange fixed on said shaft member and having an annular piston in said annular recess, said piston having an outer cylindric wall with an inwardly presented cylindric surface confronting said outwardly presented surface of said outer plate and an outwardly presented cylindric surface confronting said inwardly presented cylindric surface of said plate, to form in said recess an annular pressure chamber; and means to apply fluid pressure to said chamber to force said assembly of friction plates toward said inner flange.

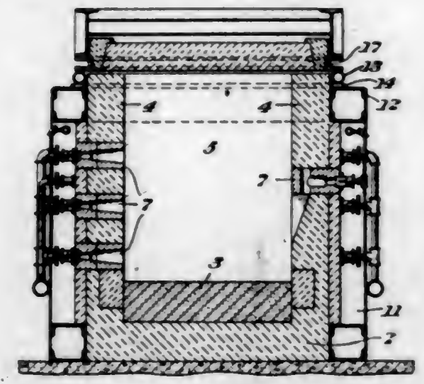


2,407,044
MANUFACTURE OF PHENOLS
Daniel Tyrer, Stockton-on-Tees, England
No Drawing. Application April 6, 1943, Serial No. 482,065. In Great Britain March 31, 1942
5 Claims. (Cl. 260—628)

1. A process for the manufacture of phenols which comprises, preparing a solid mixture of a salt of the mono-sulphonic acid corresponding to the phenol desired and an inorganic base which is infusible at temperatures up to 420° C., and is capable of forming with sulphur dioxide a sulphite stable at such temperatures, and producing the phenol by subjecting the solid mixture to a temperature ranging from 370–420° C. while passing therethrough steam free from acidic gases.

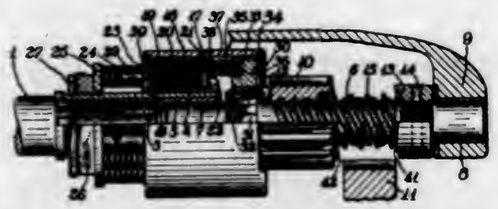
2,407,045
MANUFACTURE OF PHENOLS OR SALTS THEREOF
Daniel Tyrer, Stockton-on-Tees, England
No Drawing. Application July 8, 1943, Serial No. 493,924. In Great Britain August 13, 1942
6 Claims. (Cl. 260—628)

1. A process for the manufacture of phenols or salts thereof which comprises, preparing an intimate solid mixture of an alkali metal salt of the sulphonic acid corresponding to the phenol desired, a caustic alkali in substantially the theoretical quantity and an additional particulate solid substance selected from the group consisting of the oxides and hydroxides of calcium, barium, strontium and magnesium, in such a proportion, comprising at least 2 per cent to about 30 per cent of the weight of the sulphonic acid salt, that during the subsequent heating operation the reaction mixture does not froth or swell and remains in a substantially solid condition, and then heating the said solid mixture at a temperature ranging from 350 to 400° C. to cause the sulphonic acid salt and caustic alkali to undergo reaction.



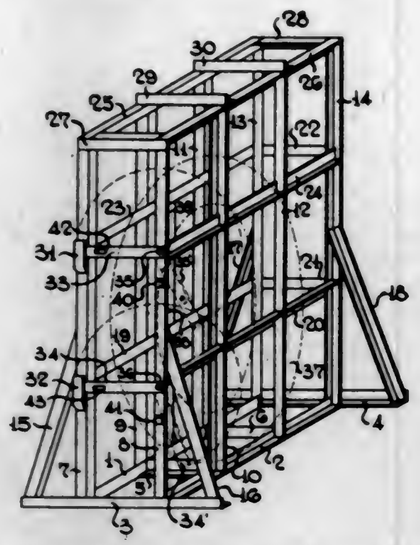
2,407,046
READILY CLEANABLE FILTER
Cecil Gordon Vokes, London, England
Application March 15, 1944, Serial No. 526,571
In Great Britain January 27, 1943
6 Claims. (Cl. 210—167)

1. A filter comprising a casing, a hollow cylindrical filter element in said casing, a cage



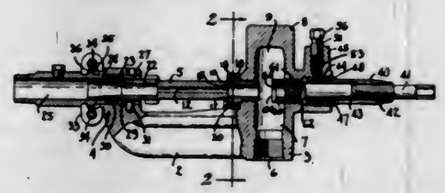
formed of resilient material in said casing, surrounding said element in spaced relation thereto, and having scraper blades struck inwardly from its surface to form scraper edges resiliently engaging the outer surface of said element, each edge forming a section of a helix about the common axis of said element and cage, and means operable externally of said casing to effect relative rotation of said cage and element.

2,407,047
FURNACE CLOSURE
Carl H. West, St. Clairsville, Ohio, assignor to Blaw-Knox Company, Pittsburgh, Pa., a corporation of New Jersey
Application October 20, 1944, Serial No. 559,501
5 Claims. (Cl. 266—31)



1. A closure for a furnace having an opening and a cover for the opening comprising a pipe extending about the opening and disposed radially outside a portion of the furnace defining the opening and engaging the furnace and positioned to be engaged by the cover to close the opening when the cover is in place and means for cooling the pipe from the interior thereof.

2,407,048
ENGINE STARTER DRIVE
Maurice P. Whitney, James E. Buxton, and Donald L. Miller, Chemung County, N. Y., assignors to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application October 27, 1944, Serial No. 560,604
6 Claims. (Cl. 74—7)

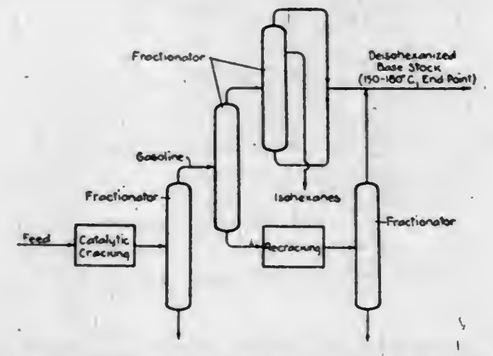


1. In an engine starter drive a power shaft, an externally splined sleeve fixed thereon, a screw shaft slidably journalled at one end in the sleeve, a pinion threaded on the screw shaft for longitudinal movement into and out of mesh with a gear of an engine to be started, a stop nut fixed on the screw shaft defining the operative position of the pinion, a coupling member fixed on the screw shaft and means for frictionally connecting the coupling member to rotate with the sleeve including a barrel member splined on the coupling member, a plurality of clutch plates splined alternately to the sleeve and barrel, said sleeve having a fixed abutment at one end, a pair of nuts adjustably threaded on the opposite end of the sleeve a deformable washer between the nuts slidably but non-rotatably mounted on the sleeve, and spring means between said nuts and clutch plates for compressing the clutch plates against said abutment.

2,407,049
TIRE INFLATION GUARD
Nathan Winarsky and Benjamin Winarsky, Newark, N. J., assignors to Belmont Body Builders, Newark, N. J., a partnership
Application August 9, 1945, Serial No. 609,894
5 Claims. (Cl. 109—49.5)

1. A tire inflation guard for preventing accidents during truck tire inflation, comprising a base for positioning a truck wheel holding a tire, at least four rigid heavy metal upright supports circumscribing the space occupied by the tire and fixed solidly to the base, a top section fastened to the supports, rigid heavy metal cross members fastened securely between the supports to prevent sudden escape of the tire rim, at least one movable member serving as a closure between the supports to allow entry of the tire into the guard, protruding members extending from the base at right angles to the plane of the main axis of the tire-circumscribing space and of such dimensions as to prevent capsizing of the guard, and means for locking said member in closed position after the wheel is placed in the guard.

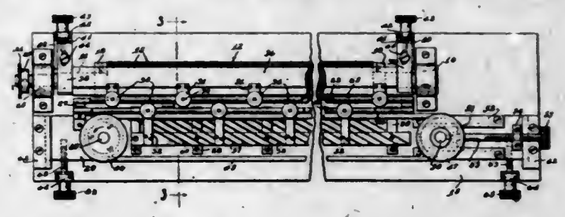
2,407,050
FLOW WING
Herbert Allen and Ruric N. Bean, Houston, Tex., assignors to Cameron Iron Works, Houston, Tex.
Application April 11, 1942, Serial No. 438,529
7 Claims. (Cl. 138—44)



1. In a flow wing having a body, a flow bean retainer carried thereby, and means to adjustably support and position said retainer in the body including a floating gland and packing, said gland being threaded to said retainer and slidably but non-rotatably mounted in said body and abutting said packing.

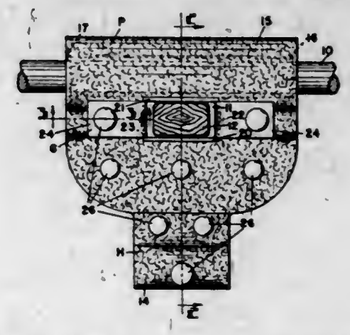
2,407,051
STABILIZATION OF RESINS RESULTING FROM POLYMERIZATION OF AN ISOPROPENYL KETONE
David E. Adelson, Berkeley, and Hans Dannenberg, San Francisco, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application September 30, 1940, Serial No. 359,160
14 Claims. (Cl. 260—63)

1. A substantially stabilized resin composition containing a stabilizing amount of a mononuclear aryl hydroxy benzoate and a resin resulting from polymerization of methyl isopropenyl ketone.



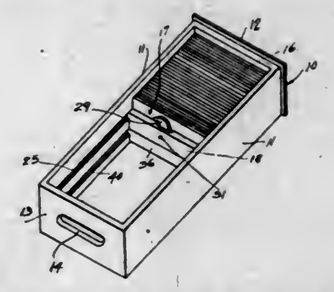
2,407,052
GASOLINE AND PROCESS FOR THE PRODUCTION THEREOF
William A. Bailey, Jr., and Bernard S. Greensfelder, Oakland, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
Application January 30, 1943, Serial No. 474,158
7 Claims. (Cl. 196—52)

1. A process for the production of base stocks suitable for the production of gasolines having high supercharged ratings which comprises catalytically cracking a hydrocarbon oil boiling predominantly above the gasoline boiling range with a clay-type cracking catalyst, separating the product by fractional distillation into gasoline and a higher boiling fraction, separating said gasoline by fractional distillation into a higher boiling gasoline fraction and a lower boiling gasoline base stock containing substantial amounts of 2-methyl pentane and 3-methyl pentane and having a final boiling point within the range of 150° C. and 180° C., subjecting said higher boiling gasoline fraction to a recracking treatment with a clay-type cracking catalyst, separating the recracked product by fractional distillation into a gasoline base stock having a final boiling point within the range of 150° C. and 180° C. and a higher boiling gasoline fraction, substantially completely removing 2-methyl pentane and 3-methyl pentane from said first gasoline base stock by separating by fractional distillation a fraction consisting predominantly of 2-methyl pentane and 3-methyl pentane, and combining the product with said second gasoline base stock.



2,407,053
FILING MACHINE
John Belada, Glassboro, N. J., assignor to Owens-Illinois Glass Company, a corporation of Ohio
Application May 27, 1944, Serial No. 537,744
7 Claims. (Cl. 29—76)

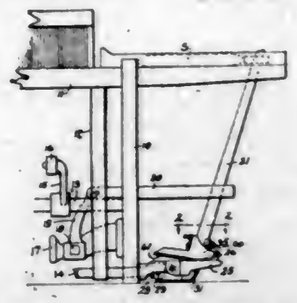
1. The combination of a cylindrical roll having a knurled surface, a support in which the roll is mounted for rotation, a driving gear connected to the roll, an endless belt mounted at one side of the roll parallel therewith and spaced therefrom, a drive shaft connected to drive said belt, means for supporting a circular workpiece between the belt and said roll with the belt and roll bearing against the workpiece at diametrically opposite points, leaf springs positioned at



intervals along the belt, and a stationary support to which one end of each spring is fixed, with the springs extending diagonally forward from their support and their free ends bearing against the belt in position to hold the belt against the workpiece and the workpiece against the roll as the workpiece is rolled along said surface.

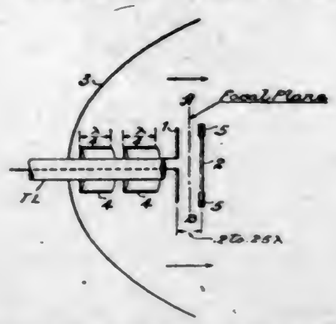
2,407,054
PICKER FOR LOOMS
William A. Blanchard, Millbury, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts
Application March 1, 1946, Serial No. 651,237
8 Claims. (Cl. 139—160)

1. A loom picker made of material comprising essentially an intermingled mixture of textile and metallic fibers.



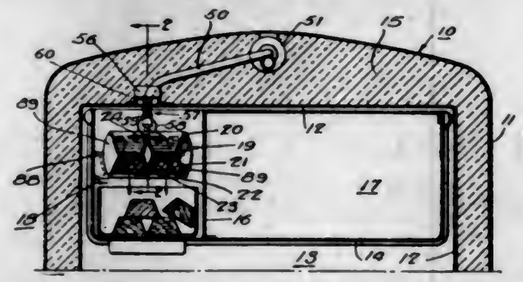
2,407,055
FILE DRAWER FOLLOWER
Burke C. Bradner, Chicago, Ill., assignor, by mesne assignments, to Clarence E. Threedy, Chicago, Ill., as trustee
Application November 6, 1943, Serial No. 509,175
5 Claims. (Cl. 129—29)

1. In combination, a drawer comprising side walls having parallel grooves formed in each of the opposed faces of such walls, a follower mounted in said drawer and comprising sections adapted to have vertical movement in opposite directions with respect to each other and includ-



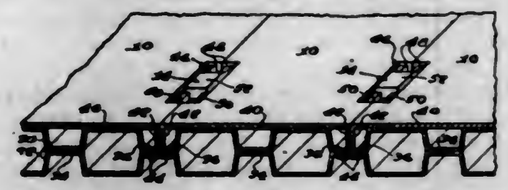
ing lateral projections engaging said grooves and adapted to bear on adjacent walls of said grooves when moved in said opposite vertical directions, and means for moving said sections in said opposite vertical directions.

2,407,056
PICKING SHOE
Benjamin W. Brouwer, Auburn, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts
Application June 15, 1945, Serial No. 599,671
5 Claims. (Cl. 139—150)



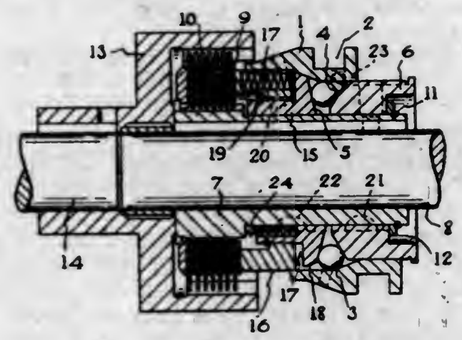
1. In picking mechanism for a loom operating with a picker stick and having a rocker iron which oscillates with the loom lay and is provided with a flat upper surface, a shoe secured to the picker stick and resting on said flat surface, said shoe having an under surface part of which is convex and part of which is straight, and resilient means holding the shoe and picker stick normally in such position that the convex surface of the shoe engages the flat surface of the rocker iron and the straight part of the under surface of the shoe is above said flat surface, said flat upper surface, convex and straight surfaces being so related that the picker stick during the first part of a working stroke thereof causes the convex surface to rock along said flat surface and during a later part of the working stroke causes the straight surface of said shoe to engage said flat surface prior to the end of the working stroke of the stick, the end of said straight surface remote from the convex surface forming a temporary pivot with said flat surface near the end of the working stroke of the picker stick to cause upward movement of the shoe relatively to the rocker iron against the action of said resilient means.

2,407,057
ANTENNA SYSTEM
Philip S. Carter, Port Jefferson, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application January 23, 1942, Serial No. 427,909
2 Claims. (Cl. 250—11)



1. A directive antenna system comprising a parabolic reflector whose dimensions are large compared to the length of the operating wave, to thereby produce a relatively sharp focal point, a primary radiator located inside said focal point and having its center on the axis of said reflector, and another radiator located outside said focal point and also having its center on the axis of said reflector, said radiators being parallel and spaced from each other by a distance in the range from .2 to .25 wavelength at the operating frequency and symmetrically located on opposite sides of said focal point, whereby the effective source of radiation toward said parabolic reflector is at the focal point, a coaxial line feeder extending through the axis of said parabolic reflector and connected to said primary radiator, and spaced quarter wavelength sleeves on the outer conductor of said feeder for preventing currents flowing in a direction toward the reflector along the outside of the outer conductor.

2,407,058
FREEZING APPARATUS
Henry Walter Clum, Upper Darby, Pa., assignor to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application September 30, 1944, Serial No. 556,594
16 Claims. (Cl. 62—2)



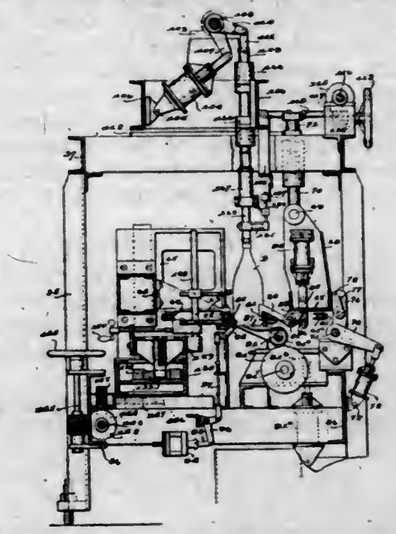
1. In a device of the character described, a mold having oppositely facing receptacles in thermal transfer relation with each other, associated temperature reducing means, liquid supply means, means for rotating the mold to bring said receptacles successively into position to receive liquid from said supply means, and means responsive to the rotation of the mold for actuating the supply means to deliver liquid to the receptacles.

2,407,059
PORTABLE LAUNCHING AND LANDING MAT FOR AIRPLANES
Henry H. Crafton, Baden, Pa., assignor to H. H. Robertson Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application September 29, 1943, Serial No. 504,290
14 Claims. (Cl. 94—13)

8. An aircraft launching and landing mat, comprising: a plurality of individual cellular metal units having flat upper surfaces and side walls depending from said upper surfaces, said units being arranged so that said side walls are in adjacent, side by side relationship; and a plurality of clamp members engaging said adjacent side walls at spaced intervals, each of said clamping members including an inverted U-shaped portion engaging said side walls to prevent lateral displacement of one of said units with respect to another, and parts engaging the under side of the flat upper surfaces, the loop of said U-shaped portion extending through said adjacent depending side walls so as to cooperate with said parts engaging the under side of the flat upper surfaces and prevent vertical displacement of one unit with respect to an adjacent unit in both directions.

2,407,060
FRICTION CLUTCH
Arthur Croft, Rawdon, near Leeds, England
Application June 5, 1944, Serial No. 538,808
In Great Britain July 14, 1943
8 Claims. (Cl. 192—93)

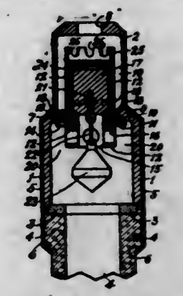
1. Friction clutch comprising driving and driven clutch elements and operating mechanism, said mechanism including a carrier sleeve, two collars slidable for a limited distance one upon the other, said collars being slidably mounted upon said carrier sleeve, means securing said collars to said sleeve for rotation therewith, stop means between the collars for limiting their relative movement, interposed spring means for urging the two collars apart, spring means between one collar and an axially stationary part for causing a co-active release movement of the two collars, and means for applying operative force to one collar, said last mentioned means comprising spherical elements between end surfaces of one of said collars and of an axially fixed part, and a collar slidable over said spherical elements for forcing the same radially inwardly to apply the clutch operating force.



2,407,061
PROCESS OF TREATING POLYVINYL ALCOHOL
Joseph Dahle, West Newton, Mass., assignor, by mesne assignments, to Pro-phy-lac-tic Brush Company, Northampton, Mass., a corporation of Delaware
No Drawing. Application April 11, 1941, Serial No. 388,144
3 Claims. (Cl. 18—47.5)

1. The process of manufacturing shaped articles, such as filaments, rods, tubes, sheets, containers and the like which comprises reacting a monomeric acetal of a mono-aldehyde with a solid polyvinyl base material containing

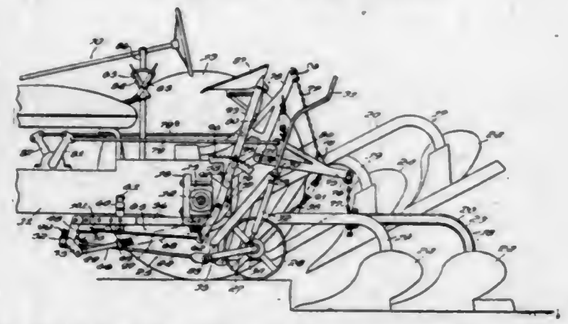
$$-CH_2-\underset{\displaystyle OH}{\underset{|}{CH}}-$$



groups in the polymeric chain which can react with the monomeric acetal to form a by-product alcohol, the reaction being conducted under anhydrous conditions in the presence of a catalyst and an aldehyde thereby producing a solid polyvinyl product containing acetal groups, the base material and the acetal resulting from the reaction being in the solid state throughout the process, the monomeric acetal being preformed and in amount at least about 3.9 times the amount of aldehyde.

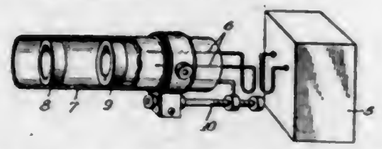
2,407,062
APPARATUS FOR TESTING CONTAINERS
William A. Darrah, Chicago, Ill., assignor to Owens-Illinois Glass Company, a corporation of Ohio
Application August 24, 1942, Serial No. 455,887
15 Claims. (Cl. 209—88)

4. Apparatus for testing the top surfaces or finishes of bottles and similar articles which comprises a support for the articles, a testing unit spaced above the support, said unit including a contact rod arranged to seat on said surface and extend thereacross and an electric contact device positioned and arranged to engage said surface at a point spaced from said contact rod, electroresponsive means controlled by said contact device for indicating defective ware, and means for rotating the articles while under test.



2,407,063
CLOSURE DEVICE FOR RENDERING BOTTLES NONREFILLABLE
Jose Soto del Llano, Habana, Cuba, assignor of one-fourth to Ricardo Moré Ferrer, Habana, Cuba
Original application March 21, 1942, Serial No. 435,710, now Patent No. 2,318,382, dated May 4, 1943. Divided and this application March 15, 1943, Serial No. 479,194. In Cuba June 21, 1941
2 Claims. (Cl. 215—23)

1. In a closure device for rendering bottles nonrefillable, when attached to the mouth of the same, the combination of an outer casing with openings at its top and bottom and adapted to rest with its bottom against the mouth of the bottle, a cylindrical valve carrying member with-

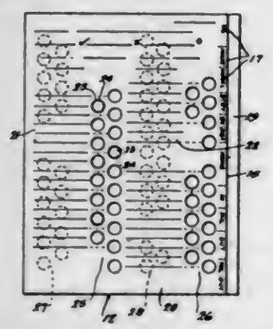


in said casing and having its intermediate portion fixedly connected with an intermediate portion of the casing, said valve carrying member having tubular end portions projecting from its intermediate portion in opposite directions and providing annular spaces between said end portions and the casing, said cylindrical valve carrying member having a valve seat between its ends and the walls of the tubular end portions of said valve carrying member being provided with openings at each side of said valve seat, a valve slidable by gravity within one projecting tubular end portion of the valve carrying member, a weight extending from the other tubular end portion of the valve carrying member and being flexibly connected with said valve, and a cap slidable on the projecting tubular end portion containing said valve and adapted to free and obstruct respectively the openings in said last named projecting tubular end portion of the valve carrying member, and means for inviolably securing said outer casing to the neck of the bottle.

2,407,064
AGRICULTURAL IMPLEMENT
Frederick L. Dewey, Canton, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application May 22, 1944, Serial No. 536,705
19 Claims. (Cl. 97—29)

1. In a tractor-mounted two-way plow having working units adapted for alternate operation, lifting means for vertically moving the working units independently between operating and transport positions, a ground-contacting gauge wheel associated with each said unit, means for vertically adjusting each said gauge wheel with respect to its associated working unit to vary the depth of operation thereof, and connecting means between said lifting means and said gauge wheels effective to remove both said gauge wheels from contact with the ground when both said units are raised to transport position, but ineffective to remove said gauge wheels from the ground when either of said units is in operating position.

2,407,065
RAY PROJECTOR
Harold Potter Donle, New York, N. Y.; Miriam D. Jensen, administratrix of said Harold Potter Donle, deceased, assignor of one-half to Daniel J. McCarthy
Application April 16, 1942, Serial No. 439,163
10 Claims. (Cl. 250—11)

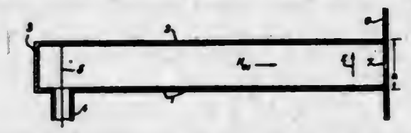


1. A ray projector including, generating means for generating ultra-high-frequency radio waves, a focusing tube of non-conducting material through which generated waves may pass, wave propagation means located near one end of said tube for propagating waves within said tube, connections coupling said generating means to said propagation means, and means for angularly restricting the wave energy projected from said focusing tube comprising said focusing tube, and a focusing member within said tube, said member being of material of considerably different conductivity from that of said tube and having an aperture therein through which said waves may pass.

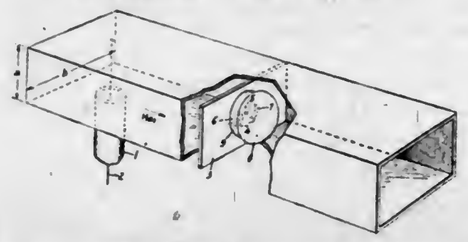
2,407,066
PROCESS FOR MANUFACTURING FUROIC ACID AND FUROIC ACID SALTS
Andrew P. Dunlop, Riverside, Ill., assignor to The Quaker Oats Company, Chicago, Ill., a corporation of New Jersey
No Drawing. Application June 29, 1942, Serial No. 449,032
11 Claims. (Cl. 260—345)

1. Process for producing furoic acid from furfural which comprises suspending furfural and a catalyst comprising a major proportion of a base metal oxide and a minor proportion of a noble metal oxide in an aqueous medium maintained in an alkaline-reacting condition while supplying an excess of elemental oxygen thereto to oxidize the furfural to a salt of furoic acid; acidifying the resulting solution to liberate the furoic acid therefrom; and recovering the latter.

2,407,067
SERVICE INSPECTION MANUAL
Durward B. Erminger, Maywood, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application September 25, 1944, Serial No. 555,622
4 Claims. (Cl. 281—44)



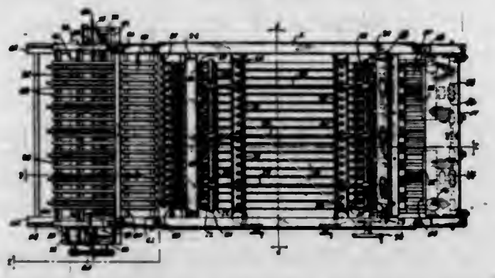
4. An envelope having front and rear faces, service and inspection items listed in columns on the faces of said envelope, said envelope faces having circular disks perforated around their outer edges in the faces of the envelope adjacent each of said items, whereby any of the disks may be removed as desired, said circular disks being arranged in vertical columns, said columns of disks on the front face being offset from the columns of disks on the rear face, and an insert sheet adapted to fit in said envelope for the purpose of marking said sheet through removed circular disks.



2.407.068
WAVE TRANSMITTING SYSTEM
Milan D. Fiske, Schenectady, and James M. Lafferty, Colonie, N. Y., assignors to General Electric Company, a corporation of New York
Application September 15, 1942, Serial No. 458,422
22 Claims. (Cl. 250—11)

1. In combination, a hollow-pipe type wave guide for transmitting electromagnetic waves di-

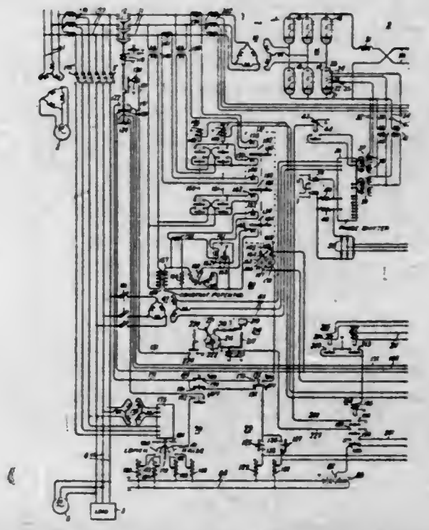
electrically, exciting means for establishing electromagnetic waves in said guide, and means including a wall member associated with said guide provided with an aperture tuned to the frequency of said exciting means and having an appreciable dimension perpendicular to a transverse component of electric field for effecting a concentration of the potential due to said waves and for effecting current flow in said wall member thereby producing in effect a dipole for radiation purposes.



2,407,069
DIELECTRIC WAVE GUIDE SYSTEM
Milan D. Fiske, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application September 15, 1942, Serial No. 458,423
14 Claims. (Cl. 178—44)

1. In combination, a dielectric wave guide of the hollow-pipe type, exciting means for establishing electromagnetic waves within said guide, a metallic wall associated with said guide and lying in a plane substantially transverse to the direction of wave propagation through said guide and provided with an aperture having an appreciable dimension perpendicular to the electric component of the field incident to the propagation of waves through said guide and tuned to the frequency of said exciting means, and a substantially reflectionless structure connected across said aperture comprising a dielectric material sealed to said wall and having an impedance effect substantially equal and opposite to that produced by said aperture.

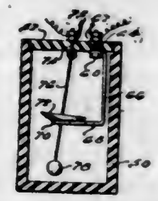
2,407,070
CORE SPLICER
Clifton C. Frame, Wabash, Ind., assignor to The G. M. Diehl Machine Works, Wabash, Ind., a corporation of Indiana
Application March 4, 1942, Serial No. 433,246
4 Claims. (Cl. 144—279)



1. In an apparatus of the character described, in combination, a flat bed comprising a plurality of flat horizontally disposed bed plates arranged closely adjacent one another and forming a substantially continuous flat bed extending from side to side, heating elements in contact with and heating said plates, a plurality of longitudinally disposed presser bars vertically movable independently of one another, means for heating said bars, means for resiliently biasing said bars toward the bed and reciprocating means for successively feeding boards beneath said presser bars, said presser bars and bed forming resilient clamping means for the boards fed therebetween to offer resistance to the movement of the boards therethrough whereby, as each board is fed to the machine, it will be forced against the preceding board to insure a tight junction between the edges of the adjacent boards.

2,407,071
THICK PASTING STARCH AND METHOD
Lowell O. Gill and John W. McDonald, Decatur, Ill., assignors to A. E. Staley Manufacturing Co., Decatur, Ill., a corporation of Delaware
No Drawing. Application November 12, 1943, Serial No. 510,068
8 Claims. (Cl. 260—9)

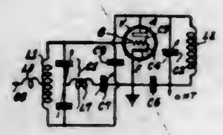
5. A process of making a composition of matter, which comprises reacting native starch in aqueous suspension having a pH of 1.5 to 7.0 with 0.005 to 2.0 per cent of a material selected from the class consisting of water soluble urea-formaldehyde condensation products and water soluble melamine-formaldehyde condensation products based on the weight of the starch, adjusting the pH of the suspension to a value within the range of 4.5 to 7.0, filtering the suspension, and drying the insoluble reaction product to recover a dry granular composition, said composition having the characteristic of being thicker pasting with hot water than the original starch and forming therewith a smooth homogeneous paste.



2,407,072
ELECTRIC CONTROL SYSTEM
William N. Gittings, Oakmont, and Amos W. Bateman, Yeadon, Pa., assignors to General Electric Company, a corporation of New York
Application October 24, 1944, Serial No. 560,161
32 Claims. (Cl. 171—97)

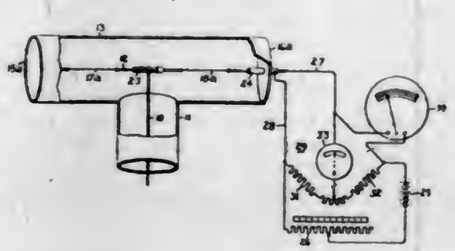
1. In an electronic conversion system, a pair of circuits one of which is an alternating current circuit, means comprising electric translating apparatus interconnecting said circuits and comprising a plurality of electronic tubes each having an anode, a cathode and a control electrode, means having a rotatable element for controlling the potential of said control electrode to determine the instant of conduction between the

anode and cathode of each tube, a direct current motor connected to operate said movable element, a direct current generator of the armature reaction-excited type connected to energize said motor and having a pair of short circuit brushes and a pair of load circuit brushes displaced therefrom, a control field winding for said generator, and means connected to said control field winding and responsive to an electrical condition of said conversion unit for controlling the power interchanged between said pair of circuits.



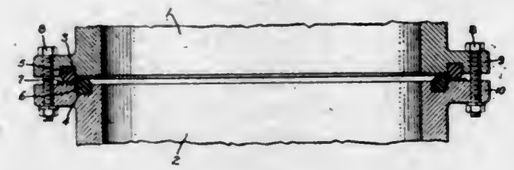
2,407,073
ALARM DEVICE FOR AUTOMOBILES
Paul T. Gorton, Grosse Pointe, Mich., assignor of fifty per cent to Hodgson S. Pierce, Detroit, Mich.
Application July 29, 1944, Serial No. 547,119
2 Claims. (Cl. 200—52)

2. A switch device comprising, in combination, a support of electrical conducting material having a ring-like portion adapted to be normally disposed in an approximately horizontal plane, a pendulum having a stem of electrical conducting material, means fixed with respect to said support for supporting said pendulum for universal movement about a point above and approximately vertically aligned with the center of said ring-like portion, said stem of said pendulum projecting through said ring-like portion in normally materially spaced relation with respect thereto, and a contact element comprising a member having an aperture therethrough supported on said ring-like portion in electrical contact therewith and being freely shiftable thereon in approximately the plane of said ring-like portion, said stem of said pendulum projecting through said aperture of said contact element in loosely associated relation with respect thereto whereby when the plane of said ring-like portion is changed a corresponding pivotal movement of said pendulum will occur and, through engagement with the wall of said aperture, shift said contact element on said ring-like portion, said contact element having a partially spherical lower face the curvature of which is such as to impart to it a natural tendency to seat in said ring-like portion, thereby overcoming any tendency of said contact element to slide away, under the force of gravity, from its seated position on said ring-like portion as shifted by said pendulum when said ring-like portion is tipped a small amount out of its normally approximately horizontal plane, and means for connecting said ring-like portion and said stem of said pendulum in series in an electrical circuit.



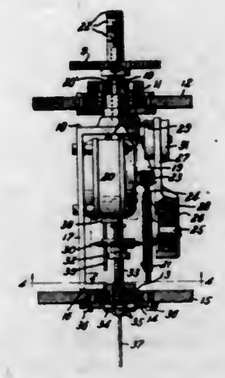
2,407,074
FEED-BACK CONTROL ARRANGEMENT FOR COUPLED TUNED CIRCUITS
Ernest Green, Chelmsford, England, assignor to Radio Corporation of America, a corporation of Delaware
Application May 16, 1944, Serial No. 535,824
In Great Britain February 17, 1943
4 Claims. (Cl. 179—171)

1. A circuit arrangement including a tuned input circuit, a tuned output circuit, a pair of capacity-potentiometers coupling said circuits, the tuned input circuit being connected from a tapping point on one capacity-potentiometer to a similarly placed tapping point on the other and having its mid-point connected to the common lower end of the two capacity-potentiometers, the tuned output circuit being connected at one of its two ends to the upper end of one of the two capacity-potentiometers, at the other of its two ends to the upper end of the other of the two capacity-potentiometers, and at its mid-point to



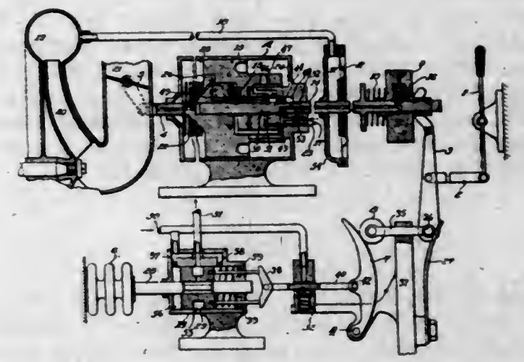
the common lower end through a connection including an inductor, wherein neutralizing capacitors are connected from the upper end of either capacity-potentiometer to the tapping point on the other and two impedances are provided, one connected across each neutralizing condenser, said impedances being constituted as series-L/C circuit elements resonant at a frequency near to the frequency of the component of frequency in the output circuit, feed-back of which it is desired to control.

2,407,075
ULTRA HIGH FREQUENCY POWER MEASUREMENT
Anatole M. Gurewitsch, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application November 12, 1942, Serial No. 465,358
6 Claims. (Cl. 171—95)



1. In combination with a concentric cable high frequency supply line, a concentric cable load line therefor, the inner cable of which includes two similar resistance sections in series relation, connections between the inner and outer cables of the load line at its two ends, a connection between the outer conductors of the supply and load lines, a connection between the inner cable of the supply line and the inner cable of the load line between the resistance sections thereof whereby said resistance sections are connected in parallel across the supply line, all of said connections being suitable for passing high frequency current and of insignificant high frequency impedance as compared to the impedance of said resistance sections whereby the impedance characteristic of said load line is independent of frequency variations, means sensitive to the temperature of said resistances for obtaining a measurement in terms of the high frequency current in the supply line and provisions for assuring that said resistances will have a selected constant value of resistance when a measurement is taken.

2,407,076
FLUID-TIGHT RADIO SHIELDED JOINT
Joseph R. Harkness, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application September 11, 1944, Serial No. 553,584
7 Claims. (Cl. 174—35)



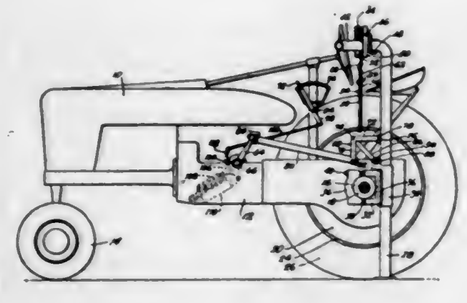
1. A fluid-tight radio shielded joint for adjacent surfaces of two metallic members each formed with a peripherally extending groove therein, a resilient member in each of said grooves extending axially beyond the outer edges of each of said grooves, a deformable electrically conductive washer arranged axially between and to extend transversely over both of said resilient members, and means for biasing said resilient members into intimate fluid-tight engagement with said deformable washer and for biasing the parts of the opposite sides of said deformable washer from each of said resilient members into good electrical contact with the adjacent surfaces of said metallic members.

2,407,077
SPEED INDICATOR TRANSMISSION
Sam Hamilton, Ardmore, Pa., assignor to The Electric Tachometer Corporation, Philadelphia, Pa., a corporation of Delaware
Application October 9, 1944, Serial No. 557,855
9 Claims. (Cl. 74—281)

1. In combination, a stationary screw shaft, a wheel threaded to run on said shaft, a first rotatable shaft the axis of which coincides with the axis of the stationary shaft, a second rotatable shaft carried by said first rotatable shaft with its axis intersecting the axis of said first rotatable shaft, a disc on said second rotatable shaft positioned so that its face engages the edge of the wheel, means for rotating said disc about the axis of said second rotatable shaft and means for revolving said second rotatable shaft about the axis of said first rotatable shaft.

2,407,078
POWER CONTROL
George M. Holley, Jr., Grosse Pointe, Mich., assignor to George M. Holley and Earl Holley
Application March 3, 1944, Serial No. 524,977
9 Claims. (Cl. 123—103)

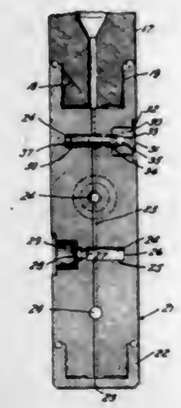
1. A throttle control for a supercharged aircraft engine comprising an air entrance to said engine, a throttle valve therein, a lever therefor, a chamber, a moving wall associated therewith, a passage connecting said chamber with the engine side of said supercharger, spring loading means engaging with said moving wall in opposition to the supercharger pressure, the pressure on the other side of said wall being atmospheric, manually controlled means for controlling said spring loading means, barometric responsive means for modifying said spring load on said moving wall at all positions of said manual means, a connection from said moving wall to said throttle lever whereby the position of the throttle is controlled by the movement of said moving wall in response to changes in the pressure of the supercharger and this supercharger pressure is balanced by said spring loading means which is regulated jointly by the manual control means and by said barometric means.



2,407,079
HOLDING TRAY FOR EGG TREATING MACHINES
Willis G. Howard, Indianapolis, Ind.
Application June 28, 1944, Serial No. 542,585
1 Claim. (Cl. 220—21)

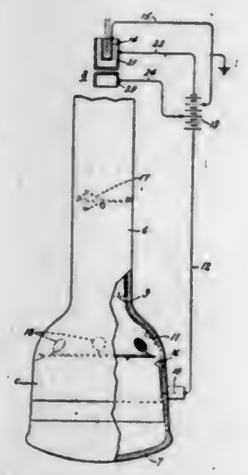
In an egg tray comprising two vertically spaced sheet metal plates, each having a plurality of medial perforations defined by two series of connected spaced strips, the strips of one series lying at right angles to the strips of the other series and medially distorted downwardly at opposite edges short of the junction points so as to clear said edges from possible contact with eggs nested in the structure, the effective dimensions of the perforations in the upper plate being greater

than the largest diameter of the largest eggs to be handled and the effective diameter of the perforations of the lower plate being substantially less than the largest diameter of the smallest egg to be handled, the two plates being vertically spaced less than half the length of the smallest egg to be handled, the upper sheet having four downwardly extending flanges each lying in a plane at right angles to the planes of adjacent flanges and each of the four flanges bonded with two adjacent flanges, the lower sheet having four downwardly extending flanges each lying in a plane at right angles to the planes of adjacent flanges and nested within the flanges of the upper sheet, and means bonding the lower edge of the flanges of the two sheets together.



2,407,080
JACK
Arnold E. W. Johnson, Oak Park, and John R. Orelind, Wilmette, Ill., assignors to International Harvester Company, a corporation of New Jersey
Application March 8, 1943, Serial No. 478,462
2 Claims. (Cl. 254—86)

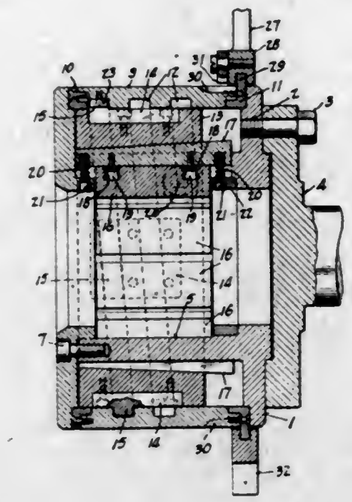
2. In a tractor having a power source comprising a swingable work arm, a control lever for effecting regulated movement of said work arm by said power source, a jack means for the tractor, said jack including a standard, sleeve means affixed to the tractor and forming a rigid structure therewith through which the standard slides, a bell-crank lever having angularly spaced arms and a fulcrum therebetween, the arms connecting the standard to the work arm, and a link pivotally attached to said rigid structure and the fulcrum of the bell-crank lever, whereby movement of the control lever causes the tractor to be raised or lowered with respect to said standard.



2,407,081
GUN PERFORATOR FOR WELL CASING
Mordica O. Johnston, Glendale, Calif.
Application November 27, 1944, Serial No. 565,261
4 Claims. (Cl. 164—0.5)

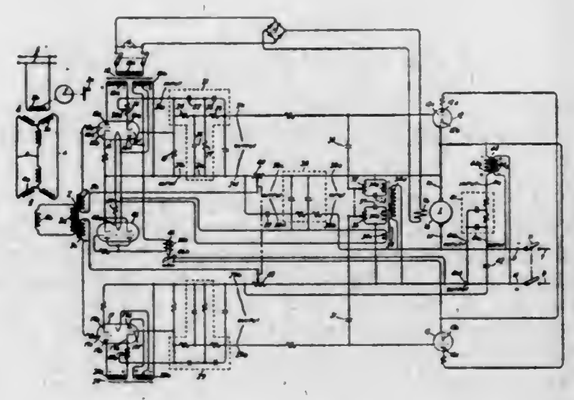
1. In a gun perforator, a body member having an explosive chamber therein to receive a charge of explosive, said chamber lying in a plane normal to the longitudinal axis of the body and intersecting said axis, the inner end of said chamber being closed and the outer end being formed with a restricted outlet opening, a seat formed around the outer end of the outlet opening to receive an annular flange portion of a projectile, a threaded bore extending outwardly beyond said seat, a threaded barrel having a central muzzle bore and adapted to be mounted within the threaded opening to receive the outer end of the projectile in the muzzle bore and to cooperate with the seat in the body member in engaging the

flange of the projectile and thus holding the projectile until the firing power of the explosive shears said flange from the projectile.



2,407,082
CATHODE-RAY DEVICE
Ralph P. Johnson and William R. Grams, Schenectady, N. Y., assignors to General Electric Company, a corporation of New York
Application January 27, 1943, Serial No. 473,706
4 Claims. (Cl. 250—164)

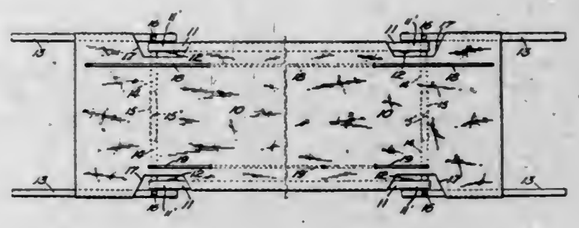
1. A cathode ray device comprising a tubular envelope, a dark trace screen therein, means for producing a pattern on said screen and a matte white reflector adjacent said screen in such position that said reflector will constitute a light-diffusing background for a pattern on said said screen.



2,407,083
CHUCK
Ernst R. Koppel, Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a corporation of New York
Application March 11, 1944, Serial No. 525,992
10 Claims. (Cl. 279—74)

1. A chuck comprising a plurality of opposed radially movable gripping jaws, a cam ring encircling said jaws with axial and circumferential cam surfaces engaging the same and relatively movable with respect thereto in both a rotary and an axial direction to effect gripping movement of said jaws, a single rotary actuating member encircling said cam ring for producing rela-

tive rotation between said ring and jaws and relative axial movement between the same, and a releasable interlock between said cam ring and said actuating member to effect substantial completion of the relative rotation of said cam ring and jaws prior to the relative axial movement of the same.

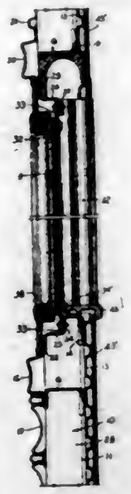


2,407,084
MOTOR CONTROL APPARATUS
Raymond W. Lavender, Waterford, N. Y., assignor to General Electric Company, a corporation of New York
Application January 23, 1945, Serial No. 574,087
8 Claims. (Cl. 172—239)

1. Apparatus for controlling the speed of an electric motor comprising a source of alternating voltage having one terminal adapted to be directly connected to a first terminal of the armature of the motor, a first electric valve having an anode connected to the other terminal of said source, a cathode adapted to be connected to a second terminal of the armature and a control grid, a second electric valve reversely connected in parallel with said first valve and provided with an anode, a cathode and a control grid, means for selectively increasing the conductivity of said valves to effect rotation of the motor in a selected direction, means responsive to the voltage between the cathode of said first valve and said first armature terminal for supplying a stabilizing voltage between the grid and cathode of said first valve, means responsive to the voltage between the cathode of said second valve and said second armature terminal for supplying a stabilizing voltage between the grid and cathode of said second valve, and means for supplying a voltage between the grid and cathode of said second valve equal in magnitude and opposite in phase to the voltage of said source.

6. Apparatus for controlling an electric motor comprising means for producing an alternating signal voltage, electric valve means responsive to said signal voltage for producing a periodically varying voltage having an alternating component and a direct component, a T bridge connected to be responsive to said periodically varying voltage and balanced at the frequency of said periodically varying voltage thereby to produce at its output terminals a direct signal voltage having a magnitude and polarity dependent upon the magnitude of said alternating signal voltage, and electric valve means controlled by said direct signal voltage for supplying a voltage to said motor to effect rotation thereof at a speed corresponding to the magnitude of said direct signal voltage.

2,407,085
FOLDABLE STRETCHER
George Berrell Leather and William Hastings Wallbanks, Feltham, England, assignors to General Aircraft Limited, Feltham, Middlesex, England
Application March 27, 1944, Serial No. 528,294
In Great Britain September 7, 1942
6 Claims. (Cl. 5—82)



4. A stretcher including a main section including spaced side rails and a handle section including spaced handle bars, a canvas connected to the side rails and to the handle bars, the handle bars being swingingly connected to the side rails, and stays pivotally connected at their ends to the handle bars and each made up of two bars pivotally connected at an intermediate point to cause the stay bars when aligned to space the side rails and handle bars and when moved on their intermediate pivots to move the respective side rails and the respective handle bars toward each other, the ends of the stay bars when aligned underlying and contacting with the adjacent ends of the side rails to support the main section when the main section and handle section are in substantially horizontal stretcher-forming alignment.

2,407,086
WINDOW CONSTRUCTION, ESPECIALLY FOR RAIL CARS

Joseph Ledwinka, Philadelphia, and George Trautvetter, Jenkintown, Pa., assignors to The Budd Company, Philadelphia, Pa., a corporation of Pennsylvania

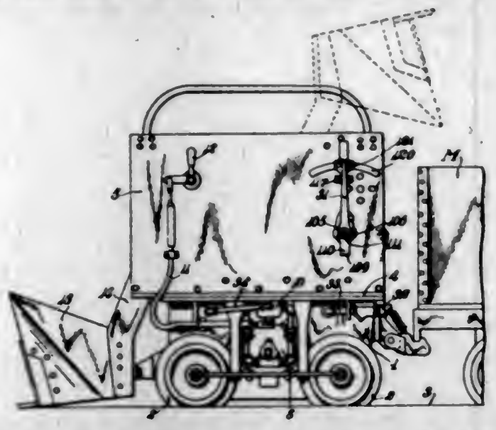
Application September 3, 1943, Serial No. 501,117
5 Claims. (Cl. 189—64)

1. In a window construction, a window frame and a sash in the frame; said frame having shoulders extending toward the center of the opening and located intermediate the outer and inner margins of the frame; said sash having a main portion adapted for the reception of a window plate and of lateral dimensions smaller than the opening of the frame in which it is located; said main portion of said sash having means projecting laterally therefrom and resting against the outside of said shoulders of the frame leaving an outwardly facing open space between the main portion of the sash and the frame, securing means accessible from the outside between said projecting means and said shoulders, and a removable panel covering said open space, said panel resting against and being secured to the surfaces of the sash and of the frame adjoining the open space.

2,407,087
MINERAL OIL LUBRICATING COMPOSITION

Eugene Lieber, Staten Island, N. Y., and Aloysius F. Cashman, Bayonne, N. J., assignors to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application December 26, 1940, Serial No. 371,788
6 Claims. (Cl. 252—52)



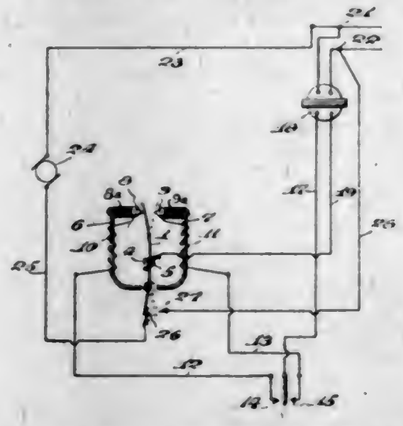
1. A composition comprising as a base a hydrocarbon product containing hydrocarbon wax and a small amount of an auto-condensation product of an aliphatic ketone having less than 12 carbon atoms, said condensation product being substantially non-volatile under fire and steam distillation conditions at temperatures below 600° F.

2,407,088
CONTROLLING MECHANISM

Louis A. Maxson, Claremont, N. H., assignor to Joy Manufacturing Company, a corporation of Pennsylvania

Original application August 13, 1941, Serial No. 406,645. Divided and this application May 20, 1942, Serial No. 443,776
9 Claims. (Cl. 214—132)

1. In a controlling mechanism for an element which is adapted to undergo a plurality of movements in different directions, separate means operative simultaneously for moving said element in said directions, a valve for controlling movement of said element in one of said directions, means automatically operative at a predetermined point of movement of said element in another of said directions for actuating said valve to position the same for the effecting of the movement

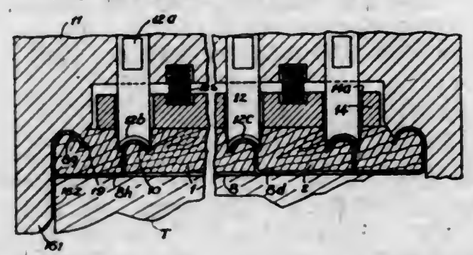


controlled thereby, and manually controlled means for taking the control of said valve away from said automatic means including a manually operable controlling element operable at will and selectively positionable to preclude the aforesaid actuation of said valve at said predetermined point of movement of said element or to cause such valve movement to take place before said element reaches said predetermined point.

2,407,089
SNAP SWITCH

Robert J. McFall, Haworth, N. J.

Application May 18, 1944, Serial No. 536,167
10 Claims. (Cl. 200—122)



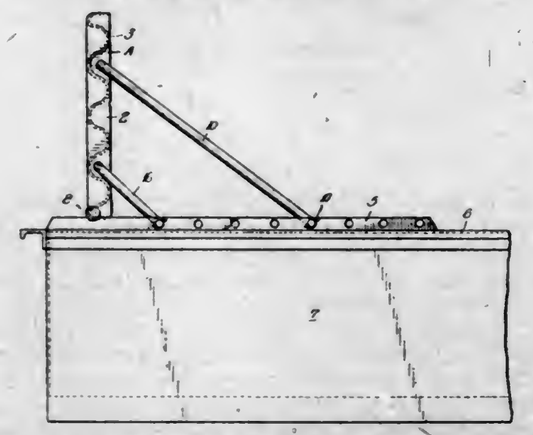
1. A snap switch comprising a thin strip of resilient metal, means for anchoring said strip to a fixed support at one point, said strip having a deformed, laterally offset area immediately adjacent said anchoring means, and a circuit-controlling contact associated with said strip.

10. The combination with a snap switch comprising a resilient strip anchored at a point intermediate its ends and being transversely deformed in the region surrounding said anchorage, of a pair of thermostatic elements having free ends adjacent and opposite each other, a heating winding on each of said elements, a pair of contacts to each of which one end of one of said windings is connected, one end of said strip being disposed between and adapted to be engaged and moved by the free end of either one of said elements, and the other end of said strip being positioned to play between and alternately engage said contacts, and said switch forming a part of the circuit of said heating windings, whereby when the first mentioned end is moved laterally by one of said electrically actuated means beyond a certain position, the other end moves in the same direction with a snap action, thereby disengaging one of said contacts and breaking the circuit through one electrically actuated means, and engaging the other contact and establishing at that point a circuit through the other electrically actuated means, and an additional independent pair of contacts constructed and arranged to be opened and closed by the lateral movements of said strip.

2,407,090
METHOD OF APPLYING METAL BINDING-STRAPS

Roy F. McMahan, Arlington Road, near Louisville, Ky.

Original application October 15, 1938, Serial No. 235,129. Divided and this application January 30, 1943, Serial No. 474,207
5 Claims. (Cl. 1—11)

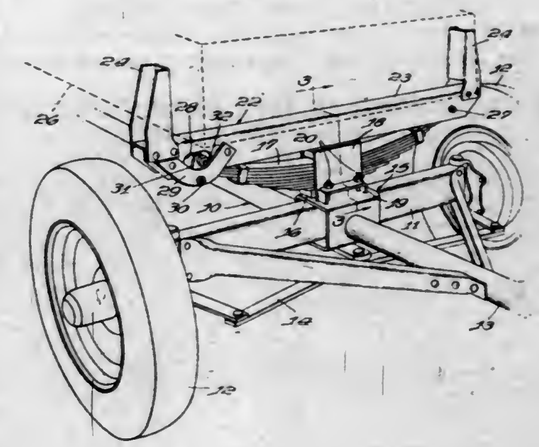


1. The method of securing a metal binding-strap, having a plurality of integral projections struck therefrom, to a wooden wall member of a box, which consists in pressing said projections through the wall member until one face of the wall member flatly contacts the adjacent face of the strap and the free end portion of each projection extends beyond the opposite face of the wall member, continuously curling the free end portion of each projection a substantial amount into the said opposite face of the wall member and until the entire end portion of each projection is arch-shaped and the outer face of the arch-shaped portion lies below the plane of the said opposite face, and forming a corrugation in the arch shaped portion of each projection to give added strength and securing ability.

2,407,091
ADJUSTABLE LADING BRACE FOR RAILWAY CARS

John McMullen, Buffalo, N. Y.

Application May 31, 1945, Serial No. 596,818
8 Claims. (Cl. 105—369)



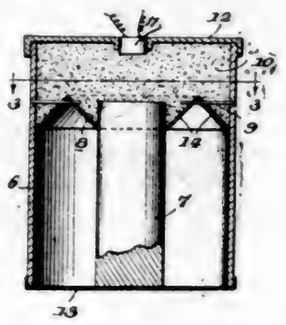
1. Means to retard shifting of lading in an open top railway car which lading projects above the side walls thereof, said means comprising a panel adapted to slidably engage the side walls of the car for movement lengthwise of the car for adjustment against the lading above the side walls of the car, a pair of braces attached to each end of the panel in spaced relation to each other and engageable with the respective side walls of the car to brace said panel against the thrust of lading due to service movements of the car, and means to engage said braces to the side walls of the car respectively in any one of several positions lengthwise of the car.

2,407,092
VEHICLE

Gordon G. McNamara, Jr., Chicago, Ill., assignor to International Harvester Company, a corporation of New Jersey

Application August 1, 1942, Serial No. 453,178
2 Claims. (Cl. 267—7)

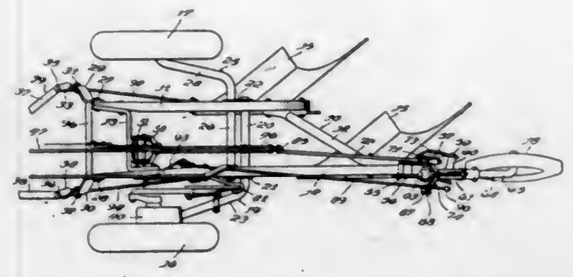
1. In a vehicle including running gear and a load-supporting frame, a support associated with the running gear, a transverse inverted channel associated with the frame and disposed above the support, a concave transverse leaf spring, an inverted U-shaped guide member embracing the lower center portion of the leaf spring and affixed to said support, the upwardly extending ends of the leaf spring fastened within the inverted channel, said inverted U-shaped guide member in normal unloaded vehicle position terminating immediately beneath the lower edge of the inverted channel, said U-shaped guide member adapted to have a sliding fit within said inverted channel, whereby upon application of any load to the vehicle the U-shaped guide telescopes the inverted channel preventing the frame and running gear from relative horizontal shifting.



2,407,093
METHOD AND APPARATUS FOR CUTTING OR PUNCHING SHEET MATERIAL

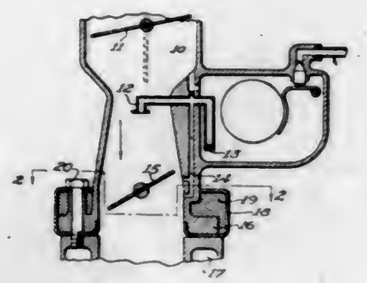
Henry H. Mohaupt, Washington, D. C., assignor to Societe Anonyme de Gestion et d'Exploitation de Brevets, Switzerland

Application May 21, 1942, Serial No. 443,958
15 Claims. (Cl. 164—85)



1. A self-contained cutter or punch for sheet material comprising a container adapted to be positioned adjacent the plate to be cut or punched, a collapsible concave tool within the container spaced from the plate a material distance, an explosive within the container and on the other

side of said tool with respect to the plate whereby, on detonating the explosive, the tool is freed



from the container by collapsing its sides and driven into said sheet.

2,407,094
AGRICULTURAL IMPLEMENT
James Morkoski, Canton, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application May 15, 1944, Serial No. 535,650
16 Claims. (Cl. 97—72)

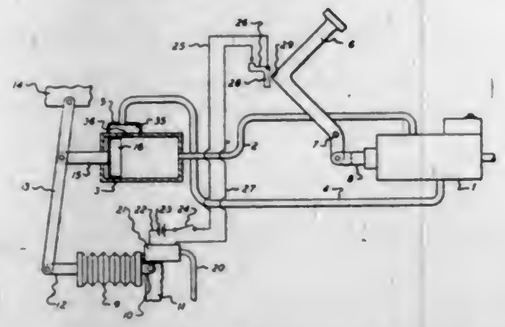
1. In a plow, a frame, ground-working tools attached to the frame, a furrow wheel upon the frame, means for locking said furrow wheel against castering when the plow is in ground-working and transport positions, and means for automatically releasing said locking means only upon forward movement of the plow when in transport position.

2,407,095
HEAT CONTROL
Elmer Olson, Ferndale, Mich., assignor to George M. Holley and Earl Holley
Application April 16, 1945, Serial No. 588,629
1 Claim. (Cl. 123—122)

A hollow flange interposed between an exhaust-heated inlet manifold and a carburetor, filled with a fuseable metal having a melting point below 175° F.

2,407,096
ANTIANEMIA VITAMIN PRODUCTS
Joseph J. Pfiffner, Ann Arbor, and Stephen B. Binkley, Edward S. Bloom, and Arthur D. Emmett, Detroit, Mich., assignors to Parke, Davis & Company, Detroit, Mich., a corporation of Michigan
No Drawing. Application March 4, 1943, Serial No. 477,998
2 Claims. (Cl. 260—236.5)

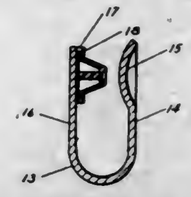
2. An organic acid containing the elements carbon, hydrogen, oxygen, and nitrogen, said acid being the acid derived by autolysis of mammalian liver tissue and being free from pantothenic acid and the antipernicious anemia principle obtainable from the liver tissue, having in .005 N sodium hydroxide solution ultraviolet absorption maxima very close to the wave lengths 256mμ, 282mμ, and 365mμ, with



$$E^{1\%}_{1\ \text{cm.}}$$

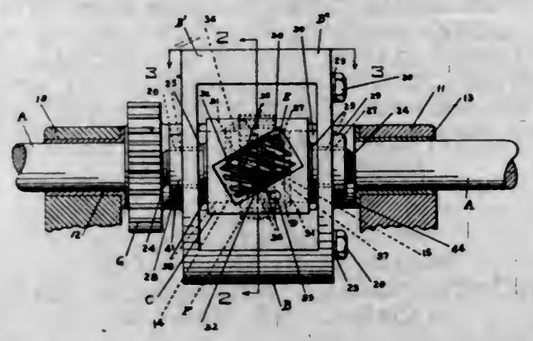
of approximately 542, 531, and 194 respectively, and absorption minima very close to the wave lengths 235mμ, 268mμ, and 333mμ, with

$$E^{1\%}_{1\ \text{cm.}}$$



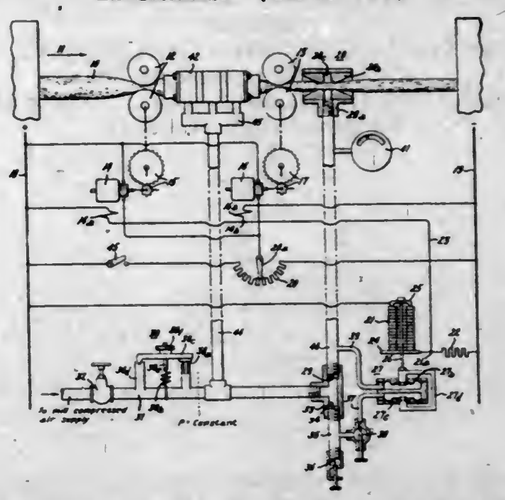
of approximately 299, 476 and 135 respectively, showing birefringence between crossed Nicol prisms when in its microcrystalline form and being colored yellowish orange in its amorphous form, both of said forms darkening and charring without melting upon heating, being relatively insoluble in cold water, much more soluble in hot water, readily soluble in glacial acetic acid and pyridine, and giving negative reactions in the biuret, murexide and Molisch tests and exercising an antianemia vitamin effect in chicks suffering from a deficiency of said acid and a growth-stimulating effect on lactobacillus casei.

2,407,097
BRAKE MECHANISM
Gilbert E. Porter, Los Angeles, Calif., assignor to Leonard J. Rosa, Detroit, Mich.
Application February 10, 1943, Serial No. 475,336
10 Claims. (Cl. 188—152)



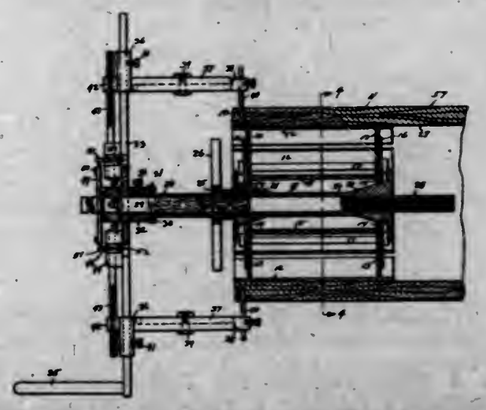
1. In a fluid operated device of the character described, for applying fluid under pressure to an expansible unit, and adapted to be controlled by actuating means, the combination of a fluid pressure receiving chamber having a wall movable by fluid pressure in said chamber, a fluid pressure transmitting chamber having a movable wall and an outlet port whereby movement of said wall will discharge fluid from said fluid transmitting chamber, a floating piston connecting said walls whereby the movement of said first named wall by fluid pressure in said fluid pressure receiving chamber will move said last named wall so as to discharge fluid from said fluid transmitting chamber through said outlet port, and means for controlled delivery of fluid under pressure into said fluid pressure receiving chamber, said means having a valve connecting a source of fluid under pressure to said fluid pressure receiving chamber, said valve comprising an outer piston having said first named piston telescoped therein, said pistons having coacting ports arranged so that when in conducting alignment fluid flows into said pressure receiving chamber and when not in conducting alignment fluid cannot flow into said pressure receiving chamber, said outer piston being connected to said actuating means for movement thereby and said first named piston moving in response to pressure in said pressure receiving chamber.

2,407,098
EARRING CONSTRUCTION
Paul A. Raiche, North Providence, R. I.
Application October 29, 1943, Serial No. 508,201
5 Claims. (Cl. 63—14)



2. An earring construction, comprising a U-shaped element of resilient material having two arms adapted to grip an ear lobe therebetween, and a resilient tip on one arm extending towards the other arm, said resilient tip comprising a hollow cup-shaped element having its edges secured to said one arm, the outwardly extending upper portion having a suction recess.

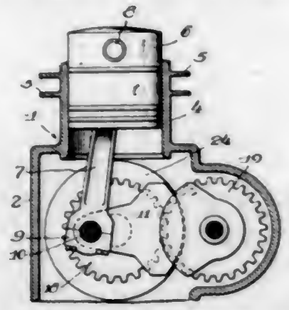
2,407,099
TWO AND ONE DIRECTION SILENT OVERRIDING AND POSITIVE DRIVING OVERRIDING MECHANISM
Carroll H. Richards, Boston, Mass.
Application January 22, 1945, Serial No. 573,988
6 Claims. (Cl. 192—41)



1. In a mechanism having a pair of elements rotatable about a common axis, the combination therewith of a gear having a driving connection with one of said elements, a member mounted in the other element for rotation relative thereto, a second gear, said second gear being mounted in said member for rotation relative thereto and adapted to mesh with the first gear, said member and said second gear being rotatable about different axes, the axis of rotation of said member being spaced from the axis of the first gear, and means for rotating one of said elements.

2,407,100
DRAFTING OF FIBERS
Ernest L. Richardson, Melrose, Mass., assignor to General Electric Company, a corporation of New York
Application June 26, 1943, Serial No. 492,425
12 Claims. (Cl. 19—70)

1. In combination, means for drafting a length of material containing an arrangement of fibers comprising a first pair of drafting rollers, a second pair of drafting rollers mounted in spaced relationship with respect to said first pair of rollers, and means for driving said first pair of rollers at a predetermined speed and said second pair of rollers at a greater speed, a source of substantially constant fluid pressure, a member providing passageway for said length of material and a chamber connected to said source and in communication with said passageway to provide a varying fluid pressure in said chamber in response to unevenness in successive portions of said length of material, and means responsive to said varying pressure for controlling said driving means to vary the relative speeds of said pairs of rolls to diminish said unevenness.

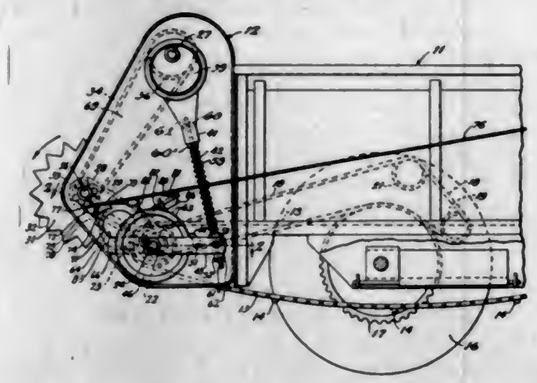


2,407,101
PIPE CUTTING AND TENONING MACHINE
Gustaf H. Rosenboom, Kalama, Wash.
Application December 23, 1943, Serial No. 515,459
1 Claim. (Cl. 144—205)

A device of the class described having in combination an expanding mandrel having a journal formed along the axis thereof, one end of said journal being threaded internally, a shaft disposed within said journal having a threaded end which occupies the threaded portion of said journal, a collar fixed on said shaft adapted to lock against the end of said journal, an operating lever rotatably mounted on said shaft adjacent to said collar, means for drivably con-

necting said lever to said shaft, tool carrying arms mounted on said lever, a screw feed for each of said arms, gearing between said shaft and screw feeds for operating the screw feeds as the operating lever is revolved with relation to said shaft.

2,407,102
INTERNAL-COMBUSTION ENGINE
Elmer Ryder, Berwyn, Ill.
Application June 4, 1943, Serial No. 489,613
1 Claim. (Cl. 74—604)

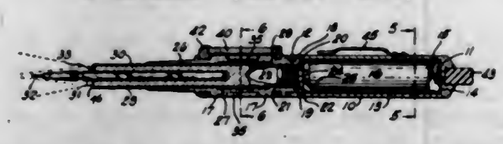


In an internal combustion engine comprising a single upright cylinder, a piston reciprocable in said cylinder, and a horizontally disposed crank shaft connected to and driven by the piston, an eccentric mass secured to the crank shaft, an auxiliary shaft mounted parallel to and disposed in the same horizontal plane as the crank shaft, gearing between the shafts whereby the auxiliary shaft is rotated oppositely to and at the same angular speed as the crank shaft, and an eccentric mass substantially equal in effect to the first mass secured to said auxiliary shaft, said masses being disposed at similar points in their cycles in their upper and lower positions, and in opposition to one another in their horizontal positions.

2,407,103
CARRIER FOR FULL-FASHIONED KNITTING MACHINES
Rudolf Johannes Scheller, Hickory, N. C.
Application August 23, 1944, Serial No. 550,733
2 Claims. (Cl. 66—126)

1. In a yarn carrier for full-fashioned knitting machines having a tube in its tip portion through which the yarn is fed, said carrier having a laterally projecting portion, and a spring clamp on said portion around which the yarn can be secured after being severed from the fabric and reversely led from the lower end of the tube to the spring clamp to thus hold the yarn on the front surface of the carrier, and a second spring clamp on the carrier into which the yarn may be placed after it has been secured in the first spring clamp.

2,407,104
MANURE SPREADER HAVING ADJUSTABLE FEED MECHANISM
William F. Schmied, Blue Island, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application December 23, 1943, Serial No. 515,338
10 Claims. (Cl. 74—116)

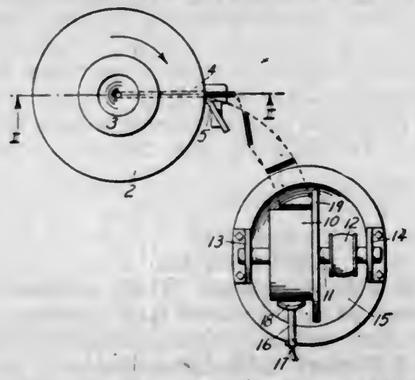


1. In a ratchet feed adjustment comprising, a ratchet wheel keyed to a shaft, an arm journally pivotable on said shaft, a pawl pivoted on said arm and adapted to engage said ratchet wheel, a reciprocable driving link having means associated with said arm, means for varying the effective length of the reciprocable driving link with respect to swinging said arm, said means for carrying the effective length comprising a cam adapted to contact a rearward extension of said arm and cause variable inclination of said arm upon rotation of said cam, and a second ratchet wheel integral with and adjacent said cam, a pawl adapted to engage and rotate said second ratchet wheel, whereby rotation of said second ratchet rotates said cam.

2,407,105
HIGH TENACITY FILAMENTARY MATERIALS
George W. Seymour and Walter Brooks, Cumberland, Md., assignors to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application January 5, 1944, Serial No. 517,114
20 Claims. (Cl. 57—140)

9. Yarn having improved textile characteristics and quality comprising an organic ester of cellulose having applied thereto a lubricating fluid comprising mineral oil, a sulfonated oil, an animal oil lubricant, a hydroxyalkyl amine salt of a long chain fatty acid and a blending agent.

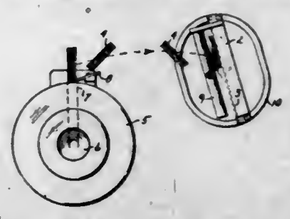
2,407,106
PENCIL
Allen P. Shelly, Denver, Colo.
Application March 3, 1944, Serial No. 524,943
4 Claims. (Cl. 240—6.46)



1. A combined flashlight and pencil comprising, in combination, a tubular casing having one end closed and the other open, a strip of conducting material extending from the closed end to a point adjacent the open end, the casing having a threaded section extending inwardly from the open end, a tubular member threadedly connected with the casing, a lamp socket positioned in

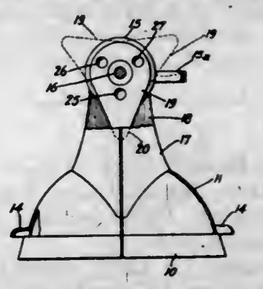
the inner end of the tubular member, the outer end of the socket having an inturned flange forming a stop for the base of a miniature electric lamp, the inner end of the socket having an outwardly directed flange terminating in an inwardly extending tongue positioned to contact with and overlap the outer end of the conducting strip, that part of the socket between the flanges being free from threads, a lamp positioned in the socket, a battery positioned in the casing, resilient means for urging the battery outwardly and electrically connecting it with the conducting strip, the center contact of the battery being positioned to engage the center contact of the lamp, whereby when the tubular member and the casing are rotated relative to each other to bring the tongue into engagement with the strip the lamp will be lighted, a cylindrical member of transparent material positioned in the tubular member, said transparent material having an axial opening, and a pencil in the opening.

2,407,107
PREPARATION OF STABLE DISPERSIONS OF ALKYL ALKACRYLATE POLYMERS
Joseph Edward Smith, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application May 5, 1943, Serial No. 485,757
12 Claims. (Cl. 260—32)



6. A stable aqueous dispersion of a polymerized alkyl alkacrylate containing from 10% to 40% of the dispersed alkacrylate which has been produced by the emulsion polymerization of the alkyl alkacrylate monomer dispersed in an aqueous solution of a water soluble partially saponified polyvinyl acetate having a saponification number of from 40 to 130 and a viscosity in a 4% aqueous solution at 20° C. of from 20 to 25 C. P. and in the presence of from 0.25% to 10.0%, based on the weight of the alkacrylate, of a refined petroleum hydrocarbon boiling above 110° C., the partially saponified polyvinyl acetate being present in an amount equal to at least 6% of the weight of the dispersed alkacrylate.

2,407,108
METHOD AND APPARATUS FOR CRIMPING FILAMENTARY MATERIALS
John E. Spalding, Nitro, and Dan B. Wicker, Dunbar, W. Va., assignors to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application October 4, 1941, Serial No. 413,702
17 Claims. (Cl. 19—66)

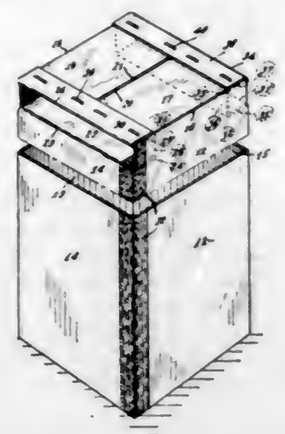


1. In a method of crimping textile fibers of spinnable length, the steps of imparting a high longitudinal velocity to a compact bundle thereof and causing the moving bundle to collide substantially endwise against an obstruction.

2,407,109
PRODUCTION OF STAPLE FIBER
Robert A. Smith, Ridley Park, Pa., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application July 18, 1942, Serial No. 451,486
9 Claims. (Cl. 19—66)

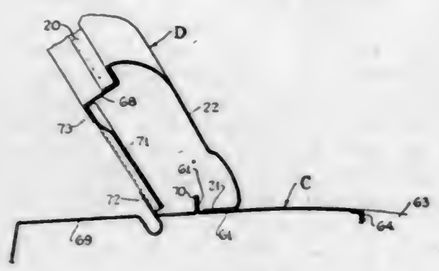
1. In a device adapted to subject fibers to opening, crimping or the like, an obstruction having an indented surface and means for impelling a clump of textile fibers of spinnable length at high velocity in free flight against said surface, said obstruction having a pitch distance facing the clump in its flight less than the effective dimension of the clump parallel thereto.

2,407,110
FLATIRON
Richard O. Spencer, Santa Monica, Calif., assignor to General Electric Company, a corporation of New York
Application August 29, 1944, Serial No. 551,658
2 Claims. (Cl. 38—79)



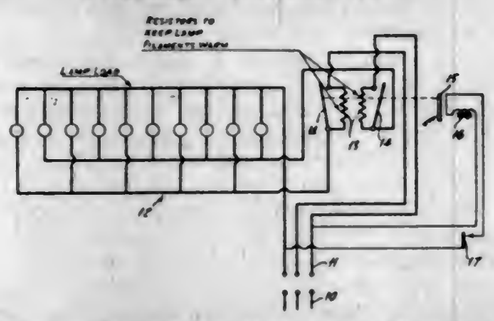
1. A flatiron comprising a handle having upright supports at the front and rear of the iron and also having a hand-grasping portion supported at the upper ends of said supports for axial rotation with reference to them, projections extending both from the front and rear ends of said hand-grasping portion and movable with it as it rotates to either of two positions at opposite sides of the vertical plane passing through the axis of rotation of said hand-grasping portion when said flatiron is in normal ironing position so as to support the handle out of contact with the work surface when the iron is tilted laterally in either direction, and means releasably holding said hand-grasping portion in each of said positions.

2,407,111
HAND GRIP AND CLOSURE FOR CARTONS
Robert Vance Thompson, Indianapolis, Ind.
Application March 18, 1943, Serial No. 479,573
18 Claims. (Cl. 229—52)



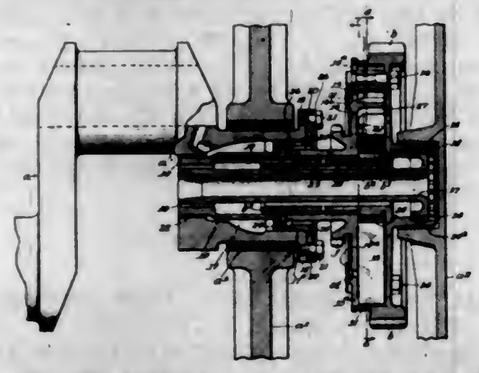
1. A carton having four angularly related walls each terminating in a tab defined by a transverse fold line, the fold lines in two opposite walls defining oppositely-facing tabs lying substantially in a common plane, the fold line in a third wall lying in a plane parallel with said common plane and disposed farther from the termini of said tabs, the tab defined by said last-named fold line being further formed with two additional fold lines substantially parallel with its defining fold line and positioned successively closer to the ter-

minus of said tab, said oppositely-facing tabs being folded inwardly toward each other substantially into said common plane, and said third tab being folded inwardly upon its first-mentioned fold line to provide a section having an extent substantially parallel with said common plane less than one-half the width of each of



said two opposite walls, then folded upon its next adjacent fold line to provide a section substantially perpendicular to said common plane, and then folded outwardly upon its next adjacent fold line to provide a further section substantially parallel with said common plane, and means securing said last-mentioned section of said third tab to said two oppositely folded tabs.

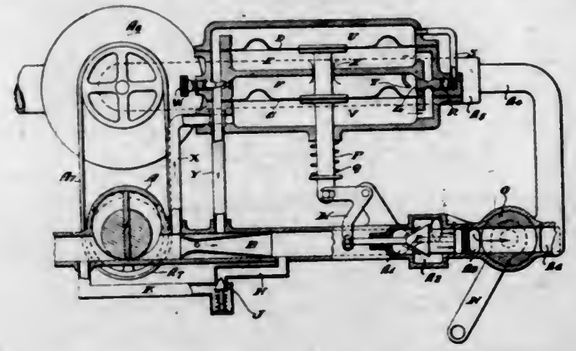
2,407,112
VEHICLE BODY CONSTRUCTION
George Trautvetter, Jenkintown, Pa., assignor to The Budd Company, Philadelphia, Pa., a corporation of Pennsylvania
Application January 11, 1941, Serial No. 374,138, which is a division of application Serial No. 34,493, August 3, 1935, now Patent No. 2,256,837, dated September 23, 1941. Divided and this application August 7, 1943, Serial No. 497,763
1 Claim. (Cl. 296—28)



In an automobile body made of sheet material, such as of sheet metal, an outer panel arranged substantially below the belt line, a window opening in the body above said panel, inner and outer rails at the lower edge of the window opening, said panel having its marginal portion adjacent the window opening extended inwardly beyond the outer surface of the body, said inner and outer rails having flange connections with said inwardly extending portion of the panel and being connected with each other along the margin of the window opening to form a box-section construction reinforcing the panels and rails which constitute main structural members of the body.

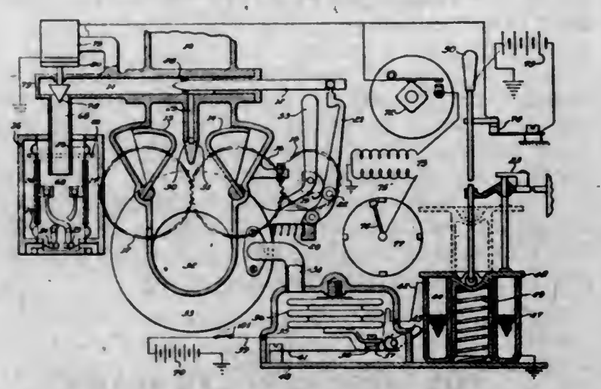
2,407,113
METHOD OF AND APPARATUS FOR INCREASING INCANDESCENT LAMP LIFE
Davis H. Tuck, Redding Ridge, Conn.
Application November 7, 1944, Serial No. 562,316
4 Claims. (Cl. 315—291)

2. The method of increasing incandescent lamp life as compared with the life of the lamp with usual on and off operation, which comprises alternately inserting in series with the lamp a current limiting resistance when the lamp is being extinguished to bring the filament resistance to four to six times its cold resistance to correspondingly reduce filament temperature, and short circuiting the resistance without allowing the lamp to cool to room temperature.



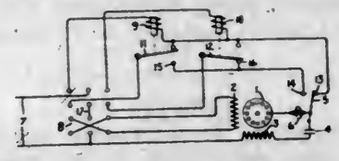
2,407,114
DRIVING MECHANISM
John M. Tyler, West Hartford, Conn., and Samuel K. Hoffman, Williamsport, Pa., assignors to The Aviation Corporation, New York, N. Y., a corporation of Delaware
Application July 19, 1943, Serial No. 495,242
7 Claims. (Cl. 74—411)

1. The combination with the crankshaft of an internal combustion engine, the shaft having a socket in one of its ends, of a resilient driving unit comprising a sleeve secured to the outer end of the shaft and extending into said socket, a driving member provided with a tubular hub extending into and having a splined connection to one end of said sleeve, a driven member having a sleeve extending into said hub, a gear fixed to said driven member, and resilient means between the members, for driving one member from the other.



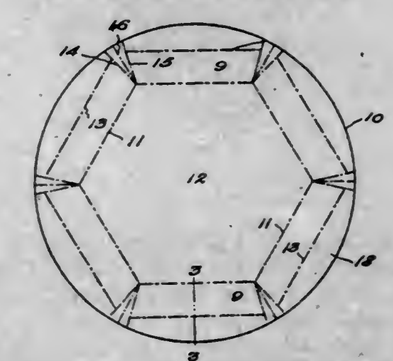
2,407,115
GOVERNOR
Stanley M. Udale, Detroit, Mich., assignor to George M. Holley and Earl Holley
Application November 3, 1944, Serial No. 561,777
1 Claim. (Cl. 158—36.4)

An anticipatory hydraulic governor of the type which regulates the speed, when the speed is increasing, before the speed reaches the desired speed, adapted for use with a liquid fuel pump connected to a prime mover which is adapted to be driven by the fuel supplied by said pump and to drive said pump at a speed proportional to the speed of the prime mover, said liquid fuel pump being of the type that has a constant displacement per revolution, an outlet from said pump, a fuel venturi therein, a balanced throttle valve in said outlet, a diaphragm responsive to the pressure difference created by the flow through said venturi connected to said valve, a second diaphragm also responsive to the pressure difference created by said flow and also connected to said throttle valve, a passage connecting the pres-



sure side of said venturi to the pressure side of one of said diaphragms, a passage connecting the pressure side of said diaphragms together, an automatic valve therein, yielding means operating to move said automatic valve into the position in which said passage is obstructed so that only one of said diaphragms is operative, means responsive to a sudden increase in speed of flow to move said automatic valve against said yielding means so as to open said connecting passage to render both of said diaphragms operative, so as to close said throttle valve rapidly when the speed of the prime mover is increasing rapidly.

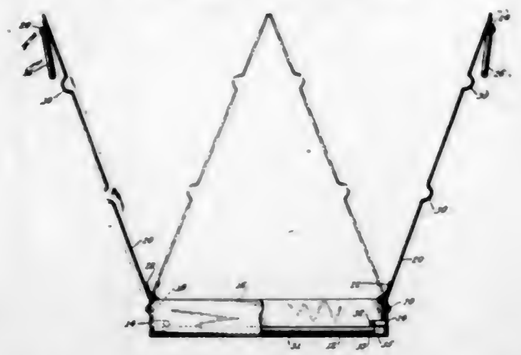
2,407,116
SAFETY DEVICE
Stanley M. Udale and Wynton R. Buick, Detroit, Mich., assignors to George M. Holley and Earl Holley
Application October 16, 1944, Serial No. 558,917
3 Claims. (Cl. 123—102)



1. A safety device for a supercharged internal combustion engine of the electric ignition type having an engine driven supercharger, the pressure of which increases with engine speed, a carburetor with a liquid fuel supply passage incorporated in the carburetor and delivering liquid fuel to the engine, automatic means responsive to an increase in the supercharger pressure for simultaneously interrupting the flow of liquid fuel to the engine and also the flow of electricity to the ignition system, manually operated means for re-establishing the liquid fuel flow and the ignition circuit.

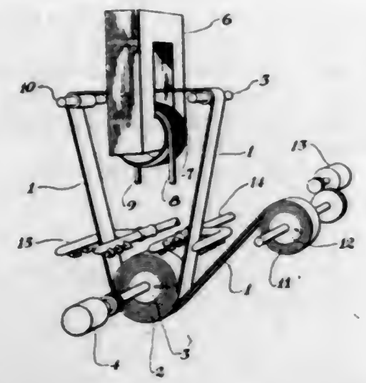
2,407,117
QUICK REVERSING CAPACITOR MOTOR
Wilbur W. Warner, Fort Wayne, Ind., assignor to General Electric Company, a corporation of New York
Application February 26, 1945, Serial No. 579,708
5 Claims. (Cl. 172—279)

1. A quick reversing capacitor motor having displaced main and start field windings, capacitance in series with the start winding, an automatic switch for opening the starting winding circuit when the motor comes up to speed during a starting operation, said switch having a running contact to which one end of the starting winding circuit then becomes connected, a pair of relays at least one of which is adapted to be energized through the automatic switch during the starting operation, said relays both having a movable contact and stationary contacts for establishing holding-in circuits for the relays when energized and connections to said running contacts when deenergized, a double-throw reversing switch for reversing the motor by reversal of the main field of the motor, said switch establishing a connection to the other end of the starting winding circuit in both of its reversing positions, to the movable contact of one of said relays in one of its reversing positions and to the movable contact of the other of said relays in its other reversing position, energizing terminals for said motor so arranged that the energizing current for the main winding of the motor flows through one or the other of said relays depending upon the position of the reversing switch, and constitutes the holding-in current of such relay and prevents it dropping out when the automatic switch opens the starting winding circuit during a starting operation, said other relay (in deenergized position) and automatic switch (on its running contact) then partially establishing a regenerative braking circuit for the motor wherein the main and start motor windings and capacitance are connected in series, which circuit is completed upon reversal of the reversing switch.



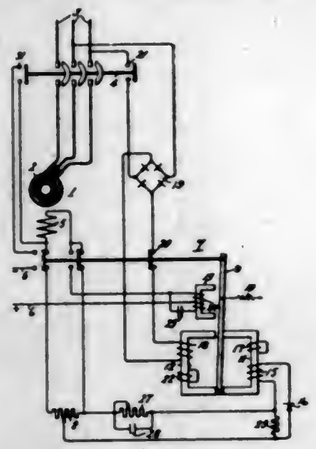
2,407,118
METHOD OF MAKING SHALLOW BAKING PLATES OF CELLULOSE MATERIAL
Harry F. Waters, New York, N. Y.
Original application August 15, 1940, Serial No. 352,679. Divided and this application April 20, 1942, Serial No. 439,638
2 Claims. (Cl. 93—49)

1. The method of making shallow plates from sheets which comprises providing an integral



blank of sheet-like cellulosic blank, folding said blank along a plurality of lines to form a hexagonal flat bottom panel, upwardly sloping side walls constituted of a plurality of plane side panels, and a circular flat marginal flange having a hexagonal inner edge, and folding the excess material between said side panels into closed pleats whereby a plate having an inner surface constituted of plane surfaces is obtained.

2,407,119
ACCOUNTING AND FILING SYSTEM
Herbert Weston, New York, N. Y.; vested in the Alien Property Custodian
Application December 26, 1941, Serial No. 424,406
2 Claims. (Cl. 129—16)

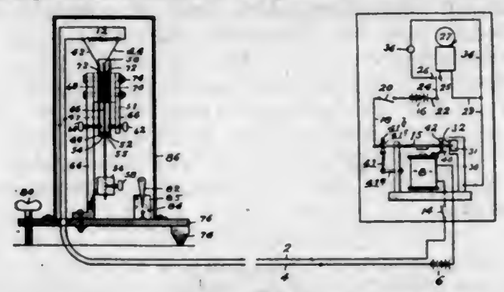


1. In a receptacle for card indexing devices comprising a container, positioning means for cards comprising a ladder-like structure having longitudinally extending members formed with outwardly bent ends to engage the side walls of the container, transversely extending positioning members secured in predetermined spaced relation below the longitudinally extending members and lugs on the transversely extending positioning members to support the ladder-like structure at a predetermined distance above the bottom of the container.

2,407,120
STRIP PROCESSING
Golder P. Wilson, Alton, Ill., assignor to Olin Industries, Inc., a corporation of Delaware
Application May 22, 1944, Serial No. 536,752
6 Claims. (Cl. 219—13)

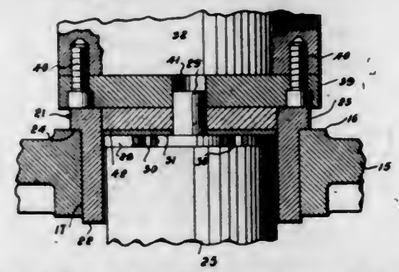
1. In an electric induction furnace, the combination which comprises an alternating electromagnetic field, means for unwinding metal strip from a coil, means for advancing said strip through said alternating electromagnetic field, and means for bringing said strip and said coil together to provide an electrical contact therebetween.

2,407,121
FIELD CONTROL SYSTEM FOR SYNCHRONOUS MACHINES
Fred H. Winter, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application November 27, 1943, Serial No. 511,974
10 Claims. (Cl. 171—118)



1. For use with a synchronous motor having an armature winding and a field winding, means for supplying alternating current to said armature winding, and a source of excitation for said field winding, a device for controlling the connection between said source and said field winding comprising a movable armature member having a switch closed position and a switch open position, means normally biasing said member to the switch open position, an electromagnet associated with said member so as to exert thereon a force in a direction to maintain said member in the switch open position and having an energizing winding, means controlled by said movable member for connecting said energizing winding in circuit with said field winding when said member is in the switch open position, a second electromagnet associated with said member so as to exert thereon a force in a direction to move said member from the switch open position to the switch closed position and having an energizing winding, a source of direct current, means controlled by said member for effecting the energization of said last mentioned energizing winding from said source of direct current when said member is in the switch open position, and a third electromagnet associated with said member so as to exert thereon a force in a direction to maintain said member in the switch closed position and having an energizing winding, and means controlled by said member for connecting said last mentioned winding in series with said field winding and said source of excitation when said member is in the switch closed position.

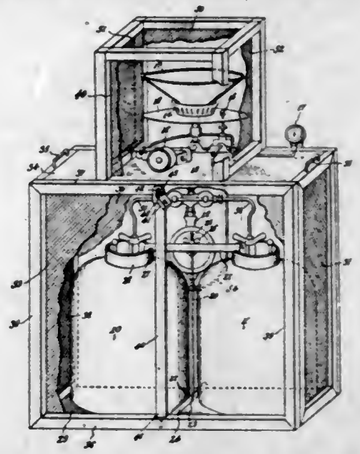
2,407,122
PORTABLE BURGLAR ALARM
Charles E. Young, Kansas City, Mo.
Application April 3, 1942, Serial No. 437,551
1 Claim. (Cl. 200—52)



In a portable burglar alarm, a pair of resilient spaced vertical conductors arranged adjacent to each other, a vertically disposed resilient pendulum suspended between but out of engagement with said conductors, supporting means including a standard arranged adjacent to one of the conductors and a vertical arm disposed adjacent to the other conductor, insulated means interposed between the upper portions of the conductors and the pendulum and between the standard and the

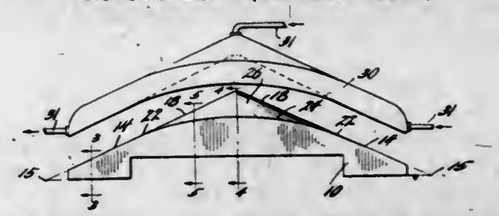
arm, means for rigidly clamping the upper portions of the foregoing elements together, means carried by the standard and the arm and having a swivel connection with each conductor for adjusting the lower portions of the latter toward or away from the pendulum, and means for normally retaining the standard and the arm in vertical position to normally maintain the pendu-

lum in neutral position, said pendulum being adapted to gravitate and carry one of its contacts into engagement with one of the other contacts and close an alarm circuit if the standard is tilted in one direction or, gravitate in an opposite direction and carry its other contact into engagement with the companion contact and close the alarm circuit if the standard is tilted in a reverse direction.



2,407,123
PRESS
Hugh V. Allison, Fairfield, Conn., assignor to The Allison Company, Bridgeport, Conn., a corporation of Connecticut
Application October 1, 1943, Serial No. 504,636
1 Claim. (Cl. 18—16)

In a machine for molding articles, a die holder having a vertical opening therethrough, means for closing the upper side of said opening, a ram movable into and through said die holder from the lower side thereof, a pair of die plates insertable into and removable from said die holder, said pair of die plates comprising a bottom die plate resting on said ram when in said die holder, a centrally located core projecting from the upper side of said die plate, an inner die plate on said bottom die plate and having a centrally located opening through which said core projects, said bottom die plate having holes therethrough in spaced relation to said core, and said ram when moved through said die holder adapted to move said die plates out through the upper side of the latter.

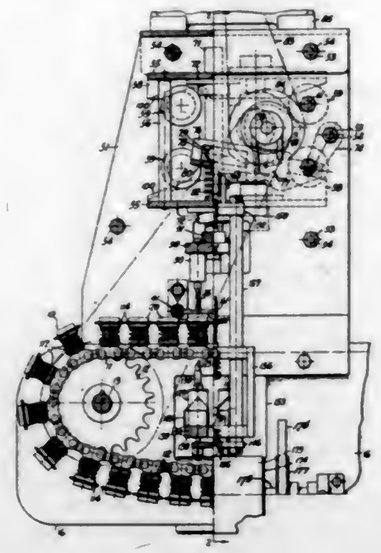


2,407,124
CASING FOR TRUCK AND FREIGHT CAR HEATERS
Peter A. Anderson, Portland, Eric Martin Anderson, Sr., Westbrook, Earl W. Hansen, Bangor, and John H. Edwards, Portland, Maine, assignors to Utilities Distributors, Inc., Portland, Maine, a corporation of Maine
Application April 30, 1943, Serial No. 485,226
4 Claims. (Cl. 220—55)

1. For use with a pair of supply and reserve gas containers, a casing for receiving same, a removable vertical panel for the casing through which the containers may be introduced and removed and having a socket in an intermediate lower part, a fixed base sill in the casing between the containers with a forwardly-extending notched end removably received into said socket, a bar positioned and constructed to hold the

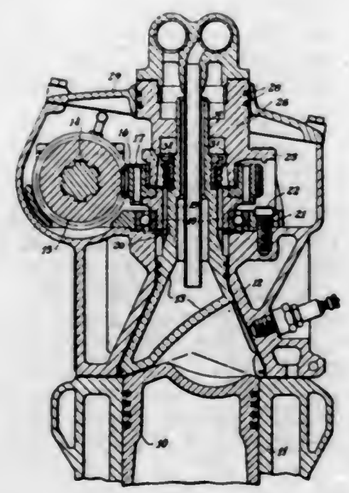
containers down in the casing, a tie-member connecting said bar and base sill, a hasp bar for said removable panel having an end removably received into said socket and the notch of the base sill, and locking means carried on the casing and engaging said hasp bar to prevent said end of the hasp bar from being removed from said socket and notch.

2,407,125
LAUNDRY MACHINE
William J. Asher, Colorado Springs, Colo.
Application March 21, 1945, Serial No. 583,928
10 Claims. (Cl. 223—52.1)



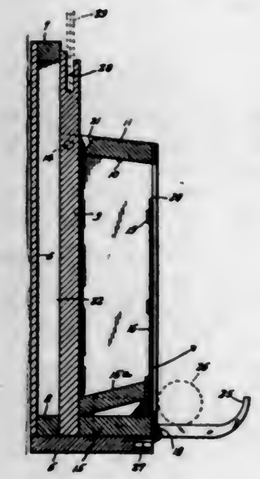
1. A buck for a collar pressing machine having a collar-engaging surface generally shaped like a low-pitched gable roof, two planes forming a portion of the said surface and substantially intersecting near one edge of the buck, the remainder of said surface comprising a generally conical segment having its apex near said intersection and meeting the opposite edge of the buck in an arc below said apex and with its opposite ends in said planes.

2,407,126
METHOD OF PITTING FRUIT
George W. Ashlock, Jr., Oakland, Calif.
Application September 24, 1945, Serial No. 618,249
2 Claims. (Cl. 146—238)



1. A method of removing a pit from a fruit comprising engaging the sides of said fruit, which has been oriented with the long axis of the pit in substantial alignment with a plunger and coring knife, in a resilient supporting zone providing a confining engagement of said fruit, inserting a plunger through an end of said supported fruit to engage and press upon the end of the pit therein, inserting a hollow coring knife into the fruit in axial alignment with the plunger until the knife engages the end of the pit opposite that engaged by the plunger and the core is within

the knife, said knife being smaller in diameter than the pit with the pit seating on the knife edge, the core thereby maintaining the alignment of the pit on the knife edge, then sliding the fruit along the plunger to break the pit loose, while said pit is engaged at its opposing ends, and moving the plunger and knife in axial alignment and in the same direction through the fruit with



the pit jammed therebetween to remove the pit through the cored fruit and out the end thereof substantially without crushing damage to the cored end of the fruit, removing the fruit supporting zone together with the fruit away from the pit substantially simultaneously with the ejection of the pit from the fruit, and retracting the knife and the pit supported thereby from said supporting zone.

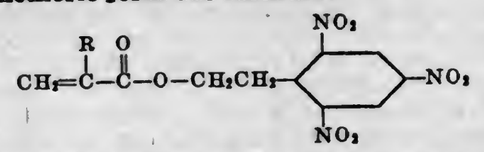
2,407,127
DRIVING MEANS FOR ROTARY VALVES OF INTERNAL-COMBUSTION ENGINES, COMPRESSORS, AND THE LIKE
Frank Metcalf Aspin, Bury, England
Application May 19, 1944, Serial No. 536,328
In Great Britain March 12, 1943
7 Claims. (Cl. 123—80)

1. A rotary valve assembly for internal combustion engines, compressors and the like comprising a housing having a conical valve seating, a rotary valve member having a stem part and a conical head at one end of the stem complementary to said conical seating, a pinion hub, longitudinal internal splines on said hub, external longitudinal splines on said stem, a pinion on said hub, a pair of bearings mounted on said hub and pinion, said hub, pinion and bearings constituting an assembled unit, a driving gear mounted laterally of said pinion in said unit, said splines being directly in mesh and permitting relative lateral and axial freedom of movement of the said stem and driving pinion so that the rotary valve member may at all times find its effective seating position whilst lateral or other thrust on the driving pinion is taken by the bearings.

2,407,128
MAIL BOX
Eugene J. Axnix, South Bend, Ind., assignor of fifteen per cent to Dan Preger, fifteen per cent to David Preger, and fifteen per cent to Elizabeth Kuzmich, South Bend, Ind.
Application April 26, 1945, Serial No. 590,320
1 Claim. (Cl. 232—17)

In a device of the class described, a fixed shelf, a box having a deposit opening therein and a back upstanding from said shelf and fixed thereto, said box including a body having a bottom resting on said shelf and a top swingably mounted on said back whereby said body may be swung upwardly and forwardly of said shelf to cause contents of the body to be deposited on the shelf, said body having a false bottom sloping toward said back to facilitate deposit of the contents of the box onto said shelf.

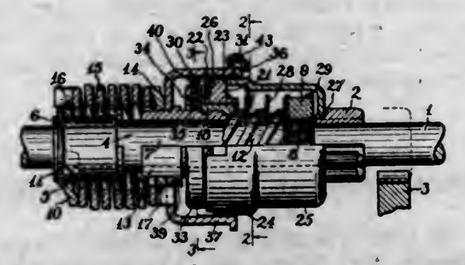
2,407,129
PROCESS OF HALOGENATION
Anthony F. Benning, Woodstown, N. J., and Joseph D. Park, Wilmington, Del., assignors to Kinetic Chemicals, Inc., Wilmington, Del., a corporation of Delaware
No Drawing. Application March 14, 1944, Serial No. 526,475
3 Claims. (Cl. 260—653)



3. A process for the preparation of halogenated derivatives of hydrocarbons which comprises reacting hydrogen fluoride and chlorine simultaneously with methane in the presence of chromium fluoride at a temperature between about 275° and 550° C. and separating the products by distillation.

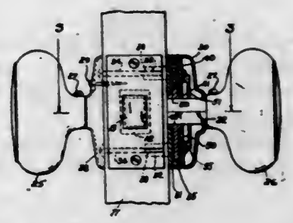
2,407,130
METHOD OF MAKING SALT WATER SOAP
James Blades, Barberton, Ohio, assignor to Kamen Soap Products Co., New York, N. Y., a firm
No Drawing. Application August 23, 1944, Serial No. 550,853
6 Claims. (Cl. 252—121)

1. The process of making a salt water soap consisting in heating a mixture of substantially 5.55 parts by weight of naphthalene and of substantially 15.45 parts by weight of lauryl alcohol at a temperature of about 40° C. when a slurry is formed, thereupon cooling the resulting slurry to a temperature of about 20° C., thereupon slowly adding about 20.4 parts by weight of fuming sulphuric acid while maintaining the temperature below about 25° C. to form a sulphonated mass of naphthalene and lauryl alcohol, then raising the temperature to about 30° C. and holding at this temperature for about 3 hours, thereupon mixing the resulting liquid with an aqueous alkali metal hydroxide solution to substantially neutralize the same, thereupon mixing said substantially neutral sulphonated mass with about sixty parts by weight of body forming substances consisting principally of anhydrous soap and water and cooking until a suitable form retaining substance is produced.



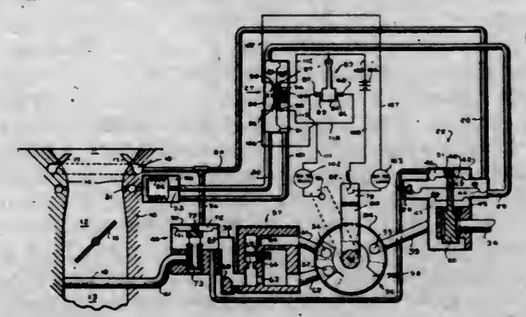
2,407,131
PLASTICS
Herman A. Bruson and George B. Butler, Philadelphia, Pa., assignors to Rohm & Haas Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application January 21, 1944, Serial No. 519,193
9 Claims. (Cl. 260—83)

1. As a new compound, a substance having in its monomeric form the formula:



wherein R is a member of the group consisting of hydrogen and methyl.

2,407,132
ENGINE STARTER GEARING
James E. Buxton, Elmira, N. Y., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application December 29, 1944, Serial No. 570,376
5 Claims. (Cl. 74—7)

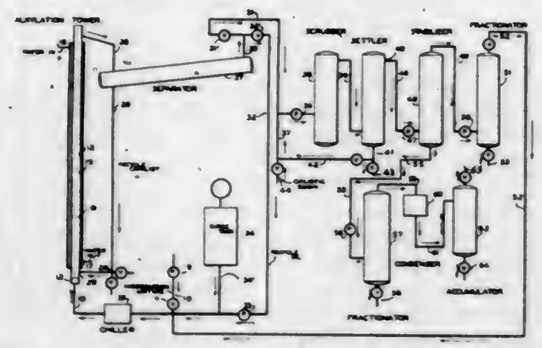


1. In an engine starter drive, a power shaft, a pinion slidably journalled thereon for movement into and out of mesh with a gear of an engine to be started, a screw shaft mounted on the power shaft, means connecting the screw shaft to rotate with the power shaft, a nut on the screw shaft, means including a disconnectable clutch for actuating the pinion by the nut, a centrifugal latch member on the nut, a second centrifugal member and means for mounting the second centrifugal member for rotation with the screw shaft in position to cooperate with the latch member and prevent the nut from movement on the screw shaft to demesh the pinion.

2,407,133
DOOR LATCH
Robert C. Cerf, Los Angeles, Calif., assignor to Pacific Plastic and Manufacturing Company, Los Angeles, Calif., a corporation of California
Application February 10, 1945, Serial No. 577,176
3 Claims. (Cl. 292—359)

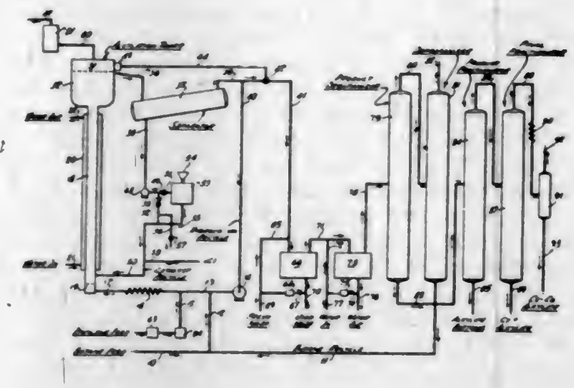
1. In a door lock, locking means for a knob-and-spindle-actuated retractable bolt means operable from one side of a door at times to hold the spindle against turning, comprising a shallow cylinder positioning member concentric with the spindle attachable at its base to a door, a notched locking disk adapted to rotate within said positioning member and non-rotatably connected to said spindle, a covering disk non-rotatably attached to said positioning member having an opening adapted to receive a locking bar, rocker means rockably mounted on said covering disk, a locking bar extending parallel to the spindle from one end of said rocker means adapted at times to simultaneously engage the openings in said covering disk and the notch in said locking disk, and push button means affixed on opposite ends of said rocker means for rocking said rocker means to engage and disengage said locking bar.

2,407,134
ENGINE SIGNAL APPARATUS
Milton E. Chandler, New Britain, Conn., assignor to Chandler-Evans Corporation, South Meriden, Conn., a corporation of Delaware
Application August 11, 1943, Serial No. 498,138
7 Claims. (Cl. 177—311)



7. Signal apparatus, comprising in combination, signal means to indicate the need for a change in the ratio of fuel and air supplied to an internal combustion engine, and means responsive to the resultant of the rate of flow of combustion air to said engine and a condition affecting the temperature of said engine for operating said signal means.

2,407,135
FURNACE LINING
Horace N. Clark, Bound Brook, N. J., assignor to Refractory & Insulation Corporation, New York, N. Y., a corporation of New Jersey
No Drawing. Application September 8, 1943, Serial No. 501.522
6 Claims. (Cl. 106—104)

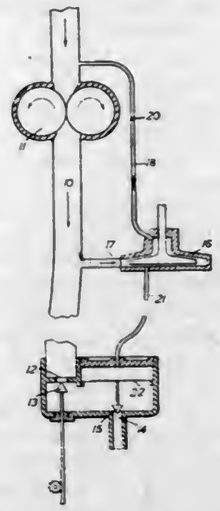


1. In a furnace, a lining made from a refractory concrete consisting of an intimate mixture of an inert filler with an aluminous cement binder comprising about 60 to 75% alumina, about 20 to 40% CaO and less than 2% iron oxides, the remainder of the concrete being formed by an inert filler.

2,407,136
ALKYLATION OF HYDROCARBONS
Louis A. Clarke, Fishkill, N. Y., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
Application December 24, 1942, Serial No. 470,043
9 Claims. (Cl. 260—683.4)

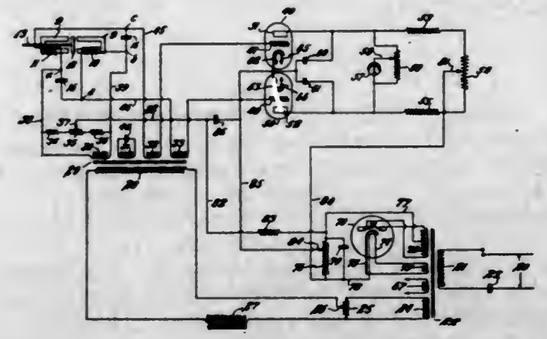
1. The method of continuously alkylating a hydrocarbon having a replaceable hydrogen atom with an alkylating agent in the presence of an alkylation catalyst of greater specific gravity than the hydrocarbon and alkylating agent, which comprises maintaining an undispersed liquid body of the alkylation catalyst of substantial height as the continuous phase in a reaction zone, continuously dispersing a fresh feed of mixed hydrocarbon and alkylating agent substantially free from alkylation catalyst and with the hydrocarbon in liquid phase into a lower portion of the liquid catalyst body without dispersion of the latter to form a multitude of fine liquid drops of mixed hydrocarbon and alkylating agent which rise in dispersed form through a substantial height of the continuous catalyst phase due to difference in gravity therebetween, whereby alkylation of the hydrocarbon with the alkylating agent to form normally liquid alkylate takes place as the principal reaction of the process, the dispersed drops coalescing to form a hydrocarbon phase upon reaching the upper surface of the liquid catalyst body, continuously removing a stream containing the coalesced hydrocarbon phase, settling any entrained catalyst from the removed stream to provide a hydrocarbon layer substantially free from catalyst, recycling a major portion of the hydrocarbon layer containing alkylate and substantially free from catalyst and mixing the same with the fresh feed for redispersion unmixed with alkylation catalyst into the lower portion of the catalyst body, recovering a substantially saturated hydrocarbon alkylate from a minor portion of said hydrocarbon layer, and adding fresh alkylation catalyst directly to the maintained body without premixing with said fresh feed as the operation proceeds to preserve the alkylating activity thereof.

2,407,137
ALKYLATION OF HYDROCARBONS
Louis A. Clarke, Fishkill, N. Y., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
Application May 12, 1944, Serial No. 535,261
11 Claims. (Cl. 260—683.4)



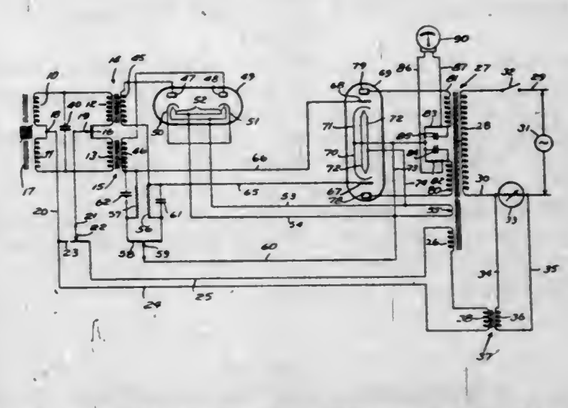
1. In the alkylation of a paraffin with an olefin in the presence of an activated aluminum halide-hydrocarbon complex catalyst, the improvement which comprises maintaining a liquid body of the activated aluminum halide-hydrocarbon complex catalyst of substantial height as the continuous phase in an alkylation reaction zone, introducing a mixed feed of paraffin and olefin unmixed with catalyst with at least the paraffin in liquid phase and in substantial molar excess of the olefin, through a dispersing orifice into the liquid catalyst body without sufficient agitation to produce an emulsion therewith, the mixed paraffin and olefin being thereby dispersed in the liquid catalyst body in the form of drops which rise through a substantial height of the continuous catalyst phase due to difference in gravity therebetween, the drops being of small size providing substantial surface contact between the drops and the continuous catalyst phase whereby alkylation of paraffin with the olefin is effected as the principal reaction in the process, the dispersed drops upon reaching the upper surface of the liquid catalyst body coalescing to form a superposed liquid hydrocarbon layer, withdrawing a stream from the superposed hydrocarbon layer, passing said stream to a separator where any entrained catalyst drops out leaving a hydrocarbon phase substantially free from catalyst, recycling a major proportion of the said hydrocarbon phase substantially free from catalyst for reintroduction with the fresh paraffin and olefin feed through the dispersing orifice into the liquid catalyst body, discharging a minor proportion of said hydrocarbon phase and recovering a substantially saturated hydrocarbon alkylate therefrom.

2,407,138
CHEMICAL COMPOUNDS AND PREPARATION THEREOF
Albert M. Clifford and Joy G. Lichty, Stow, Ohio, assignors to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
No Drawing. Application April 25, 1942, Serial No. 440,466
5 Claims. (Cl. 260—302)



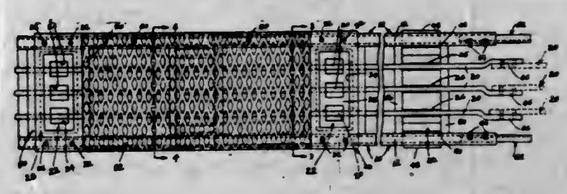
1. The process of producing a 2-cyanoethyl 2-thiazyl sulphide which comprises condensing one mol of a 2-mercapto-thiazole with one mol of acrylonitrile in the presence of a catalyst.

2,407,139
SYSTEM FOR PRODUCING REGULATED LIQUID PRESSURE
William Charles Clothier, Beatrice Naylor, and John Ernest Patrick Dunning, Farnborough, Hants, England, assignors to the Minister of Supply in His Majesty's Government of the United Kingdom of Great Britain and Northern Ireland, London, England
Application February 14, 1944, Serial No. 522,352
In Great Britain July 7, 1941
9 Claims. (Cl. 103—11)



1. A system for regulating an adjustable flow control valve comprising a duct for supplying liquid under pressure, means for producing a pressure difference between two parts of the duct, a driven centrifugal pump for producing a pressure difference less than the pressure difference between the two parts of the duct, said centrifugal pump having an intake near its periphery connected to the high pressure part of the duct and an outlet nearer its eye connected to the low pressure part of the duct, so that the liquid passes through the centrifugal pump in a direction opposed to the pressure gradient therein, and means responsive to pressure changes in said pump for actuating the valve to be regulated.

2,407,140
ELECTRIC MICROGAUGE SYSTEM
Charles F. Coake, Indianapolis, Ind., assignor to Senn Corporation, New Augusta, Ind., a corporation of Indiana
Application August 2, 1944, Serial No. 547,766
20 Claims. (Cl. 177—351)



1. An electric measuring system comprising a Wheatstone bridge circuit including a pair of parallel series resonant branches each having an inductive leg and a capacitive leg connected in series with the elements of the two branches reversed in order so that like elements appear in diagonally opposite legs, means supplying a given alternating voltage across opposite corners of said bridge and an output circuit connected across other opposite corners of said bridge, means oppositely varying the reactance of a pair of like elements of said bridge in accordance with the quantity being measured to produce a phase shift in said output circuit which is a function of said variation, and means measuring said phase shift.

2,407,141
ELECTRIC MICROGAUGE SYSTEM
Charles F. Coake, Indianapolis, Ind., assignor to Senn Corporation, New Augusta, Ind., a corporation of Indiana
Application February 15, 1945, Serial No. 578,074
10 Claims. (Cl. 177—351)

1. An electric measuring system comprising inductive and capacity elements connected to form a bridge circuit, means supplying an alternating voltage of predetermined frequency across one diagonal of said bridge, said inductive and capacity elements being related to form a pair of circuits resonant at said frequency, a pair of output circuits connected respectively across a pair of like elements of said bridge to carry equal currents when said bridge is in balance near the point of resonance, means oppositely varying the reactance of a pair of like elements of said bridge in accordance with the quantity being measured to change the tuning of said resonant circuits and to produce a corresponding unbalance in the currents in said circuits, and means responsive to the unbalance between said currents.

2,407,142
BUS DUCT
Louis W. Cole, New York, and Helge Jensen, Flushing, N. Y., assignors to Cole Industries, Inc., Long Island City, N. Y., a corporation of New York
Application November 17, 1942, Serial No. 465,882
6 Claims. (Cl. 173—334.1)

5. In a bus-duct, a longitudinally extending duct in which the buses are positioned, said duct comprising a pair of longitudinal members dis-

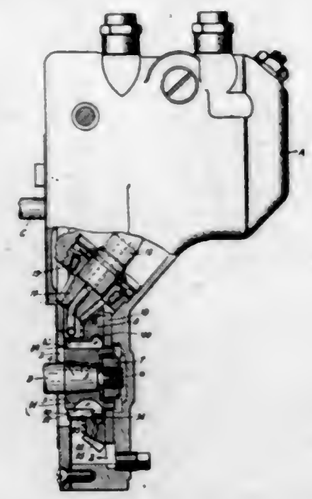
posed in laterally spaced relation, each of said members having a main wall and flanges projecting outwardly from said main wall at the opposite edges thereof, said main walls of the two longitudinal members being in confronting surface relation, and a plurality of plates disposed at the opposite sides of the duct in spaced relation longitudinally thereof, and secured at their opposite ends to the adjacent flanges, respectively, of said longitudinal members, said plates having laterally projecting portions extending between and having their opposite ends in engagement with said confronting wall surfaces, respectively, to prevent movement of said longitudinal members toward each other, said plates having flanges at their opposite ends engaging the ends of adjacent flanges, respectively, of said longitudinal members to hold the latter against movement away from each other.

2,407,143

ADHESIVES AND A PROCESS OF PRODUCING SAME

Theodor Daur, Mannheim, and Walter Daniel, Ludwigshafen-on-the-Rhine, Germany; vested in the Alien Property Custodian

No Drawing. Application April 4, 1941, Serial No. 386,860. In Germany April 30, 1940
3 Claims. (Cl. 260—4)



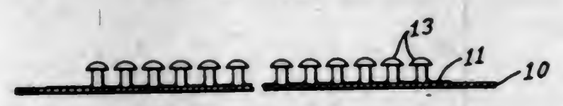
3. A stable adhesive comprising phosphorus oxychloride treated natural rubber dissolved in monomeric styrene and from 0.1% to 5% of ethylamine as a stabilizer.

2,407,144

RESILIENT DRIVE GEARING

Herbert C. Edwards, Massillon, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a corporation of Ohio

Application October 7, 1942, Serial No. 461,183
5 Claims. (Cl. 64—27)



1. A resilient drive gearing comprising a shaft, a gear on said shaft, and a resilient driving connection between said shaft and gear, said driving connection comprising a driving member rotatable with said shaft and supporting said gear, a member mounted in said gear for rotary movement relative thereto, an abutment member rigid with said gear, a spring interposed between said abutment member and the member that is mounted in said gear for rotation relative thereto, and an axially slidable driving connection between said driving member and the member that is mounted in said gear for rotation relative thereto.

2,407,145

METHOD OF HANDLING SMALL ARTICLES IN ELECTROLYTIC TREATMENT

Charles Tennant Elwin, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a corporation of Connecticut

Application November 8, 1941, Serial No. 418,370
4 Claims. (Cl. 204—23)

1. The method of racking small metallic articles of like uniform character upon a portable support member for electrolytic treatment of the character of electroplating or anodizing which comprises the use of a portable imperforated flat electrical conductor plate of relatively thin material to one side of which is applied an adhesive material immune to the electrolyte and of a frangible character when in a dry state, applying the articles in a prearranged manner and a separated state to the adhesive side of said plate and setting a relatively small portion of each article into said adhesive material while in a tacky state, applying sufficient axial pressure upon each of said prearranged articles to squeeze the adhesive material from between the adjacent surfaces of said articles and plate and establish electrical contact therebetween, said displaced adhesive material forming an anchor fillet about each of the articles adjacent the point of contact, maintaining the articles in a fixed manner relative to the plate until said adhesive material has set, subjecting said articles to an electrolytic treatment of the character mentioned above and thereafter breaking them away from said support as individual units.

2,407,146

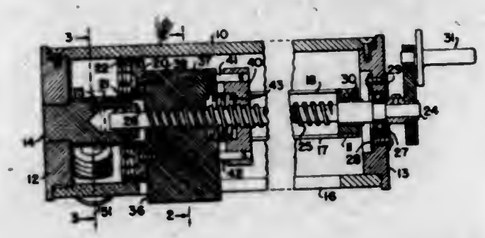
METHOD OF COATING SURFACES WITH POWDER

Christopher Phillip Fagan, Danbury, England, assignor to Radio Corporation of America, a corporation of Delaware

No Drawing. Application May 1, 1944, Serial No. 533,667. In Great Britain February 26, 1943
2 Claims. (Cl. 117—33.5)

1. In the manufacture of end-view screens having a conducting surface on a carrier body the method which includes the steps of applying to the carrier body a fine suspension of silver oxide in amyl acetate containing pyroxylin, drying the suspension, reducing the homogenous oxide in hydrogen around 90° C., baking, wetting the thus-produced white silver surface on the carrier body with a 1% solution of silicon tetraethyl in ethyl oxalate, dusting upon the silicon ester film a powdered fluorescent material, and baking at 350° C.

2,407,147



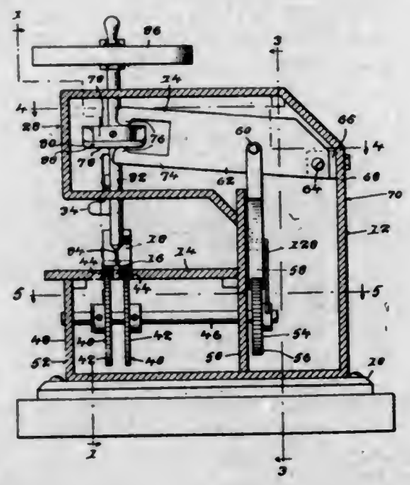
ADJUSTABLE TRANSMISSION LINE

Nicholas V. Fedotoff, Lynbrook, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois

Application February 27, 1945, Serial No. 579,975
12 Claims. (Cl. 178—44)

1. A transmission line of adjustable electrical length comprising, a first conductor, a second conductor having an axially extending slot and a predetermined spaced relation to said first conductor, an adjustable member movable in a predetermined path in the space between said conductors for varying the electrical length of the transmission line including said conductors, a

driving member disposed within said second conductor for exerting a controllable driving force along said line, and means projecting through said slot into mechanical-coupling engagement



with said adjustable member and said driving member for effecting a displacement of said adjustable member along said path by said driving member.

2,407,148

SEWING MACHINE

Iván M. A. García, Bremerton, Wash.

Application September 8, 1942, Serial No. 457,668
5 Claims. (Cl. 112—198)

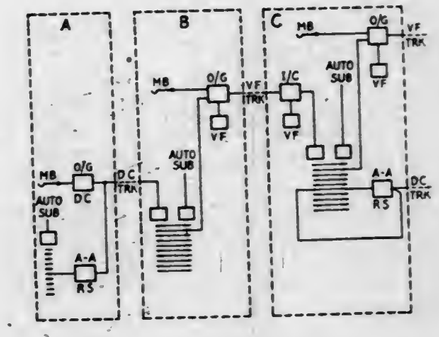
1. A sewing machine for uniting woven superposed fabrics, comprising a needle bar mounted for both rotary and reciprocatory movement, means for continuously rotating the needle bar, a needle carried by the needle bar having a hook shaped to pass freely through the fabrics and to pull threads from the fabrics upon withdrawal of the needle to form a loop from the thread, a cam means acting on the needle bar to reciprocate the same during rotation, whereby the said needle is caused to pass through the fabric and after a half-turn of the needle to pick up the threads and then to withdraw the needle from the fabric and after the next half-turn to withdraw said loop and impart a twist thereto.

2,407,149

STABILIZED 2-CHLOR-BUTENE-2

Clyde B. Gardenier, Belleville, N. J., assignor to Thomas A. Edison, Incorporated, West Orange, N. J., a corporation of New Jersey

No Drawing. Application September 8, 1944, Serial No. 553,280
6 Claims. (Cl. 252—364)



6. A composition of matter comprising 2 chlor butene 2, chloroform and an aliphatic liquid alcohol.

2,407,150

TELEPHONE OR LIKE SIGNALING SYSTEM

Charles Gillings, Charles Edmund Beale, and Teseo Bruno Dante Terroni, Liverpool, England, assignors, by mesne assignments, to Automatic Electric Laboratories, Inc., a corporation of Delaware

Application September 18, 1943, Serial No. 502,884
In Great Britain October 15, 1942
7 Claims. (Cl. 179—27)

1. In a telephone system wherein a connection is established to a called station by automatic switches controlled over a voice frequency signaling trunk including means responsive to a disconnect at the calling end to transmit a forward signal to release said switches, a source of impulses comprising alternating current of determined voice frequency interrupted at predetermined intervals accessible to the called end of said trunk, means in said trunk responsive to a disconnect at the called station to connect said source of impulses to the trunk as a clearing signal whereby the calling station disconnects and the forward signal is transmitted, and means responsive to said forward signal to disconnect the clearing signals from the trunk before the said switch release is initiated.

2,407,151

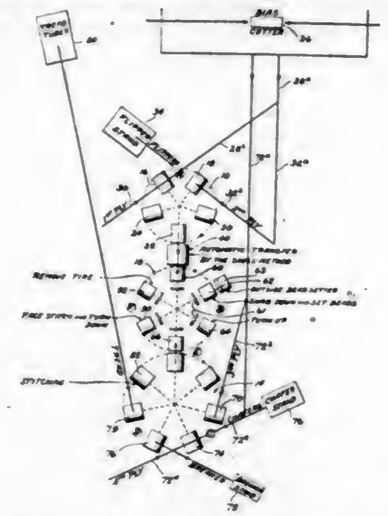
EXPLOSIVE COMPOSITION

Richard C. Glogau, Woodbury, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application August 17, 1944, Serial No. 549,959
12 Claims. (Cl. 52—14)

1. A method of preventing the caking of explosive compositions containing ammonium nitrate, which comprises coating the ammonium nitrate particles with a finely divided material taken from the group consisting of the difficultly soluble inorganic silicates and precipitated silica.

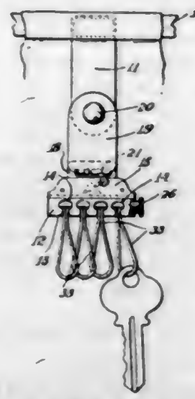
2,407,152



METHOD FOR BUILDING PNEUMATIC TIRES

Jorgen I. Haase, Akron, Ohio, assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware

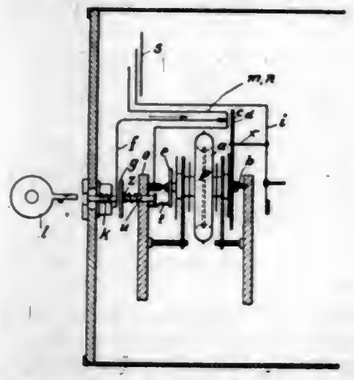
Application January 30, 1943, Serial No. 474,128
12 Claims. (Cl. 154—14)



6. That method of building a pneumatic tire which includes the steps of building a two-ply band at a first operator station, setting beads adjacent the edges of the band, turning the edges of the band over the beads, separately building a second two-ply band including chafers, breaker, tread and sidewalls at a second operator station, moving the second band over the first-

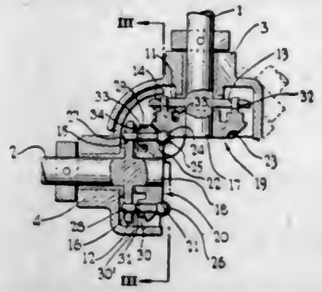
named band at a third operator station, turning the edges of the second band under the beads

of the first-named band, and face stitching the bands together.



2,407,153
KEY HOLDER
Atto N. Hanna, Atlantic Highlands, N. J.
Application October 24, 1944, Serial No. 560,145
7 Claims. (Cl. 70—456)

1. A key holder embodying therein a base fitting having a tubular head provided with a plurality of segmental, circumferential slots each having an enlarged portion, each of said slots being adapted to receive a looped key carrier, said head having screw threads adjacent one end thereof, a semi-cylindrical retainer slide having a plurality of spaced wards adapted to obstruct the enlarged portions of said slots respectively, co-operating means on said base fitting and said retaining slide for guiding and limiting the movement of said slide, a manually operative screw mounted in said screw threads, and a swivelling connection between said screw and said retainer slide.

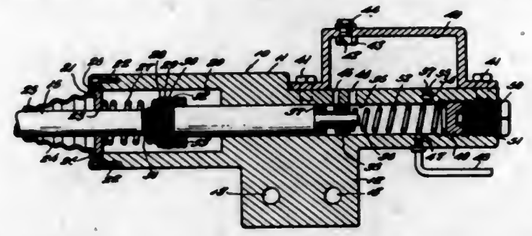


2,407,154
SETTING DEVICE ON MECHANICAL AND ELECTRIC MEASURING INSTRUMENTS
Paul Hildebrand and Artur Metz, Mannheim, Germany; vested in the Alien Propery Custodian
Application January 9, 1941, Serial No. 373,780
In Germany September 2, 1940
3 Claims. (Cl. 200—56)

1. A measuring instrument having a movable pointer, a switch, means for operating said switch on movement of said pointer outside a predetermined range, comprising a pair of pivoted arms adapted to be engaged by the pointer and moved in opposite directions when the pointer passes opposite limits of said range, friction operating con-

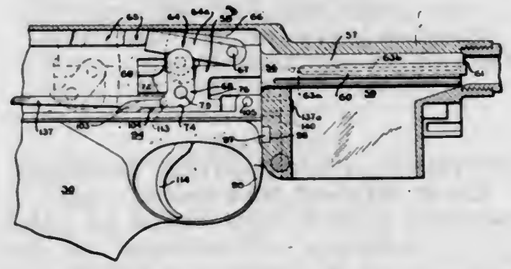
nections between said arms and switch, means for changing the position of said arms to adjust said limits and operable from outside said instrument and means for holding said switch during the adjusting movement of said arms.

2,407,155
FLEXIBLE JOINT
Dan Campbell Holmes, New York, N. Y.
Application March 2, 1943, Serial No. 477,702
5 Claims. (Cl. 74—385)



1. A flexible coupling, including, in combination: a first housing formed with an orifice for receiving a shaft; a second housing formed with an orifice for receiving a shaft; each of the housings provided with ears aligned with ears of the other housing and arranged in pairs and each ear formed with an aligning orifice and each orifice having a pivot pin therein; shafts, one in each of the first mentioned orifices of the housings; driving flanges, one attached to each shaft, each flange formed with a plurality of driving pin orifices; interengaging gears, one on the end of each shaft, each gear free on its shaft; each gear formed with a plurality of orifices for the reception of driving pins, said last mentioned orifices terminating at the outer face of the gear in partispherical hollows and each gear resiliently pressed away from its adjacent driving flange by springs; driving pins in the driving pin orifices of the flanges and the gears; the driving pins of one gear being formed with ball heads resting in the partispherical hollows whereby motion of one shaft may be transmitted to the other shaft.

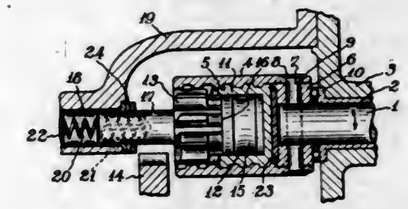
2,407,156
TRAILER BRAKE
John Theo Horne, Layton, Utah
Application August 17, 1944, Serial No. 549,869
1 Claim. (Cl. 188—142)



A combined trailer hitch and brake actuating mechanism which includes a casing adapted to be attached to the towing arms of a trailer vehicle, said casing having an axial bore opening

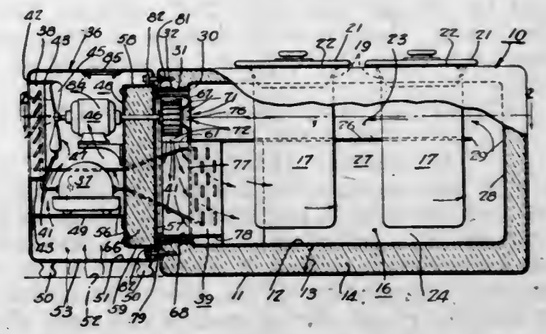
adjacent one end into an enlarged chamber, a plug closing the end of the bore opposite that opening into the chamber to form a fluid tight joint, a draw bar, one end of the draw bar being adapted to be attached to a towing vehicle, the opposite end of said draw bar telescopically entering the bore in the casing, means yieldingly connecting the draw bar to the casing, so that when pull is exerted on the draw bar the casing will be moved, non-compressible fluid within the

bore between the end of the draw bar and the plug, a pipe connecting the bore in the casing with the braking system on a trailer vehicle whereby when the draw bar telescopes into the bore the fluid contained therein will be forced into the braking system on the trailer vehicle to set the brakes thereon and manually controlled means to by-pass the fluid and avoid building pressure in the trailer vehicle braking system when the trailer is being backed by the towing vehicle.



2,407,157
FIREARM
George J. Hyde, Brooklyn, N. Y., assignor to Firearms Research Corporation, New York, N. Y., a corporation of New York
Application June 14, 1941, Serial No. 398,034
3 Claims. (Cl. 42—3)

1. In a rifle having a cartridge chamber, a magazine and a receiver, a bolt mechanism mounted in said receiver, a locking member pivotally mounted on said bolt mechanism, a firing mechanism carried by said bolt mechanism, means including a reciprocatory rod and a link pivotally connected with said rod and pivotally mounted on said locking member for actuating said bolt mechanism to reload the cartridge chamber, a cam on said bolt and engaged by said link for effecting movement of said locking member to lock said bolt mechanism in firing position, means carried by said receiver for cocking said firing mechanism during movement of said bolt mechanism to firing position, and cam means on said link for releasing said cocking means when said locking member is moved into locked position.



2,407,158
ENGINE STARTER DRIVE
Burr W. Jones, Elmira, N. Y., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application April 2, 1945, Serial No. 586,199
9 Claims. (Cl. 74—7)

1. In an engine starter drive, a power shaft, a sleeve extension fixed thereon, a thimble threaded in the sleeve, a block of elastically deformable material in the thimble, a pinion normally housed within the sleeve and engaging said block, a bearing in which the pinion is slidably journalled for

movement by said thimble out of said sleeve into mesh with a gear of an engine to be started, and means for limiting the projection of the pinion from the sleeve.

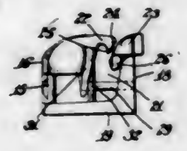
2,407,159
REFRIGERATION APPARATUS
Welton Paul Jones, Rydal, Pa., assignor to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application January 30, 1945, Serial No. 575,204
2 Claims. (Cl. 62—102)

1. In refrigeration apparatus, a heat-insulated cabinet having an apertured wall, a food container within and in spaced relation with the walls of said cabinet, a partition in the cabinet forming adjoining communicating passages each embracing a portion of said container, portable cooling means detachably connected to said cabinet and having an insulated wall adapted to close said aperture, said portable means further comprising compressor, condenser and motor elements mounted at the outer side of said wall and an evaporator and an impeller mounted at the inner side of said wall, said impeller being operatively connected with the said motor, and said evaporator and impeller being arranged with respect to said partition so that operation of the impeller is effective to set up a circulation of air through the passages and over the surfaces of the evaporator.

2,407,160
SELF-LOCKING BOLT
David A. Kahn, Columbus, Ohio
Application January 10, 1945, Serial No. 572,229
2 Claims. (Cl. 151—7)

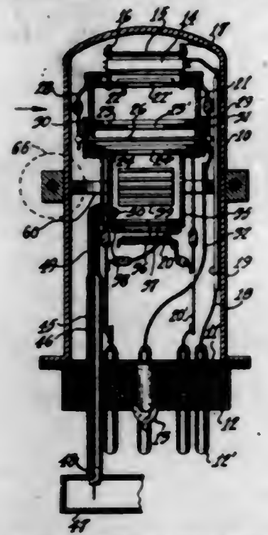
1. A bolt member comprising an elongated shank externally threaded with the threads extending substantially continuously throughout the circumference of the shank, said shank having a slot therethrough from side to side and extending lengthwise in the threaded portion thereof and said slotted portion in a region spaced from the threaded end of the member being expanded diametrically to a larger diameter than the remainder of the shank between said expanded portion and the threaded end of the

shank, and resilient plastic material substantially filling the slotted and expanded portion of the



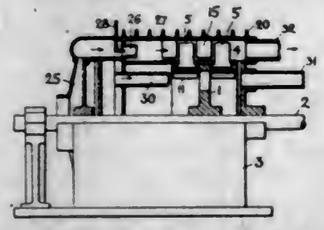
shank throughout and maintaining the expanded condition thereof.

2,407,161
ACYL DICYANDIAMIDES AND SALTS THEREOF
Donald W. Kaiser and Jack T. Thurston, Riverside, Conn., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application May 30, 1942, Serial No. 445,206
15 Claims. (Cl. 260—551)



10. The new compounds formed by mixing together and reacting at temperatures not in excess of about 60° C. a member of the group consisting of halides and anhydrides of carboxylic acids, dicyandiamide, a member of the group consisting of water-soluble alkali-metal hydroxides and alkaline earth metal hydroxides and water, the amount of water being not substantially in excess of that which is necessary to dissolve the reactants.

2,407,162
LOOM SHUTTLE
John J. Kaufmann, Jr., Greenville, S. C., assignor to Steel Heddle Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania
Application January 13, 1944, Serial No. 518,038
4 Claims. (Cl. 139—223)



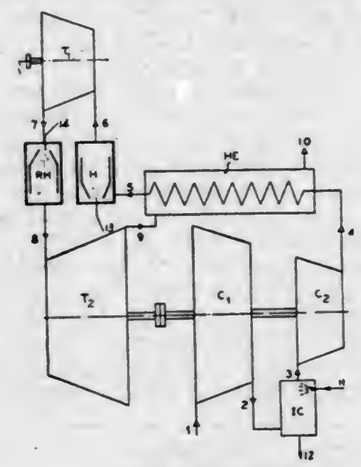
1. An automatically threading loom shuttle having a threading block the body portion of which is made of a hard metal casting and provided with a thread channel extending longitudinally therethrough, said threading block having an integral thread retaining horn portion at the outer end thereof extending from one of the side walls of the body portion toward an extension of the other side wall thereof, said horn portion being separated therefrom at its free end by a thread entrance slot extending downwardly and forwardly and having opposed parallel faces disposed in planes inclined to the longitudinal axis and to the vertical, said horn portion also having a downwardly extending lip at its free end, and the oppositely disposed portion of the side wall also having a downwardly extending lip.

2,407,163
ELECTRON DISCHARGE DEVICE
George Ross Kilgore, Princeton, Warren R. Ferris, Kingston, and Carl Shulman, Princeton, N. J., assignors to Radio Corporation of America, a corporation of Delaware
Application July 28, 1943, Serial No. 496,420
8 Claims. (Cl. 315—6)

1. An electron discharge device including an envelope, a cathode within said envelope for supplying a beam of electrons, means within said envelope for receiving said electrons, and means positioned between said cathode and receiving means and through which the beam path lies, and including a cavity resonator within said envelope, tuning means for said resonator connecting the cavity resonator to the inner walls of the envelope and including a deformable ring contacting the inner walls of said envelope, and arms extending between said deformable ring and the walls of said resonator.

2,407,164
INTERNAL-COMBUSTION TURBINE
Leo B. Kimball, New Haven, Conn.
Application April 15, 1944, Serial No. 531,203
4 Claims. (Cl. 60—41)

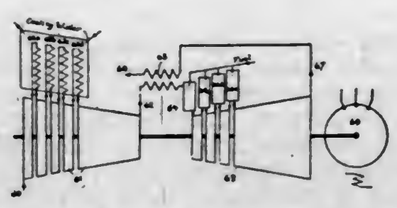
1. A turbine wheel comprising a rim; means to rotatively support the rim; a plurality of blades supported radially on the periphery of the rim; a liner on the inner surface of the rim made of a material having relatively high coefficient of heat conductivity; and a plurality of cooling fins at the inner side of the liner.



2,407,165
METHOD AND MEANS FOR IMPROVING POWER PRODUCTION IN COMBUSTION TURBINES
Johann Kreitner, New York, and Frederick Nettel, Manhasset, N. Y.
Application June 21, 1941, Serial No. 399,242
15 Claims. (Cl. 60—41)

1. In a method to produce power from a continuous stream of a gaseous working medium by

compressing it in a plurality of stages with intermediate cooling, pre-heating it thereafter by regenerative heat exchange, heating it thereafter by combustion of fuel, and expanding it to develop mechanical power, the step of inter-cooling said working medium where the absolute compression temperature reaches a definite fraction of the absolute expansion end temperature, according to



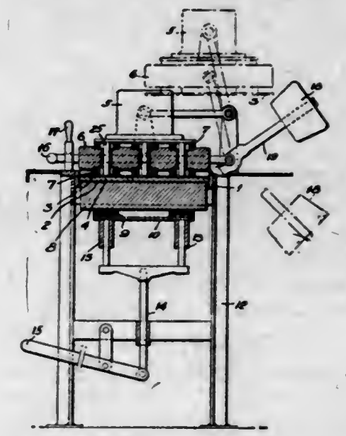
$$\frac{T'_2}{T_3} \sim e_c . e_e \cdot \frac{1-0.97.e.k}{1-0.20.e.k}$$

within a margin of plus or minus six per cent of the absolute temperatures, wherein T'_2 denotes

the absolute temperature of the partly compressed working fluid at the outlet of an intermediate stage of compression means, T_3 the absolute temperature of the expanded working fluid at the outlet of the last stage of expansion means, e_c the internal efficiency of compression, e_e the internal efficiency of expansion, e the thermal overall efficiency of the cycle, and k the efficiency of regenerative heat transfer.

2,407,166
HEAT CYCLE
Johann Kreitner, New York, and Frederick Nettel, Manhasset, N. Y.
Application November 8, 1941, Serial No. 418,288
5 Claims. (Cl. 60—1)

1. In the method of producing power in heat engines through cyclic changes of a gaseous working fluid, the sequence of compression from a starting point of given pressure and temperature to a compression end point of substantially smaller entropy and a temperature more than forty degrees centigrade higher than the temperature at any point within the first half of the compression range, heating to a still higher temperature at substantially constant pressure, expansion therefrom to a point of substantially larger entropy, substantially lower temperature, and a pressure substantially equal to that of the compression starting point.



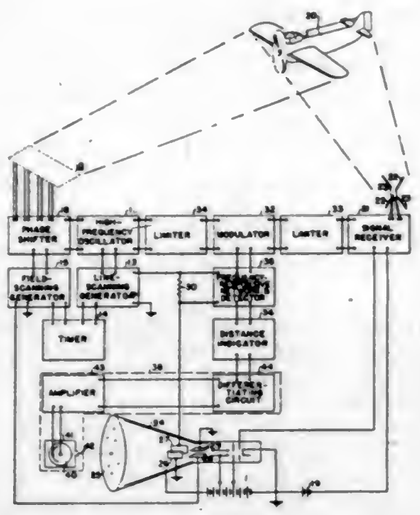
2,407,167
DERIVATIVES OF 1-HYDROXYPHENYL-3-AMINOBUTANE AND PROCESSES FOR THEIR PRODUCTION
Fritz Külz, Frankfort-on-the-Main, Germany; vested in the Alien Property Custodian
No Drawing. Application October 18, 1941, Serial No. 415,519½. In Germany February 21, 1940
3 Claims. (Cl. 260—570.8)

3. A substituted butylamino-butane of the formula

$$X-CH_2-CH_2-\underset{\displaystyle H-\underset{|}{N}-CH_2-CH_2-CH_2-CH_3}{\overset{|}{CH}}-CH_3$$

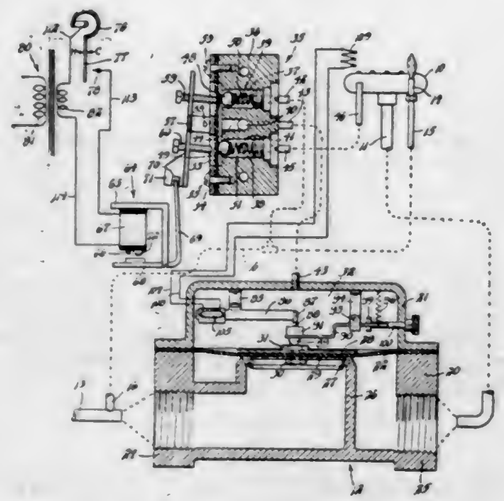
in which X is a hydroxyphenyl radical.

2,407,168
APPARATUS FOR MOLDING CONCRETE
Knut Vilhelm Lindkvist, Stockholm, Sweden, assignor to Aktiebolaget Vibro-Betong, Stockholm, Sweden
Application November 29, 1943, Serial No. 512,272
In Sweden November 28, 1942
10 Claims. (Cl. 25—41)
(Granted under the provisions of sec. 14, act of March 2, 1927; 357 O. G. 5)



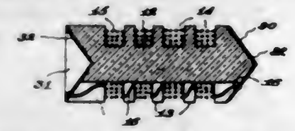
1. An apparatus for producing molded bodies of concrete and the like, which comprises a frame, a mold resiliently mounted in said frame and formed by walls one of which is movable relative to the wall opposite and adapted to compress the material in the mold, vibratory means directly and inelastically contacting one of said opposite walls, means for applying pressure against the same wall in such manner as to compress said material, and resilient means interposed between said mold wall and said pressure means in such manner that the pressure is applied resiliently.

2,407,169
SYSTEM FOR LOCATING RADIATED-SIGNAL REFLECTORS
Arthur V. Loughren, Great Neck, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois
Application May 26, 1941, Serial No. 395,172
9 Claims. (Cl. 250—1)



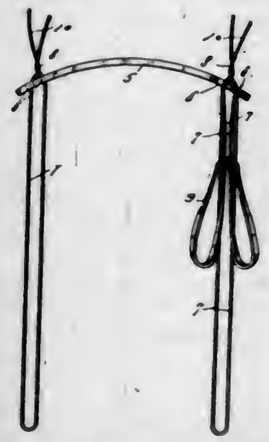
1. A system for locating a radiated-signal reflector comprising, a radiating system having a radiation characteristic effectively in the form of a sharply-concentrated beam, means for applying a carrier signal to said radiating system, means for varying the frequency of said carrier signal to scan a predetermined space in at least one direction with said beam, means for receiving energy from said radiated beam reflected

from said reflector and for utilizing said received energy to indicate the direction of said reflector, and means responsive jointly to said frequency-



modulated signal and said reflected signal for determining the distance of said radiated-signal reflector from said locating system.

2,407,170
CONTROL MECHANISM
Sidney K. Malek, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application November 25, 1942, Serial No. 466,962
16 Claims. (Cl. 158—99)

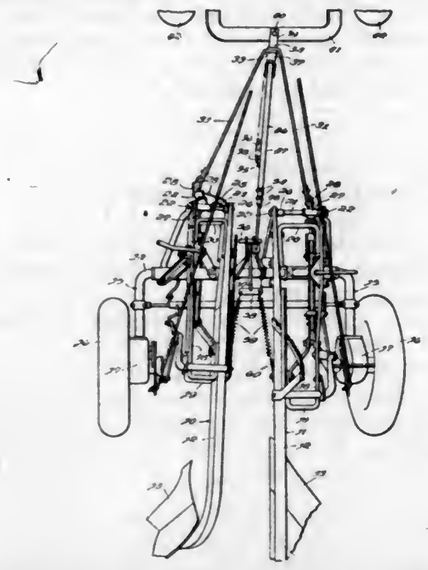


8. In a control mechanism, a control device movable between first and second controlling positions, a stop normally assuming a position in which it prevents movement of said device beyond an intermediate position, a lever carrying said stop and an armature, an electromagnet for cooperating with said armature to move said lever and said stop to a position in which said device may move to said second position, and means for adjusting the normal relationship between said stop and said control device so as to adjust said intermediate position.

2,407,171
FIXED RESISTOR
Lawrence E. McFarren, Indianapolis, Ind., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
Application May 16, 1944, Serial No. 535,788
1 Claim. (Cl. 201—67)

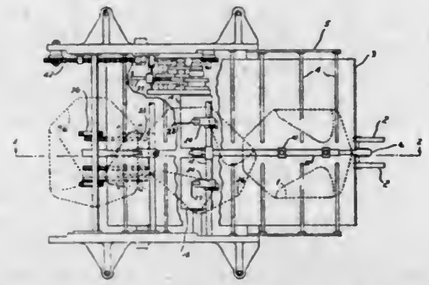
An electrical resistor comprising in combination an insulative tube, a ferrule at each end of said tube, a plurality of stacked unitary resistance elements mounted within said tube, each of said resistance elements including an insulative spool with windings of resistance wire thereon having one of its ends formed with an external conical surface and its other end formed with a corresponding internal conical surface and a metalized layer on each of said surfaces constituting terminals for said windings, the external and internal conical surfaces of adjoining spools being adapted to mate with each other to maintain the relative position of the spools in the stack, means including a fused metallic bond between each pair of adjoining metalized layers for connecting all of said windings in series, and means for connecting the terminals of said serially connected windings to said ferrules.

2,407,172
GAME CARRIER
Clarence H. McMillan, Minneapolis, Minn.
Application November 17, 1945, Serial No. 629,305
3 Claims. (Cl. 224—58)



1. A game carrier comprising a rectangular leather handle having in each end portion two pairs of holes, the holes of each pair being substantially parallel to the longitudinal edges of the handle, and pairs of long rawhide straps, each strap being folded upon itself to form a loop, the end portions of each strap being inserted through one pair of said holes and connected, each looped strap being capable of being folded to form a running noose.

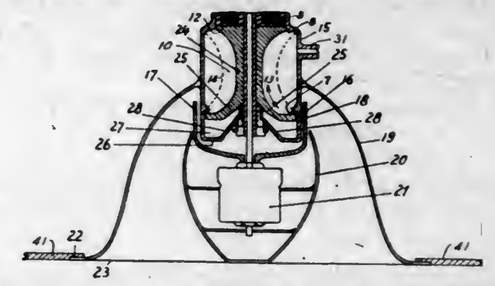
2,407,173
AGRICULTURAL IMPLEMENT
James Morkoski, Canton, Ill., assignor to International Harvester Company, a corporation of New Jersey
Original application June 28, 1943, Serial No. 492,476. Divided and this application November 29, 1944, Serial No. 565,623
4 Claims. (Cl. 97—47)



1. In an agricultural implement adapted for attachment to a tractor, in combination, support-

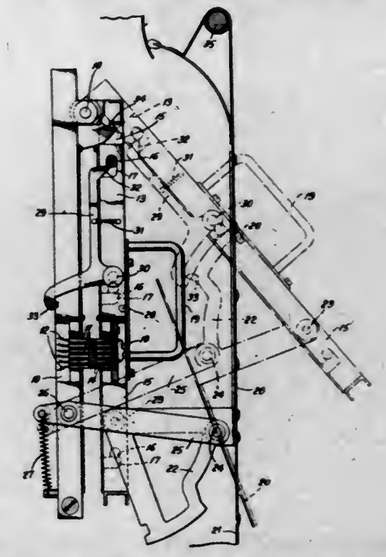
ing wheels on the implement, hitch means on the implement, a member pivoted on the implement for longitudinal rocking movement, means ad-

justable in length rigidly connecting said hitch means and said member for rocking movement therewith, and means biasing said member to forward rocking movement.



2,407,174
ENVELOPE MACHINE
John L. Oberender, Baltimore, Md., assignor to Oles Envelope Corporation, Baltimore, Md., a corporation of Maryland
Application March 23, 1944, Serial No. 527,755
11 Claims. (Cl. 271—2)

1. In an envelope machine, a sheet turning section comprising a pair of rolls and means to rotate them to continuously forward and turn the sheet in its own plane, means to feed a sheet thereto and to receive a sheet therefrom, said rolls being in substantial alignment and having their axes parallel one with the other and with the plane of movement of the sheet, one roll having a forwarding speed greater than the other, and laterally adjustable means, movable laterally to determine the angle of turn, bearing on the sheet opposite said rolls.



2,407,175
ECHO SOUNDING DEVICE
Peter Orlich, Günther Negel, and Hans Hartz, Kiel, Germany; vested in the Alien Property Custodian
Application November 14, 1940, Serial No. 365,646
In Germany May 2, 1939
3 Claims. (Cl. 116—147)

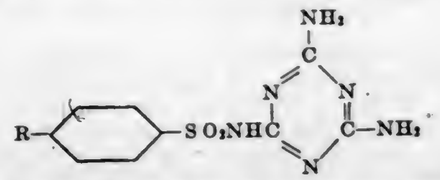
1. In a siren, a casing enclosing an air chamber, means for delivering compressed air to said chamber, said casing having ports for emitting compressed air from said air chamber, a rotor mounted adjacent said ports, and means for driving said rotor at a predetermined speed, said rotor having ports coacting with said casing ports to control the emission of compressed air from said air chamber to produce a sound of definite frequency, a valve seat and a differential valve in said air chamber coacting to control the flow of compressed air from said chamber to said ports, the armature of said valve constituting an inner wall of the air chamber and designed to recip-

rocate in the direction of its longitudinal axis, the configuration of the armature being such as to form an outer curved surface defining a relatively small curved zone within the air chamber, whereby said air chamber is tuned to said frequency so that standing sound waves are set up with a loop at said ports and a node at the end of said air chamber most remote from said ports, the distance from said ports through said air chamber to the most remote part of the inner wall of said casing being equal to an uneven multiple of one fourth of the wave length of the emitted sound waves.

2,407,176
PLUGBOARD
Donald R. Piatt, Endicott, and Alvin E. Gray, Binghamton, N. Y., assignors to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application December 12, 1944, Serial No. 567,856
3 Claims. (Cl. 173—328)

1. In a machine having a stationary plugboard panel, the combination of a plugboard supporting frame pivoted at the upper end of said panel, a plugboard insertible in the frame and swingable with the frame to move the plugging face of the board outward and upward to an accessible plugging position, a member pivoted to the frame, a link pivoted to the stationary panel, said member and link being articulated

to form a toggle to hold the frame in its plugging position, a latch for locking said member to the frame, and means controlled by the plugboard when it is not set in a predetermined location in the frame for causing the latch to lock the frame in plugging position.



2,407,177

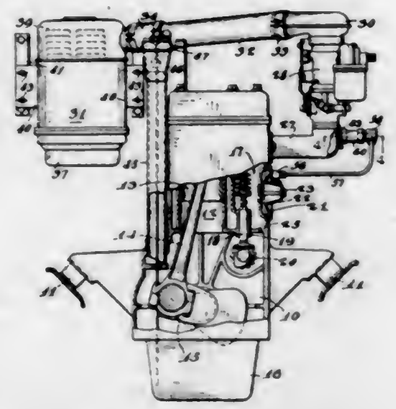
SULPHONAMIDE DERIVATIVES OF MELAMINE AND PROCESSES FOR THEIR PRODUCTION

Richard O. Roblin, Jr., Old Greenwich, and Philip S. Winnek, Riverside, Conn., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine

No Drawing. Application July 31, 1942, Serial No. 453,100
8 Claims. (Cl. 260—239.6)

1. A compound of the group consisting of those represented by the following formula and salts thereof:

in which R is a member of the group consisting of amino radicals and radicals reducible to an amino group.



5. The process which comprises reacting melamine with a p-nitrobenzenesulphonyl halide to give p-nitrobenzenesulphonamido melamine and subsequently reducing the p-nitro group to a p-amino group.

2,407,178

CRANKCASE VENTILATION SYSTEM AND APPARATUS

Delmar G. Roos, Toledo, Ohio, assignor to Willys-Overland Motors, Inc., Toledo, Ohio, a corporation of Delaware

Application October 15, 1943, Serial No. 506,453
3 Claims. (Cl. 123—119)

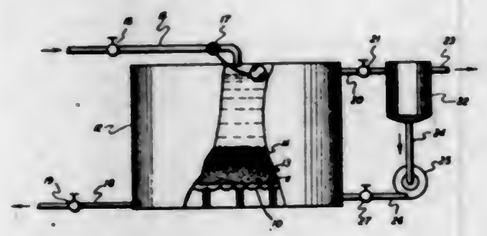
3. In combination, an internal combustion engine having a series of vertical cylinders arranged in a line, and a crank case below the cylinders, a valve chamber laterally disposed to the cylinders, a carburetor having an intake and an outlet, an oil filler tube projecting from above the engine and extending into the crankcase below the valve chamber and on the opposite side of the cylinders from the said chamber, an air cleaner on the same side of the engine as the filler tube, means connecting the carburetor's intake with said air cleaner, an air conduit connected to said filler tube, means connecting the air cleaner and said air conduit, a closure for sealing the upper end of the filler tube, an intake manifold connected to the carburetor's outlet, and valve means connecting the valve chamber and the intake manifold.

2,407,179

INSTANTANEOUS RECORDING COMPOSITION

Albert B. Savage, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Michigan

No Drawing. Application December 31, 1942, Serial No. 470,912
7 Claims. (Cl. 106—37)



1. A sound record of the instantaneous recording type, the composition whereof includes ethyl cellulose and as a plasticizer therefor a lower alkyl ester of ricinoleic acid.

2,407,180

METHOD OF PURIFYING OIL FIELD WATERS

Harold Schiller, Los Angeles, and Abraham Shapiro, Monrovia, Calif., assignors to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York

Application October 30, 1943, Serial No. 508,360
2 Claims. (Cl. 210—2)

1. The method of removing clay-suspended petroleum from oil-field water, which comprises: passing said water by controlled flow through a bed composed of granules of ferrous sulfid (FeS) and thereby transferring said petroleum from said clay suspension to the granules composing said bed; passing substantially oil-free clay particles from said suspension out of said bed into suspension in the effluent water and retaining the petroleum in said bed.

2,407,181

ARTIFICIAL WAXES AND GREASES

Samuel Le Roy Scott, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application March 30, 1944, Serial No. 528,770
8 Claims. (Cl. 260—2)

1. Process for the preparation of greasy to waxy, silicon-containing, polymeric materials which comprises reacting ethylene with a silicon halide containing not more than twenty-one carbon atoms and having directly attached to silicon at least one halogen selected from the class consisting of fluorine, chlorine, and bromine, at 50–300° C. and a pressure of at least 20 atmospheres, any catalyst present being a polymerization catalyst ineffective in the Friedel-Crafts reaction.

2,407,182

PROCESS FOR PREPARING 2,6-NITRO CHLOR BENZYL ALCOHOL

Frederic Sievenpiper, Alden, N. Y., assignor to Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York

No Drawing. Application September 23, 1942, Serial No. 459,429
6 Claims. (Cl. 260—618)

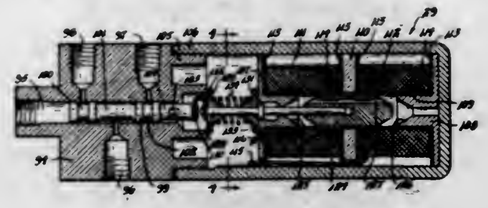
1. An improved process for the production of 2,6-nitro chlor benzyl alcohol from a brominated mixture containing 2,6-nitro chlor benzyl bromide together with a substantial proportion of 2,6-nitro chlor toluene, obtained by partial bromination of 2,6-nitro chlor toluene, which comprises boiling said mixture with an aqueous hydrolyzing agent for 2,6-nitro chlor benzyl bromide to produce 2,6-nitro chlor benzyl alcohol, simultaneously condensing the vapors emanating from said mixture, and separating the water-immiscible portion of the condensate from the aqueous portion thereof to recover the unreacted 2,6-nitro chlor toluene.

2,407,183

RUBBER COMPOSITION

Frank J. Soday, Swarthmore, Pa., assignor to The United Gas Improvement Company, a corporation of Pennsylvania

No Drawing. Application October 17, 1942, Serial No. 462,411
17 Claims. (Cl. 260—36)



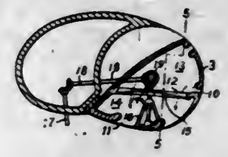
1. A new composition of matter comprising an ester of alkyl phenyl ethyl alcohol in which said alkyl substituent appears on the ring, and rubber selected from the group consisting of natural rubber and rubber-like polymers of butadiene, isoprene, piperylene, and 2-chlorobutadiene.

2,407,184

SOLENOID VALVE

Hubert T. Sparrow, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Milwaukee, Wis., a corporation of Delaware

Application October 14, 1942, Serial No. 461,956
5 Claims. (Cl. 137—139)



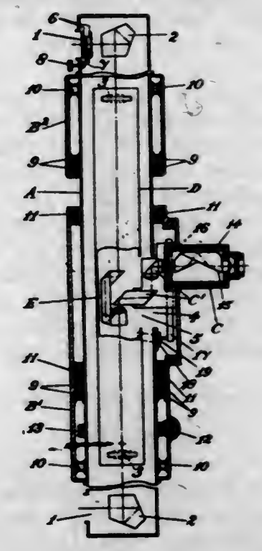
2. A solenoid valve, comprising, in combination, a valve body having a longitudinal bore, a piston valve having a neutral center position in said bore, a solenoid housing detachably secured to said valve body, a solenoid in the housing and spaced from said valve body, a plunger operably disposed in said solenoid substantially axially of said piston valve, said plunger having a neutral center position, a driving connection detachably jointing said plunger and said piston valve and permitting limited relative movement there between, a centering spring fixed to said driving connection and functioning to normally maintain said plunger and said piston valve in centered positions when said valve body and said solenoid housing are assembled, said fixed spring permitting said plunger to depart from centered positions when said body and said housing are disassembled.

2,407,185

WING WITH FLAP ENCLOSING A BLOWER MEANS

Edward A. Stalker, Bay City, Mich.

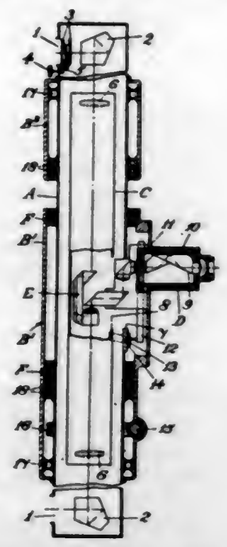
Application December 5, 1944, Serial No. 566,766
8 Claims. (Cl. 244—42)



1. A wing structure of the character described which comprises a wing main body, a flap adjustably supported on said body to define a wing therewith, means forming a slot in said wing for developing boundary layer control, blower means located in said flap, and means establishing communication between said blower and said slot to induce a flow therethrough.

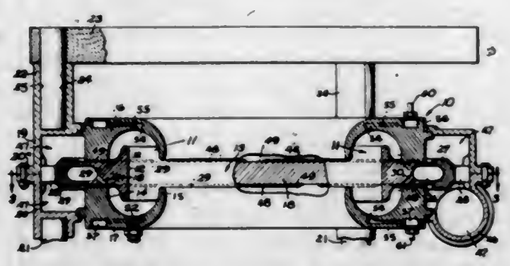
2,407,186

RANGE FINDER, HEIGHT FINDER, AND LIKE MEASURING INSTRUMENT



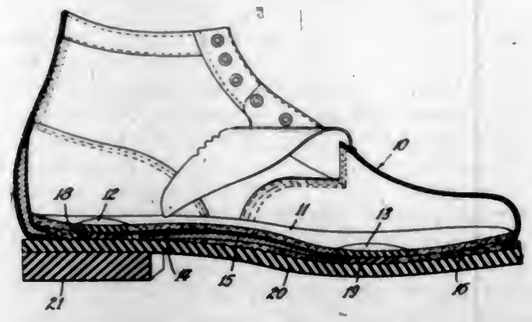
John Martin Strang and Claud Foster, Glasgow, Scotland, assignor to Barr & Stroud, Limited, Glasgow, Scotland

Application December 1, 1944, Serial No. 566,221
In Great Britain March 14, 1941
5 Claims. (Cl. 88—2.7)



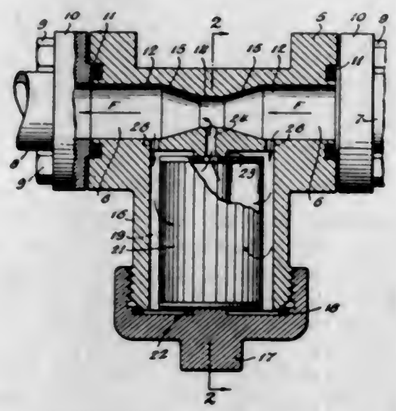
1. A fixed eyepiece rangefinder comprising a bearing, a base casing which is rotatable in the bearing for varying the elevation of the line of sight, an eyepiece fixedly carried by the bearing, a prism combination fixed in position relative to the bearing to receive light from the base casing and transmit it through an aperture provided in the base casing to the eyepiece, an erecting prism carried by the bearing between the prism combination aforesaid and the eyepiece and through which the light is directed in its path from the prism combination to the eyepiece, a carrier for said erecting prism, said carrier being rotatable relative to the bearing, and scroll cam mechanism connecting the base casing with said carrier to rotate said carrier and erecting prism from said base casing at half the angular speed of rotation of said casing, said scroll cam mechanism including a scroll-shaped cam rotatable about the axis of the scroll and a linearly movable member engaging with said cam for the transmission of motion from said casing to said carrier.

2,407,187
RANGE FINDER, HEIGHT FINDER, AND LIKE OPTICAL MEASURING INSTRUMENT
John Martin Strang and Claud Foster, Glasgow, Scotland, assignors to Barr & Stroud, Limited, Glasgow, Scotland
Application December 1, 1944, Serial No. 566,222
In Great Britain March 14, 1941
7 Claims. (Cl. 88—2.7)



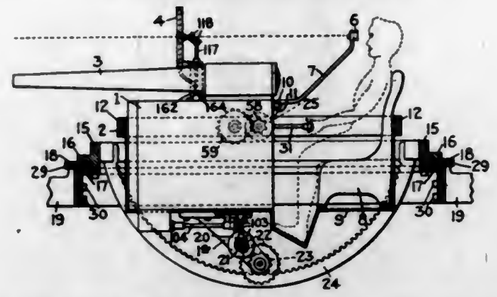
1. A fixed eyepiece rangefinder comprising a tubular base casing, a stationary bearing tube coaxial with the base casing and in which the base casing is rotatably carried, an eyepiece carried by the bearing tube, the bearing tube extending in the axial direction from one side to the other of an aperture provided in the base casing for the passage of light from the interior of the base casing to the eyepiece, anti-friction bearings by means of which the base casing is rotatably carried in the bearing tube, and, on each side of the said aperture, an annular tongue and groove arrangement which constitutes a sealing labyrinth as distinct from a bearing, the tongue element and groove element thereof being relatively movable in rotating the base casing.

2,407,188
BURNER
William S. Sutton, Rockford, Ill.
Application September 27, 1943, Serial No. 503,951
10 Claims. (Cl. 110—28)



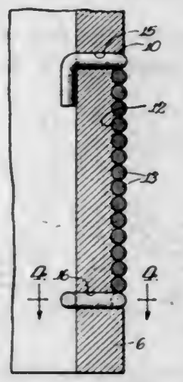
1. A burner of the character set forth comprising, in combination, a burner head comprising upper and lower members each having a semicircular channel, a spacer ring interposed between said members with said channels in opposed relation to form a mixing and combustion chamber, said members defining an annular outlet opening at the inner side of said chamber, and means for supplying fuel to said chamber including an annular channel in said spacer ring and ports connecting said channel with said chamber.

2,407,189
SHOE
John E. Taber, Jr., South Bend, and Kenneth L. Keene, Mishawaka, Ind., assignors to Mishawaka Rubber and Woolen Manufacturing Company, Mishawaka, Ind., a corporation of Indiana
Application January 26, 1942, Serial No. 428,172
3 Claims. (Cl. 175—264)



1. A conductive shoe comprising a conductive outsole designed for direct contact with the ground, said outsole being formed of relatively soft flexible material which presents a relatively high resistance to static electrical charges, an insole substantially coextensive with the inner face of said outsole, said insole comprising a strip of relatively soft material including a ball portion, a heel portion and a connecting arch portion, there being openings extending completely through the ball and heel portions of said strip respectively, and an insert of relatively soft flexible conductive material disposed in each of said openings, said inserts also presenting a relatively high resistance to static electrical charges and conductively connected to said outsole whereby such charges are slowly and without an attendant spark conducted from the foot through the insole and outsole to the ground.

2,407,190
FILTER FOR FLUID FLOW SYSTEMS
William O. Tait, Garden City, N. Y., assignor to Sperry Gyroscope Company, Inc., a corporation of New York
Application June 30, 1944, Serial No. 542,855
4 Claims. (Cl. 210—164)

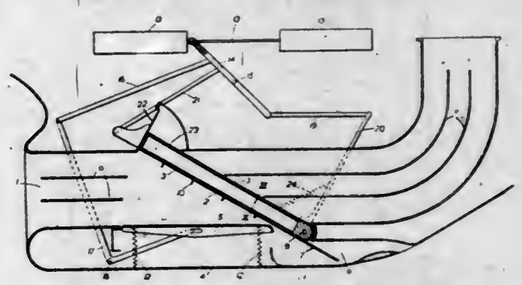


2. A filtering device for filtering fluid comprising a conduit section adapted to form a part of a closed fluid-circulating system and shaped to provide a venturi responsive to flow in either direction to produce a reduced static pressure and increased velocity of the fluid at one point in said conduit, an auxiliary passage leading from another point in the same conduit as the first point but in a region of higher static pressure and discharging into the conduit at said one point, and a filtering element in said passage whereby a portion of the fluid flowing in the system is directed through the filtering element always in the same direction while flow in the system takes place in either direction.

2,407,191
GUN SIGHT
James D. Tear, Great Neck, and Charles W. Buckley, Mount Vernon, N. Y., assignors to Ford Instrument Company, Inc., Long Island City, N. Y., a corporation of New York
Application January 22, 1941, Serial No. 375,426
10 Claims. (Cl. 33—49)

1. Gun sighting apparatus for use on moving ships and other craft comprising a base adjustable about a train axis, a sight carried by the base and angularly adjustable with respect to a datum line thereon, power means for training the base, a relay device in control of the power means, manual means operative to actuate the relay, a mechanical vector operatively connected to be set in direction by the power means and in length according to the ship's speed and including component solving means, transmitting means operative to receive and transmit the movement of the manual means, means for combining a sight angle component of the vector with the movement of the transmitting means, a multiplier adapted to have a function of range introduced therein as one input and the said combination as the other input, and means operated by said multiplier for adjusting the sight according to the product.

2,407,192
PISTON
Ralph R. Teetor, Hagerstown, Ind., assignor to The Perfect Circle Company, Hagerstown, Ind., a corporation of Indiana
Application May 25, 1944, Serial No. 537,252
4 Claims. (Cl. 309—13)

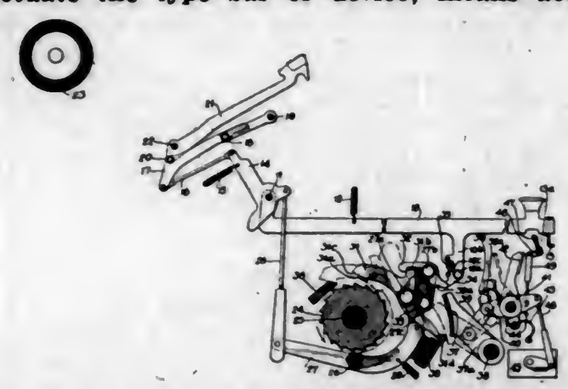


4. In a piston for use in a cylinder of an internal combustion engine, a piston skirt provided with a longitudinal slot and a circumferential groove with a spiral thread and formed of metal having a coefficient of expansion higher than that of cast iron or steel, a wire formed of metal having a lower coefficient of expansion than that of the skirt and tightly wound in the spiral thread of said groove in a series of turns around the slotted portion of the skirt and compressing the skirt to reduce its unconfined diameter to its final effective diameter, with the outer portions of the turns of wire projecting beyond the outer surface of the skirt to provide a bearing adapted to engage the wall of the cylinder, and means for fastening the ends of the wire to the skirt.

2,407,193
RUBBER RECLAIM
Harry H. Thompson, Akron, Ohio, assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
No Drawing. Application March 6, 1942, Serial No. 433,673
3 Claims. (Cl. 260—714)

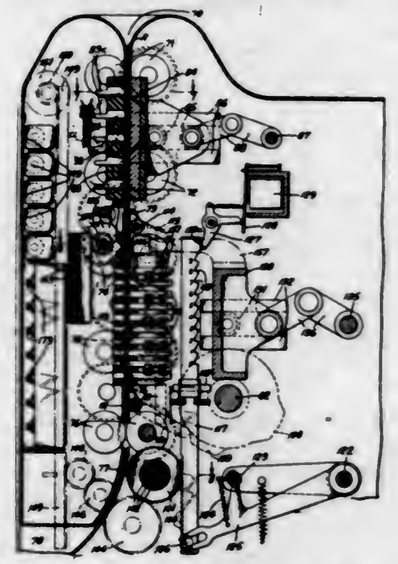
1. A process for preparing a non-staining reclaim rubber which comprises refluxing solid, alkali reclaimed rubber with a solvent mixture containing 50 to 90 percent of carbon tetrachloride, the remainder of the solvent mixture being methyl alcohol.

2,407,194
FILTER
Cecil Gordon Vokes, London, England
Application June 8, 1943, Serial No. 490,067
In Great Britain June 11, 1942
11 Claims. (Cl. 183—33)



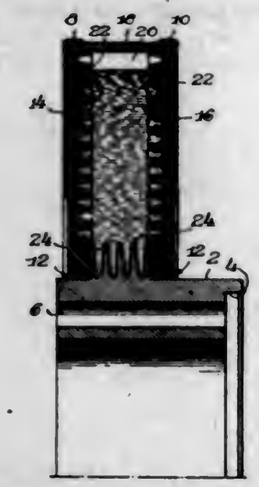
1. In an aircraft having an engine, a duct for delivering air to the engine, filtering means selectively functioning at will to filter the air passing through said duct to the engine or to permit the air passing through the duct to the engine to be free of filtration, manually controlled mechanism for said filtering means to cause the air passing through the duct to the engine to remain unfiltered, and means to utilize a portion of the air flowing through the duct in unfiltered condition as a pressure medium to pass through the filtering means in a direction reverse to the direction of the air therethrough during its filtering function, whereby such reversely directed current of air tends to clean the filter.

2,407,195
TYPEWRITING MACHINE
Richard Von Reppert, Rochester, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application February 17, 1944, Serial No. 522,737
16 Claims. (Cl. 197—17)



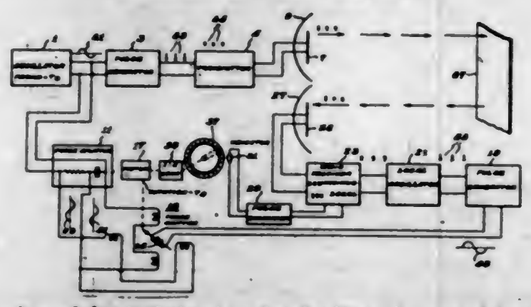
1. In combination with a power operating mechanism for the type bars and other devices of a typewriting machine wherein there is provided a power driven actuator and a power operating device for each type bar or device, each

device including means releasable for operative engagement with the power driven actuator to actuate the type bar or device; means acting



directly upon the releasable means for disengaging the releasable means from the operating member, and manual means for operating the disengaging means.

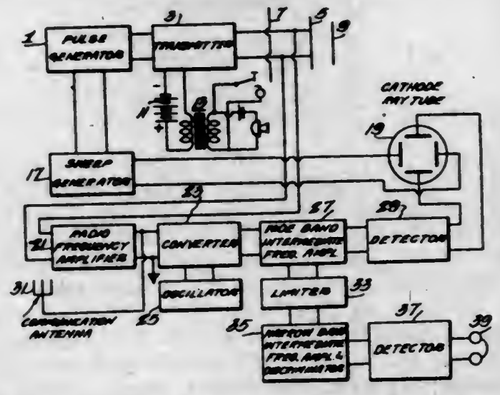
2,407,196
ACCOUNTING MACHINE
Thomas J. Watson, New York, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application July 15, 1943, Serial No. 494,819
3 Claims. (Cl. 235—61.9)



1. In a machine controlled by a record card having a plurality of marking areas thereon in each of which areas a mark may be made to represent a commodity, a plurality of settable switches for each marking area, the switches for each area being settable to represent a selected value for the related commodity, means for sensing the areas of the card, punching mechanism, accumulating mechanism, operating means therefor, means jointly controlled by said sensing means and said settable switches, for controlling the operating means of said accumulating mechanism to obtain therein the total of the values represented by the switches whose related areas contain marks, further means jointly controlled by said sensing means and said settable switches for controlling a portion of said punching mechanism to individually record in the card the values represented by the switches whose related areas contain marks, and means controlled by said accumulating mechanism concurrently with the operation of said last named means, for controlling another portion of said punching mechanism to record in the card the total of said values together with the recording of the individual values.

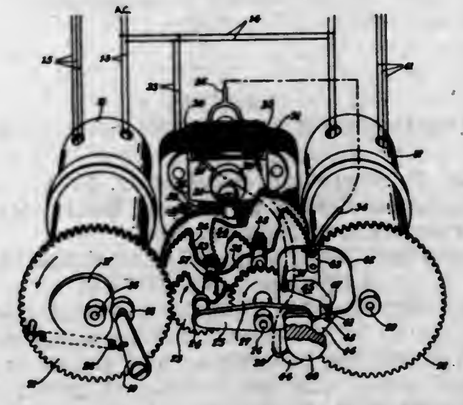
2,407,197
BRAKE ROTOR
Raymond Watts, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application January 12, 1944, Serial No. 517,942
3 Claims. (Cl. 188—264)

1. In a fabricated brake rotor, a cylindrical support member having radially and circumferentially extending heat dissipating fins integral with the outer perimeter thereof and spaced from the ends thereof, a brake ring comprising spaced annular plates sleeved over said member and having the inner perimeter thereof welded to the outer perimeter of said member at opposite sides of said fins, said plates defining an annular chamber therebetween, a cylindrical closure ring between said plates and recessed in the outer perimeters thereof and welded thereto, friction plates secured to said annular plates on the remote sides thereof, a plurality of heat dissipating fins integral with the other sides of said annular plates and projecting axially therefrom at opposite sides of said chamber into said chamber, and a substance within said chamber having the characteristics of high thermal capacity and conductivity.



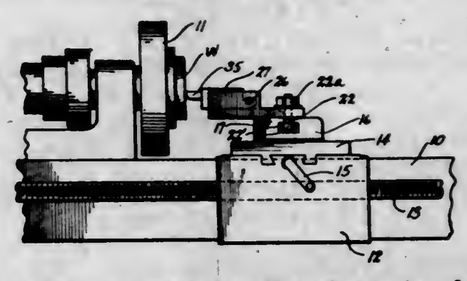
2,407,198
DISTANCE AND DIRECTION DETERMINATION SYSTEM
Irving Wolff, Merchantville, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application March 19, 1938, Serial No. 196,863
21 Claims. (Cl. 250—1)

1. An object detector including in combination means for radiating pulses of radio frequency energy, a superheterodyne device including a local oscillator for receiving said energy after reflection from the object to be detected, means for



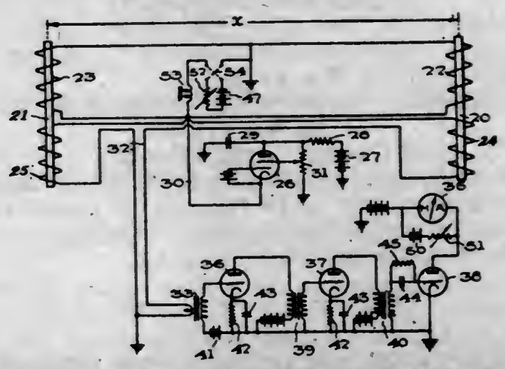
making the local oscillator of said receiving device oscillate at continuously varying intervals after the radiation of each of said pulses, a second means synchronously varying at said continuously varying rate, and means including said device for indicating the response to said reflected energy.

2,407,199
COMMUNICATION AND DISTANCE DETERMINING SYSTEM
Irving Wolff, Merchantville, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application June 29, 1940, Serial No. 343,133
22 Claims. (Cl. 250—1)



1. A system for the simultaneous detection of wave reflecting objects and the transmission of intelligence including means for radiating discrete pulses at a pulse carrier frequency which may be filtered with respect to the frequency of said intelligence transmission, means for receiving said pulses after reflection, means connected to said receiving means for indicating visually the reception of a reflected pulse to indicate a wave reflecting object, and means effectively connected to said radiating means for modulating said pulses with signals to be transmitted simultaneously.

2,407,200
FOLLOW-UP MECHANISM
Louvan E. Wood, Baltimore, Md., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application December 11, 1944, Serial No. 567,576
6 Claims. (Cl. 172—239)



1. In a synchronous drive, driving and driven self-synchronous motors disposed in cooperative relationship, and carrying driving and driven gears respectively; a rockable carrier pivoted adjacent said motors; a planet gear journaled on said carrier and meshing with said driving gear; a sun gear meshing with said planet gear and said driven gear; a reversible power motor having driving connection with, and operable to apply rotative efforts to said driven motor; and circuit means, automatically controlled by rocking movement of said carrier, for so controlling said power motor as to cause said driven motor to synchronously follow said driving motor.

2,407,201
INTERCHANGEABLE TOOLHOLDER
Edward F. Woodward, Seattle, Wash.
Application May 22, 1944, Serial No. 536,683
1 Claim. (Cl. 82—35)

A tool holding means of the character described comprising a base block adapted for fixed securement to a cross slide or the like, and having a longitudinal, upwardly opening channel therein formed with a flat bottom surface, an anchor pin mounted in the block and extended transversely through the channel near the inner end thereof, and a tool holding bar fitted in the channel, between its side walls, and having means at its outer end for mounting a tool and having an extension at its inner end for engaging beneath the anchor pin; said extension having a cross channel seating the pin therein when the bar is in place and said extension of the bar having its bottom surface curved about the axial line of the anchor pin and providing release of the bar from the pin by upward swinging movement of its outer end.

2,407,202
APPARATUS FOR RESPONDING TO MAGNETIC FIELDS
Victor V. Vacquier, Garden City, N. Y., assignor to Gulf Research & Development Company, Pittsburgh, Pa., a corporation of Delaware
Original application July 21, 1941, Serial No. 403,455. Divided and this application July 17, 1945, Serial No. 605,550
6 Claims. (Cl. 177—380)

1. An apparatus responsive to space gradient of magnetic field comprising a pair of slender cores of minimal cross-sectional area and of material of high permeability and characterized in that the hysteresis loop thereof exhibits a sharp knee where saturation is reached, said cores arranged parallel to each other and with a spacing between them such that the gradient may estab-

lish a difference in field at their respective locations, means for cyclically energizing said cores to saturation in the same sense whereby each core abruptly reaches saturation at a phase of the energizing cycle which is shifted by changes in the ambient field at said core, windings adjacent said cores connected in opposition to deliver the differences between voltages induced by said cores, whereby said phase shifts cause production of sharp voltage pulses which vary in magnitude with a change in field at either one of the cores, and transducing means selective to said pulses in energy-receiving relation to said windings.

2,407,203

α-AMINO-γ-ALKOXYBUTYRIC ACIDS AND METHOD OF PREPARING THE SAME

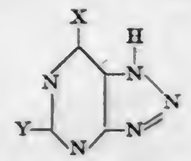
Quintin P. Cole and Richard O. Roblin, Jr., Old Greenwich, Conn., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine

No Drawing. Application May 29, 1944, Serial No. 537,968

1 Claim. (Cl. 260—534)

α-Amino-γ-methoxybutyric acid.

2,407,204



TRIAZOLO (d) PYRIMIDINES AND METHODS OF PREPARING THE SAME

Jackson P. English, Stamford, James R. Vaughan, Jr., Greenwich, and Richard O. Roblin, Jr., Old Greenwich, Conn., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine

No Drawing. Application July 22, 1944, Serial No. 546,206

8 Claims. (Cl. 260—251)

1. Chemical compounds corresponding to the general formula:

wherein X and Y are members of the group consisting of hydrogen, hydroxy, amino, thio, alkylthio, alkoxy, and alkylamino radicals.

2,407,205

INSECT REPELLENTS

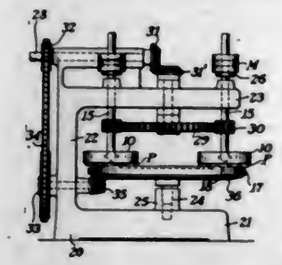
Benjamin G. Wilkes, Wilkinsburg, Pa., assignor to Carbide and Carbon Chemicals Corporation, a corporation of New York

No Drawing. Application February 11, 1943, Serial No. 475,566

8 Claims. (Cl. 167—22)

7. A method of repelling insects which includes applying to a zone to be treated an insect repellent comprising as an essential repellent ingredient thereof 2-ethylhexanediol-1,3.

2,407,206



METHOD AND APPARATUS FOR GRINDING AND POLISHING SURFACES

Benjamin E. Luboshez, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

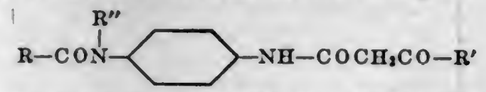
Application June 23, 1944, Serial No. 541,679

9 Claims. (Cl. 51—131)

4. A grinding and polishing apparatus comprising in combination a tool having a grinding surface which is longer than it is wide; a blocking member adapted for blocking a plurality of elements in side by side relation with the surface of each element to be worked lying substantially in a common plane and constituting a substantially continuous annular surface the inner diameter of which is greater than the width of the grinding surface; means for mounting said blocking member relative to said tool so that said annular surface extends across the width of said grinding surface and is adapted to contact the

same in two oppositely disposed arcuate areas each and every arc thereof which is concentric with the center of said annular surface being of equal length; means for applying a pressure to the blocking member to force said annular surface against said grinding surface, said means disposed so that the pressure per unit area between the grinding surface and said annular surface is equal over the entire areas of the two in contact at any instant; and means for rotating said blocking member relative to said tool about an axis which is at the center of said annular surface.

2,407,207



PROCESS OF PRODUCING P-PHENYLENE DIAMINES

Ilmari F. Salminen and Arnold Weissberger, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

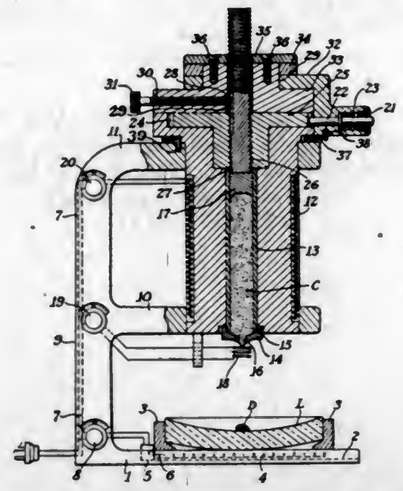
No Drawing. Application June 8, 1944, Serial No. 539,398

6 Claims. (Cl. 260—558)

1. A compound having the following formula:

where R is an aryl radical, R'' is selected from the class consisting of hydrogen and hydrocarbon groups, and R' is selected from the class consisting of alkyl and aryl groups.

2,407,208



MACHINE FOR METERING CEMENT TO LENSES

William T. Sherwood, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

Application March 7, 1945, Serial No. 581,529

5 Claims. (Cl. 91—43)

1. A machine for applying metered quantities of cement to lenses comprising a support, a lens holder mounted thereon, a cement cylinder mounted above the lens holder, a plunger movably mounted in the cylinder, a pawl and ratchet for advancing the plunger into the cylinder by predetermined amounts, a coupling on the cylinder positioned over the lens holder, a nozzle having an orifice adapted to be attached to the coupling and to extend downwardly therefrom and over the lens holder, said plunger being adapted to extrude measured droplets of cement through said nozzle and upon a lens held by said holder, and a heating element extending

about said orifice and out of contact therewith for maintaining said droplets of cement issuing from the nozzle at a temperature facilitating dropping.

2,407,209

STABILIZATION OF NITROCELLULOSE FILM BASE

Donald R. Swan and John M. Calhoun, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

No Drawing. Application November 19, 1942, Serial No. 466,226

3 Claims. (Cl. 106—182)

1. A composition adapted for the preparation of photographic film base essentially consisting of nitrocellulose and a stabilizing amount of a hydroxy aromatic compound selected from the group consisting of p-tertiary butyl phenol, p-tertiary amyl phenol, and p-hydroxy phenyl acetic acid.

2,407,210

COLOR COUPLERS

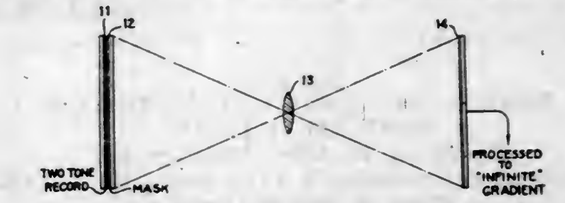
Arnold Weissberger, Charles J. Kibler, and Paul W. Vittum, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

No Drawing. Application April 14, 1944, Serial No. 531,124

17 Claims. (Cl. 95—6)

7. The method of producing a yellow photographic image in a gelatino-silver halide emulsion layer, which comprises exposing said layer and developing it with a primary aromatic amino developing agent in the presence of an o-alkoxybenzoyl-acetanilide coupler compound.

2,407,211



LINE AND HALFTONE REPRODUCTION

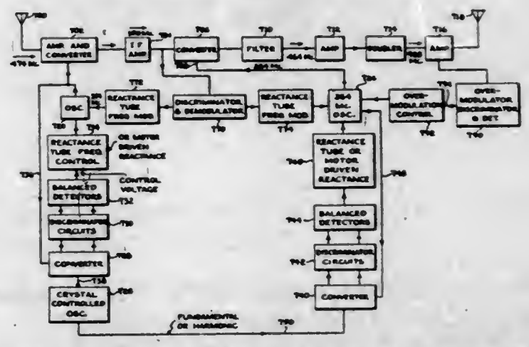
John A. C. Yule, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

Application May 26, 1944, Serial No. 537,443

18 Claims. (Cl. 95—5)

1. A photographic process for the reproduction of a minutely detailed two-tone original including a series of printing steps, the last one of the series being the first infinite gradient step of the process, one of the steps of the series consisting of printing a record from a previous record which is unsharply masked at least during the major portion of the printing exposure, the mask being negative to the record it is masking and having an effec-

tive masking factor between .2 and .7 and an effective unsharpness sufficient to cause the finer details of the original to be substantially lost in the mask but not greater than .06 inch.



2,407,212

RADIO RELAYING

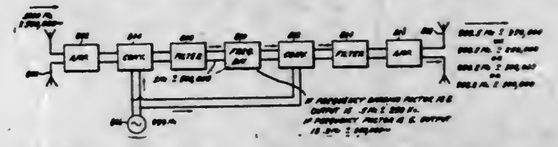
Harry Tunick, Rye, N. Y., assignor to Radio Corporation of America, a corporation of Delaware

Original application June 16, 1942, Serial No. 447,225. Divided and this application June 13, 1944, Serial No. 540,060

20 Claims. (Cl. 250—15)

1. The method which includes heterodyning electrical waves down to an intermediate frequency, frequency multiplying the waves of intermediate frequency and heterodyning the frequency multiplied waves to a wave of higher frequency.

2,407,213



RADIO RELAYING

Harry Tunick, Rye, N. Y., assignor to Radio Corporation of America, a corporation of Delaware

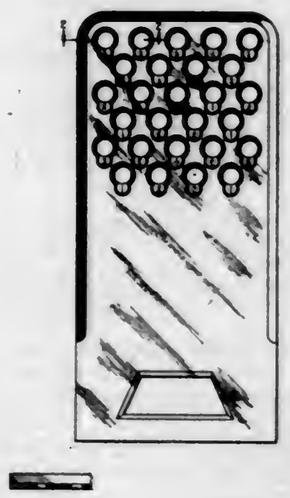
Original application June 16, 1942, Serial No. 447,225. Divided and this application June 13, 1944, Serial No. 540,061

10 Claims. (Cl. 250—15)

1. The method of reducing the phase or frequency deviation of phase or frequency modu-

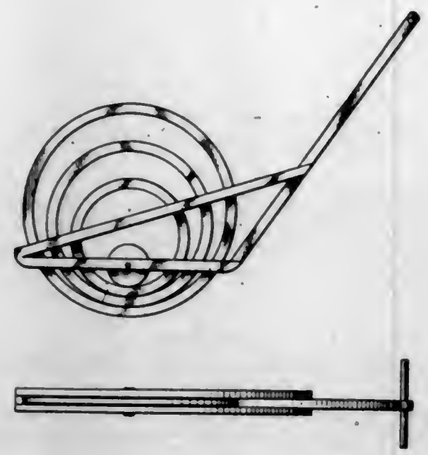
lated waves which includes generating oscillations of relatively constant frequency, utilizing a portion of the generated oscillations to heterodyne the phase or frequency modulated waves down to a relatively low intermediate frequency, frequency dividing the waves of intermediate frequency, and utilizing another portion of the locally generated waves to heterodyne the frequency divided waves to a higher mean frequency.

DESIGNS



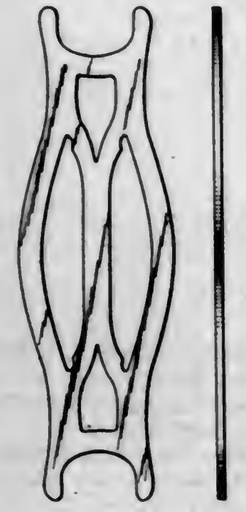
SEPTEMBER 3, 1946

145,500
DESIGN FOR A STEAK PLATTER OR SIMILAR ARTICLE
Benjamin H. Adler, Chicago, Ill.
Application November 3, 1945, Serial No. 123,433
Term of patent 14 years
(Cl. D44—15)



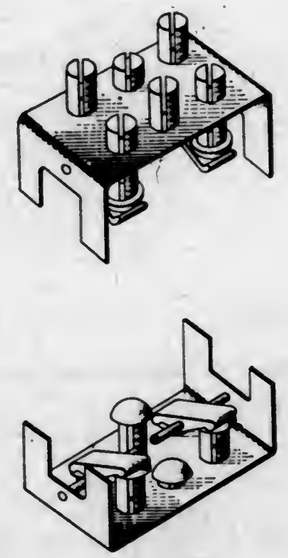
The ornamental design for a steak platter or similar article, as shown and described.

145,501
DESIGN FOR A GAME BOARD
Irving Altman, New York, N. Y.
Application July 16, 1945, Serial No. 120,727
Term of patent 7 years
(Cl. D34—5)



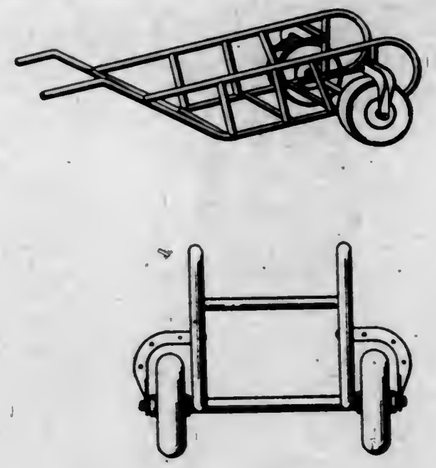
The ornamental design for a game board, substantially as shown and described.

145,502
DESIGN FOR A PUSH TOY
Dwight Moody Auchard, Vallejo, Calif.
Application October 10, 1945, Serial No. 122,726
Term of patent 14 years
(Cl. D34—15)



The ornamental design for a push toy, substantially as shown and described.

145,503
DESIGN FOR A HAND LINE HOLDER
Charles H. Badgley, East Cleveland, Ohio
Application November 19, 1945, Serial No. 123,917
Term of patent 14 years
(Cl. D31—4)

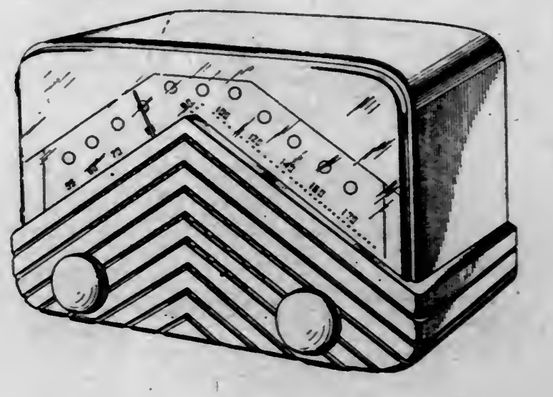


The ornamental design for a hand line holder, as shown.

145,504
DESIGN FOR A POUNDING TOY
Samuel L. Beder, New York, N. Y.
Application November 9, 1945, Serial No. 123,601
Term of patent 7 years
(Cl. D34—15)

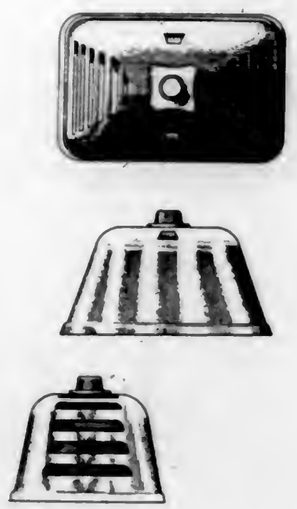
The ornamental design for a pounding toy, substantially as shown.

145,505
DESIGN FOR A HAND TRUCK
Alvin H. Beidelman, Jr., Naperville, Ill.
Application November 26, 1945, Serial No. 124,082
Term of patent 14 years
(Cl. D14—3)



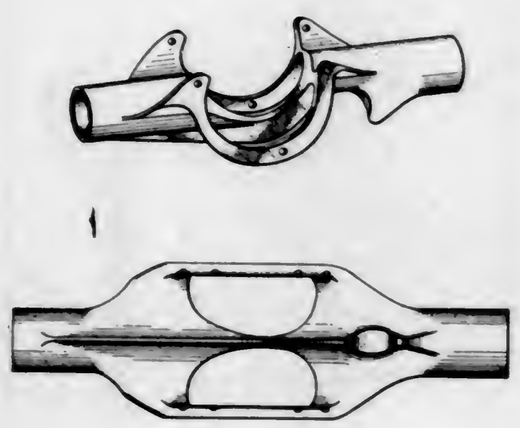
The ornamental design for a hand truck, substantially as shown.

145,506
DESIGN FOR A LIPSTICK HOLDER
John D. Buckingham, Chicago, Ill., assignor to Lucien Lelong, Inc., Chicago, Ill., a corporation of Illinois
Application March 22, 1946, Serial No. 127,770
Term of patent 14 years
(Cl. D86—10)



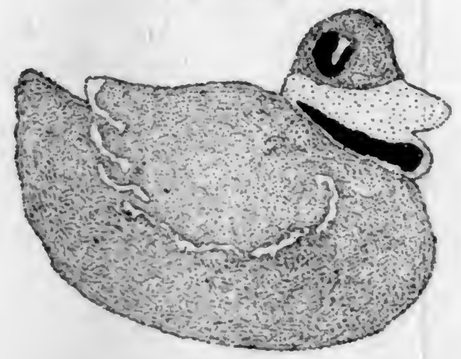
The ornamental design for a lipstick holder or similar article, as shown.

145,507
DESIGN FOR A RADIO CABINET
Robert Davol Budlong, Skokie, Ill., assignor to Zenith Radio Corporation, a corporation of Illinois
Application September 1, 1945, Serial No. 122,412
Term of patent 7 years
(Cl. D56—4)



The ornamental design for a radio cabinet, as shown and described.

145,508
DESIGN FOR A RADIO RECEIVER
Paul Brinkman, Los Angeles, Calif.
Application October 3, 1945, Serial No. 122,507
Term of patent 14 years
(Cl. D56—4)



The ornamental design for a radio receiver, as shown.

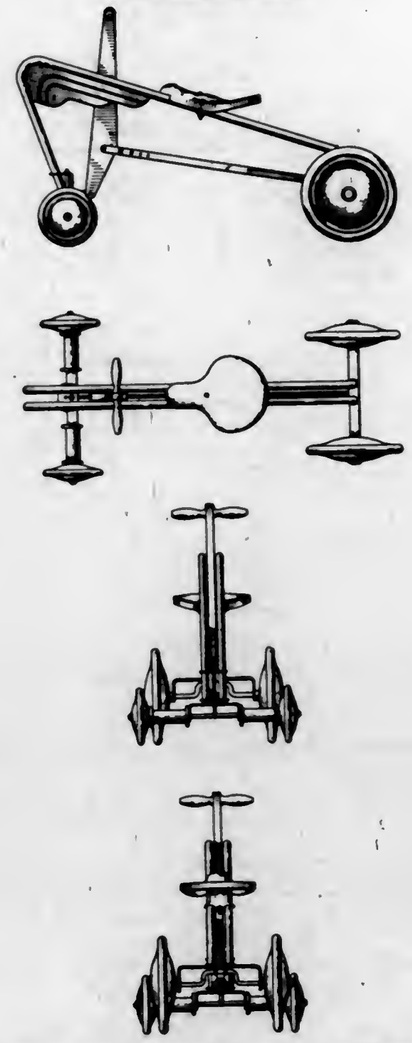
145,509
DESIGN FOR A REEL SUPPORT
Mary M. Clink, Los Angeles, Calif.
Application May 25, 1945, Serial No. 119,720
Term of patent 14 years
(Cl. D31—4)

The ornamental design for a reel support, substantially as shown.

145,510
DESIGN FOR A SCATTER RUG OR SIMILAR ARTICLE OF MANUFACTURE
Albert D. Clist, Purdy, N. Y.
Application May 21, 1946, Serial No. 129,947
Term of patent 7 years
(Cl. D92—21)

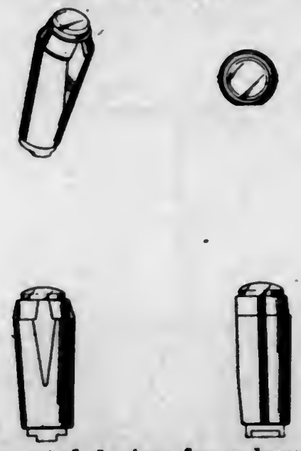
The ornamental design for a scatter rug or similar article of manufacture, as shown.

145,511
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Bernard Darvie, New York, N. Y.
Application December 21, 1945, Serial No. 124,927
Term of patent 3½ years
(Cl. D45—19)



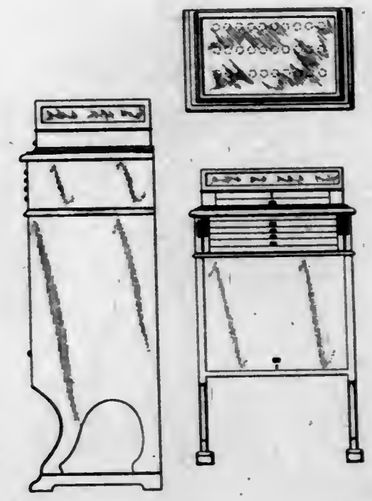
The ornamental design for a brooch or similar article, substantially as shown.

145,512
DESIGN FOR A CONTAINER CAP
Philip A. Derham, Rosemont, Pa., assignor to Victor Metal Products Corporation, Brooklyn, N. Y., a corporation of New York
Application November 1, 1945, Serial No. 123,380
Term of patent 14 years
(Cl. D58—26)



The ornamental design for a container cap, substantially as shown.

145,513
DESIGN FOR A TOY VEHICLE
Carl Dodegge, Maywood, Ill., assignor to Harry L. Lieberman, doing business as Lakewood Mfg. Co., Chicago, Ill.
Application December 8, 1945, Serial No. 124,547
Term of patent 7 years
(Cl. D34—15)

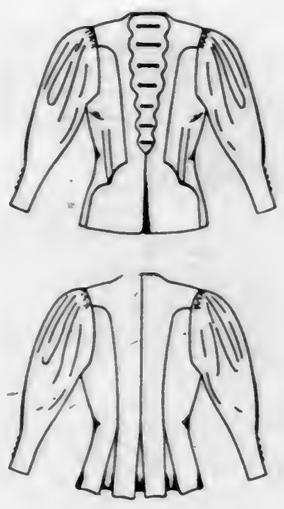


The ornamental design for a toy vehicle, substantially as shown.

145,514
DESIGN FOR A HAND STAMP
Ronald K. Duke, Los Angeles, Calif.
Application February 19, 1946, Serial No. 126,691
Term of patent 14 years
(Cl. D64—10)

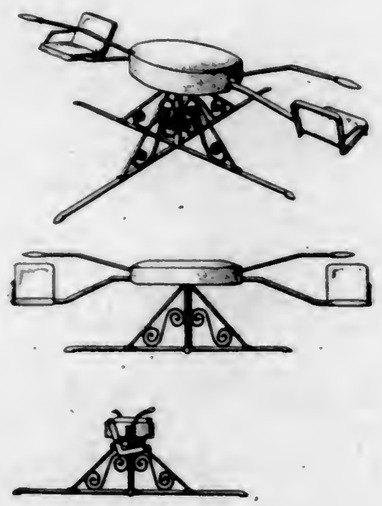
The ornamental design for a hand stamp, substantially as shown and described.

145,515
DESIGN FOR A COMBINED COIN STORAGE AND DISPLAY CABINET
Adolph E. Eckert, Spring Lake, Mich.
Application December 2, 1944, Serial No. 116,672
Term of patent 14 years
(Cl. D33—19)



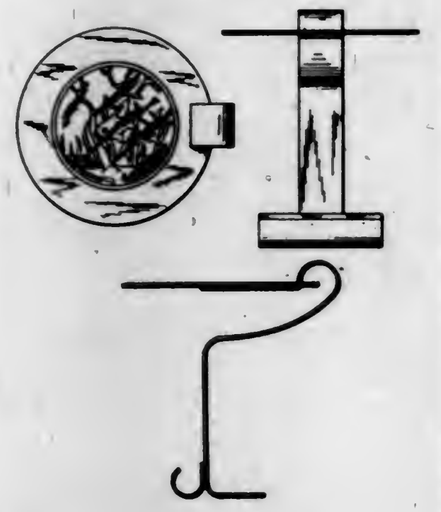
The ornamental design for a combined coin storage and display cabinet, as shown and described.

145,516
DESIGN FOR A FINGER RING
Barnett Esh, New York, N. Y., assignor to Weisfield & Goldberg, Inc., Seattle, Wash., a corporation of Delaware
Application April 18, 1945, Serial No. 119,081
Term of patent 14 years
(Cl. D45—10)



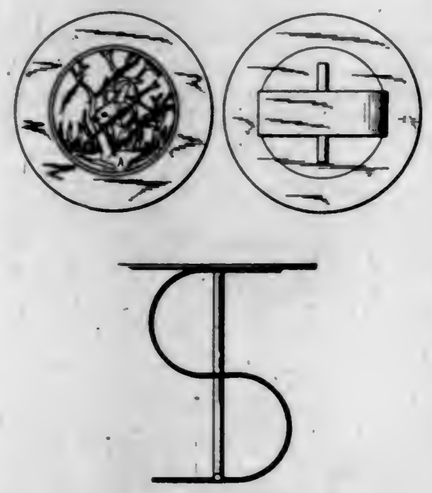
The ornamental design for a finger ring, as shown.

145,517
DESIGN FOR A JACKET
Nathan Finkelstein, New York, N. Y.
Application May 27, 1946, Serial No. 130,100
Term of patent 7 years
(Cl. D3—4)



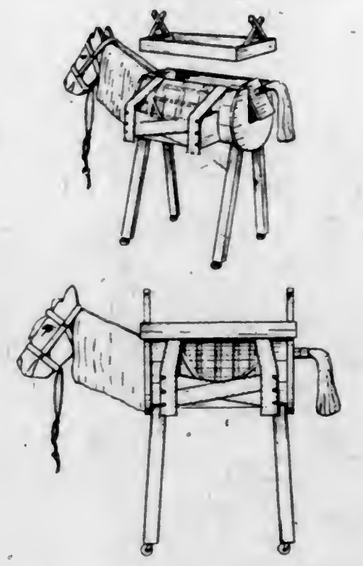
The ornamental design for a jacket, substantially as shown.

145,518
DESIGN FOR A CARROUSEL
Lowell M. Glasco, Dallas, Tex.
Application November 19, 1945, Serial No. 123,873
Term of patent 14 years
(Cl. D34—5)



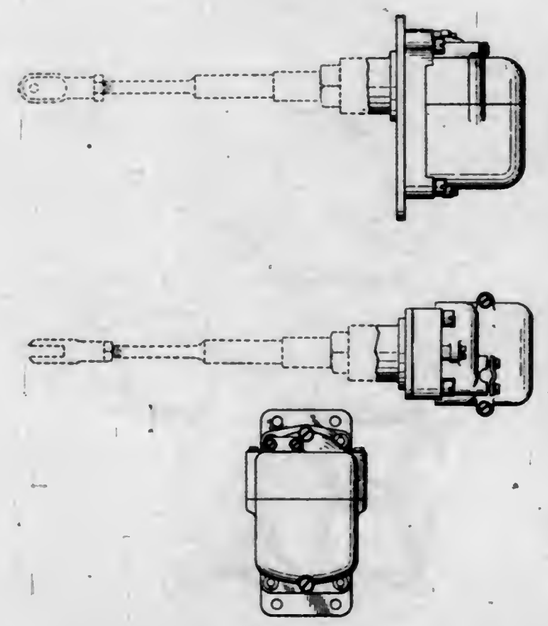
The ornamental design for a carrousel, as shown.

145,519
DESIGN FOR A TABLE OR SIMILAR ARTICLE
Claybourne W. Hart and Amplis O. Hart, Chicago, Ill.
Application December 14, 1945, Serial No. 124,736
Term of patent 7 years
(Cl. D33—14)



The ornamental design for a table or similar article, as shown.

145,520
DESIGN FOR A TABLE OR SIMILAR ARTICLE
Claybourne W. Hart and Amplis O. Hart, Chicago, Ill.
Application December 15, 1945, Serial No. 124,768
Term of patent 7 years
(Cl. D33—14)



The ornamental design for a table or similar article, as shown.

145,521
DESIGN FOR A PORTABLE BAR OR SIMILAR ARTICLE
Carl H. Hasche, Los Angeles, Calif.
Application February 16, 1945, Serial No. 118,003
Term of patent 7 years
(Cl. D33—19)

The ornamental design for a portable bar or similar article, substantially as shown and described.

145,522
DESIGN FOR A MOTOR DRIVEN ACTUATOR FOR MOVABLE PARTS OF AN AIRPLANE OR THE LIKE
Carl F. Hilgeman, Buffalo, N. Y., assignor to Eastman Machine Company, Buffalo, N. Y.
Application April 11, 1945, Serial No. 118,947
Term of patent 14 years
(Cl. D71—1)

The ornamental design for a motor driven actuator for movable parts of an airplane or the like, substantially as shown and described.

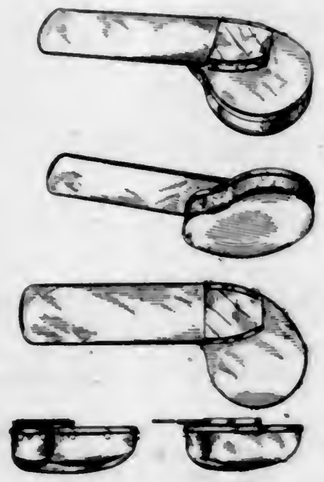
145,523
DESIGN FOR A CONDIMENT SHAKER OR SIMILAR ARTICLE
Kenneth A. Hodil, Pittsburgh, Pa., assignor of forty per cent to Fred G. Reimolds, Pittsburgh, Pa.
Application December 20, 1945, Serial No. 124,895
Term of patent 7 years
(Cl. D42—22)

The ornamental design for a condiment shaker or similar article, as shown.

145,524
DESIGN FOR A TROWEL
Otto Hoffman, Portland, Oreg.
Application October 26, 1945, Serial No. 123,227
Term of patent 14 years
(Cl. D35—2)

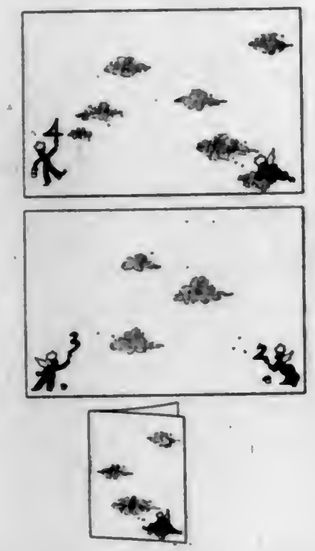
The ornamental design for a trowel, as shown.

145,525
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 2, 1946, Serial No. 126,203
Term of patent 7 years
(Cl. D45—19)



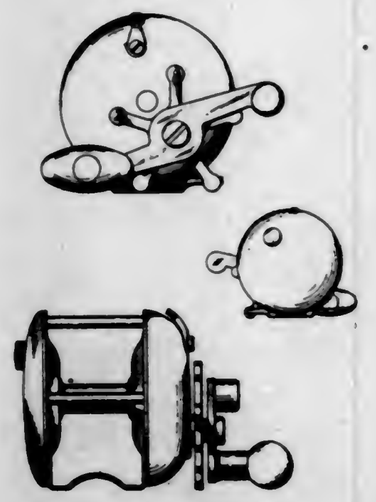
The ornamental design for a brooch or similar article, substantially as shown.

145,526
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 2, 1946, Serial No. 126,208
Term of patent 7 years
(Cl. D45—19)



The ornamental design for a brooch or similar article, substantially as shown.

145,527
DESIGN FOR A DESCENT RETARDER
Paul M. Lewis, Los Angeles, Calif., assignor to Sky-Hook Co., Los Angeles, Calif., a limited partnership of California
Application February 12, 1945, Serial No. 117,890
Term of patent 3½ years
(Cl. D34—15)

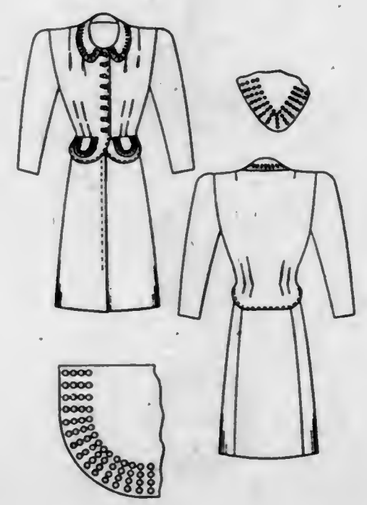


The ornamental design for a descent retarder, substantially as shown.

145,528
DESIGN FOR A SHEET OF WRITING PAPER
Sara Little, New York, N. Y., assignor to Associated Card and Stationery Company, a firm
Application April 26, 1946, Serial No. 128,984
Term of patent 3½ years
(Cl. D59—14)

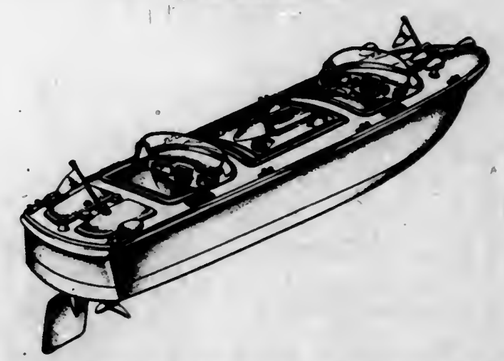
The ornamental design for a sheet of writing paper, substantially as shown.

145,529
DESIGN FOR A FISHING REEL
Henry I. Mandolf, San Diego, Calif.
Application November 26, 1945, Serial No. 124,091
Term of patent 14 years
(Cl. D31—4)



The ornamental design for a fishing reel, substantially as shown.

145,530
DESIGN FOR A FLOWER CONTAINER
Roderick I. McLellan, San Francisco, and Wilson J. Field, Orinda, Calif., assignors to E. W. McLellan Co., San Francisco, Calif., a copartnership
Application May 19, 1945, Serial No. 119,620
Term of patent 14 years
(Cl. D58—12)

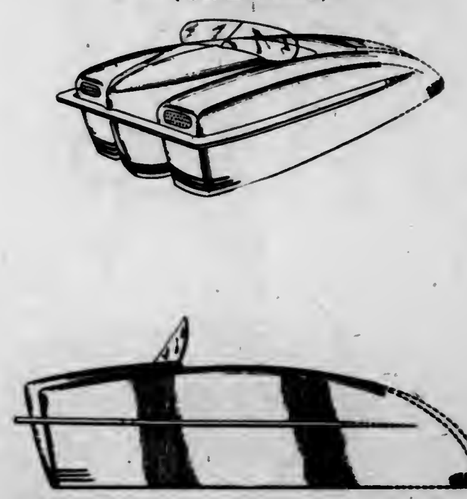


The ornamental design for a flower container, as shown and described.

145,531
DESIGN FOR A LADY'S SUIT
Morris Millard, New York, N. Y.
Application April 25, 1946, Serial No. 128,948
Term of patent 3½ years
(Cl. D3—4)

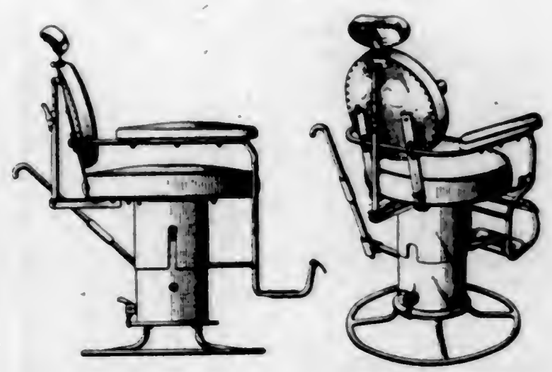
The ornamental design for a lady's suit, substantially as shown.

145,532
DESIGN FOR A TOY BOAT
Samuel Orkin, Los Angeles, Calif., assignor to Harvey Machine Co., Inc., Los Angeles, Calif., a corporation of California
Application August 6, 1945, Serial No. 121,255
Term of patent 7 years
(Cl. D34—15)



The ornamental design for a toy boat, as shown.

145,533
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel Inc., New York, N. Y.
Application February 2, 1946, Serial No. 126,215
Term of patent 7 years
(Cl. D45—19)



The ornamental design for a brooch or similar article, substantially as shown.

145,534
DESIGN FOR AN AUTOMOBILE BODY
Harold P. Post, Hartford, and Lauriea C. McMullen, West Hartford, Conn.
Application November 11, 1944, Serial No. 116,294
Term of patent 3½ years
(Cl. D14—3)

The ornamental design for an automobile body, as shown and described.

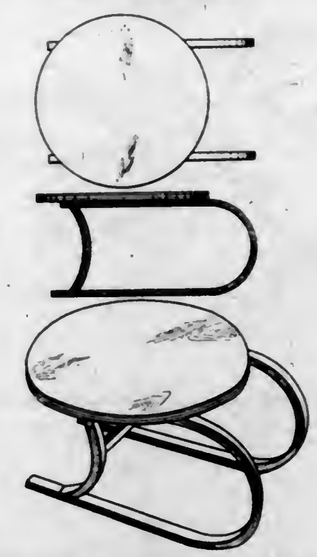
145,535
DESIGN FOR A CHAIR
Robert P. Ralston, Columbus, Ohio
Application November 16, 1945, Serial No. 123,826
Term of patent 14 years
(Cl. D15—3)

The ornamental design for a chair, as shown.

144,536
DESIGN FOR A SUIT
Harry Redman, New York, N. Y.
Application May 29, 1946, Serial No. 130,220
Term of patent 3½ years
(Cl. D3—4)

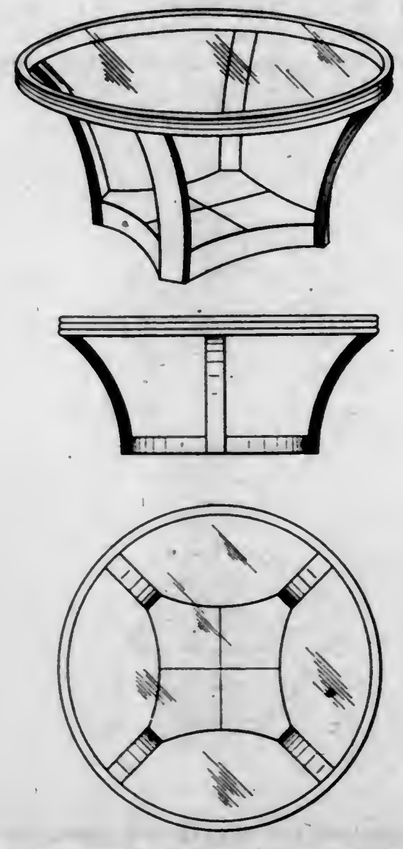
The ornamental design for a suit, substantially as shown.

145,537
DESIGN FOR A COAT
Harry Redman, New York, N. Y.
Application May 29, 1946, Serial No. 130,221
Term of patent 3½ years
(Cl. D3—4)



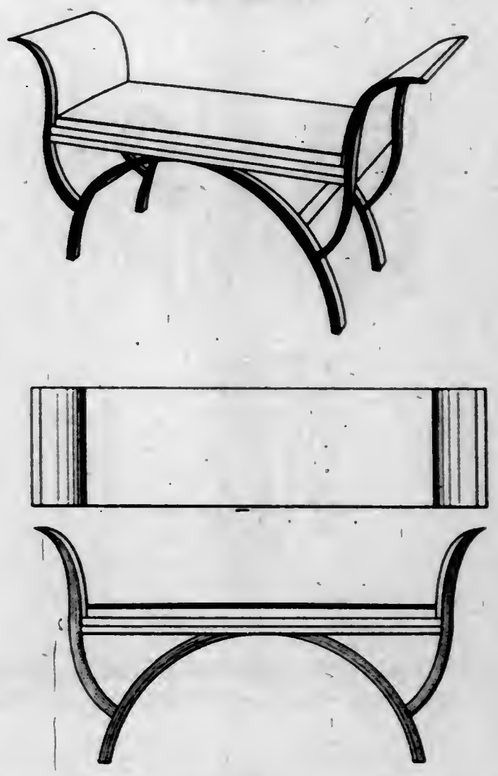
The ornamental design for a coat, substantially as shown.

145,538
DESIGN FOR A SPRAY NOZZLE
Harper Richards, Chicago, Ill., assignor to Rilling Company, Minneapolis, Minn., a corporation of Minnesota
Application November 29, 1945, Serial No. 124,175
Term of patent 7 years
(Cl. D91—3)



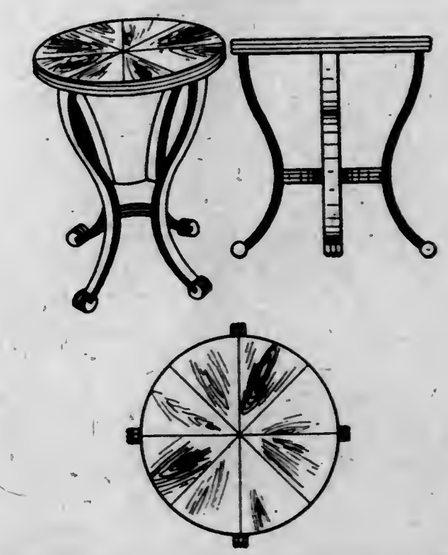
The ornamental design for a spray nozzle, substantially as shown.

145,539
DESIGN FOR A TABLE
Bernard Sky, Toronto, Ontario, Canada, assignor to Skyline Moulded Furniture Company Limited, Toronto, Ontario, Canada
Application October 27, 1945, Serial No. 123,235
In Canada October 11, 1945
Term of patent 14 years
(Cl. D33—14)



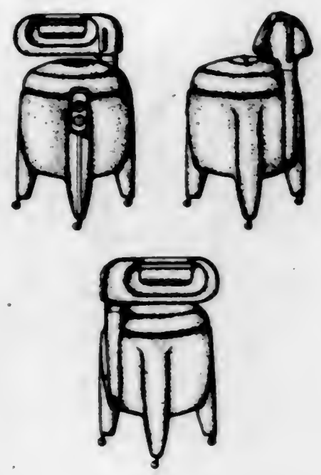
The ornamental design for a table, as shown.

145,540
DESIGN FOR A TABLE
Bernard Sky, Toronto, Ontario, Canada, assignor to Skyline Moulded Furniture Company Limited, Toronto, Ontario, Canada
Application October 27, 1945, Serial No. 123,236
In Canada July 5, 1945
Term of patent 14 years
(Cl. D33—14)



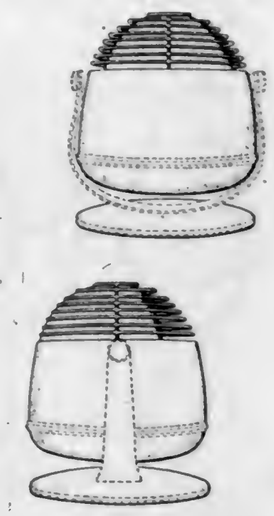
The ornamental design for a table, as shown.

145,541
DESIGN FOR A SETTEE
Bernard Sky, Toronto, Ontario, Canada, assignor to Skyline Moulded Furniture Company Limited, Toronto, Ontario, Canada
Application October 27, 1945, Serial No. 123,237
In Canada July 5, 1945
Term of patent 14 years
(Cl. D15—11)



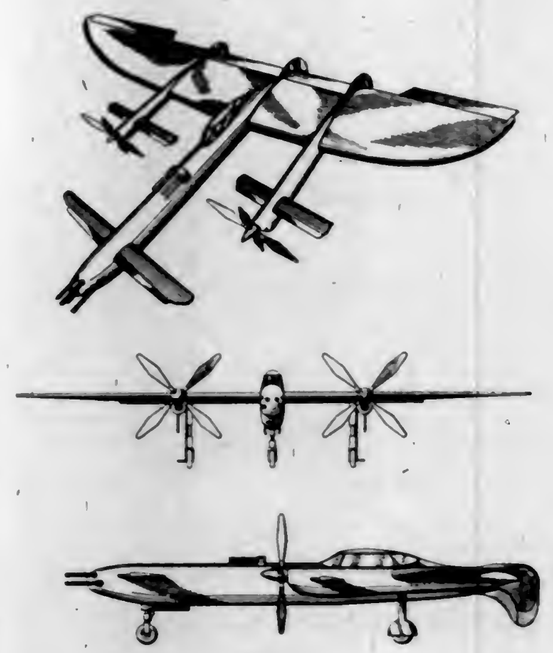
The ornamental design for a settee, as shown.

145,542
DESIGN FOR A TABLE
Bernard Sky, Toronto, Ontario, Canada, assignor to Skyline Moulded Furniture Company Limited, Toronto, Ontario, Canada
Application October 27, 1945, Serial No. 123,238
In Canada July 5, 1945
Term of patent 14 years
(Cl. D33—14)



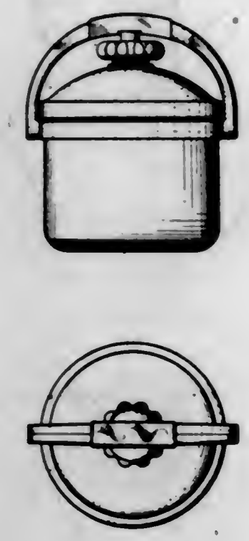
The ornamental design for a table, as shown.

145,543
DESIGN FOR A COMBINED WASHING MACHINE AND WRINGER OR SIMILAR ARTICLE
Carl W. Sundberg, Detroit, Mich., assignor to Nineteen Hundred Corporation, St. Joseph, Mich., a corporation of New York
Application September 19, 1945, Serial No. 122,173
Term of patent 7 years
(Cl. D49—1)



The ornamental design for a combined washing machine and wringer or similar article, as shown.

145,544
DESIGN FOR AN ELECTRIC HEATER
Jason B. Swartzbaugh, Toledo, Ohio, assignor to The Swartzbaugh Manufacturing Company, Toledo, Ohio, a corporation of Ohio
Application November 2, 1945, Serial No. 123,409
Term of patent 7 years
(Cl. D81—10)



The ornamental design for an electric heater, substantially as shown and described.

145,545
DESIGN FOR AN AIRPLANE
Enrique R. Thompson, El Paso, Tex.
Application May 29, 1945, Serial No. 119,795
Term of patent 3½ years
(Cl. D71—1)

The ornamental design for an airplane, as shown.

145,546
DESIGN FOR A PRESSURE COOKER
Roy T. Watts, New York, and Frederic C. Rudolph, Jackson Heights, N. Y.
Application November 23, 1945, Serial No. 124,014
Term of patent 3½ years
(Cl. D44—1)

The ornamental design for a pressure cooker, substantially as shown.

145,547
DESIGN FOR WALLPAPER BORDER OR SIMILAR ARTICLE
Ada Westrate, Chicago, Ill., assignor to The Meyercord Co., Chicago, Ill., a corporation of Illinois
Application April 4, 1946, Serial No. 128,246
Term of patent 3½ years
(Cl. D59—10)

The ornamental design for wallpaper border or similar article, as shown.

145,548
DESIGN FOR WALLPAPER BORDER OR SIMILAR ARTICLE
Ada Westrate, Chicago, Ill., assignor to The Meyercord Co., Chicago, Ill., a corporation of Illinois
Application April 4, 1946, Serial No. 128,253
Term of patent 3½ years
(Cl. D59—10)

The ornamental design for wallpaper border or similar article, as shown.

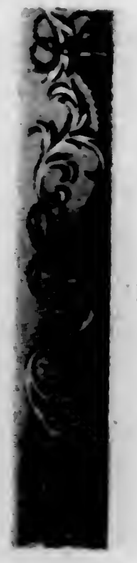
145,549
DESIGN FOR WALLPAPER BORDER OR SIMILAR ARTICLE
Ada Westrate, Chicago, Ill., assignor to The Meyercord Co., Chicago, Ill., a corporation of Illinois
Application April 4, 1946, Serial No. 128,254
Term of patent 3½ years
(Cl. D59—10)

The ornamental design for wallpaper border or similar article, as shown.

145,550
DESIGN FOR WALLPAPER BORDER OR SIMILAR ARTICLE
Ada Westrate, Chicago, Ill., assignor to The Meyercord Co., Chicago, Ill., a corporation of Illinois
Application April 4, 1946, Serial No. 128,259
Term of patent 3½ years
(Cl. D59—10)

The ornamental design for wallpaper border or similar article, as shown.

145,551
DESIGN FOR WALLPAPER BORDER OR SIMILAR ARTICLE
Ada Westrate, Chicago, Ill., assignor to The Meyercord Co., Chicago, Ill., a corporation of Illinois
Application April 4, 1946, Serial No. 128,261
Term of patent 3½ years
(Cl. D59—10)

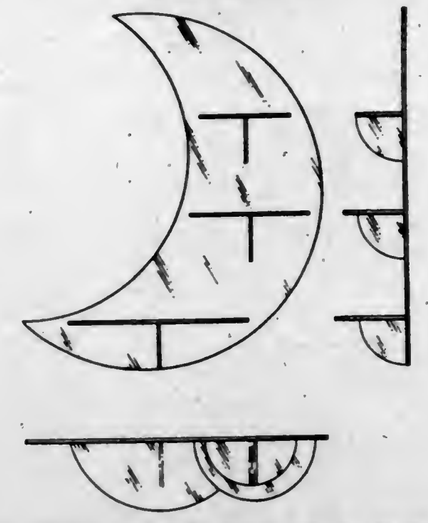


The ornamental design for wallpaper border or similar article, as shown.

145,552
DESIGN FOR WALLPAPER BORDER OR SIMILAR ARTICLE
Ada Westrate, Chicago, Ill., assignor to The Meyercord Co., Chicago, Ill., a corporation of Illinois
Application April 4, 1946, Serial No. 128,265
Term of patent 3½ years
(Cl. D59—10)

The ornamental design for wallpaper border or similar article, as shown.

145,553
DESIGN FOR WALLPAPER BORDER OR SIMILAR ARTICLE
Ada Westrate, Chicago, Ill., assignor to The Meyercord Co., Chicago, Ill., a corporation of Illinois
Application April 4, 1946, Serial No. 128,266
Term of patent 3½ years
(Cl. D59—10)



The ornamental design for wallpaper border or similar article, as shown.

145,554
DESIGN FOR WALLPAPER BORDER OR SIMILAR ARTICLE
Ada Westrate, Chicago, Ill., assignor to The Meyercord Co., Chicago, Ill., a corporation of Illinois
Application April 4, 1946, Serial No. 128,269
Term of patent 3½ years
(Cl. D59—10)

The ornamental design for wallpaper border or similar article, as shown.

145,555
DESIGN FOR A WHATNOT SHELF UNIT
Percy J. York, Tampa, Fla.
Application October 16, 1945, Serial No. 122,887
Term of patent 14 years
(Cl. D33—3)

The ornamental design for a whatnot shelf unit, substantially as shown.

145,556
DESIGN FOR A SHOE OR SIMILAR ARTICLE
Evelyn Ziniti, New York, N. Y.
Application May 10, 1946, Serial No. 129,540
Term of patent 7 years
(Cl. D7—7)

The ornamental design for a shoe or similar article, substantially as shown.

Battery charging and testing apparatus, Combination. Mercury Battery Charger Co. 423,644; Sept. 3.
Circuit breakers. Frank Adam Electric Company. 423,620; Sept. 3; Serial No. 494,297; published June 11, 1946.
Circuit switching apparatus and parts thereof, Electric. Allis-Chalmers Manufacturing Company. 423,591; Sept. 3; Serial No. 493,308; published June 4, 1946.
Electric appliances. Tennessee Valley Associates. 423,648; Sept. 3.
Electric dishwashing machines, Domestic. Dyna-Electric Manufacturing Company. 423,500–1; Sept. 3; Serial Nos. 488,851–2; published June 11, 1946.
Electric switches Wallace Metal Products Company, Inc. 423,619; Sept 3; Serial No. 494,296; published June 11, 1946.
Electric wire, Sheathed. Plastic Wire & Cable Corporation. 423,553; Sept. 3; Serial No. 490,967; published June 18, 1946.
Electrical cords, Extensible. Kellogg Switchboard and Supply Company. 423,579–80; Sept. 3; Serial Nos. 493,010–11; published May 21, 1946.
Electrically operated lather producing machines. Campbell Products Company. 423,525; Sept. 3; Serial No. 490,634; published June 18, 1945.
Electro-magnets. Hanchett Manufacturing Co 423,458; Sept. 3; Serial No. 484,128; published May 28, 1946.
Fans, Electric. Galvin Electric Manufacturing Company. 215,265; renewed July 13, 1946. O. G. Sept. 3.
Fixtures, Electric fluorescent lamp lighting. Fluorescent Fixtures, Inc. 423,494; Sept. 3; Serial No. 488,459; published May 21, 1946.
Flash lights, electric vapor and/or explosive proof extension lights, etc. Stewart R. Browne Mfg. Co. Inc. 423,556; Sept. 3; Serial No. 491,962; published June 11, 1946.
Heating equipment and parts therefor, High frequency induction. Induction Heating Corporation. 423,481; Sept. 3; Serial No. 487,133; published June 11, 1946.
Insulated wire and tubing and for thermo-plastic applied concentrically on wires for electrical insulation, Electrically. J. F. Mattimore. 423,539; Sept. 3; Serial No. 491,166; published June 18, 1946.
Irons, Electric. C. D. Muller. 423,575; Sept. 3; Serial No. 492,940; published May 21, 1946.
Jaws for electrode holders and contact members. Lincoln Electric Company. 423,446; Sept. 3; Serial No. 481,073; published June 4, 1946.
Lamps, Electric. Westinghouse Electric Corporation. 423,589–90; Sept. 3; Serial Nos. 493,234–5; published May 21, 1946.
Lighting fixtures, Fluorescent. Day-Brite Lighting, Inc. 423,557; Sept. 3; Serial No. 491,963; published June 11, 1946.
Motors, dynamotors, speed controllers, Electrical. A. G. Redmond Co. 423,433; Sept. 3; Serial No. 474,178; published May 28, 1946.
Motors, Electric. Farmco, Incorporated. 423,515; Sept. 3; Serial No. 490,108; published June 4, 1946.
Plastic electrical parts, Molded. Pro-phy-lac-tic Brush Company. 423,473; Sept. 3; Serial No. 486,117; published June 18, 1946.
Plates, Metal. Oakite Products, Inc. 423,464; Sept. 3; Serial No. 484,968; published June 4, 1946.
Radio receiving sets. Metropolitan Radio Electronics Corp. 423,529; Sept. 3; Serial No. 490,898; published June 11, 1946.
Radio receiving sets. Affiliated Retailers, Inc. 423,605; Sept. 3; Serial No. 493,709; published May 28, 1946.
Radio receiving sets. Le R. Schenck. 423,670; Sept. 3.
Radio receiving sets and parts thereof. V-Lectrical Engineering Co. 423,524; Sept. 3; Serial No. 490,560; published June 11, 1946.
Radio receiving sets and parts thereof. Windsor-Lloyd Products, Inc. 423,568; Sept. 3; Serial No. 492,534; published June 4, 1946.
Radio tubes. Federal Telephone and Radio Corporation. 423,583–4; Sept. 3; Serial Nos. 493,112–13; published May 21, 1946.
Record players with radio amplifier, Electric. Tone Products Corporation of America. 423,522; Sept. 3; Serial No. 490,554; published June 18, 1946.
Rubber sleeves for electric insulating purposes, Synthetic. Hellermann Electric Limited. 423,441; Sept. 3; Serial No. 478,954; published June 11, 1946.
Shears, Hand supported and controlled electric power driven. Black and Decker Manufacturing Company. 423,444; Sept. 3; Serial No. 479,274; published Oct. 23, 1945.
Switches, electric switch housings and overtravel actuators, Electric. First Industrial Corporation. 423,461; Sept. 3; Serial No. 484,738; published May 28, 1946.
Transformers, Electrical power. United States Television Manufacturing Corporation. 423,519; Sept. 3; Serial No. 490,271; published June 11, 1946.
Transmitting and receiving apparatus. Allis-Chalmers Manufacturing Company. 423,558; Sept. 3; Serial No. 492,016; published June 11, 1946.
Warmers and cookers, electrically heated bottle warmers, electrically heated vapor sterilizers, Electrically heated food, etc. Electrical Industries, Inc. 423,504; Sept. 3; Serial No. 489,454; published May 28, 1946.
Wheels and trolley harps, Trolley. American Brake Shoe Company. 423,612; Sept. 3; Serial No. 493,997; published June 11, 1946.
Wire, Electrical. Callite Tungsten Corporation. 423,476; Sept. 3; Serial No. 486,287; published May 28, 1946.
X-ray apparatus for the making of X-ray exposures. Westinghouse Electric & Manufacturing Company. 423,449; Sept. 3; Serial No. 482,186; published Sept. 18, 1945.

CLASS 22

Devices for releasing snagged fishing lures or baits. Helldiver Company. 423,638; Sept. 3; Serial No. 497,605; published June 11, 1946.
Dolls. A. Kargere. 423,521; Sept. 3; Serial No. 490,538; published June 18, 1946.
Game devices. A. A. Rees. 423,435; Sept. 3; Serial No. 476,927; published June 11, 1946.
Golf balls. R. H. Macy & Co., Inc. 216,779; renewed Aug. 17, 1946. O. G. Sept. 3.
Kits of miniature building materials. R. L. Kirkegaard. 423,660; Sept. 3.
Toy airplanes, boats, trains and jeeps. Sky Hobby, Incorporated. 423,639; Sept. 3; Serial No. 497,632; published June 11, 1946.
Toy holster sets. Classy Products Co. 423,635; Sept. 3; Serial No. 497,530; published June 11, 1946.
Toys, Rubber. Tillotson Rubber Co. 423,426; Sept. 3; Serial No. 431,096; published July 2, 1940.

CLASS 23

Apparatus for thinning seedling and other plants. Fijelen Research and Development Company. 423,551; Sept. 3; Serial No. 491,637; published May 28, 1946.
Aprons for carding machines, Rub. Boston Woven Hose & Rubber Company. 423,513; Sept. 3; Serial No. 490,057; published June 11, 1946.
Cleaning equipment, Industrial. Oakite Products, Inc. 423,465; Sept. 3; Serial No. 484,969; published June 4, 1946.
Cork screws. J. H. Miller. 423,451; Sept. 3; Serial No. 482,539; published June 11, 1946.
Cultivators, Agricultural. Deere & Company. 423,478; Sept. 3; Serial No. 486,297; published May 28, 1946.
Cutters, Machine tool. A. Mackmann. 423,456; Sept. 3; Serial No. 483,828; published Nov. 27, 1945.
Die heads. Landis Machine Company. 217,005; renewed Aug. 24, 1946. O. G. Sept. 3.
Dies, fluid orifice, plugs and fluid spray jets, etc., Wire and bar drawing. United States Quarry Tile Company. 423,506; Sept. 3; Serial No. 489,547; published June 11, 1946.
Discs and spray whirls, Spray. R. E. Cooley. 423,526; Sept. 3; Serial No. 490,746; published May 21, 1946.
Earthworking machines. K & B Manufacturing Co. 423,527; Sept. 3; Serial No. 490,833; published June 18, 1946.
Elevating and lowering appliances, Pressure line operated hydraulic and pneumatic-hydraulic pressure line operated. Weaver Manufacturing Company. 423,646; Sept. 3.
Engine and transmission mounts, Vibration and shock absorbing. Anchor Rubber Products, Inc. 423,508; Sept. 3; Serial No. 489,894; published June 18, 1946.
Filing machines. Robinson Manufacturing Co. 423,672; Sept. 3.
Guides, grinding balls and wearing plates, etc., Textile thread. United States Quarry Tile Company. 423,483; Sept. 3; Serial No. 487,227; published June 11, 1946.
Gun, Automotive radiator flushing. R. F. Becker. 423,600; Sept. 3; Serial No. 493,585; published May 28, 1946.
Hydraulic valve actuators. Bendix Aviation Corporation. 423,495; Sept. 3; Serial No. 488,564; published June 11, 1946.
Jacks, Automobile. Tudor Industries Corp. 423,523; Sept. 3; Serial No. 490,558; published June 4, 1946.
Lawn mowers. Root Manufacturing Co. 423,621; Sept. 3; Serial No. 494,363; published June 11, 1946.

Lawn mowers, field mowing machines, grain harvesters, etc. H. C. Dodge Incorporated. 218,227; renewed Sept. 21, 1946. O. G. Sept. 3.
Loaders, for tractors powered by the tractor itself, Front end. Super Six Mfg., Inc. 423,518; Sept. 3; Serial No. 490,267; published June 11, 1946.
Lubricating apparatus, Built-in track-attached mechanical. Ardco Manufacturing Company. 423,497; Sept. 3; Serial No. 488,633; published May 21, 1946.
Lubricators, Rail. American Brake Shoe Company. 423,512; Sept. 3; Serial No. 490,049; published May 28, 1946.
Machine for use in washing grease from metal parts. Gray-Mills Co. 423,474; Sept. 3; Serial No. 486,250; published May 28, 1946.
Machines for the separation of the elements and clarification of milk, etc. Columbia Machine Works, Inc. 423,436; Sept. 3; Serial No. 477,140; published June 18, 1946.
Material treating machines. Safety Car Heating and Lighting Company, Inc. 423,434; Sept. 3; Serial No. 476,818; published May 28, 1946.
Molds, Chocolate and confectionery. Warren Bros. Corp. 423,596; Sept. 3; Serial No. 493,412; published May 28, 1946.
Mowers, Lawn. American Chain & Cable Company, Inc. 423,452; Sept. 3; Serial No. 482,960; published May 21, 1946.
Pipe extension, Automobile tail. L. Lyons. 423,459; Sept. 3; Serial No. 484,692; published June 11, 1946.
Pumps. Marlow Pumps. 423,442; Sept. 3; Serial No. 479,081; published June 11, 1946.
Rake and cutter, Combination hand. R. G. Arey. 423,514; Sept. 3; Serial No. 490,096; published June 4, 1946.
Razor blades. Otto Roth, Inc. 214,850; renewed July 6, 1946. O. G. Sept. 3.
Razor blades. Lightfoot Schultz Co. 423,517; Sept. 3; Serial No. 490,126; published June 4, 1946.
Razor blades. Mukamal Company. 423,559; Sept. 3; Serial No. 492,078; published May 28, 1946.
Razors, pocket-knives, butcher-knives, etc. Adolph Kastor & Bros. 54,356; re-renewed June 26, 1946. O. G. Sept. 3.
Scissors and shears. Clayton Manufacturing Company. 423,550; Sept. 3; Serial No. 491,629; published May 21, 1946.
Separators, Electric cream. Farmco, Incorporated. 423,516; Sept. 3; Serial No. 490,109; published June 4, 1946.
Servicing apparatus, Unitary portable automotive. Lincoln Engineering Company. 423,437; Sept. 3; Serial No. 477,937; published June 18, 1946.
Stock handling machinery. J. B. Engineering Sales Company. 423,440; Sept. 3; Serial No. 478,456; published May 21, 1946.
Supporting members and label guides, Work. R. B. White. 423,453; Sept. 3; Serial No. 483,504; published May 28, 1946.
Taps and dies. Winter Brothers Company. 423,671; Sept. 3.
Threading machines. Williams Tool Corporation. 212,322; renewed Apr. 27, 1946. O. G. Sept. 3.
Tractors. Deere & Company. 423,477; Sept. 3; Serial No. 486,296; published May 28, 1946.
Trucks, Gasoline engine powered lift. Domestic Industries, Inc. 423,645; Sept. 3.
Valves, Automatic mechanical water-unloading. Gray Company, Inc. 423,547; Sept. 3; Serial No. 491,566; published May 21, 1946.
Writing machines, Shorthand. W. V. Kirkpatrick. 423,532; Sept. 3; Serial No. 490,951; published May 28, 1946.

CLASS 24

Laundry appliances, Domestic. Nineteen Hundred Corporation. 423,611; Sept. 3; Serial No. 493,977; published June 18, 1946.
Washing machines, Clothes or laundry. Altorfer Bros. Company. 215,158; renewed July 13, 1946. O. G. Sept. 3.

CLASS 26

Apparatus for synchronizing the flash bulb equipment of photographic cameras. Al Norris Company. 423,545; Sept. 3; Serial No. 491,499; published June 11, 1946.
Calipers, dividers, and pencil compasses, etc., Inside and outside. R. A. Beck. 423,363; Sept. 3; Serial No. 492,352; published June 18, 1946.
Cameras, parts thereof and accessories therefor. Adel Precision Products Corp. 423,622; Sept. 3; Serial No. 494,417; published June 11, 1946.
Discs, Kaleidoscopic. Television Associates, Inc. 423,447; Sept. 3; Serial No. 481,501; published June 18, 1946.
Electrically operated apparatus. Oakite Products, Inc. 423,466; Sept. 3; Serial No. 485,094; published June 4, 1946.
Eyeglasses and eyeglass mountings or frames, etc. Optical Products Company. 423,593–4; Sept. 3; Serial Nos. 493,387–8; published June 18, 1946.
Films, Motion picture. RKO Television Corporation. 423,432; Sept. 3; Serial No. 473,396; published June 11, 1946.
Gauging members. N. W. Redmer. 423,468; Sept. 3; Serial No. 485,601; published June 18, 1946.
Glasses, eyeglasses, spectacles, etc., Sun. Comptone Company. 423,585; Sept. 3; Serial No. 493,165; published June 11, 1946.
Glasses, eyeglasses, spectacles, etc., Sun. Comptone Company. 423,586–7; Sept. 3; Serial Nos. 493,167–8; published June 11, 1946.
Glasses, Sun. Bee-Tee Optical Corporation. 423,601; Sept. 3; Serial No. 493,586; published June 18, 1946.
Meters and instruments, Fluid. Builders Iron Foundry. 423,561; Sept. 3; Serial No. 492,177; published June 18, 1946.
Mountings, Ophthalmic. Uhlemann Optical Co. of Illinois. 423,624; Sept. 3; Serial No. 494,526; published June 11, 1946.
Pyrometers. Claud S. Gordon Company. 423,567; Sept. 3; Serial No. 492,493; published June 11, 1946.
Tanks, squeegees, and printing rolls, Photographic processing. Polaroid Corporation. 423,546; Sept. 3; Serial No. 491,507; published June 18, 1946.
Transfers, Photosensitive. Di-Noc Company. 423,448; Sept. 3; Serial No. 481,887; published June 18, 1946.
Transits, Pocket. Wm. Ainsworth & Sons, Inc. 423,472; Sept. 3; Serial No. 486,019; published June 18, 1946.

CLASS 27

Watches. Gothic Watch Co. Inc. 217,855; renewed Sept. 14, 1946. O. G. Sept. 3.

CLASS 29

Hairbrush. J. Tanenbaum. 423,662; Sept. 3.

CLASS 30

Dinner sets, breakfast sets, and similar china or porcelain ware. B. Altman & Co. 218,264; renewed Sept. 21, 1946. O. G. Sept. 3.
Porcelain ware. E. L. Fondeville. 218,055; renewed Sept. 21, 1946. O. G. Sept. 3.

CLASS 31

Cabinets, storage refrigerator cabinets, farm freezer, etc., Ice cream. Stangard-Dickerson Corporation. 423,534; Sept. 3; Serial No. 491,034; published June 11, 1946.
Cabinets, storage refrigerator cabinets, farm freezers, etc., Ice cream. Stangard-Dickerson Corporation. 423,535; Sept. 3; Serial No. 491,035; published June 18, 1946.
Cabinets, storage refrigerator cabinets, farm freezers, etc., Ice cream. Stangard-Dickerson Corporation. 423,540; Sept. 3; Serial No. 491,197; published June 4, 1946.
Refrigerating apparatus, refrigerating machines, and refrigerators. Aktiebolaget Elektrolux. 214,633; renewed June 29, 1946. O. G. Sept. 3.
Refrigeration controls. Sporlan Valve Company. 423,439; Sept. 3; Serial No. 478,296; published June 18, 1946.
Refrigerators and home freezers. Allied Stores Corporation. 423,606; Sept. 3; Serial No. 493,712; published June 18, 1946.
Refrigerators and home freezers. Allied Stores Corporation. 423,607; Sept. 3; Serial No. 493,714; published June 18, 1946.

CLASS 32

Cabinet shelves. Kangaroo. 423,652; Sept. 3.
Cabinets, Metal filing. General Fireproofing Company. 216,941; renewed Aug. 24, 1946. O. G. Sept. 3.
Cribs. E. F. Borrelli. 423,628; Sept. 3; Serial No. 495,535; published June 18, 1946.
Desk tops for office desks and the like. General Fireproofing Company. 218,135; renewed Sept. 21, 1946. O. G. Sept. 3.
Mattresses and box springs. Columbia Bedding Co. 423,655; Sept. 3.
Mattresses, divans, box springs, and studio couches. R. B. Clark. 423,629; Sept. 3; Serial No. 495,540; published June 11, 1946.
Mirrored picture frames, mirrored bars, mirrored show cases, etc. A. Brown. 423,659; Sept. 3.
Tables, card tables, corner tables, etc., Trestle. Habitant Shops, Inc. 423,663–4; Sept. 3.

CLASS 33

Crystals, Watch. C. & E. Marshall Company. 218,262; renewed Sept. 21, 1946. O. G. Sept. 3.
Glass bottles. L. Rose & Co., Limited. 51,682; re-renewed Apr. 24, 1946. O. G. Sept. 3.

CLASS 34

Air conditioning equipment. Lance Wikkerink. 423,562; Sept. 3; Serial No. 492,241; published June 18, 1946.
Boilers, Steam and hot-water. Fitzgibbons Boiler Company, Inc. 217,589; renewed Sept. 7, 1946. O. G. Sept. 3.
Feeding assemblies and filters, pumps, and other parts thereof, Liquid fuel. Withas Manufacturing Company. 423,479; Sept. 3; Serial No. 486,511; published June 18, 1946.
Flints. Superior Smelting Corporation. 423,505; Sept. 3; Serial No. 493,408; published June 18, 1946.

Heaters using solid fuels, Water. Locke Stove Company. 423,642; Sept. 3.
Lighters, and parts for such lighters, Friction pyrophoric and catalytic cigar, cigarette, and pipe. L. L. Zukmann. 423,484; Sept. 3; Serial No. 487,491; published Jan. 22, 1946.

CLASS 35

Hose and rotary hose, Wire braid hydraulic control and industrial grease. Thermold Company. 423,489; Sept. 3; Serial No. 487,877; published Nov. 13, 1945.
Hose, Flexible metal. Bendix Aviation Corporation. 423,438; Sept. 3; Serial No. 478,266; published June 11, 1946.

CLASS 36

Clarinet instruments, Miniature. Pioneer Musical Instrument Co. 423,482; Sept. 3; Serial No. 487,205; published June 4, 1946.
Harmonicas, Mouth. M. Hohner, Inc. 218,381; renewed Sept. 28, 1946. O. G. Sept. 3.

CLASS 37

Files of paper and/or fabric, letter and invoice files of paper and/or fabric, expanding envelopes, etc., Expanding. Cook and Cobb Company. 217,402; renewed Aug. 31, 1946. O. G. Sept. 3.
Kit of paper wrapping and packaging materials, Assembly in the nature of a. Yorkville Pape Co. Inc. 423,454; Sept. 3; Serial No. 483,790; published June 11, 1946.
Mailing cards and for stationery, Personalized. T. J. Williams. 423,554; Sept. 3; Serial No. 491,782; published June 11, 1946.
Mounts and albums, Photographic. General Aniline & Film Corporation. 423,486; Sept. 3; Serial No. 487,675; published June 11, 1946.
Paper, Drawing. J. E. P. Sullivan. 423,492; Sept. 3; Serial No. 488,384; published June 11, 1946.
Paper, Printing. Seaman Paper Company. 215,641; renewed July 20, 1946. O. G. Sept. 3.
Paper towels. Wheeler Paper Corporation. 423,566; Sept. 3; Serial No. 492,480; published June 18, 1946.
Paper towels. Wheeler Paper Corporation. 423,573; Sept. 3; Serial No. 492,808; published June 18, 1946.
Paper, vegetable parchment, wax paper, etc., Tissue. Brooks Paper Company. 214,929; renewed July 6, 1946. O. G. Sept. 3.
Paper, Wrapping. Universal Ribbon Company. 423,541; Sept. 3; Serial No. 491,294; published June 11, 1946.
Printed punched cards, Partially. Charles R. Hadley Company. 423,462; Sept. 3; Serial No. 484,741; published June 18, 1946.
Staples, Strips of united. E. H. Hotchkiss Company. 53,216; re-renewed May 29, 1946. O. G. Sept. 3.
Tissue, Facial. I. Worthman. 423,651; Sept. 3.
Tissue fruit wraps. Crown Zellerbach Corporation. 423,569; Sept. 3; Serial No. 492,546; published June 18, 1946.

CLASS 38

Newspaper, Evening and Sunday. Brooklyn Citizen. 218,630; renewed Sept. 28, 1946. O. G. Sept. 3.
Section of periodical publications. United States News Publishing Corporation. 423,565; Sept. 3; Serial No. 492,476; published May 7, 1946.

CLASS 39

Boots and shoes, Leather. Evans Shoe Co. 56,411; re-renewed Sept. 25, 1946. O. G. Sept. 3.
Boots, slippers, and shoes, Leather and cloth. Hanan & Son. 53,143; re-renewed May 29, 1946. O. G. Sept. 3.
Cloaks, dress-skirts, dress-waists, etc. Bedell Company. 55,049; re-renewed Aug. 7, 1946. O. G. Sept. 3.
Coats and suits. Worumbo Manufacturing Company. 218,094–5; renewed Sept. 21, 1946. O. G. Sept. 3.
Coats, trousers, vests, and overcoats, Men's and boys'. Levinsohn Bros. & Co., Inc. 218,052; renewed Sept. 21, 1946. O. G. Sept. 3.

Anderson, John W., Gary, Ind. Handle for safety razors. 2,406,984; Sept. 3.
Anderson, John W., Gary, Ind. Razor. 2,406,985; Sept. 3.
Anderson, Peter A., Portland, E. M. Anderson, Sr., Westbrook, E. W. Hansen, Bangor, and J. H. Edwards, assignors to Utilities Distributors, Inc., Portland, Maine. Casing for truck and freight car heaters. 2,407,124; Sept. 3.
Anderson, Reuben B., St. Paul, Minn. Hair clipper. 2,406,986; Sept. 3.
Anderson, Roger, Seattle, Wash. Fracture splint. 2,406,987; Sept. 3.
Asher, William J., Colorado Springs, Colo. Laundry machine. 2,407,125; Sept. 3.
Ashlock, George W., Jr., Oakland, Calif. Pitting machine. 2,406,736; Sept. 3.
Ashlock, George W., Jr., Oakland, Calif. Pitting fruit. 2,407,126; Sept. 3.
Aspin, Frank M., Bury, England. Driving means for rotary valves of internal-combustion engines, compressors and the like. 2,407,127; Sept. 3.
Atlantic Coast Fisheries Company, The, assignee: *See*— Savrda, Charles M.
Atlantic Refining Company, The, assignee: *See*— Griesinger, William K.
Atlas Powder Company, assignee: *See*— Bonner, Rowland E., and Brewster.
Griffin, William C.
Atwood, Norman R., St. Johnsbury, Vt. Binder for containing a textbook and note sheets. 2,406,785; Sept. 3.
Aukland, Olav, New York, N. Y. Adjustable staging. 2,406,786; Sept. 3.
Austin, Ellsworth W.: *See*— Choate, Roy E., and Austin.
Automatic Electric Laboratories, Inc., assignee: *See*— Gillings, Charles, Beale, and Terroni.
Avery, W. & T., Limited, assignee: *See*— Page, Alfred E.
Aviation Corporation, The, assignee: *See*— Tyler, John M., and Hoffman.
Axnix, Eugene J., assignor of fifteen percent to Dan Preger, fifteen percent to David Preger, and fifteen percent to E. Kuzmich, South Bend, Ind. Mail box. 2,407,128; Sept. 3.
Bacon, Walter M., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telegraph system. 2,406,787; Sept. 3.
Bailey, William A., Jr., and B. S. Greensfelder, Oakland, assignors to Shell Development Company, San Francisco, Calif. Gasoline and the production thereof. 2,407,052; Sept. 3.
Barcus, Anthony P., assignor to General Motors Corporation, Dayton, Ohio. Clothes wringer. 2,406,788; Sept. 3.
Bardwell, Ralph F., Southbridge, and J. H. Smith, Taunton, assignors to American Optical Company, Southbridge, Mass. Abrading machine. 2,406,789; Sept. 3.
Barnet Ensign Limited, assignee: *See*— Hunter, Douglas G.
Barr & Stroud, Limited, assignee: *See*— Strang, John M., and Foster.
Basic Refractories, Inc., assignee: *See*— Schoenlaub, Robert A.
Bateman, Amos W.: *See*— Gittings, William N., and Bateman.
Beale, Charles E.: *See*— Gillings, Charles, Beale, and Terroni.
Bean, Ruric N.: *See*— Allen, Herbert, and Bean.
Beatty, William A., and L. W. Houghton, London, England, assignors to International Standard Electric Corporation. System for the electric transmission of sound and other waves. 2,406,790; Sept. 3.
Bedford, Alda V.: *See*— Wendt, Karl R., and Bedford.
Bedingfield, Wade R., assignee: *See*— Colley, George F.
Beech-Nut Packing Company, assignee: *See*— McBean, Douglas M.
Belada, John, Glassboro, N. J., assignor to Owens-Illinois Glass Company. Filing machine. 2,407,053; Sept. 3.
Belcher, Daniel, assignor to Bemis Bro. Bag Co., Minneapolis, Minn. Closing bag tube ends. 2,406,791; Sept. 3.
Bell Telephone Laboratories, Incorporated, assignee: *See*— Bacon, Walter M.
Bies, Frank R.
Elmer, Lloyd A., and Lovell.
French, Norman R.
Holden, William H. T.
Muller, Arno H.
Pierce, John R.
Belmont Body Builders, assignee: *See*— Winarsky, Nathan and B.
Bemis Bro. Bag Co., assignee: *See*— Belcher, Daniel.
Bendix Aviation Corporation, assignee: *See*— Buxton, James E.
Jones, Burr W.
Whitney, Maurice P., Buxton, and Miller.
Wood, Louvan E.
Benioff, Hugo, La Canada, Calif., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Piezoelectric oscillator. 2,406,792; Sept. 3.
Benkoe, Erwin, assignee: *See*— Benkoe, Ivan.
Benkoe, Ivan, London, N. W. 3, England, assignor to E. Benkow, Bronx, N. Y. Device for measuring changes of distance between two relatively movable parts. 2,406,793; Sept. 3.
Benning, Anthony F., Woodstown, F. B. Downing, Carney's Point, N. J., and J. D. Park, assignors to Kinetic Chemicals, Inc., Wilmington, Del. Separating pyrolysis products of chlorodifluoromethane. 2,406,794; Sept. 3.
Benning, Anthony F., Woodstown, N. J., and J. D. Park, assignors to Kinetic Chemicals, Inc., Wilmington, Del. Halogenation. 2,407,129; Sept. 3.
Bernardi, Dominic J., and R. T. Florence, Bronx, assignors to Interchemical Corporation, New York, N. Y. Lithographic printing ink. 2,406,795; Sept. 3.
Bernardin Bottle Cap Co., Inc., assignee: *See*— Hughes, Edward B.
Bies, Frank R., Springfield, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Wave filter. 2,406,796; Sept. 3.
Binkley, Stephen B.: *See*— Pfiffner, Joseph J., Binkley, Bloom, and Emmett.
Bjorn, Theodore, assignee: *See*— Bramble, Donald E.

Blades, James, Barberton, Ohio, assignor to Kamen Soap Products Co., New York, N. Y. Making salt water soap. 2,407,130; Sept. 3.

Blanchard, William A., Millbury, assignor to Crompton & Knowles Loom Works, Worcester, Mass. Picker for looms. 2,407,054; Sept. 3.

Blaw-Knox Company, assignee: *See*— West, Carl H.

Bloom, Edward S.: *See*— Pfiffner, Joseph J., Binkley, Bloom, and Emmett.

Boicey, James H., assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Laminated glass glazing unit. 2,406,939; Sept. 3.

Bolt, John A.: *See*— Kruse, Willard E., Nysewander, and Bolt.

Bolton, James, New Bedford, Mass. Method of and apparatus for use in preparing weaving warps. 2,406,988; Sept. 3.

Bonner, Rowland E., Stamford, Conn., and M. D. Brewster, assignors to Atlas Powder Company, Wilmington, Del. Tack testing device. 2,406,989; Sept. 3.

Borden, George C., Jr., and K. R. Karlson, Easton, Pa., assignors to Riegel Paper Corporation, New York, N. Y. Antifungus wrapper, etc. 2,406,990; Sept. 3.

Boyce, Henrietta E., New York, N. Y. Gauntlet glove. 2,406,991; Sept. 3.

Bradner, Burke, assignor, by mesne assignments, to C. E. Threedy, Chicago, Ill., as trustee. File drawer follower. 2,407,055; Sept. 3.

Bramble, Donald E., assignor of one-half to T. Bjorn, Chicago, Ill. Trailer top. 2,406,737; Sept. 3.

Brandt, Automatic Cashier Company, assignee: *See*— Hoffman, Otis E., Quirk, and Spenger.

Bray, Frederick H.: *See*— Hartley, George C., Lowry, and Bray.

Brewster, Morris D.: *See*— Bonner, Rowland E., and Brewster.

Breyfogel, Albert W.: *See*— Haglund, Hakon H., and Breyfogel.

Brill, William E., Cleveland, Ohio, assignor to General Motors Corporation, Detroit, Mich. Pivot pin. 2,406,940; Sept. 3.

British Insulated Cables Limited, assignee: *See*— Mann, Walter N., and Lawrenson.

Brooks, John A., Detroit, Mich., assignor to Howard Foundry Company, Chicago, Ill. Combination valve structure. 2,406,941; Sept. 3.

Brooks, Walter: *See*— Seymour, George W., and Brooks.

Brophy, John J., Salem, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Apparatus for use in stiffening uppers of shoes. 2,406,738; Sept. 3.

Brouwer, Benjamin W., Auburn, assignor to Crompton & Knowles Loom Works, Worcester, Mass. Picking shoe. 2,407,056; Sept. 3.

Brown, William T., Fort Wayne, Ind., assignor to Farnsworth Television and Radio Corporation. Frequency doubler. 2,406,739; Sept. 3.

Brunswick-Balke-Collender Company, The, assignee: *See*— Luth, Harold J., Scheidementel, and Krupnick.

Bruson, Herman A., and G. B. Butler, assignors to Röhm & Haas Company, Philadelphia, Pa. Plastics. 2,407,131; Sept. 3.

Buckbee, John A., Fort Wayne, Ind., assignor to Farnsworth Television and Radio Corporation. Keystone correction apparatus. 2,406,740; Sept. 3.

Buckendale, Lawrence R., assignor to The Timken-Detroit Axle Company, Detroit, Mich. Vehicle driving mechanism. 2,406,797; Sept. 3.

Buckeye Steel Castings Company, The, assignee: *See*— Stertzbach, Harry W.

Buckley, Charles W.: *See*— Tear, James D., and Buckley.

Budd Company, The, assignee: *See*— Ledwinka, Joseph, and Trauvetter. Trauvetter, George.

Buick, Wynton R.: *See*— Udale, Stanley M., and Buick.

Burroughs, Gordon S., Forest Hills, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Direction finder. 2,406,798; Sept. 3.

Busignies, Henri G.: *See*— Deloraine, Edmond M., Busignies, and de Rosa.

Busignies, Henri G., Forest Hills, assignor to International Standard Electric Corporation, New York, N. Y. Distortion corrective arrangement. 2,406,799; Sept. 3.

Busignies, Henri G., Forest Hills, assignor to International Standard Electric Corporation, New York, N. Y. Direction finder with filter. 2,406,800; Sept. 3.

Butler, Bernard J., San Francisco, Calif., assignor to Maui Pineapple Company, Ltd., Honolulu, Territory of Hawaii. Method and apparatus for loading and storing pineapples. 2,406,992; Sept. 3.

Butler, George B.: *See*— Bruson, Herman A., and Butler.

Buttner, Horace J., Indianapolis, Ind., assignor to General Motors Corporation, Detroit, Mich. Sealed doors. 2,406,942; Sept. 3.

Buxton, James E.: *See*— Whitney, Maurice P., Buxton, and Miller.

Buxton, James E., Elmira, N. Y., assignor to Bendix Aviation Corporation, South Bend, Ind. Engine starter gearing. 2,407,132; Sept. 3.

Byers, William B., Kansas City, Mo. Making insulating blankets. 2,406,801; Sept. 3.

Calhoun, John M.: *See*— Swan, Donald R., and Calhoun.

Cameron Iron Works, assignee: *See*— Allen, Herbert, and Bean.

Carbide and Carbon Chemicals Corporation, assignee: *See*— Carruthers, Thomas F. Wilkes, Benjamin G.

Carruthers, Thomas F., SouthCharleston, W. Va., assignor to Carbide and Carbon Chemicals Corporation. 2-ethylhexyl phosphates. 2,406,802; Sept. 3.

Carter, Philip S., Port Jefferson, N. Y., assignor to Radio Corporation of America. Antenna system. 2,407,057; Sept. 3.

Carter, Shirley J., Hayward, Calif., assignor to Titeflex, Inc. Forming corrugated tube from a strip. 2,406,943; Sept. 3.

Cashman, Aloysius F.: *See*— Lieber, Eugene, and Cashman.

Celanese Corporation of America, assignee: *See*— Seymour, George W., and Brooks.

Cerf, Robert C., assignor to Pacific Plastic and Manufacturing Company, Los Angeles, Calif. Door latch. 2,407,133; Sept. 3.

Certain-Teed Products Corporation, assignee: *See*— Gardner, Harry F.

Chandler-Evans Corporation, assignee: *See*— Chandler, Milton E. Lockwood, Harry A.

Chandler, Milton E., New Britain, Conn., assignor to Chandler-Evans Corporation. Anticorrosion plug. 2,406,993; Sept. 3.

Chandler, Milton E., New Britain, assignor to Chandler-Evans Corporation, South Meriden, Conn. Engine signal apparatus. 2,407,134; Sept. 3.

Chantermerle, Pierre: *See*— Wittkuhns, Bruno A., and Chantemerle.

Chatterjea, Prafulla K., and L. W. Houghton, London, W. C. 2, assignors to Standard Telephones and Cables Limited, London, England. High frequency electrical communication system. 2,406,803; Sept. 3.

Chatterjea, Prafulla K., and C. T. Scully, London, England, assignors, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Negative resistance device for generating oscillations or reducing damping. 2,406,804; Sept. 3.

Chemical Construction Corporation, assignee: *See*— Mohr, Albert C. Schideler, Pierre, and Richardson. Titlestad, Nicolay.

Chemical Foundation, Incorporated, The, assignee, trustee: *See*— Hixson, Arthur W., and Miller.

Chesus, Frank O.: *See*— Richardson, Avery G., and Chesus.

Chicago Metallic Manufacturing Company, assignee: *See*— Langel, Adrien L.

Choate, Roy E., and E. W. Austin, assignors to La Plant-Choate Manufacturing Company, Incorporated, Cedar Rapids, Iowa. Vehicle. 2,406,944; Sept. 3.

Chu, Helga M.: *See*— Chu, Hing F. and H. M.

Chu, Hing F. and H. M., Larchmont, N. Y. Alternating cloth doll and constructing same. 2,406,994; Sept. 3.

Clark, Horace N., Bound Brook, N. J., assignor to Refractory & Insulation Corporation, New York, N. Y. Furnace lining. 2,407,135; Sept. 3.

Clark, Trevor H., New York, N. Y., assignor to Federal Telephone and Radio Corporation. Conductor joint and making same. 2,406,805; Sept. 3.

Clarke, Carole A., Glen Ridge, assignor to Federal Telephone and Radio Corporation, Newark, N. J. Rectifier. 2,406,806; Sept. 3.

Clarke, Louis A., Fishkill, assignor to The Texas Company, New York, N. Y. Alkylation of hydrocarbons. 2,407,136; Sept. 3.

Clarke, Louis A., Fishkill, assignor to The Texas Company, New York, N. Y. Alkylation of hydrocarbons. 2,407,137; Sept. 3.

Clayton, Benjamin, assignee: *See*— Thurman, Benjamin H.

Clifford, Albert M., and J. G. Lichty, Stow, Ohio, assignor to Wingfoot Corporation, Akron, Ohio. Chemical compounds and preppration thereof. 2,407,138; Sept. 3.

Clothier, William C., B. Naylor, and J. E. P. Dunning, Farnborough, Hants, England, assignors to The Minister of Supply in His Majesty's Government of the United Kingdom of Great Britain and Ireland, London, England. System for producing regulated liquid pressures. 2,407,139; Sept. 3.

Clum, Henry W., Upper Darby, assignor to Philco Corporation, Philadelphia, Pa. Freezing apparatus. 2,407,058; Sept. 3.

Coake, Charles F., Indianapolis, assignor to Senn Corporation, New Augusta, Ind. Electric microgauge system. 2,407,140; Sept. 3.

Coake, Charles F., Indianapolis, assignor to Senn Corporation, New Augusta, Ind. Electric microgauge system. 2,407,141; Sept. 3.

Coates, George O., Washington, D. C. Antiskid chain. 2,406,995; Sept. 3.

Colbath, Dan L., Schenectady, N. Y., assignor to General Electric Company. Sighting apparatus. 2,406,807; Sept. 3.

Cole Industries, Inc., assignee: *See*— Cole, Louis W., and Jensen.

Cole, Louis W., New York, and H. Jensen, Flushing, N. Y., assignors to Cole Industries, Inc., Long Island City, N. Y. Bus duct. 2,407,142; Sept. 3.

Cole, Quintin P., and R. O. Roblin, Jr., Old Greenwich, Conn., assignors to American Cyanamid Company, New York, N. Y. α-amino-α-alkoxybutyric acids and method of preparing the same. 2,407,203; Sept. 3.

Colley, George F., assignor to W. R. Bedingfield, Augusta, Ga. Tire removing apparatus. 2,406,996; Sept. 3.

Columbia Broadcasting System, Inc., assignee: *See*— Goldmark, Peter C.

Compton, Walter A., and R. S. Nicholls, assignors to Miles Laboratories, Inc., Elkhart, Ind. Vitamin B-complex tablet. 2,406,741; Sept. 3.

Conner, Guy O., Wheeling, W. Va. Forming machine. 2,406,808; Sept. 3.

Consolidated Vultee Aircraft Corporation, assignee: *See*— Rethorst, Scott.

Continental Can Company, Inc., assignee: *See*— Gazette, Marshall E. O'Brien, Frank J. Palmer, Wilson G. Punte, William F. Schrader, Herbert.

Cooper, Dexter P., Jr., assignor to Polaroid Corporation, Cambridge, Mass. Mold for use in the manufacture of optical elements. 2,406,742; Sept. 3.

Corcoran, Josephine C., assignee: *See*— Nunn, Elizabeth T.

Cottrell, C. B., & Sons Company, assignee: *See*— Luehrs, Hans J.

Crafton, Henry H., Baden, assignor to H. H. Robertson Company, Pittsburgh, Pa. Portable launching and landing mat for airplanes. 2,407,059; Sept. 3.

Creamery Package Mfg. Company, The, assignee: *See*— Farrall, Arthur W.

Creed and Company Limited, assignee: *See*— Thompson, Alfred E., and Salmon.

Croft, Arthur, Rawdon, near Leeds, England. Friction clutch. 2,407,060; Sept. 3.

Crompton & Knowles Loom Works, assignee: *See*— Blanchard, William A. Brouwer, Benjamin W.

Crowson, Enoch E., Greenville, S. C. Reflected price tag or the like. 2,406,743; Sept. 3.

Cryar, Buford L., Albertville, Ala. Rotary cast cutter. 2,406,744; Sept. 3.

Curry, Harold E., Seattle, Wash. Atomizer. 2,406,997; Sept. 3.

Curtze, Max, Los Angeles, Calif., assignor to The Scholl Mfg. Co., Inc., Chicago, Ill. Capping tubing. 2,406,745; Sept. 3.

Dahle, Joseph, West Newton, assignor, by mesne assignments, to Pro-phy-lac-tic Brush Company, Northampton, Mass. Treating polyvinyl alcohol. 2,407,061; Sept. 3.

Daniel, Walter: *See*— Daur, Theodor, and Daniel.

Dannenbert, Hans: *See*— Adelson, David E., and Dannenberg.

Darrah, William A., Chicago, Ill., assignor to Owens-Illinois Glass Company. Apparatus for testing containers. 2,407,062; Sept. 3.

Daur, Theodor, Mannheim, and W. Daniel, Ludwigshafen-on-the-Rhine, Germany; vested in the Alien Property Custodian. Adhesives and producing same. 2,407,143; Sept. 3.

Davis, Ernest W., River Forest, assignor to Stewart-Warner Corporation, Chicago, Ill. Oil cup. 2,406,746; Sept. 3.

Davis, Ernest W., River Forest, Ill. Pneumatic motor. 2,406,747; Sept. 3.

Davis, John H., and R. W. Matthews, Aberdeen Proving Ground, Md., and N. G. McLean, Memphis, Tenn. Water-cooled ammunition rack. 2,406,809; Sept. 3.

Day, Roland B., Riverside, assignor to Universal Oil Products Company, Chicago, Ill. Treatment of hydrocarbonaceous solids. 2,406,810; Sept. 3.

Deere & Company, assignee: *See*— Walz, Claude W., and Griff.

Delamere Company, Inc., assignee: *See*— Huppert, William.

Del Llano, Jose S., assignor of one-fourth to R. M. Ferrer, Habana, Cuba. Closure device for rendering bottles nonrefillable. 2,407,063; Sept. 3.

Deloraine, Edmond M., New York, H. G. Busignies, Forest Hills, and L. A. de Rosa, Staten Island, N. Y., assignors to Federal Telephone and Radio Corporation, Newark, N. J. Facsimile system. 2,406,811; Sept. 3.

Deloraine, Edmond M., New York, H. G. Busignies, Forest Hills, and L. A. de Rosa, Staten Island, N. Y., assignors to Federal Telephone and Radio Corporation, Newark, N. J. Facsimile system and method. 2,406,812; Sept. 3.

De Rosa, Louis A.: *See*— Deloraine, Edmond M., Busignies, and de Rosa.

De Rosa, Louis A., West Brighton, Staten Island, N. Y., assignor to Federal Telephone and Radio Corporation, Newark, N. J. Intelligence transmission system. 2,406,813; Sept. 3.

Dewey, Frederick L., Canton, Ill., assignor to International Harvester Company. Agricultural implement. 2,407,064; Sept. 3.

Dickinson, Norman L., Basking Ridge, N. J., assignor to Standard Oil Company, Chicago, Ill. Desalting of hydrocarbon oils. 2,406,748; Sept. 3.

Diehl, G. M., Machine Works, The, assignee: *See*— Frame, Clifton C.

Distillers Company Limited, The, assignee: *See*— Stanley, Herbert M.

Dittmar, Harry R., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Sizing composition and yarn sized therewith. 2,406,749; Sept. 3.

Donle, Harold P., deceased, New York, N. Y.; M. D. Jensen, administratrix, assignor of one-half to D. J. McCarthy. Ray projector. 2,407,065; Sept. 3.

Dorst, James A., U. S. Army, Geiger Field, Wash. Trestle bridge. 2,406,814; Sept. 3.

Dow Chemical Company, the, assignee: *See*— Savage, Albert B.

Downing, Frederick B.: *See*— Benning, A. F., Downing, and Park.

Dowty Equipment Limited, assignee: *See*— MacKenzie, Donald.

Du Bois, Joseph E., assignor of one-fifth to V. I. Du Bois, Detroit, Mich., one-fifth to L. T. Holzworth, North Tonawanda, one-fifth to R. C. Sterne, one-fifth to E. Silbert, and one-fifth to F. E. Taylor, Buffalo, N. Y. Eyeshield. 2,406,998; Sept. 3.

Du Bois, Virginia I., assignee, et al.: *See*— Du Bois, Joseph E.

Duesel, Bernard F.: *See*— Tisza, Edmond T., and Duesel.

Dunlop, Andrew P., Riverside, assignor to The Quaker Oats Company, Chicago, Ill. Manufacturing furoic acid and furoic acid salts. 2,407,066; Sept. 3.

Dunning, John E. P.: *See*— Clothier, William C., Naylor, and Dunning.

Du Pont, E. I. de Nemours & Company, assignee: *See*— Dittmar, Harry R. Fothergill, Robert E., Hill, and Johnson. Glogau, Richard C. Hitt, Otha A. Johnston, Frederick L. McQueen, David M. Neal, Arthur M., and Sturgis. Pollock, Frank S., Jr. Rothrock, Henry S. Scott, Samuel L. Smith, Joseph E.

Durgin, Franklin W., Washington, D. C. Continuous range finder. 2,406,999; Sept. 3.

Dyett, James H., assignor to Hard Manufacturing Company, Buffalo, N. Y. Toilet or the like cabinet. 2,406,750; Sept. 3.

Eastman Kodak Company, assignee: *See*— Luboshez, Benjamin E. Salminen, Ilmari F., and Weissberger. Sherwood, William T. Swan, Donald R., and Calhoun. Weissberger, Arnold, Kibler, and Vittum. Yule, John A. C.

Edison, Thomas A., Incorporated, assignee: *See*— Gardenier, Clyde B. Snavely, Earl R.

Edwards, Herbert C., Massillon, assignor to The Timken Roller Bearing Company, Canton, Ohio. Resilient drive gearing. 2,407,144; Sept. 3.

Edwards, John H.: *See*— Anderson, Peter A. and E. M., Sr., Hansen, and Edwards.

Eisemann Corporation, assignee: *See*— Tabb, Warner T.

Electric Tachometer Corporation, The, assignee: *See*— Hamilton, Sam.

Electrical Products Corporation, assignee: *See*— Owen, Harold R.

Elfving, Thore M., Nockeby, Sweden. Multilayer insulation. 2,406,815; Sept. 3.

Elmer, Lloyd A., Summit, and C. A. Lovell, Maplewood, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Sound recording projectile. 2,406,816; Sept. 3.

Elwin, Charles T., assignor to Scovill Manufacturing Company, Waterbury, Conn. Handling small articles in electrolytic treatment. 2,407,145; Sept. 3.

Emerson, Kenneth H., assignor, by mesne assignments, to Philco Radio Corporation, Philadelphia, Pa. Demonstration apparatus. 2,406,751; Sept. 3.

Emmett, Arthur D.: *See*— Pfiffner, Joseph J., Binkley, Bloom, and Emmett.

Emsco Derrick & Equipment Company, assignee: *See*— Tremolada, Guglielmo R.

Engemann, Herbert H., Cleveland Heights, Ohio. Hammer slot and floating pin assembly for automatic push rods. 2,406,817; Sept. 3.

English, Jackson P., Stamford, J. R. Vaughan, Jr., Greenwich, and R. O. Roblin, Jr., Old Greenwich, Conn., assignors to American Cyanamid Company, New York, N. Y. Triazolo (d) pyrimidines and methods of preparing the same. 2,407,204; Sept. 3.

Erb, George H., South Orange, assignor to Federal Telephone and Radio Corporation, Newark, N. J. Rotary switch. 2,406,818; Sept. 3.

Erminger, Durward B., Maywood, Ill., assignor to International Harvester Company. Service inspection manual. 2,407,067; Sept. 3.

Eskin, Samuel G., and C. K. Strobel, Pittsburgh, assignors to Robertshaw Thermostat Company, Youngwood, Pa. Safety control for gaseous fuel burners. 2,406,752; Sept. 3.

Evans, John, Palmyra, N. J., assignor to Radio Corporation of America. Radio device for indicating doppler effect. 2,407,000; Sept. 3.

Fagan, Christopher P., Danbury, England, assignor to Radio Corporation of America. Coating surfaces with powder. 2,407,146; Sept. 3.

Farnsworth Television and Radio Corporation, assignee: *See*—
Brown, William T.
Buckbee, John A.

Farrall, Arthur W., Wilmette, assignor to The Creamery Package Mfg. Company, Chicago, Ill. Butter manufacture. 2,406,819; Sept. 3.

Federal Telephone & Radio Corporation, assignee: *See*—
Alford, Andrew.
Burroughs, Gordon S.
Clark, Trevor H.
Clarke, Carole A.
Deloraine, Edmond M., Busignies, and de Rosa.
De Rosa, Louis A.
Erb, George H.
Herbst, John A.
Labin, Emile, and Nye.
Relf, Reginald T.
Richardson, Avery G., and Chesus.
Watts, Chester B., Jr.
Young, Norman H., Jr.

Fedotoff, Nicholas V., Lynbrook, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill. Adjustable transmission line. 2,407,147; Sept. 3.

Fell, William F., Merchantville, N. J., assignor to Radio Corporation of America. Insulator for concentric transmission lines. 2,406,945; Sept. 3.

Ferrer, Ricardo M., assignee: *See*—
Del Llano, Jose S.

Ferris, Warren R.: *See*—
Kilgore, George R., Ferris, and Shulman.

Finke, D. H., assignee: *See*—
Noonan, John.

Firearms Research Corporation, assignee: *See*—
Hyde, George J.

Firestone, Floyd A., Ann Arbor, Mich. Music teaching device. 2,406,946; Sept. 3.

Fisher, Harmon F., Palo Alto, and A. C. Peck, Los Altos, Calif., assignors, by mesne assignments, to The Permanente Metals Corporation. Removing suspended matter from suspensions. 2,406,820; Sept. 3.

Fiske, Milan D., Schenectady, N. Y., assignor to General Electric Company. Dielectric wave guide system. 2,407,069; Sept. 3.

Fiske, Milan D., Schenectady, and J. M. Lafferty, Colonie, N. Y., assignors to General Electric Company. Wave transmitting system. 2,407,068; Sept. 3.

Fitzgerald, Charles F., Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Sole pressing machine. 2,406,753; Sept. 3.

Florence, Robert T.: *See*—
Bernardi, Dominic J., and Florence.

Forbes, Joseph A., assignor to Kelsey-Hayes Wheel Company, Detroit, Mich. Brake. 2,406,754; Sept. 3.

Ford Instrument Company, Inc., assignee: *See*—
Tear, James D., and Buckley.

Ford Motor Company, assignee: *See*—
Wharam, John J., and Pinardi.

Foster, Claud: *See*—
Strang, John M., and Foster.

Fothergill, Robert E., J. W. Hill, and A. A. Johnson, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Modified cellulose ester fibers. 2,406,755; Sept. 3.

Fox, Martin, Dansville, N. Y. Beverage bottle carrier. 2,406,756; Sept. 3.

Fox, Vernie A., Detroit, Mich. Heat processing machine. 2,406,821; Sept. 3.

Fox, Vernie A., Detroit, Mich. Control system and mechanism for heat processing machines. 2,406,822; Sept. 3.

Frame, Clifton C., assignor to The G. M. Diehl Machine Works, Wabash, Ind. Core splicer. 2,407,070; Sept. 3.

Fratis, Joseph E., Berkeley, and E. H. Oakley, El Cerrito, assignors to American Bitumuls Company, San Francisco, Calif. Bituminous emulsions. 2,406,823; Sept. 3.

Fremlin, John H., London, England, assignor to International Standard Electric Corporation, New York, N. Y. Electron discharge apparatus. 2,406,824; Sept. 3.

French, Henry C., Elm Grove, and N. V. Kuehlman, assignors to The Heil Co., Milwaukee, Wis. Scraper. 2,406,826; Sept. 3.

French, Norman R., Pleasantville, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Privacy system for speech transmission. 2,406,825; Sept. 3.

Gabriel Steel Company, assignee: *See*—
Zabriskie, William F.

Garcia, Ivan M. A., Bremerton, Wash. Sewing machine. 2,407,148; Sept. 3.

Gardenier, Clyde B., Belleville, assignor to Thomas A. Edison, Incorporated, West Orange, N. J. Stabilized 2-chlor-butene-2. 2,407,149; Sept. 3.

Gardner, Harry F., Highland Park, Ill., assignor to Certain-Teed Products Corporation, New York, N. Y. Set stabilized plaster. 2,406,757; Sept. 3.

Gazette, Marshall E., Boston, Mass., assignor, by mesne assignments, to Continental Can Company, Inc., New York, N. Y. Containers made of paper, and making the same. 2,406,758; Sept. 3.

General Aircraft Limited, assignee: *See*—
Leather, George B., and Wallbanks.

General Electric Company, assignee: *See*—
Colbath, Dan L.
Fiske, Milan D.
Fiske, Milan D., and Lafferty.
Gittings, William N., and Bateman.
Grimshaw, Charles S.
Gurewitsch, Anatole M.
Harkness, Joseph R.
Johnson, Ralph P., and Grams.
Lavender, Raymond W.
Moore, John R.
Novak, Robert L.
Richardson, Ernest L.
Spencer, Richard O.
Warner, Wilbur W.
Winter, Fred H.

General Motors Corporation, assignee: *See*—
Barcus, Anthony P.
Brill, William E.
Butner, Horace J.
Matthews, Carroll F.
Trisler, Milton A.

Gill, Lowell O., and J. W. McDonald, assignors to A. E. Staley Manufacturing Co., Decatur, Ill. Thick pasting starch and method. 2,407,071; Sept. 30.

Gillings, Charles, C. E. Beale, and T. B. D. Terroni, Liverpool, England, assignors, by mesne assignments, to Automatic Electric Laboratories, Inc. Telephone or like signaling system. 2,407,150; Sept. 3.

Gittings, William N., Oakmont, and A. W. Bateman, Yeadon, Pa., assignors to General Electric Company. Electric control system. 2,407,072; Sept. 3.

Glogau, Richard C., Woodbury, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Explosive composition. 2,407,151; Sept. 3.

Glukes, Bernard R., assignor to The Kinney Company, Los Angeles, Calif. Construction toy. 2,406,759; Sept. 3.

Goldmark, Peter C., assignor to Columbia Broadcasting System, Inc., New York, N. Y. Color television. 2,406,760; Sept. 3.

Golkowski, Floyd F., Cleveland, Ohio. Insect excluding sliding windows. 2,406,761; Sept. 3.

Goodchild, Frank D., London, W. C. 2, assignor to Standard Telephones and Cables Limited, London, England. Electron discharge device. 2,406,827; Sept. 3.

Gorton, Paul T., Grosse Pointe, assignor of fifty per cent to H. S. Pierce, Detroit, Mich. Alarm device for automobiles. 2,407,073; Sept. 3.

Goss Printing Press Company, The, assignee: *See*—
Taylor, Auburn, and Worthington.

Government of the United Kingdom of Great Britain and Northern Ireland, The Minister of Supply in His Majesty's, assignee: *See*—
Clothier, William C., Naylor, and Dunning.

Grams, William R.: *See*—
Johnson, Ralph P., and Grams.

Gray, Alvin E.: *See*—
Platt, Donald R., and Gray.

Green, Ernest, Chelmsford, England, assignor to Radio Corporation of America. Feed-back control arrangement for coupled tuned circuits. 2,407,074; Sept. 3.

Greensfelder, Bernard S.: *See*—
Bailey, William A., Jr., and Greensfelder.

Grey, David S., assignor to Polaroid Corporation, Cambridge, Mass. Optical system. 2,406,762; Sept. 3.

Griesinger, William K., Drexel Hill, assignor to The Atlantic Refining Company, Philadelphia, Pa. Purification of oil-soluble sulphonates. 2,406,763; Sept. 3.

Griff, Robert D.: *See*—
Walz, Claude W., and Griff.

Griffin, William C., Tamaqua, Pa., assignor to Atlas Powder Company, Wilmington, Del. Sugar derivatives. 2,407,001; Sept. 3.

Griffin, William C., Newport, assignor to Atlas Powder Company, Wilmington, Del. Glycol glucosides and derivatives thereof. 2,407,002; Sept. 3.

Griffin, William C., Newport, assignor to Atlas Powder Company, Wilmington, Del. Emulsifying agents produced from glycol glucosides and their production. 2,407,003; Sept. 3.

Grimshaw, Charles S., Scotia, N. Y., assignor to General Electric Company. Optical sighting apparatus. 2,406,828; Sept. 3.

Guignon, Emile S., Jr., Kansas City, Mo. Sectional building. 2,407,004; Sept. 3.

Guillemin, Victor, Jr., Dayton, Ohio. Automatic graph drawing recorder. 2,406,764; Sept. 3.

Gulf Research & Development Company, assignee: *See*—
Vacquier, Victor V.

Gump, B. F., Co., assignee: *See*—
Williams, Ralph E., and Nowak.

Gurewitsch, Anatole M., Schenectady, N. Y., assignor to General Electric Company. Ultra high frequency power measurement. 2,407,075; Sept. 3.

Hasse, Jorgen L., assignor to Wingfoot Corporation, Akron, Ohio. Building pneumatic tires. 2,407,152; Sept. 3.

Haglund, Hakon H., Pelham, and A. W. Breyfogel, Howard Beach, assignors to The Western Union Telegraph Company, New York, N. Y. Telegraph system. 2,406,829; Sept. 3.

Haley, Joe B., Houston, Tex. Attachment for toilets. 2,407,005; Sept. 3.

Hall, Homer J.: *See*—
Tongberg, Carl O., and Hall.

Haman, Howard H., and C. E. Whalen, assignors to The Warren Featherbone Co., Three Oaks, Mich. Sealing together two pieces of waterproof fabric, and the seam formed thereby. 2,406,830; Sept. 3.

Hamilton, Sam, Ardmore, assignor to The Electric Tachometer Corporation, Philadelphia, Pa. Speed indicator transmission. 2,407,077; Sept. 3.

Hanna, Atto N., Atlantic Highlands, N. J. Key holder. 2,407,153; Sept. 3.

Hansen, Earl W.: *See*—
Anderson, Peter A. and E. M., Sr., Hansen, and Edwards.

Hansen, Jack, Everett, Wash. Can punching device. 2,406,831; Sept. 3.

Hard Manufacturing Company, assignee: *See*—
Dyett, James H.

Hardinge, Mervyn G., Loma Linda, Calif. Fracture plate. 2,406,832; Sept. 3.

Harkness, Joseph R., Schenectady, N. Y., assignor to General Electric Company. Fluid-tight radio shielded joint. 2,407,076; Sept. 3.

Harlamoff, Anatol J., South Gate, Calif., assignor to A. O. Smith Corporation, Milwaukee, Wis. Centrifugal pump. 2,406,947; Sept. 3.

Harris, Henry C., Pittsburg, Tex. Buster gang plow. 2,407,006; Sept. 3.

Harris-Seybold Company, assignee: *See*—
Harrold, Charles W.
Woodruff, Arthur B.

Harrison, Bertram M., Wellesley Hills, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Submarine signaling. 2,406,833; Sept. 3.

Harrold, Charles W., University Heights, Ohio, assignor to Harris-Seybold Company. Sheet feeder. 2,406,765; Sept. 3.

Harrold, Charles W., Cleveland, Ohio, assignor to Harris-Seybold Company. Sheet feeder. 2,406,766; Sept. 3.

Hartley, George C., L. P. Lowry, and F. H. Bray, assignors to Standard Telephones and Cables Limited, London, England. Arrangement for receiving predetermined trains of electric impulses. 2,406,834; Sept. 3.

Hartz, Hans: *See*—
Orlich, Peter, Negel, and Hartz.

Hayes, Harvey C., Washington, D. C. Directive transceiver for sound. 2,406,767; Sept. 3.

Hazeltine Research, Inc., assignee: *See*—
Fedotoff, Nicholas V.
Lewis, Harold M.
Loughren, Arthur V.

Heil Co., The, assignee: *See*—
French, Henry C., and Kuehlman.

Henrichsen, Knut, Los Angeles, Calif., assignor to North American Aviation, Inc. Articulated bus. 2,407,007; Sept. 3.

Herbst, John A., Oradell, assignor to Federal Telephone and Radio Corporation, Newark, N. J. Method and means for transmitting intelligence. 2,406,835; Sept. 3.

Hildebrand, Paul, and A. Metz, Mannheim, Germany; vested in the Alien Property Custodian. Setting device on mechanical and electrical measuring instruments. 2,407,154; Sept. 3.

Hill, Julian W.: *See*—
Fothergill, Robert E., Hill, and Johnson.

Hillier, James: *See*—
Zworykin, V. K., and Hillier.

Hitt, Otha A., Chesterfield County, Va., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Yarn twisting apparatus. 2,406,768; Sept. 3.

Hixson, Arthur, Leonia, N. J., and R. Miller, New York, N. Y., assignors to The Chemical Foundation, Incorporated, as trustee. Recovery of vanadium. 2,407,008; Sept. 3.

Hoertz, Norman: *See*—
Newton, John A., and Hoertz.

Hoffman, Otis E., E. W. Quirk, and W. H. Sprenger, assignors to Brandt Automatic Cashier Company, Watertown, Wis. Coin handling machine. 2,406,948; Sept. 3.

Hoffman, Samuel K.: *See*—
Tyler, John M., and Hoffman.

Holbrook, John K., assignor to Micropat, Inc., New York, N. Y. Microfilm viewer. 2,407,009; Sept. 3.

Holden, William H. T., Woodside, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electric air position indicator. 2,406,836; Sept. 3.

Holley, Earl, assignee, et al.: *See*—
Holley, George M., Jr.
Udale, Stanley M.
Udale, Stanley M., and Buick.

Holley, George M., assignee: *See*—
Holley, George M., Jr.
Olson, Elmer.

Holley, George M., assignee, et al.: *See*—
Udale, Stanley M.
Udale, Stanley M., and Buick.

Holley, George M., Jr., Grosse Pointe, Mich., assignor to G. M. Holley and E. Holley. Power control. 2,407,078; Sept. 3.

Holmes, Dan Campbell, New York, N. Y. Flexible joint. 2,407,155; Sept. 3.

Holzworth, Lauriene T., assignee, et al.: *See*—
Du Bois, Joseph E.

Hoover Company, The, assignee: *See*—
Acheson, Louis K.
Smellie, Donald G.
Troxler, Charles G.

Horne, John T., Layton, Utah. Trailer brake. 2,407,156; Sept. 3.

Hosman, David F., Omaha, Nebr. Combination cooker and ricer. 2,406,769; Sept. 3.

Houghton, Leslie W.: *See*—
Beatty, William A., and Houghton.
Chatterjea, Prafulla K., and Houghton.

Howard Foundry Company, assignee: *See*—
Brooks, John A.

Howard, Willis G., Indianapolis, Ind. Holding tray for egg treating machines. 2,407,079; Sept. 3.

Huck, Louis C., Grosse Pointe, assignor to Huxon Holding Corporation, Detroit, Mich. Riveting gun. 2,406,949; Sept. 3.

Hudson, Lester C., Big Prairie, Ohio. Adapter head for wells. 2,407,010; Sept. 3.

Huebner, William C., New York, N. Y. Camera. 2,406,770; Sept. 3.

Hughes, Edward B., assignor to Bernardin Bottle Cap Co., Inc., Evansville, Ind. Device for vacuum sealing containers. 2,406,771; Sept. 3.

Hunter, Douglas G., London, England, assignor to Barnet Ensign Limited. Folding photographic camera. 2,406,772; Sept. 3.

Huppert, William, New York, N. Y., assignor to Delamere Company, Inc. Hair roll. 2,407,011; Sept. 3.

Hutchinson, Archibald D. L., Seattle, Wash. Safety device for dump trucks. 2,407,012; Sept. 3.

Huxon Holding Corporation, assignee: *See*—
Huck, Louis C.

Hyde, George J., Brooklyn, assignor to Firearms Research Corporation, New York, N. Y. Firearm. 2,407,157; Sept. 3.

Ielfield, Fred C., assignor to Silver Creek Precision Corporation, Silver Creek, N. Y. Cereal cutter. 2,406,773; Sept. 3.

Ifield, Richard J., Ealing, London, assignor to Joseph Lucas Limited, Birmingham, England. Fuel pump governor. 2,407,013; Sept. 3.

Interchemical Corporation, assignee: *See*—
Bernardi, Dominic J., and Florence.
Whyzmuzis, Paul, and Linkletter.

International Business Machines Corporation, assignee: *See*—
Platt, Donald R., and Gray.
Von Reppert, Richard.
Watson, Thomas J.

International Harvester Company, assignee: *See*—
Dewey, Frederick L.
Erminger, Durward B.
Johnson, Arnold E. W., and Orelind.
McNamara, Gordon G., Jr.
Morkoski, James.
Schmied, William F.

International Nickel Company Inc., assignee: *See*—
Pfeil, Leonard B.

International Standard Electric Corporation, assignee: *See*—
Beatty, William A., and Houghton.
Busignies, Henri G.
Chatterjea, Prafulla K., and Scully.
Fremlin, John H.

Jack & Heintz Precision Industries, Inc., assignee: *See*—
Kalister, Frank B., Stafford, and Konyvka.

Jackson, Pearl M., Chicago, Ill. Self-squeezing mop. 2,406,950; Sept. 3.

Jantz, Gustave H., Cincinnati, Ohio, assignor to Lovell Manufacturing Company, Erie, Pa. Wringer. 2,406,951; Sept. 3.

Jensen, Helge.: *See*—
Cole, Louis W., and Jensen.

Jensen, Miriam D., administratrix.: *See*—
Donle, Harold P.

Johnson, Alfred A.: *See*—
Fothergill, Robert E., Hill, and Johnson.

Johnson, Arnold E. W., Oak Park, and J. R. Orelind, Wilmette, Ill., assignors to International Harvester Company. Jack. 2,407,080; Sept. 3.

Johnson, Ralph P., and W. R. Grams, Schenectady, N. Y., assignors to General Electric Company. Cathode-ray device. 2,407,082; Sept. 3.

Johnston, Frederick L., Claymont, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Stabilized polyvinyl fluoride. 2,406,837; Sept. 3.

Johnston, Mordica O., Glendale, Calif. Gun perforator for well casing. 2,407,081; Sept. 3.

Jones, Burr W., Elmira, N. Y., assignor to Bendix Aviation Corporation, South Bend, Ind. Engine starter drive. 2,407,158; Sept. 3.

Jones, Welton P., Rydal, assignor to Philco Corporation, Philadelphia, Pa. Refrigerator motor-compressor mounting. 2,407,014; Sept. 3.

Jones, Welton P., Rydal, assignor to Philco Corporation, Philadelphia, Pa. Refrigeration apparatus. 2,407,159; Sept. 3.

Joseph, Harrison O., Los Angeles, Calif. Coat hanger. 2,407,015; Sept. 3.

Josepho, Anatol M., Pacific Palisades, Calif. Safety screwdriver. 2,406,952; Sept. 3.

Joy Manufacturing Company, assignee: *See*—
Maxson, Louis A.

Justesen, Aage C.: *See*—
Mason, Reginald D., and Justesen.

Kahn, David A., Columbus, Ohio. Self-locking bolt. 2,407,160; Sept. 3.

Kaiser, Donald W., and J. T. Thurston, Riverside, Conn., assignors to American Cyanamid Company, New York, N. Y. Acyl dicyandiamides and salts thereof. 2,407,161; Sept. 3.

Kalister, Frank B., Cleveland, J. O. Stafford, Painesville, and F. J. Konyvka, Maple Heights, assignors, by mesne assignments, to Jack & Heintz Precision Industries, Inc., Cleveland, Ohio. Ball loading machine. 2,407,016; Sept. 3.

Kamen Soap Products Co., assignee: *See*—
Blades, James.

Kamlet, Jonas, New York, N. Y., assignor to Miles Laboratories, Inc., Elkhart, Ind. Synthesis of riboflavin and intermediates therefor. 2,406,774; Sept. 3.

Karlson, Karl R.: *See*—
Bordon, George C., Jr., and Karlson.

Kaufmann, John J., Jr., Greenville, S. C., assignor to Steel Heddle Manufacturing Company, Philadelphia, Pa. Loom shuttle. 2,407,162; Sept. 3.

Keene, Kenneth L.: *See*—
Taber, John E., Jr., and Keene.

Keller, Herman L., Decherd, Tenn. Potato sacker. 2,407,017; Sept. 3.

Kelsey-Hayes Wheel Company, assignee: *See*—
Forbes, Joseph A.

Kepler, Francis M., Upper Darby, Pa. Forming bent tubing. 2,406,838; Sept. 3.

Kibler, Charles J.: *See*—
Weissberger, Arnold, Kibler, and Vittum.

Kilgore, George R., Princeton, W. R. Ferris, Kingston, and C. Shulman, Princeton, N. J., assignors to Radio Corporation of America. Electron discharge device. 2,407,163; Sept. 3.

Killian, Ezekiel, assignor, by direct and mesne assignments, of one-fourth to E. L. Kotzen, one-fourth to S. R. Kotzen, one-fourth to M. E. Kotzen, and one-fourth to Howard C. Mohn Hosiery Co. Inc., Reading, Pa. Yarn feed means. 2,406,775; Sept. 3.

Kimball, Leo B., New Haven, Conn. Internal-combustion turbine. 2,407,164; Sept. 3.

Kinetic Chemicals, Inc., assignee: *See*—
Benning, Anthony F., and Park.
Benning, Anthony F., Downing, and Park.

Kinney Company, The, assignee: *See*—
Glukes, Bernard R.

Kirkpatrick, James B., Woodbury, N. J., J. J. Somers, Philadelphia, Pa., and A. N. Sachanen, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Catalytic alkylation process. 2,406,776; Sept. 3.

Konyvka, Frank J.: *See*—
Kalister, Frank B., Stafford, and Konyvka.

Koppel, Ernest R., assignor to A. O. Smith Corporation, Milwaukee, Wis. Chuck. 2,407,083; Sept. 3.

Koretzky, Murry H., New York, N. Y. Birthday cake candle holder. 2,406,777; Sept. 3.

Kostur, J. Edward, Amarillo, Tex. Clutch. 2,407,019; Sept. 3.

Kotzen, Louis E., assignee, et al.: *See*—
Killian, Ezekiel.

Kotzen, Myer E., assignee, et al.: *See*—
Killian, Ezekiel.

Kotzen, Samuel R., assignee, et al.: *See*—
Killian, Ezekiel.

Kraus, William A., Richmond, Va. Time recorder attachment and card guide. 2,407,020; Sept. 3.

Kreitner, Johann, New York, and F. Nettel, Manhasset, N. Y. Improving power production in combustion turbines. 2,407,165; Sept. 3.

Kreitner, Johann, New York, and F. Nettel, Manhasset, N. Y. Heat cycle. 2,407,166; Sept. 3.

Krupnick, Sydney R.: *See*—
Luth, Harold J., Scheidemantel, and Krupnick.

Kruse, Willard E., Chicago, Ill., C. W. Nysewander, Highland, Ind., and J. A. Bolt, assignors to Standard Oil Company, Chicago, Ill. Slurrying aluminum chloride for hydrocarbon conversion processes. 2,406,778; Sept. 3.

Kuehlman, Norman V.: *See*—
French, Henry C., and Kuehlman.

Külz, Fritz, Frankfort-on-the-Main, Germany; vested in the Alien Property Custodian. Derivatives of 1-hydroxy-phenyl-3-aminobutane and their production. 2,407,167; Sept. 3.

Kurlychek, John L., Orange, N. J., assignor to United States Rubber Company New York, N. Y. Flame resistant and water repellent fabrics and method of making the same. 2,406,779; Sept. 3.

Kutscha, Alois, Chicago, Ill. Profiling milling cutter. 2,406,780; Sept. 3.

Kuzmich, Elizabeth, et al., assignee: *See*—
Axnix, Eugene J.

Labin, Emile, New York, and J. H. Nye, Jackson Heights, N. Y., assignors to Federal Telephone and Radio Corporation. Impedance matching device. 2,406,839; Sept. 3.

Lafferty, James M.: *See*—
Fiske, Milan D., and Lafferty.

Lambert Brake Corporation, assignee: *See*—
Lambert, Homer T.

Lambert, Homer T., assignor to Lambert Brake Corporation, St. Joseph, Mich. Multiple disk energizing clutch. 2,407,022; Sept. 3.

Langel, Adrien L., assignor to Chicago Metallic Manufacturing Company, Chicago, Ill. Multiple baking pan. 2,407,021; Sept. 3.

La Plant-Choate Manufacturing Company, Incorporated, assignee: *See*—
Choate, Roy E., and Austin.

Lavender, Raymond W., Waterford, N. Y., assignor to General Electric Company. Motor control apparatus. 2,407,084; Sept. 3.

Lawrenson, Ernest: *See*—
Mann, Walter N., and Lawrenson.

Leather, George B. and W. H. Wallbanks, Feltham, assignors to General Aircraft Limited, Feltham, Middlesex, England. Foldable stretcher. 2,407,085; Sept. 3.

Ledwinka, Joseph, Philadelphia, and G. Trauvetter, Jenkintown, assignors to The Budd Company, Philadelphia, Pa. Window construction, especially for rail cars. 2,407,086; Sept. 3.

Lee, Leonard P., assignee: *See*—
Tippen, Frank J.

Leo, Herbert T., and C. C. Taylor, Anaheim, Calif. Preparing pectase. 2,406,840; Sept. 3.

Levy, Maurice M., London, W. C. 2, assignor to Standard Telephones and Cables Limited, London, England. Secret transmission system. 2,406,841; Sept. 3.

Lewel Manufacturing Co. Inc., assignee: *See*—
Novick, Abe.

Lewis, Harold M., Allenhurst, N. J., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill. System for determining the position of an object in space. 2,406,953; Sept. 3.

Lewis, Jacob D., Yonkers, assignor to Otis Elevator Company, New York, N. Y. Electric motor and control system for motors. 2,406,781; Sept. 3.

Lewis, Jacob D., Yonkers, assignor to Otis Elevator Company, New York, N. Y. Motor control system. 2,406,782; Sept. 3.

Libbey-Owens-Ford Glass Company, assignee: *See*—
Boicey, James H.

Lichty, Joy G.: *See*—
Clifford, Albert M., and Lichty.

Lieber, Eugene, Staten Island, N. Y., and A. F. Cashman, Bayonne, N. J., assignors to Standard Oil Development Company. Mineral oil lubricating composition. 2,407,087; Sept. 3.

Lindkvist, Knut V., assignor to Aktiebolaget Vibro-Betong, Stockholm, Sweden. Apparatus for molding concrete. 2,407,168; Sept. 3.

Linkletter, Harry: *See*—
Whyzmuzis, Paul, and Linkletter.

Linn, Carl B., Riverside, assignor to Universal Oil Products Company, Chicago, Ill. Alkylation of isoparaffinic hydrocarbons. 2,406,954; Sept. 3.

Lively, George, Pueblo, Colo. Bicycle seat. 2,406,783; Sept. 3.

Lockwood, Harry A., Meriden, Conn., assignor to Chandler-Evans Corporation. Anticorrosion plug. 2,407,023; Sept. 3.

Lohmuller, Bernard H., and G. W. Lohmuller, North Hollywood, Calif. Theater curtain. 2,407,024; Sept. 3.

Lohmuller, Genevieve W.: *See*—
Lohmuller, Bernard H. and G. W.

Lord Manufacturing Company, assignee: *See*—
Wallerstein, Leon, Jr.

Loughren, Arthur V., Great Neck, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill. System for locating radiated-signal reflectors. 2,407,169; Sept. 3.

Lovell, Clarence A.: *See*—
Elmer, Lloyd A., and Lovell.

Lovell Manufacturing Company, assignee: *See*—
Jantz, Gustave H.

Lower, Carl F., Edgewood, assignor to The Union Switch & Signal Company, Swissvale, Pa. Apparatus for the control of highway crossing signals. 2,406,955; Sept. 3.

Lowry, Leonard P.: *See*—
Hartley, G. C., Lowry, and Bray.

Luboshez, Benjamin E., assignor to Eastman Kodak Company, Rochester, N. Y. Method and apparatus for grinding and polishing surfaces. 2,407,206; Sept. 3.

Lucas, Joseph, Limited, assignee: *See*—
Ifield, Richard J.

Luehrs, Hans J., assignor to C. B. Cottrell & Sons Company, Westerly, R. I. Means for securing printing plates to their bases. 2,406,883; Sept. 3.

Lupton, McSherry, Winchester, Va. Grading machine. 2,406,842; Sept. 3.

Luse, Daniel C., Chicago, Ill. Wall surface sheet or tile. 2,407,025; Sept. 3.

Luth, Harold J., H. B. Scheidemantel, and S. R. Krupnick, Muskegon, Mich., assignors to The Brunswick-Balke-Collender Company, Chicago, Ill. Molding materials under heat and pressure. 2,406,843; Sept. 3.

MacKenzie, Donald, assignor to Dowty Equipment Limited, Cheltenham, England. Fluid-actuated control system. 2,407,018; Sept. 3.

MacMullin, Robert B.: *See*—
Wood, Joseph L., and MacMullin.

Malek, Sidney K., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Control mechanism. 2,407,170; Sept. 3.

Mallett, John D.: *See*—
Shepherd, James E., and Mallett.

Mallory, P. R., & Co., Inc., assignee: *See*—
McFarren, Lawrence E.

Mann, Walter N., S. Coldfield, and E. Lawrenson, assignors to British Insulated Cables Limited, Prescot, England. Electric heating system for buildings. 2,406,884; Sept. 3.

Manning, Maxwell & Moore, Inc., assignee: *See*—
Mitchell, George A.

Marien, Charles, and M. W. Marien, assignors to Ramsey Accessories Manufacturing Corporation, St. Louis, Mo. Piston ring. 2,406,844; Sept. 3.

Marien, Melvin W.: *See*—
Marien, Charles A. and M. W.

Marker, Russell E., State College, Pa., assignor to Parke, Davis & Company, Detroit, Mich. Sapogenin oxidation products and preparing the same. 2,406,885; Sept. 3.

Mashmeyer, Herman, Jacksonville, Fla. Awning. 2,407,026; Sept. 3.

Mason, Reginald D., Richmond, and A. C. Justesen, Heston, England. Manufacture of cream substitutes. 2,407,027; Sept. 3.

Mathieson Alkali Works, Inc., The, assignee: *See*—
Wood, Joseph L., and MacMullin.

Matthews, Carroll F., Indianapolis, Ind., assignor to General Motors Corporation, Detroit, Mich. Apparatus for electroplating of bearing shells. 2,406,956; Sept. 3.

Matthews, Robert W.: *See*—
Davis, John H., Matthews, and McLean.

Maui Pineapple Company, Ltd., assignee: *See*—
Butler, Bernard J.

Maxson, Louis A., Claremont, N. H., assignor to Joy Manufacturing Company. Controlling mechanism. 2,407,088; Sept. 3.

McBean, Douglas M., Rochester, assignor to Beech-Nut Packing Company, Canajoharie, N. Y. Coffee bin. 2,406,886; Sept. 3.

McBride, Maurice G., Enfield, Middlesex, England, assignor to Sangamo Electric Company, Springfield, Ill. Electrical ratiometer. 2,406,887; Sept. 3.

McCarthy, Daniel J., assignee: *See*—
Donle, Harold P.

McCarthy, Harry, Kewanee, Ill., assignor to Walworth Patents, Inc., Boston, Mass. Handwheel attaching means. 2,406,957; Sept. 3.

McDonald, John W.: *See*—
Gill, Lowell O., and McDonald.

McFall, Robert J., Haworth, N. J. Snap switch. 2,407,089; Sept. 3.

McFarren, Lawrence E., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind. Fixed resistor. 2,407,171; Sept. 3.

McGreal, Martin E.: *See*—
Nierderl, Joseph B., V., and McGreal.

McLean, Edmond C., Palatka, Fla. Portable timber cutting saw apparatus. 2,407,028; Sept. 3.

McLean, Nathaniel G.: *See*—
Davis, John H., Matthews, and McLean.

McMahan, Roy F., Arlington Road, near Louisville, Ky. Applying metal binding-straps. 2,407,090; Sept. 13.

McMillan, Clarence H., Minneapolis, Minn. Game carrier. 2,407,172; Sept. 3.

McMullen, John, Buffalo, N. Y. Adjustable lading brace for railway cars. 2,407,091; Sept. 3.

McNamara, Gordon G., Jr., Chicago, Ill., assignor to International Harvester Company. Vehicle. 2,407,092; Sept. 3.

McQueen, David M., Newark, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Chemically modified wool. 2,406,958; Sept. 3.

Meidenbauer, Phillip E., Jr., assignor to Scott Aviation Corporation, Lancaster, N. Y. Breathing apparatus. 2,406,888; Sept. 3.

Metz, Artur: *See*—
Hildebrand, Paul, and Metz.

Micropat, Inc., assignee: *See*—
Holbrook, John K.

Miles Laboratories, Inc., assignee: *See*—
Compton, Walter A., and Nicholls.
Kamlet, Jonas.

Millard, Dwight H., Norwalk, Calif. Rotary pump. 2,406,959; Sept. 3.

Miller, Donald L.: *See*—
Whitney, Maurice P., Buxton, and Miller.

Miller, Kent, Aiken, S. C. Horse eyeshield. 2,407,029; Sept. 3.

Miller Printing Machinery Co., assignee: *See*—
Neuhart, Andrew.
Saul, August A.

Miller, Ralph: *See*—
Hixson, Arthur W., and Miller.

Mills, William L., Waco, Tex. Razor. 2,407,030; Sept. 3.

Minneapolis-Honeywell Regulator Company, assignee: *See*—
Malek, Sidney K.
Sparrow, Hubert T.

Mishawaka Rubber and Woolen Manufacturing Co., assignee: *See*—
Tabel, John E., Jr., and Keene.

Mitchell, George A., assignor to Manning, Maxwell & Moore, Inc., Muskegon, Mich. Power unit for traveling cranes. 2,406,889; Sept. 3.

Mohaupt, Henry H., Washington, D. C., assignor to Societe Anonyme de Gestion et d' Exploitation de Brevets, Switzerland. Method and apparatus for cutting or punching sheet material. 2,407,093; Sept. 3.

Mohn, Howard C., Hosiery Co. Inc., assignee, et al.: *See*—
Killian, Ezekiel.

Mohr, Albert C., Arcadia, Calif., assignor, by mesne assignments, to Chemical Construction Corporation, New York, N. Y. Production of sulphur dioxide. 2,406,890; Sept. 3.

Moore, John R., Schenectady, N. Y., assignor to General Electric Company. Gyroscopic device. 2,406,845; Sept. 3.

Morcaldi D', Rosaria F., East Boston, Mass. Knotted needlework with tied loops. 2,407,031; Sept. 3.

Morkoski, James, Canton, Ill., assignor, to International Harvester Company. Agricultural implement. 2,407,094; Sept. 3.

Morkoski, James, Canton, Ill., assignor to International Harvester Company. Agricultural implement. 2,407,173; Sept. 3.

Muller, Arno H., Wood-Ridge, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Winding machine. 2,406,846; Sept. 3.

Myers, Bernard L., Dallas, Tex. Sheave mounting. 2,407,032; Sept. 3.

Naylor, Beatrice: *See*—
Clothier, William C., Naylor, and Dunning.

Neal, Arthur M., Wilmington, Del., and B. M. Sturgis, Pitman, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparation of heavy metal salts of dithiocarbamic acids. 2,406,960; Sept. 3.

Negel, Günter: *See*—
Orlich, Peter, Negel, Hartz.

Nettel, Frederick: *See*—
Kreitner, Johann, and Nettel.

Neuhart, Andrew, assignor to Miller Printing Machinery Co., Pittsburgh, Pa. Registering sheets. 2,406,847; Sept. 3.

Newton, John A., and N. Hoertz, assignors to Thompson Products, Inc., Cleveland, Ohio. Shaft bearing assembly. 2,406,891; Sept. 3.

Nichol, Arthur V., Elkins Park, assignor to Philco Radio and Television Corporation, Philadelphia, Pa. Device for use with helically-wound coils. 2,406,961; Sept. 3.

Nicholls, Richard S.: *See*—
Compton, Walter A., and Nicholls.

Niederl, Joseph B., V. Niederl, and M. E. McGreal, Brooklyn, N. Y. N-benzyl-n-alkyl morpholinium compounds. 2,406,892; Sept. 3.

Nierderl, Victor: *See*—
Nierderl, Joseph B. and V., and McGreal.

Noonan, John, St. Louis, Mo., assignor to D. H. Finke, Chicago, Ill. Counter. 2,406,962; Sept. 3.

North American Aviation, Inc.: *See*—
Henrichsen, Knut.

Norton, Samuel H., assignor to Thompson Products, Inc., Cleveland, Ohio. Valve seat insert assembly and assembly method and means. 2,406,963; Sept. 3.

Novak, Robert L., Devon, Conn., assignor to General Electric Company. Remote-control system. 2,406,848; Sept. 3.

Novick, Abe, South Orange, assignor to Lewel Manufacturing Co. Inc., Newark, N. J. Brassière slip. 2,406,849; Sept. 3.

Nowak, Leon J., Jr.: *See*—
Williams, Ralph E., and Nowak.

Nunn, Elizabeth T., Cleveland, assignor of one-half to J. C. Corcoran, Rocky River, Ohio. Garment. 2,406,893; Sept. 3.

Nye, James H.: *See*—
Labin, Emile, and Nye.

Nysewander, Cecil W.: *See*—
Kruse, Willard E., Nysewander, and Bolt.

Oakley, Eugene H.: *See*—
Fratis, Joseph E., and Oakley.
Oberender, John L., assignor to Oles Envelope Corporation, Baltimore, Md. Envelope machine. 2,407,174; Sept. 3.
O'Brien, Frank J., Pelham, assignor to Continental Can Company, Inc., New York, N. Y. Closure for paper containers. 2,406,894; Sept. 3.
O'Kelly, Arlie A., Woodbury, J. Plucker, III, Pitman, N. J., and R. H. Work, Philadelphia, Pa., assignors to Socony-Vacuum Oil Company, Incorporated. Catalytic alkylation process. 2,407,033; Sept. 3.
Oles Envelope Corporation, assignee: *See*—
Oberender, John L.
Olin Industries, Inc., assignee: *See*—
Wilson, Golder P.
Olson, Elmer, Ferndale, Mich., assignor to G. M. and E. Holley. Heat control. 2,407,095; Sept. 3.
Olson, Raymond G., Chevy Chase, Md. Electric connector. 2,406,895; Sept. 3.
Orelind, John R: *See*—
Johnson, Arnold E. W., and Orelind.
Orlich, Peter, G. Negel, and H. Hartz, Kiel, Germany; vested in the Alien Property Custodian. Echo sounding device. 2,407,175; Sept. 3.
Orr, Donald J., Arnolds Park Iowa. Variable delivery and reversing pump. 2,406,964; Sept. 3.
Orr, Donald J., Arnolds Park, Iowa. Variable delivery fluid handling device. 2,406,965; Sept. 3.
Otis Elevator Company, assignee: *See*—
Lewis, Jacob D.
Owen, Harold R., assignor to Electrical Products Corporation, Los Angeles, Calif. Gaseous discharge tube lighting fixture. 2,406,896; Sept. 3.
Owens-Illinois Glass Company, assignee: *See*—
Belada, John.
Darrah, William A.
Pacific Plastic and Manufacturing Company, assignee: *See*—
Cerf, Robert C.
Page, Alfred E., assignor to W. & T. Avery Limited, Birmingham, England. Automatic weighing apparatus embodying a totalizing mechanism. 2,406,897; Sept. 3.
Palmer, Wilson G., Chicago, Ill., assignor to Continental Can Company, Inc., New York, N. Y. Cap lining material and producing the same. 2,406,898; Sept. 3.
Park, Joseph D.: *See*—
Benning, Anthony F., Downing, and Park.
Benning, Anthony F., and Park.
Parke, Davis & Company, assignee: *See*—
Marker, Russell E.
Pfiffner, Joseph J., Binkley, Bloom, and Emmett.
Rawlins, Albert L.
Peck, Albert C.: *See*—
Fisher, Harmon F., and Peck.
Penaljo Company, assignee: *See*—
Walsh, John J.
Perfect Circle Company, The, assignee: *See*—
Teetor, Ralph R.
Permanente Metals Corporation, The, assignee: *See*—
Fisher, Harmon F., and Peck.
Pfeil, Leonard B., Edgbaston, Birmingham, England, assignor to International Nickel Company Inc., New York, N. Y. Spark plug electrode. 2,406,966; Sept. 3.
Pfiffner, Joseph J., Ann Arbor, and S. B. Binkley, E. S. Bloom and A. D. Emmett, assignors to Parke, Davis & Company, Detroit, Mich. Antianemia vitamin products. 2,407,096; Sept. 3.
Philco Corporation, assignee: *See*—
Clum, Henry W.
Emerson, Kenneth H.
Jones, Welton P.
Seher, Henry W.
Philco Radio and Television Corporation, assignee: *See*—
Nichol, Arthur V.
Phillips Petroleum Company, assignee: *See*—
Sievers, Carl F.
Upham, John D.
Platt, Donald R., Endicott, and A. E. Gray, Binghamton, assignors to International Business Machine Corporation, New York, N. Y. Plugboard. 2,407,176; Sept. 3.
Pierce, Hodgson S., assignee: *See*—
Gorton, Paul T.
Pierce, John R., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electron discharge apparatus. 2,406,850; Sept. 3.
Pinardi, Charles P.: *See*—
Wharam, John J., and Pinardi.
Pines, Herman, Riverside, assignor to Universal Oil Products Company, Chicago, Ill. Isomerization of saturated hydrocarbons. 2,406,967; Sept. 3.
Pittsburgh Equitable Meter Company, assignee: *See*—
Whittaker, Alexander R.
Plessey Company Limited, The, assignee: *See*—
Pugh, Cyril A., and Say.
Plucker, Julius, III: *See*—
O'Kelly, Arlie A., Plucker, and Work.
Polaroid Corporation, assignee: *See*—
Cooper, Dexter P., Jr.
Grey, David S.
Pollock, Frank S., Jr., Martinsville, Va., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Lubricated traveler ring. 2,406,901; Sept. 3.
Porter, Gilbert E., Los Angeles, Calif., assignor to L. J. Rosa, Detroit, Mich. Brake mechanism. 2,407,097; Sept. 3.
Preger, Dan, assignee, et al.: *See*—
Axnix, Eugene J.
Pro-phy-lac-tic Brush Company, assignee: *See*—
Dahle, Joseph.
Pugh, Cyril A., Ilford, and A. W. Say, Upminster, assignors to The Plessey Company Limited, Ilford, England. Hydraulic cutout device. 2,406,899; Sept. 3.
Punte, William F., Passaic, assignor to Continental Can Company, Inc., New York, N. Y. Adhesive tape container with nesting feature. 2,406,900; Sept. 3.
Pyridium Corporation, assignee: *See*—
Tisza, Edmond T., and Duesel.
Quaker Oats Company, The, assignee: *See*—
Dunlop, Andrew P.
Quirk, Earl W.: *See*—
Hoffman, Otis E., Quirk, and Spenger.

Wendt, Karl R.
Wendt, Karl R., and Bedford.
Wolff, Irving.
Zworykin, V. K., and Hillier.
Raiche, Paul A., North Providence, R. I. Earring construction. 2,407,098; Sept. 3.
Ramsey Accessories Manufacturing Corporation, assignee: *See*—
Marien, Charles A. and M. W.
Rawlins, Albert L., Grosse Pointe Woods, assignor to Parke, Davis & Company, Detroit, Mich. Soap-like preparations. 2,406,902; Sept. 3.
Redcay, Aaron K., Baton Rouge, La., assignor, by mesne assignments, to Standard Catalytic Company. Fischer synthesis. 2,406,851; Sept. 3.
Refining Unincorporated, assignee: *See*—
Thurman, Benjamin H.
Refractory & Insulation Corporation, assignee: *See*—
Clark, Horace N.
Rehfeld, George W., Manhattan, Kans. Jetty with stabilizer. 2,407,034; Sept. 3.
Relf, Reginald T., Chatham, N. J., assignor to Federal Telephone and Radio Corporation. Conductor grommet assembly. 2,406,852; Sept. 3.
Rethorst, Scott, Los Angeles, Calif., assignor, by mesne assignments, to Consolidated Vultee Aircraft Corporation. Fuel container and method of making same. 2,406,903; Sept. 3.
Richards, Carroll H., Boston, Mass. Two and one direction silent overriding and positive driving overriding mechanism. 2,407,099; Sept. 3.
Richardson, Avery G., Boonton, N. J., and F. O. Chesus, Islip, N. Y., assignors to Federal Telephone and Radio Corporation, Newark, N. J. Rotary position corrector. 2,406,853; Sept. 3.
Richardson, Ernest L., Melrose, Mass., assignor to General Electric Company. Drafting of fibers. 2,407,100; Sept. 3.
Richardson, Ralph S.: *See*—
Schideler, Pierre, and Richardson.
Riegel Paper Corporation, assignee: *See*—
Borden, George C., Jr., and Karlson.
Roberts, Frederick W., Lockport, N. Y. Wood grinding machine. 2,406,904; Sept. 3.
Robertshaw Thermostat Company, assignee: *See*—
Eskin, Samuel G., and Strobel.
Strobel, Charles K.
Robertson, H. H., Company, assignee: *See*—
Crafton, Henry H.
Roblin, Richard O., Jr.: *See*—
Cole, Quintin P., and Roblin.
English, Jackson P., Vaughan, and Roblin.
Roblin, Richard O., Jr., Old Greenwich, and P. S. Winnek, Riverside, Conn., assignors to American Cyanamid Company, New York, N. Y. Sulphonamide derivatives of melamine and their production. 2,407,177; Sept. 3.
Röhm & Haas Company, assignee: *See*—
Bruson, Herman A., and Butler.
Roos, Delmar G., assignor to Willys-Overland Motors, Inc., Toledo, Ohio. Crankcase ventilation system and apparatus. 2,407,178; Sept. 3.
Rosa, Leonard J., assignee: *See*—
Porter, Gilbert E.
Rosenboom, Gustaf H., Kalama, Wash. Pipe cutting and tenoning machine. 2,407,101; Sept. 3.
Rossell, William T., assignor to Transit Research Corporation, New York, N. Y. Brake shoe. 2,407,035; Sept. 3.
Rothrock, Henry S., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Producing cellulosic structures. 2,406,905; Sept. 3.
Ryder, Elmer, Berwyn, Ill. Internal-combustion engine. 2,407,102; Sept. 3.
Sachanen, Alexander N.: See—
Kirkpatrick, James B., Somers, and Sachanen.

Salminen, Ilmari F., and A. Weissberger, assignors to Eastman Kodak Company, Rochester, N. Y. Producing p-phenylene diamines. 2,407,207; Sept. 3.
Salmon, Reginald D.: *See*—
Thompson, Alfred E., and Salmon.
Samiran, David, Osborn, Ohio. Multiple tank fuel system. 2,406,854; Sept. 3.
Sangamo Electric Company, assignee: *See*—
McBride, Maurice G.
Satterlee, Howard A., Sharon, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Apparatus for controlling rotation. 2,406,855; Sept. 3.
Satterlee, Howard A., Needham, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Apparatus for controlling rotation. 2,406,856; Sept. 3.
Saul, August A., assignor to Miller Printing Machinery Co., Pittsburgh, Pa. Sheet handling apparatus. 2,406,857; Sept. 3.
Saunders, Enos P., Berkeley, assignor to Triangle Engineering Company, Ferndale, Mich. Rotary sine index plate. 2,406,906; Sept. 3.
Savage, Albert B., assignor to The Dow Chemical Company, Midland, Mich. Instantaneous recording composition. 2,407,179; Sept. 3.
Savrda, Charles M., Bay Shore, assignor to The Atlantic Coast Fisheries Company, New York, N. Y. Method and apparatus for treating fish. 2,406,907; Sept. 3.
Say, Alan W.: *See*—
Pugh, Cyril A., and Say.
Scheidemantel, Herman B.: *See*—
Luth, Harold J., Scheidemantel, and Krupnick.
Scheller, Rudolf J., Hickory, N. C. Carrier for full-fashioned knitting machines. 2,407,103; Sept. 3.
Schideler, Pierre, New York, and R. S. Richardson, Scarsdale, assignors to Chemical Construction Corporation, New York, N. Y. Apparatus for the manufacture of formaldehyde. 2,406,908; Sept. 3.
Schiller, Harold, Los Angeles, and A. Shapiro, Monrovia, Calif., assignors to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Purifying oil field waters. 2,407,180; Sept. 3.
Schmied, William F., Blue Island, Ill., assignor to International Harvester Company. Manure spreader having adjustable feed mechanism. 2,407,104; Sept. 3.
Schoenlaub, Robert, A., Tiffin, assignor to Basic Refractories, Inc., Cleveland, Ohio. Plastic bonding basic refractories. 2,406,909; Sept. 3.
Schoenlaub, Robert A., Tiffin, assignor to Basic Refractories, Inc., Cleveland, Ohio. Treatment of refractory materials. 2,406,910; Sept. 3.
Scholl Mfg. Co., Inc., assignee: *See*—
Curtze, Max.
Schrader, Herbert, Wheeling, W. Va., assignor to Continental Can Company, Inc., New York, N. Y. Closing sheet metal containers. 2,406,911; Sept. 3.
Schwarzer, Fred, Pottstown, Pa. Automatic fishhook. 2,406,912; Sept. 3.
Scott Aviation Corporation, assignee: *See*—
Meidenbauer, Phillip E., Jr.
Scott, Samuel Le R., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Artificial waxes and greases. 2,4007,181; Sept. 3.
Scovill Manufacturing Company, assignee: *See*—
Elwin, Charles T.
Scully, Charles T.: *See*—
Chatterjea, Prafulla K., and Scully.
Seher, Henry W., Elkins Park, assignor to Philco Corporation, Philadelphia, Pa. Plate winding machine. 2,406,968; Sept. 3.
Senn Corporation, assignee: *See*—
Coake, Charles F.
Serrano, Liberto A., Barcelona, Spain. Carburetion system for internal-combustion engine. 2,406,913; Sept. 3.
Seymour, George W., and W. Brooks, Cumberland, Md., assignors to Celanese Corporation of America. High tenacity filamentary materials. 2,407,105; Sept. 3.
Shapiro, Abraham.: *See*—
Schiller, Harold, and Shapiro.
Shell Development Company, assignee: *See*—
Adelson, David E., and Dannenberg.
Bailey, William A., Jr., and Greensfelder.
Shelly, Allen P., Denver, Colo. Pencil. 2,407,106; Sept. 3.
Shepherd, James E., Hempstead, and J. D. Mallett, Garden City, N. Y., assignors to Sperry Gyroscope Company, Inc. Visual position and phase sense indicator. 2,406,858; Sept. 3.
Sherwood, William T., assignor to Eastman Kodak Company, Rochester, N. Y. Machine for metering cement to lenses. 2,407,208; Sept. 3.
Shulman, Carl: *See*—
Kilgore, George R., Ferris, and Shulman.
Sievenpiper, Frederic, Alden, assignor to Allied Chemical & Dye Corporation, New York, N. Y. Preparing 2,6-nitro chlor benzyl alcohol. 2,407,182; Sept. 3.
Sievers, Carl F., Pontiac, Mich., assignor to Phillips Petroleum Company. Dispensing nozzle, valve, and valve disk fastening means. 2,406,914; Sept. 3.
Silbert, Eileen, assignee, et al.: *See*—
Du Bois, Joseph E.
Silman, Leon, New York, N. Y. Full-fashioned knitted garment and manufacturing the same. 2,406,969; Sept. 3.

Stertzbach, Harry W., assignor to The Buckeye Steel Castings Company, Columbus, Ohio. Side frame for railway car trucks. 2,406,862; Sept. 3.

Stewart-Warner Corporation, assignee: *See*—
Davis, Ernest W.

Strang, John M., and C. Foster, assignors to Barr & Stroud, Limited, Glasgow, Scotland. Range finder, height finder, and like measuring instrument. 2,407,186; Sept. 3.

Strang, John M., and C. Foster, assignors to Barr & Stroud, Limited, Glasgow, Scotland. Range finder, height finder, and like optical measuring instrument. 2,407,187; Sept. 3.

Strobel, Charles K.: *See*—
Eskin, Samuel G., and Strobel.

Strobel, Charles K., Pittsburgh, assignor to Robertshaw Thermostat Company, Youngwood, Pa. Control and ignition system for fuel burners. 2,406,925; Sept. 3.

Sturgis, Bernard M.: *See*—
Neal, Arthur M., and Sturgis.

Submarine Signal Company, assignee: *See*—
Benioff, Hugo.
Harrison, Bertram M.
Satterlee, Howard A.
Smith, Edward W.

Summerfield, Martin, Pasadena, assignor to Aerojet Engineering Corporation, Azusa, Calif. System of jet propulsion. 2,406,926; Sept. 3.

Sutton, William S., Rockford, Ill. Burner. 2,407,188; Sept. 3.

Swan, Donald R., and J. M. Calhoun, assignors to Eastman Kodak Company, Rochester, N. Y. Stabilization of nitrocellulose film base. 2,407,209; Sept. 3.

Swann, James S., Homewood, assignor to Standard Railway Equipment Manufacturing Company, Chicago, Ill. Paneled steel roof. 2,406,863; Sept. 3.

Tabb, Warner T., Plainfield, N. J., assignor to Eisemann Corporation, Brooklyn, N. Y. High-pressure fluid pump gasketing. 2,406,927; Sept. 3.

Taber, John E., Jr., South Bend, and K. L. Keene, assignors to Mishawaka Rubber and Woolen Manufacturing Company, Mishawaka, Ind. Shoe. 2,407,189; Sept. 3.

Tait, William O., Garden City, N. Y., assignor to Sperry Gyroscope Company, Inc. Filter for fluid flow systems. 2,407,190; Sept. 3.

Taramaschi, Angelo, San Carlos, Calif. Cable straightener. 2,407,040; Sept. 3.

Taylor, Auburn, Charleston, W. Va., and E. W. Worthington, assignors to The Goss Printing Press Company, Chicago, Ill. Fountain inker drive mechanism. 2,406,928; Sept. 3.

Taylor, Clarence C.: *See*—
Leo, Herbert T., and Taylor.

Taylor, Florence E., assignee, et al.: *See*—
Du Bois, Joseph E.

Tear, James D., Great Neck, and C. W. Buckley, Mount Vernon, assignors to Ford Instrument Company, Inc., Long Island City, N. Y. Gun sight. 2,407,191; Sept. 3.

Teetor, Ralph R., assignor to The Perfect Circle Company, Hagerstown, Ind. Piston. 2,407,192; Sept. 3.

Terroni, Tesco B. D.: *See*—
Gillings, Charles, Beale, and Terroni.

Teter, John W., Chicago, Ill., assignor to Sinclair Refining Company, New York, N. Y. Catalyst. 2,406,929; Sept. 3.

Texas Company, The, assignee: *See*—
Clarke, Louis A.

Thomas, Charles L., assignor to Universal Oil Products Company, Chicago, Ill. Manufacture of hydrocarbons. 2,406,864; Sept. 3.

Thompson, Alfred E., and R. D. Salmon, assignors to Creed and Company Limited, Croydon, England. Preparing facsimile messages for transmission. 2,406,865; Sept. 3.

Thompson, Ernest S., Stockton, Calif. Disk harrow. 2,406,866; Sept. 3.

Thompson, Harry H., assignor to Wingfoot Corporation, Akron, Ohio. Rubber reclaim. 2,407,193; Sept. 3.

Thompson Products, Inc., assignee: *See*—
Newton, John A., and Hoertz.
Norton, Samuel H.

Thompson, Robert V., Indianapolis, Ind. Hand grip and closure for cartons. 2,407,111; Sept. 3.

Threedy, Clarence E., assignee, trustee: *See*—
Bradner, Burke C.

Thurman, Benjamin H., Charlotte, N. C., assignor, by mesne assignments, to B. Clayton, Houston, Tex., doing business as Refining Unincorporated. Insecticide. 2,407,041; Sept. 3.

Thurston, Jack T.: *See*—
Kaiser, Donald W., and Thurston.

Timken-Detroit Axle Company, assignee: *See*—
Buckendale, Lawrence R.

Timken Roller Bearing Company, The, assignee: *See*—
Edwards, Herbert C.

Tippen, Frank J., Coventry, assignor to L. P. Lee, near Stratford-on-Avon, England. Governing gear for engines and other machines. 2,407,042; Sept. 3.

Tisza, Edmond T., and B. F. Duesel, assignors to Pyridium Corporation, Yonkers. Production of pyridine 3-sulphonic acid and its salts. 2,406,972; Sept. 3.

Titeflex, Inc., assignee: *See*—
Carter, Shirley J.

Titlestad, Nicolay, White Plains, assignor to Chemical Construction Corporation, New York, N. Y. Sulfuric acid regeneration. 2,406,930; Sept. 3.

Tomlinson, George H., Jr.: *See*—
Tomlinson, George H. and G. H., Jr.

Tomlinson, George H., Montreal, Quebec, and G. H. Tomlinson, Jr., Cornwall, Ontario, assignors to Howard Smith Paper Mills, Limited, Montreal, Quebec, Canada. Treating lignocellulosic material. 2,406,867; Sept. 3.

Tongberg, Carl O., Westfield, and H. J. Hall, Roselle, N. J., assignor to Standard Oil Development Company. Paraffin isomerization process. 2,406,868; Sept. 3.

Transit Research Corporation, assignee: *See*—
Rossell, William T.

Trautvetter, George: *See*—
Ledwinka, Joseph, and Trautvetter.

Trautvetter, George, Jenkintown, assignor to The Budd Company, Philadelphia, Pa. Vehicle body construction. 2,407,112; Sept. 3.

Tremolada, Guglielmo R., assignor to Emsco Derrick & Equipment Company, Los Angeles, Calif. Air operated clutch. 2,407,043; Sept. 3.

Triangle Engineering Company, assignee: *See*—
Saunders, Enos P.

Trisler, Milton A., Indianapolis, Ind., assignor to General Motors Corporation, Detroit, Mich. Altitude compensator for fuel pumps. 2,406,973; Sept. 3.

Troxler, Charles G., Canton, assignor to The Hoover Company, North Canton, Ohio. Air cleaner. 2,406,931; Sept. 3.

Tuck, Davis H., Redding Ridge, Conn. Methods of and apparatus for increasing incandescent lamp life. 2,407,113; Sept. 3.

Tunick, Harry, Rye, N. Y., assignor to Radio Corporation of America. Wave conversion. 2,406,932; Sept. 3.

Tunick, Harry, Rye, N. Y., assignor to Radio Corporation of America. Radio relaying. 2,407,212; Sept. 3.

Tunick, Harry, Rye, N. Y., assignor to Radio Corporation of America. Radio relaying. 2,407,213; Sept. 3.

Tyler, John M., West Hartford, and S. K. Hoffman, Williamsport, Pa., assignors to The Aviation Corporation, New York, N. Y. Driving mechanism. 2,407,114; Sept. 3.

Tyrer, Daniel, Stockton-on-Tees, England. Manufacture of phenols. 2,407,044; Sept. 3.

Tyrer, Daniel, Stockton-on-Tees, England. Manufacture of phenols or salts thereof. 2,407,045; Sept. 3.

Udale, Stanley M., Detroit, Mich., assignor to G. M. Holley and E. Holley, Governor. 2,407,115; Sept. 3.

Udale, Stanley M., and W. R. Buick, Detroit, Mich., assignors to G. M. Holley and E. Holley. Safety device. 2,407,116; Sept. 3.

Union Switch & Signal Company, The, assignee: *See*—
Lower, Carl F.

United Gas Improvement Company, The, assignee: *See*—
Soday, Frank J.

United Shoe Machinery Corporation, assignee: *See*—
Brophy, John J.
Fitzgerald, Charles F.

United States Rubber Company, assignee: *See*—
Kurlychek, John L.

Universal Oil Products Company, assignee: *See*—
Day, Roland B.
Linn, Carl B.
Pines, Herman.
Thomas, Charles L.

Upham, John D., Bartlesville, Okla., assignor to Phillips Petroleum Company. Catalyst preparation. 2,406,869; Sept. 3.

Utilities Distributors, Inc., assignee: *See*—
Anderson, Peter A. and E. M., Sr., Hansen, and Edwards.

Vacquier, Victor V., Oakmont, assignor to Gulf Research & Development Company, Pittsburgh, Pa. Apparatus for responding to magnetic fields. 2,406,870; Sept. 3.

Vacquier, Victor V., Garden City, N. Y., assignor to Gulf Research & Development Company, Pittsburgh, Pa. Apparatus for responding to magnetic fields. 2,407,202; Sept. 3.

Vance, Arthur W., Cranbury, N. J., assignor to Radio Corporation of America. Power supply for electron microscopes. 2,406,974; Sept. 3.

Varela, Arthur A., Washington, D. C. Triode oscillator circuit. 2,406,871; Sept. 3.

Vaughan, James R., Jr.: *See*—
English, Jackson P., Vaughan, and Roblin.

Vittum, Paul W.: *See*—
Weissberger, Arnold, Kibler, and Vittum.

Vokes, Cecil G., London, England. Readily cleanable filter. 2,407,046; Sept. 3.

Vokes, Cecil G., London, England. Filter. 2,407,194; Sept. 3.

Von Reppert, Richard, Rochester, assignor to International Business Machines Corporation, New York, N. Y. Typewriting machine. 2,407,195; Sept. 3.

Waite, Philip M., Corry, Pa. Throttle control. 2,406,872; Sept. 3.

Walker, Nevilles E., Portland, Oreg. Electrically operated control. 2,406,873; Sept. 3.

Walker, Nevilles E., Portland, Oreg. Retractable control element for toy airplanes. 2,406,874; Sept. 3.

Wallbanks, William H.: *See*—
Leather, George B., and Wallbanks.

Wallerstein, Leon, Jr., assignor to Lord Manufacturing Company, Erie, Pa. Flexible coupling. 2,406,875; Sept. 3.

Walsh, John J., Des Peres, assignor to Penaljo Company, St. Louis, Mo. Making slip lasted shoes. 2,406,975; Sept. 3.

Walworth Patents, Inc., assignee: *See*—
McCarthy, Harry.

Walz, Claude W., and R. D. Griff, Rock Island, assignors to Deere & Company, Moline, Ill. Beet loader. 2,406,976; Sept. 3.

Warner, Wilbur W., Fort Wayne, Ind., assignor to General Electric Company. Quick reversing capacitor motor. 2,407,117; Sept. 3.

Warren Featherbone Co., The, assignee: *See*—
Haman, Howard H., and Whalen.

Waters, Harry F., New York, N. Y. Making shallow baking plates of cellulose material. 2,407,118; Sept. 3.

Watson, Thomas J., assignor to International Business Machines Corporation, New York, N. Y. Accounting machine. 2,407,196; Sept. 3.

Watts, Chester B., Jr., East Orange, N. J., assignor to Federal Telephone and Radio Corporation. Instrument navigation system. 2,406,876; Sept. 3.

Watts, Raymond, assignor to American Steel Foundries, Chicago, Ill. Brake rotor. 2,407,197; Sept. 3.

Weissberger, Arnold: *See*—
Salminen, Ilmari F., and Weissberger.

Weissberger, Arnold, C. J. Kibler, and P. W. Vittum, assignors to Eastman Kodak Company, Rochester, N. Y. Color coupler. 2,407,210; Sept. 3.

Wendt, Karl R., Hightstown, N. J., assignor to Radio Corporation of America. Synchronizing system. 2,406,977; Sept. 3.

Wendt, Karl R., Hightstown, and A. V. Bedford, Princeton, N. J., assignors to Radio Corporation of America. Square coding wave generator for secret telecommunication systems. 2,406,978; Sept. 3.

West, Carl H., St. Clairsville, Ohio, assignor to Blaw-Knox Company, Pittsburgh, Pa. Furnace closure. 2,407,047; Sept. 3.

Western Union Telegraph Company, The, assignee: *See*—
Haglund, Hakon H., and Breyfogel.

Weston, Herbert, New York, N. Y.; vested in the Alien Property Custodian. Accounting and filing system. 2,407,119; Sept. 3.

Whalen, Charles E.: *See*—
Haman, Howard H., and Whalen.

Wharam, John J., and C. P. Pinardi, assignors to Ford Motor Company, Dearborn, Mich. Gross shaft mounting. 2,406,933; Sept. 3.

Whitney, Maurice P., J. E. Buxton, and D. L. Miller, Chemung County, N. Y., assignor to Bendix Aviation Corporation, South Bend, Ind. Engine starter drive. 2,407,048; Sept. 3.

Whittaker, Alexander R., New York, N. Y., assignor to Pittsburgh Equitable Meter Company, Pittsburgh, Pa. Oscillating disk meter. 2,406,877; Sept. 3.

Whyzmuzis, Paul, Corona, Long Island, N. Y., and H. Linkletter, Englewood, N. J., assignors to Interchemical Corporation, New York, N. Y. Printing ink. 2,406,878; Sept. 3.

Wicker, Dan B.: *See*—
Spalding, John E., and Wicker.

Wilkes, Benjamin G., Wilkinsburg, Pa., assignor to Carbide and Carbon Chemicals Corporation. Insect repellent. 2,407,205; Sept. 3.

Williams, Ralph E., River Forest, and L. J. Nowak, Jr., assignors to B. F. Gump Co., Chicago, Ill. Weighing and dispensing apparatus. 2,406,934; Sept. 3.

Willys-Overland Motors, Inc., assignee: *See*—
Roos, Delmar G.

Wilson, Golder P., Alton, Ill., assignor to Olin Industries, Inc., Strip processing. 2,407,120; Sept. 3.

Winarsky, Benjamin: *See*—
Winarsky, Nathan and B.

Winarsky, Nathan and B., assignors to Belmont Body Builders, Newark, N. J. Tire inflation guard. 2,407,049; Sept. 3.

Wingfoot Corporation, assignee: *See*—
Clifford, Albert M., and Lichty.
Haase, Jorgen I.
Thompson, Harry H.

Winnek, Philip S.: *See*—
Roblin, Richard O., and Winnek.

Winter, Fred H., Schenectady, N. Y., assignor to General Electric Company. Field control systems for synchronous machines. 2,407,121; Sept. 3.

Wittkuhns, Bruno A., Summit, and P. Chantemerle, Fort Lee, N. J., assignors to Sperry Gyroscope Company, Inc., Brooklyn, N. Y. Damping eliminator for gyroscopic compasses. 2,406,879; Sept. 3.

Wolfe, John F., Lapeer, Mich. Circular saw and dado cover. 2,406,979; Sept. 3.

Wolff, Irving, Merchantville, N. J., assignor to Radio Corporation of America. Distance and direction determination. 2,407,198; Sept. 3.

Wolff, Irving, Merchantville, N. J., assignor to Radio Corporation of America. Communication and distance determining system. 2,407,199; Sept. 3.

Wood, Joseph L., and R. B. MacMullin, Niagara Falls, assignos to The Mathieson Alkali Works, Inc., New York, N. Y. Preparation of fusions containing magnesium chloride. 2,406,935; Sept. 3.

Wood, Louvan E., Baltimore, Md., assignor to Bendix Aviation Corporation, South Bend, Ind. Follow-up mechanism. 2,407,200; Sept. 3.

Woodruff, Arthur B., Brecksville, Ohio, assignor to Harris-Seybold Company. Sheet delivery mechanism. 2,406,936; Sept. 3.

Woodward, Edward F., Seattle, Wash. Interchangeable toolholder. 2,407,201; Sept. 3.

Work, Robert H.: *See*—
O'Kelly, Arlie A., Plucker, and Work.

Worthington, Emory W.: *See*—
Taylor, Auburn, and Worthington.

Young, Charles A., Springfield, Ohio. Combined release fire and straight fire gun. 2,406,980; Sept. 3.

Young, Charles A., Springfield, Ohio. Combined release fire and straight fire gun. 2,406,981; Sept. 3.

Young, Charles E., Kansas City, Mo. Portable burglar alarm. 2,407,122; Sept. 3.

Young, Norman H., Jr., Jackson Heights, N. Y., assignor to Federal Telephone and Radio Corporation. Intelligence transmission system. 2,406,880; Sept. 3.

Young, Norman H., Jr., Jackson Heights, N. Y., assignor to Federal Telephone and Radio Corporation. Method and system for communicating intelligence. 2,406,881; Sept. 3.

Young, Norman H., Jr., Jackson Heights, N. Y., assignor to Federal Telephone and Radio Corporation, Newark, N. J. Radio impulse system. 2,406,882; Sept. 3.

Yule, John A. C., assignor to Eastman Kodak Company, Rochester, N. Y. Line and halftone reproduction. 2,407,211; Sept. 3.

Zabriskie, William F., assignor to Gabriel Steel Company, Detroit, Mich. Barrel storage rack. 2,406,937; Sept. 3.

Zehrbach, Edgar L., Lima, Ohio. Reaming. 2,406,938; Sept. 3.

Zworykin, Vladimir K., Philadelphia, Pa., and J. Hillier, Cranbury, N. J., assignors to Radio Corporation of America. Electronic vibration detecting apparatus. 2,406,982; Sept. 3.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 3D DAY OF SEPTEMBER, 1946

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Controlling system, Crane. M. G. Clay. Re. 22,785; Sept. 3.
Extraction process. W. J. D. van Dijck. Re. 22,788; Sept. 3.
Hydrocarbons, Manufacture of high anti-knock. A. R. Goldsby. Re. 22,786; Sept. 3.
Plow. A. A. Scarlett. Re. 22,787; Sept. 3.

LIST OF DESIGN INVENTIONS

Actuator for movable parts of an airplane or the like, Motor driven. C. F. Hilgeman. 145,522; Sept. 3.
Airplane. E. R. Thompson. 145,545; Sept. 3.
Bar or similar article, Portable. C. H. Hasche. 145,521; Sept. 3.
Body, Automobile. H. P. Post and L. C. McMullen. 145,534; Sept. 3.
Border or similar article, Wallpaper. A. Westrate. 145,547–54; Sept. 3.
Brooch or similar article. B. Darvie. 145,511; Sept. 3.
Brooch or similar article. A. Katz. 145,525–6; Sept. 3.
Brooch or similar article. A. Philippe. 145,533; Sept. 3.
Cabinet, Combined coin storage and display. A. E. Eckert. 145,515; Sept. 3.
Cabinet, Radio. R. D. Budlong. 145,507; Sept. 3.
Cap, Container. P. A. Derham. 145,512; Sept. 3.
Carrousel. L. M. Glasco. 145,518; Sept. 3.
Chair. R. P. Ralston. 145,535; Sept. 3.
Coat. H. Redman. 145,537; Sept. 3.
Container, Flower. R. I. McLellan and W. J. Field. 145,530; Sept. 3.
Cooker, Pressure. R. T. Watts and F. C. Rudolph. 145,546; Sept. 3.
Fishing reel. H. I. Mandolf. 145,529; Sept. 3.
Game board. I. Altman. 145,501; Sept. 3.
Heater, Electric. J. B. Swartzbaugh. 145,544; Sept. 3.
Holder, Hand line. C. H. Badgley. 145,503; Sept. 3.
Holder, Lipstick. J. D. Buckingham. 145,506; Sept. 3.
Jacket. N. Finkelstein. 145,517; Sept. 3.
Nozzle, Spray. H. Richards. 145,538; Sept. 3.
Platter or similar article, Steak. B. H. Adler. 145,500; Sept. 3.
Radio receiver. P. Brinkman. 145,508; Sept. 3.
Retarder, Descent. P. M. Lewis. 145,527; Sept. 3.
Ring, Finger. B. Esh. 145,516; Sept. 3.
Rug or similar article of manufacture, Scatter. A. D. Clist. 145,510; Sept. 3.
Settee. B. Sky. 145,541; Sept. 3.
Shaker or similar article, Condiment. K. A. Hodil. 145,523; Sept. 3.
Shelf unit, Whatnot. P. J. York. 145,555; Sept. 3.
Shoe or similar article. E. Ziniti. 145,556; Sept. 3.
Stamp, Hand. R. K. Duke. 145,514; Sept. 3.
Suit. H. Redman. 145,536; Sept. 3.
Suit, Lady's. M. Millard. 145,531; Sept. 3.
Support, Reel. M. M. Clink. 145,509; Sept. 3.
Table or similar article. C. W. and A. O. Hart. 145,519–20; Sept. 3.
Table. B. Sky. 145,539–40; Sept. 3.
Table. B. Sky. 145,542; Sept. 3.
Toy boat. S. Orkin. 145,532; Sept. 3.
Toy, Pounding. S. L. Beder. 145,504; Sept. 3.
Toy, Push. D. M. Auchard. 145,502; Sept. 3.
Toy vehicle. C. Dodegge. 145,513; Sept. 3.
Trowel. O. Hoffman. 145,524; Sept. 3.
Truck, Hand. A. H. Beidelman, Jr. 145,505; Sept. 3.
Washing machine and wringer or similar article, Combined. C. W. Sundberg. 145,543; Sept. 3.
Writing paper, Sheet of. S. Little. 145,528; Sept. 3.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 3D DAY OF SEPTEMBER, 1946

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abrading machine. R. F. Bardwell and J. H. Smith. 2,406,789; Sept. 3.
Accounting and filing system. H. Weston. 2,407,119; Sept. 3.
Accounting machine. T. J. Watson. 2,407,196; Sept. 3.
Acyl dicyandiamides and salts thereof. D. W. Kaiser and J. T. Thurston. 2,407,161; Sept. 3.
Adhesive. P. Stamberger. 2,407,038; Sept. 3.
Adhesives and producing same. T. Daur and W. Daniel. 2,407,143; Sept. 3.
Agricultural implement. F. L. Dewey. 2,407,064; Sept. 3.
Agricultural implement. J. Morkoski. 2,407,094; Sept. 3.
Agricultural implement. J. Morkoski. 2,407,173; Sept. 3.
Air cleaner. C. G. Troxler. 2,406,931; Sept. 3.
Air-conditioning control. E. R. Snavely. 2,407,036; Sept. 3.
Aircraft. E. A. Stalker. 2,406,921; Sept. 3.
Aircraft. E. A. Stalker. 2,406,924; Sept. 3.
Aircraft, Control of. E. A. Stalker. 2,406,919; Sept. 3.
Aircraft having boundary layer controlled wings. E. A. Stalker. 2,406,923; Sept. 3.
Air operated clutch. G. R. Tremolada. 2,407,043; Sept. 3.
Airplanes, Retractable control element for toy. N. E. Walker. 2,406,874; Sept. 3.
Alarm device for automobiles. P. T. Gorton. 2,407,073; Sept. 3.
Alcohol, Treating polyvinyl. J. Dahle. 2,407,061; Sept. 3.
α-amino-α-alkoxybutyric acids and preparing the same. Q. P. Cole and R. O. Roblin. 2,407,203; Sept. 3.
Antenna system. P. S. Carter. 2,407,057; Sept. 3.
Anticorrosion plug. M. E. Chandler. 2,406,993; Sept. 3.
Anticorrosion plug. H. A. Lockwood. 2,407,023; Sept. 3.
Antiskid chain. G. O. Coates. 2,406,995; Sept. 3.
Apparatus for controlling rotation. H. A. Satterlee. 2,406,855; Sept. 3.
Apparatus for controlling rotation. H. A. Satterlee. 2,406,856; Sept. 3.
Apparatus for molding concrete. K. V. Lindkvist. 2,407,168; Sept. 3.
Apparatus for responding to magnetic fields. V. V. Vacquier. 2,406,870; Sept. 3.
Apparatus for responding to magnetic fields. V. V. Vacquier. 2,407,202; Sept. 3.
Apparatus for testing containers. W. A. Darrah. 2,407,062; Sept. 3.
Apparatus for the control of highway crossing signals. C. F. Lower. 2,406,955; Sept. 3.
Apparatus for the electroplating of bearing shells. C. F. Matthews. 2,406,956; Sept. 3.
Apparatus for the manufacture of formaldehyde. P. Schideler and R. S. Richardson. 2,406,908; Sept. 3.
Apparatus for use in stiffening uppers of shoes. J. J. Brophy. 2,406,738; Sept. 3.
Applying machine, Overcap. A. E. Almgren. 2,406,784; Sept. 3.
Articles in electrolytic treatment, Handling small. C. T. Elwin. 2,407,145; Sept. 3.
Atomizer. H. E. Curry. 2,406,997; Sept. 3.
Attachments for toilets. J. B. Haley. 2,407,005; Sept. 3.
Awning. H. Mashmeyer. 2,407,026; Sept. 3.
Barrel storage rack. W. F. Zabriskie. 2,406,937; Sept. 3.
Beacon, Glide path. A. Alford. 2,406,734; Sept. 3.
Bearing assembly, Shaft. J. A. Newton and N. Hoertz. 2,406,891; Sept. 3.
Beverage bottle carrier. M. Fox. 2,406,756; Sept. 3.
Bicycle seat. G. Lively. 2,406,783; Sept. 3.
Bin, Coffee. D. M. McBean. 2,406,886; Sept. 3.
Binder for containing a textbook and note sheets. N. R. Atwood. 2,406,785; Sept. 3.
Binding-strap, Applying metal. R. F. McMahan. 2,407,090; Sept. 3.
Birthday cake candle holder. M. H. Koretzky. 2,406,777; Sept. 3.
Blankets, Making insulating. W. B. Byers. 2,406,801; Sept. 3.
Body construction, Vehicle. G. Trautvetter. 2,407,112; Sept. 3.
Bolt, Self-locking. D. A. Kahn. 2,407,160; Sept. 3.
Box: *See*—
Nail box.
Brace for railway cars, Adjustable lading. J. McMullen. 2,407,091; Sept. 3.
Brake: *See*—
Trailer brake.
Brake. J. A. Forbes. 2,406,754; Sept. 3.
Brake mechanism. G. E. Porter. 2,407,097; Sept. 3.
Breathing apparatus. P. E. Meidenbauer, Jr. 2,406,888; Sept. 3.
Bridge, Trestle. J. A. Dorst. 2,406,814; Sept. 3.
Building, Sectional. E. S. Guignon, Jr. 2,407,004; Sept. 3.
Burglar alarm, Portable. C. E. Young. 2,407,122; Sept. 3.
Burner. W. S. Sutton. 2,407,188; Sept. 3.
Bus, Articulated. K. Henrichsen. 2,407,007; Sept. 3.
Bus duct. L. W. Cole and H. Jensen. 2,407,142; Sept. 3.
Butter manufacture. A. W. Farrall. 2,406,819; Sept. 3.
Cabinet: *See*—
Toilet or the like cabinet.
Cable straightener. A. Taramaschi. 2,407,040; Sept. 3.
Camera. W. C. Huebner. 2,406,770; Sept. 3.
Camera, Folding photographic. D. G. Hunter. 2,406,772; Sept. 3.
Carburetion system for internal-combustion engines. L. A. Serrano. 2,406,913; Sept. 3.
Carrier: *See*—
Beverage bottle carrier. Game carrier.
Carrier for full-fashioned knitting machines. R. J. Scheller. 2,407,103; Sept. 3.
Casing for truck and freight car heaters. P. A. and E. M. Anderson, Sr., E. W. Hansen, and J. H. Edwards. 2,407,124; Sept. 3.
Casting, Centrifugal. H. G. Specht. 2,406,860; Sept. 3.
Catalyst. J. W. Teter. 2,406,929; Sept. 3.
Catalyst preparation. J. D. Upham. 2,406,869; Sept. 3.
Catalytic alkylation process. J. B. Kirkpatrick, J. J. Somers, and A. N. Sachanen. 2,406,776; Sept. 3.
Catalytic alkylation process. A. A. O'Kelly, J. Plucker, III, and R. H. Work. 2,407,033; Sept. 3.
Cathode-ray device. R. P. Johnson and W. R. Grams. 2,407,082; Sept. 3.
Cellulosic structures, Producing. H. S. Rothrock. 2,406,905; Sept. 3.
Centrifugal pump. A. J. Harlamoff. 2,406,947; Sept. 3.
Cereal cutter. F. C. Ielfield. 2,406,773; Sept. 3.
Chain: *See*—
Antiskid chain.
Chemical compound and preparation thereof. A. M. Clifford and J. G. Lichty. 2,407,138; Sept. 3.
Chuck. E. R. Koppel. 2,407,083; Sept. 3.
Circuit: *See*—
Triode oscillator circuit.
Circular saw and dado cover. J. F. Wolfe. 2,406,979; Sept. 3.
Cleaner: *See*—
Air cleaner. Suction cleaner.
Clipper, Hair. R. B. Anderson. 2,406,986; Sept. 3.
Closure device for rendering bottles nonrefillable. J. S. del Llano. 2,407,063; Sept. 3.
Closure for paper containers. F. J. O'Brien. 2,406,894; Sept. 3.
Closure, Furnace. C. H. West. 2,407,047; Sept. 3.
Clutch: *See*—
Air operated clutch. Multiple disk energizing clutch.
Friction clutch.
Clutch. J. E. Kostur. 2,407,019; Sept. 3.
Coat hanger. H. O. Joseph. 2,407,015; Sept. 3.
Communicating intelligence, Method and system for. N. H. Young, Jr. 2,406,881; Sept. 3.
Communication and distance determining system. I. Wolff. 2,407,199; Sept. 3.
Communication in pipe lines. E. W. Smith. 2,406,859; Sept. 3.
Communication system, High-frequency electrical. P. K. Chatterjea and L. W. Houghton. 2,406,803; Sept. 3.
Compensator for fuel pumps, Altitude. M. A. Trisler. 2,406,973; Sept. 3.
Connector: *See*—
Electric connector.
Container and making same, Fuel. S. Rethorst. 2,406,903; Sept. 3.
Container with nesting feature, Adhesive tape. W. F. Punte. 2,406,900; Sept. 3.
Containers, Closing sheet metal. H. Schrader. 2,406,911; Sept. 3.
Containers made of paper and making the same. M. E. Gazette. 2,406,758; Sept. 3.
Control and ignition system for fuel burners. C. K. Strobel. 2,406,925; Sept. 3.
Control arrangement for coupled tuned circuits, Feed back. E. Green. 2,407,074; Sept. 3.
Control device, Motor. R. W. Lavender. 2,407,084; Sept. 3.
Control, Electrically operated. N. E. Walker. 2,406,873; Sept. 3.
Control for gaseous fuel burners, Safety. S. G. Eskin and C. K. Strobel. 2,406,752; Sept. 3.
Control mechanism. S. K. Malek. 2,407,170; Sept. 3.
Control system and mechanism for heat processing machines. V. A. Fox. 2,406,822; Sept. 3.
Control system, Electric. W. N. Gittings and A. W. Bateman. 2,407,072; Sept. 3.
Control system, Fluid-actuated. D. MacKenzie. 2,407,018; Sept. 3.
Control system for synchronous machines, Field. F. H. Winter. 2,407,121; Sept. 3.

Control system, Motor. J. D. Lewis. 2,406,782; Sept. 3.
Controlling mechanism. L. A. Maxson. 2,407,088; Sept. 3.
Cooker and ricer, Combination. D. F. Hosman. 2,406,769; Sept. 3.
Correction apparatus, Keystone. J. A. Buckbee. 2,406,740; Sept. 3.
Corrective arrangement, Distortion. H. G. Busignies. 2,406,799; Sept. 3.
Corrector, Rotary position. A. G. Richardson and F. O. Chesus. 2,406,853; Sept. 3.
Counter. J. Noonan. 2,406,962; Sept. 3.
Coupler, Color. A. Weissberger, C. J. Kibler, and P. W. Vittum. 2,407,210; Sept. 3.
Coupling: *See*—
  Flexible coupling.
Cover: *See*—
  Circular saw and addo cover.
Cross shaft mounting. J. J. Wharam and C. P. Pinardi. 2,406,933; Sept. 3.
Cup, Oil. E. W. Davis. 2,406,746; Sept. 3.
Curtain, Theatre. B. H. and G. W. Lohmuller. 2,407,024; Sept. 3.
Cutout device, Hydraulic. C. A. Pugh and A. W. Say. 2,406,899; Sept. 3.
Cutter: *See*—
  Cereal cutter. Rotary cast cutter.
  Profiling milling cutter.
Cutting and tenoning machine, Pipe. G. H. Rosenboom. 2,407,101; Sept. 3.
Cycle, Heat. J. Kreitner and F. Nettel. 2,407,166; Sept. 3.
Delivery mechanism, Sheet. A. B. Woodruff. 2,406,936; Sept. 3.
Demonstration apparatus. K. H. Emerson. 2,406,751; Sept. 3.
Detecting device, Electronic vibration. V. K. Zworykin and J. Hillier. 2,406,982; Sept. 3.
Determining the position of an object in space, System for. H. M. Lewis. 2,406,953; Sept. 3.
Device for measuring changes of distance between two relatively movable parts. I. Benkoe. 2,406,793; Sept. 3.
Device for use with helically-wound coils. A. V. Nichol. 2,406,961; Sept. 3.
Device for vacuum sealing containers. E. B. Hughes. 2,406,771; Sept. 3.
Direction finder. G. S. Burroughs. 2,406,798; Sept. 3.
Direction finder with filter. H. G. Busignies. 2,407,800; Sept. 3.
Distance and direction determination system. I. Wolff. 2,407,198; Sept. 3.
Doll and constructing same, Alternating cloth. H. F. and H. M. Chu. 2,406,994; Sept. 3.
Door latch. R. C. Cerf. 2,407,133; Sept. 3.
Doors, Sealed. H. J. Buttner. 2,406,942; Sept. 3.
Doubler, Frequency. W. T. Brown. 2,406,739; Sept. 3.
Drive, Engine starter. B. W. Jones. 2,407,158; Sept. 3.
Drive mechanism, Fountain inker. A. Taylor and E. W. Worthington. 2,406,928; Sept. 3.
Driving means for rotary valves of internal-combustion engines, compressors, and the like. F. M. Aspin. 2,407,127; Sept. 3.
Driving mechanism. J. M. Tyler and S. K. Hoffman. 2,407,114; Sept. 3.
Driving mechanism, Vehicle. L. R. Buckendale. 2,406,797; Sept. 3.
Earring construction. P. A. Raiche. 2,407,098; Sept. 3.
Electric air position indicator. W. H. T. Holden. 2,406,830; Sept. 3.
Electric connector. R. G. Olson. 2,406,895; Sept. 3.
Electrode, Spark plug. L. B. Pfeil. 2,406,966; Sept. 3.
Electron discharge apparatus. J. H. Fremlin. 2,406,824; Sept. 3.
Electron discharge apparatus. J. R. Pierce. 2,406,850; Sept. 3.
Electron discharge device. F. D. Goodchild. 2,406,827; Sept. 3.
Electron discharge device. G. R. Kilgore, W. R. Ferris, and C. Shulman. 2,407,163; Sept. 3.
Eliminator for gyroscopic compasses, Damping. B. A. Wittkuhns and P. Chantemerle. 2,406,879; Sept. 3.
Emulsifying agents produced from glycol glucosides and their production. W. C. Griffin. 2,407,003; Sept. 3.
Emulsions, Bituminous. J. E. Fratis and E. H. Oakley. 2,406,823; Sept. 3.
Engine: *See*—
  Internal-combustion engine.
Envelope machine. J. L. Oberender. 2,407,174; Sept. 3.
Ester fibers, Modified cellulose. R. E. Fothergill, J. W. Hill, and A. A. Johnson. 2,406,755; Sept. 3.
Excluding means for sliding windows, Insect. F. F. Golkowski. 2,406,761; Sept. 3.
Explosive composition. R. C. Glogau. 2,407,151; Sept. 3.
Eyeshield. J. E. Du Bois. 2,406,998; Sept. 3.
Eyeshield, Horse. K. Miller. 2,407,029; Sept. 3.
Fabrics and making the same, Flame-resistant and water repellent. J. L. Kurlychek. 2,406,779; Sept. 3.
Facsimile system. E. M. Deloraine, H. G. Busignies, and L. A. de Rosa. 2,406,811; Sept. 3.
Facsimile system and method. E. M. Deloraine, H. G. Busignies, and L. A. de Rosa. 2,406,812; Sept. 3.
Feed means, Yarn. E. Killian. 2,406,775; Sept. 3.
Feeder: *See*—
  Sheet feeder.
Fibers, Drafting of. E. L. Richardson. 2,407,100; Sept. 3.
Filamentary materials, High tenacity. G. W. Seymour and W. Brooks. 2,407,105; Sept. 3.
Filamentary materials, Method and apparatus for crimping. J. E. Spalding and D. B. Wicker. 2,407,108; Sept. 3.
File drawer follower. B. Bradner. 2,407,055; Sept. 3.
Filing machine. J. Belada. 2,407,053; Sept. 3.
Filter: *See*—
  Readily cleanable filter. Wave filter.
Filter. C. G. Vokes. 2,407,194; Sept. 3.
Filter for fluid flow systems. W. O. Tait. 2,407,190; Sept. 3.
Firearm. G. J. Hyde. 2,407,157; Sept. 3.
Fischer synthesis. A. K. Redcay. 2,406,851; Sept. 3.
Fish, Treating. C. M. Savrda. 2,406,907; Sept. 3.
Fishhook, Automatic. F. Schwarzer. 2,406,912; Sept. 3.
Flatiron. R. O. Spencer. 2,407,110; Sept. 3.
Flexible coupling. L. Wallerstein, Jr. 2,406,875; Sept. 3.
Flexible joint. D. C. Holmes. 2,407,155; Sept. 3.
Fluid pump gasketing, High-pressure. W. T. Tabb. 2,406,927; Sept. 3.
Fluid-tight radio shielded joint. J. R. Harkness. 2,407,076; Sept. 3.
Follow-up mechanism. L. E. Wood. 2,407,200; Sept. 3.
Forming machine. G. O. Conner. 2,406,808; Sept. 3.
Frame for railway car trucks, Side. H. W. Stertzbach. 2,406,862; Sept. 3.
Freezing apparatus. H. W. Clum. 2,407,058; Sept. 3.
Friction clutch. A. Croft. 2,407,060; Sept. 3.
Fruit, Pitting. G. W. Ashlock, Jr. 2,407,126; Sept. 3.
Fuel system, Multiple tank. D. Samiran. 2,406,854; Sept. 3.
Furoic acid and furoic acid salts, Manufacturing. A. P. Dunlop. 2,407,066; Sept. 3.
Fusions containing magnesium chloride, Preparation of. J. L. Wood and R. B. MacMullin. 2,406,935; Sept. 3.
Game carrier. C. H. McMillan. 2,407,172; Sept. 3.
Garment. E. T. Nunn. 2,406,893; Sept. 3.
Garment and manufacturing the same, Full-fashioned knitted. L. Silman. 2,406,969; Sept. 3.
Gasoline and the production thereof. W. A. Bailey, Jr., and B. S. Greensfelder. 2,407,052; Sept. 3.
Gear for engines and other machines, Governing. F. J. Tippen. 2,407,042; Sept. 3.
Gearing, Engine starter. J. E. Buxton. 2,407,132; Sept. 3.
Gearing, Resilient drive. H. C. Edwards. 2,407,144; Sept. 3.
Generator for secret telecommunication systems, Square coding wave. K. R. Wendt and A. V. Bedford. 2,406,978; Sept. 3.
Glazing unit, Laminated glass. J. H. Boicey. 2,406,939; Sept. 3.
Glove, Gauntlet. H. E. Boyce. 2,406,991; Sept. 3.
Glycol glucosides and derivatives thereof. W. C. Griffin. 2,407,002; Sept. 3.
Governor. S. M. Udale. 2,407,115; Sept. 3.
Governor, Fuel pump. R. J. Ifield. 2,407,013; Sept. 3.
Grading machine. McS. Lupton. 2,406,842; Sept. 3.
Grinding and polishing surfaces, Method and apparatus for. B. E. Luboshez. 2,407,206; Sept. 3.
Grinding machine, Wood. F. W. Roberts. 2,406,904; Sept. 3.
Grip and closure for cartons, Hand. R. V. Thompson. 2,407,111; Sept. 3.
Grommet assembly, Conductor. R. T. Relf. 2,406,852; Sept. 3.
Guard, Tire inflation. N. and B. Winarsky. 2,407,049; Sept. 3.
Guide system, Dielectric wave. M. D. Fiske. 2,407,069; Sept. 3.
Gun sight. J. D. Tear and C. W. Buckley. 2,407,191; Sept. 3.
Gun, Combined release fire and straight fire. C. A. Young. 2,406,980–1; Sept. 3.
Gun, Riveting. L. C. Huck. 2,406,949; Sept. 3.
Gyroscopic device. J. R. Moore. 2,406,845; Sept. 3.
Halogenation. A. F. Benning and J. D. Park. 2,407,129; Sept. 3.
Handle for safety razors. J. W. Anderson. 2,406,984; Sept. 3.
Handling apparatus, Sheet. A. A. Saul. 2,406,857; Sept. 3.
Handling device, Variable delivery fluid. D. J. Orr. 2,406,965; Sept. 3.
Handling machine, Coin. O. E. Hoffman, E. W. Quirk, and W. H. Sprenger. 2,406,948; Sept. 3.
Handwheel attaching means. H. McCarthy. 2,406,957; Sept. 3.
Hanger: *See*—
  Coat hanger.
Harrow, Disk. E. S. Thompson. 2,406,866; Sept. 3.
Head for wells, Adaptor. L. C. Hudson. 2,407,010; Sept. 3.
Heat control. E. Olson. 2,407,095; Sept. 3.

Heating system for buildings, Electric. W. N. Mann and E. Lawrenson. 2,406,884; Sept. 3.
Holder: *See*—
  Birthday cake candle holder. Key holder.
  Interchangeable tool holder.
Hydrocarbon oils, Desalting of. N. L. Dickinson. 2,406,748; Sept. 3.
Hydrocarbonaceous solids, Treatment of. R. B. Day. 2,406,810; Sept. 3.
Hydrocarbons, Alkylation of. L. A. Clarke. 2,407,136–7; Sept. 3.
Hydrocarbons, Alkylation of isoparaffinic. C. B. Linn. 2,406,954; Sept. 3.
Hydrocarbons, Isomerization of saturated. H. Pines. 2,406,967; Sept. 3.
Hydrocarbons, Manufacture of. C. L. Thomas. 2,406,864; Sept. 3.
Impulse system, Radio. N. H. Young, Jr. 2,406,882; Sept. 3.
Incandescent lamp life, Methods of and apparatus for increasing. D. H. Tuck. 2,407,113; Sept. 3.
Indicator: *See*—
  Electric air position indicator. Visual position and phase sense indicator.
  Radio pulse indicator.
Indicator for harbor defense, Plotter. E. W. Springer. 2,406,861; Sept. 3.
Ink, Lithographic printing. D. J. Bernardi and R. T. Florence. 2,406,795; Sept. 3.
Ink, Printing. P. Whyzmuzis and H. Linkletter. 2,406,878; Sept. 3.
Insect repellant. B. G. Wilkes. 2,407,205; Sept. 3.
Insecticide. B. H. Thurman. 2,407,041; Sept. 3.
Insulation, Multilayer. T. M. Elfving. 2,406,815; Sept. 3.
Insulator for concentric transmission lines. W. F. Fell. 2,406,945; Sept. 3.
Interchangeable tool holder. E. F. Woodward. 2,407,201; Sept. 3.
Internal-combustion engine. E. Ryder. 2,407,102; Sept. 3.
Internal-combustion turbine. L. B. Kimball. 2,407,164; Sept. 3.
Jack. A. E. W. Johnson and J. R. Orelind. 2,407,080; Sept. 3.
Jet propulsion, System of. M. Summerfield. 2,406,926; Sept. 3.
Jetty with stabilizer. G. W. Rehfeld. 2,407,034; Sept. 3.
Joint: *See*—
  Flexible joint.
  Fluid-tight radio shielded joint.
Joint and making same, Conductor. T. H. Clark. 2,406,805; Sept. 3.
Key holder. A. N. Hanna. 2,407,153; Sept. 3.
Latch: *See*—
  Door latch.
Launching and landing mat for airplanes, Portable. H. H. Crafton. 2,407,059; Sept. 3.
Laundry machine. W. J. Asher. 2,407,125; Sept. 3.
Lighting fixture, Gaseous discharge tube. H. R. Owen. 2,406,896; Sept. 3.
Lignocellulosic materials, Treating. G. H. and G. H. Tomlinson, Jr. 2,406,867; Sept. 3.
Line and halftone reproduction. J. A. C. Yule. 2,407,211; Sept. 3.
Lining, Furnace. H. N. Clark. 2,407,135; Sept. 3.
Lining material and producing the same, Cap. W. G. Palmer. 2,406,898; Sept. 3.
Loader, Beet. C. W. Walz and R. D. Griff. 2,406,976; Sept. 3.
Loading and storing pineapples, Method and apparatus for. B. J. Butler. 2,406,992; Sept. 3.
Loading machine, Ball. F. B. Kalister. J. O. Stafford, and F. J. Konyvka. 2,407,016; Sept. 3.
Locating radiated-signal reflectors, System for. A. V. Loughren. 2,407,169; Sept. 3.
Lubricant and lubricating surfaces therewith. F. J. Sowa. 2,406,971; Sept. 3.
Lubricants. F. J. Sowa. 2,407,037; Sept. 3.
Lubricated traveler ring. F. S. Pollock, Jr. 2,406,901; Sept. 3.
Lubricating composition, Mineral oil. E. Lieber and A. F. Cashman. 2,407,087; Sept. 3.
Machine for metering cement to lenses. W. T. Sherwood. 2,407,208; Sept. 3.
Mail box. E. J. Axnix. 2,407,128; Sept. 3.
Manual, Service inspection. D. B. Erminger. 2,407,067; Sept. 3.
Matching device, Impeding. E. Labin and J. H. Nye. 2,406,839; Sept. 3.
Messages for transmission, Preparing facsimile. A. E. Thompson and R. D. Salmon. 2,406,865; Sept. 3.
Meter: *See*—
  Oscillating disk meter.
Microfilm viewer. J. K. Holbrook. 2,407,009; Sept. 3.
Microgauge system, Electric. C. F. Coake. 2,407,140–1; Sept. 3.
Mold for use in the manufacture of optical elements. D. P. Cooper, Jr. 2,406,742; Sept. 3.
Molding materials under heat and pressure. H. J. Luth, H. B. Scheidemantel, and S. R. Krupnick. 2,406,843; Sept. 3.
Mop, Self-squeezing. P. M. Jackson. 2,406,950; Sept. 3.
Motor: *See*—
  Pneumatic motor.
  Quick converting capacitor motor.
Motor and control system for motors, Electric. J. D. Lewis. 2,406,781; Sept. 3.
Mounting: *See*—
  Cross shaft mounting. Sheave mounting.
  Refrigerator motor - compressor mounting.
Multiple disk energizing clutch. H. T. Lambert. 2,407,022; Sept. 3.
N-benzyl-N-alkyl morpholinium compounds. J. B. and V. Niederl, and M. E. McGreal. 2,406,892; Sept. 3.
Navigation system, Instrument. C. B. Watts, Jr. 2,406,876; Sept. 3.
Needlework with tied loops, Knotted. R. F. Morcaldi D'. 2,407,031; Sept. 3.
Nitrocellulose film base, Stabilization of. D. R. Swan and J. M. Calhoun. 2,407,209; Sept. 3.
Nozzle, valve, and valve disk fastening means, Dispensing. C. F. Sievers. 2,406,914; Sept. 3.
Oil field waters, Purifying. H. Schiller and A. Shapiro. 2,407,180; Sept. 3.
Oil-soluble sulphonates, Purification of. W. K. Griesinger. 2,406,763; Sept. 3.
1-hydroxyphenol-3-aminobutane and their production, Derivatives of. F. Kulz. 2,407,167; Sept. 3.
Optical system. D. S. Grey. 2,406,762; Sept. 3.
Oscillating disk meter. A. R. Whittaker. 2,406,877; Sept. 3.
Oscillator, Piezoelectric. H. Benioff. 2,406,793; Sept. 3.
P-phenylene diamines, Producing. I. F. Salminen and A. Weissberger. 2,407,207; Sept. 3.
Pan, Multiple baking. A. L. Langel. 2,407,021; Sept. 3.
Paraffin isomerization process. C. O. Tongberg and H. J. Hall. 2,406,868; Sept. 3.
Pectase, Preparing. H. T. Leo and C. C. Taylor. 2,406,840; Sept. 3.
Pencil. A. P. Shelly. 2,407,106; Sept. 3.
Perforator for well casing, Gun. M. O. Johnston. 2,407,081; Sept. 3.
Phenols, Manufacture of. D. Tyrer. 2,407,044; Sept. 3.
Phenols or salts thereof, Manufacture of. D. Tyrer. 2,407,045; Sept. 3.
Picker for looms. W. A. Blanchard. 2,407,054; Sept. 3.
Pin: *See*—

Pivot pin. W. E. Brill. 2,406,940; Sept. 3.
Plaster, Set stabilized. H. F. Gardner. 2,406,757; Sept. 3.
Plastics. H. A. Bruson and G. B. Butler. 2,407,131; Sept. 3.
Plate, Fracture. M. G. Hardinge. 2,406,832; Sept. 3.
Plate, Rotary sine index. E. P. Saunders. 2,406,906; Sept. 3.
Plates of cellulose material, Making shallow baking. H. F. Waters. 2,407,118; Sept. 3.
Plates to their bases, Securing printing. H. J. Luehrs. 2,406,883; Sept. 3.
Plow, Buster gang. H. C. Harris. 2,407,006; Sept. 3.
Plug: *See*—
  Anticorrosion plug.
Plugboard. D. R. Platt and A. E. Gray. 2,407,176; Sept. 3.
Pneumatic motor. E. W. Davis. 2,406,747; Sept. 3.
Power control. G. M. Holley, Jr. 2,407,078; Sept. 3.
Power production in combustion turbines, Improving. J. Kreitner and F. Nettel. 2,407,165; Sept. 3.
Power unit for traveling cranes. G. A. Mitchell. 2,406,889; Sept. 3.
Press. H. V. Allison. 2,407,123; Sept. 3.
Pressing machine, Sole. C. F. Fitzgerald. 2,406,753; Sept. 3.
Privacy system for speech transmission. N. R. French. 2,406,825; Sept. 3.
Processing machine, Heat. V. A. Fox. 2,406,821; Sept. 3.
Profiling milling cutter. A. Kutscha. 2,406,780; Sept. 3.
Projectile, Sound recording. L. A. Elmer and C. A. Lovell. 2,406,816; Sept. 3.
Projector, Ray. H. P. Donle. 2,407,065; Sept. 3.
Pump: *See*—
  Centrifugal pump. Variable delivery and reversing pump.
  Rotary pump.
Punching device, Can. J. Hansen. 2,406,831; Sept. 3.
Pyridine 3-sulphonic acid and its salts, Production of. E. T. Tisza and B. F. Duesel. 2,406,972; Sept. 3.
Pyrolysis products of chlorodifluoromethane, Separating. A. F. Benning, F. B. Downing, and J. D. Park. 2,406,794; Sept. 3.
Quick converting capacitor motor. W. W. Warner. 2,407,117; Sept. 3.
Rack: *See*—
  Barrel storage rack.
  Water-cooled ammunition rack.
Radiating system, Multisignal. A. Alford. 2,406,735; Sept. 3.

Radio device for indicating doppler effect. J. Evans. 2,407,000; Sept. 3.
Radio pulse indicator. J. P. Smith. 2,406,970; Sept. 3.
Radio relaying. H. Tunick. 2,407,212–13; Sept. 3.
Range finder, Continuous. F. W. Durgin. 2,406,999; Sept. 3.
Range finder, height finder, and like measuring instrument. J. M. Strang and C. Foster. 2,407,186–7; Sept. 3.
Ratiometer, Electrical. M. G. McBride. 2,406,887; Sept. 3.
Razor. J. W. Anderson. 2,406,983; Sept. 3.
Razor. J. W. Anderson. 2,406,985; Sept. 3.
Razor W. L. Mills. 2,407,030; Sept. 3.
Readily cleanable filter. C. G. Vokes. 2,407,046; Sept. 3.
Reaming. E. L. Zehrbach. 2,406,938; Sept. 3.
Recorder attachment and card guide, Time. W. A. Kraus. 2,407,020; Sept. 3.
Recorder, Automatic graph drawing. V. Guillemin, Jr. 2,406,764; Sept. 3.
Recording composition, Instantaneous. A. B. Savage. 2,407,179; Sept. 3.
Rectifier. C. A. Clarke. 2,406,806; Sept. 3.
Refractories, Plastic bonding basic. R. A. Schoenlaub. 2,406,909; Sept. 3.
Refractory materials, Treatment of. R. A. Schoenlaub. 2,406,910; Sept. 3.
Refrigeration apparatus. W. P. Jones. 2,407,159; Sept. 3.
Refrigerator motor-compressor mounting. W. P. Jones. 2,407,014; Sept. 3.
Regulated liquid pressures, System for producing. W. C. Clothier, B. Naylor, and J. E. P. Dunning. 2,407,139; Sept. 3.
Remote-control system. R. L. Novak. 2,406,848; Sept. 3.
Resins resulting from polymerization of an isopropenyl ketone, Stabilization of. D. E. Adelson and H. Dannenberg. 2,407,051; Sept. 3.
Resistance device for generating oscillations or reducing damping, Negative. P. K. Chatterjea and C. T. Scully. 2,406,804; Sept. 3.
Resistor, Fixed. L. E. McFarren. 2,407,171; Sept. 3.
Riboflavin and intermediates therefor, Synthesis of. J. Kamlet. 2,406,774; Sept. 3.
Ring: *See*—
Lubricated traveler ring. Piston ring.
Roll, Hair. W. Huppert. 2,407,011; Sept. 3.
Roof, Panelled steel. J. S. Swann. 2,406,863; Sept. 3.
Rotary cast cutter. B. L. Cryar. 2,406,744. Sept. 3.
Rotary pump. D. H. Millard. 2,406,959; Sept. 3.
Rotary switch. G. H. Erb. 2,406,818; Sept. 3.
Rotor, Brake. R. Watts. 2,407,197; Sept. 3.
Rubber composition. F. J. Soday. 2,407,183; Sept. 3.
Rubber reclaim. H. H. Thompson. 2,407,193; Sept. 3.
Sacker, Potato. H. L. Keller. 2,407,017; Sept. 3.
Safety device. S. M. Udale and W. R. Buick. 2,407,116; Sept. 3.
Safety device for dump trucks. A. D. L. Hutchinson. 2,407,012; Sept. 3.
Salts of dithiocarbamic acids, Preparation of heavy metal. A. M. Neal and B. M. Sturgis. 2,406,960; Sept. 3.
Sapogenin oxidation products and preparing the same. R. E. Marker. 2,406,885; Sept. 3.
Saw apparatus, Portable timber cutting. E. C. McLean. 2,407,028; Sept. 3.
Scraper. H. C. French and N. V. Kuehlman. 2,406,826; Sept. 3.
Screwdriver, Safety. A. M. Josepho. 2,406,952; Sept. 3.
Sealing together two pieces of waterproof fabric, and the seam formed thereby. H. H. Haman and C. E. Whalen. 2,406,830; Sept. 3.
Seat: *See*—
Bicycle seat.
Setting device on mechanical and electrical measuring instruments. P. Hildebrand and A. Metz. 2,407,154; Sept. 3.
Sewing machine. I. M. A. Garcia. 2,407,148; Sept. 3.
Sheave mounting. B. L. Myers. 2,407,032; Sept. 3.
Sheet feeder. C. W. Harrold. 2,406,765; Sept. 3.
Sheet feeder. C. W. Harrold. 2,406,766; Sept. 3.
Sheet material, Method and apparatus for cutting or punching. H. H. Mohaupt. 2,407,093; Sept. 3.
Sheet or tile, Wall surface. D. C. Luse. 2,407,025; Sept. 3.
Sheets, Registering. A. Neuhart. 2,406,847; Sept. 3.
Shoe. J. E. Taber, Jr., and K. L. Keene. 2,407,189; Sept. 3.
Shoe, Brake. W. T. Rossell. 2,407,035; Sept. 3.
Shoe, Picking. B. W. Brouwer. 2,407,056; Sept. 3.
Shoes, Making slip lasted. J. J. Walsh. 2,406,975; Sept. 3.
Shuttle, Loom. J. J. Kaufmann, Jr. 2,407,162; Sept. 3.
Sighting apparatus. D. L. Colbath. 2,406,807; Sept. 3.
Sighting apparatus, Optical. C. S. Grimshaw. 2,406,828; Sept. 3.
Signal apparatus, Engine. M. E. Chandler. 2,407,134; Sept. 3.
Signaling, Submarine. B. M. Harrison. 2,406,833; Sept. 3.
Sizing composition and yarn sized therewith. H. R. Dittmar. 2,406,749; Sept. 3.
Slip, Brassière. A. Novick. 2,406,849; Sept. 3.
Slot and floating pin assembly for automatic push rods, Hammer. H. H. Engemann. 2,406,817; Sept. 3.
Slurrying aluminum chloride for hydrocarbon conversion processes. W. E. Kruse, C. W. Nysewander, and J. A. Bolt. 2,406,778; Sept. 3.
Snap switch. R. J. McFall. 2,407,089; Sept. 3.
Soap-like preparations. A. L. Rawlins. 2,406,902; Sept. 3.
Soap, Making salt water. J. Blades. 2,407,130; Sept. 3.
Solenoid valve. H. T. Sparrow. 2,407,184; Sept. 3.
Sounding device, Echo. P. Orlich, G. Negel, and H. Hartz. 2,407,175; Sept. 3.
Splicer, Core. C. C. Frame. 2,407,070; Sept. 3.
Splint, Fracture. R. Anderson. 2,406,987; Sept. 3.
Spreader having adjustable feed mechanism, Manure. W. F. Schmied. 2,407,104; Sept. 3.
Stabilized polyvinyl fluoride. F. L. Johnston. 2,406,837; Sept. 3.
Stabilized 2-chlor-butene-2. C. B. Gardenier. 2,407,149; Sept. 3.
Stable dispersions of alkyl alkacrylate polymers, Preparation of. J. E. Smith. 2,407,107; Sept. 3.
Staging, Adjustable. O. Aukland. 2,406,786; Sept. 3.
Staple fiber, Production of. R. A. Smith. 2,407,109; Sept. 3.
Starch and method, Thick pasting. L. O. Gill and J. W. McDonald. 2,407,071; Sept. 3.
Starter drive, Engine. M. P. Whitney, J. E. Buxton, and D. L. Miller. 2,407,048; Sept. 3.
Stretcher, Foldable. G. B. Leather and W. H. Wallbanks. 2,407,085; Sept. 3.
Strip processing. G. P. Wilson. 2,407,120; Sept. 3.
Substitutes, Manufacture of cream. R. D. Mason and A. C. Justesen. 2,407,027; Sept. 3.
Suction cleaner. L. K. Acheson. 2,406,733; Sept. 3.
Suction cleaner. D. G. Smellie. 2,406,915; Sept. 3.
Sugar derivatives. W. C. Griffin. 2,407,001; Sept. 3.
Sulphonamide derivatives of melamine and their production. R. O. Roblin, Jr., and P. S. Winnek. 2,407,177; Sept. 3.
Sulphur dioxide, Production of. A. C. Mohr. 2,406,890; Sept. 3.
Sulphuric acid regenration. N. Titlestad. 2,406,930; Sept. 3.
Supply for electron microscopes, Power. A. W. Vance. 2,406,974; Sept. 3.
Surfaces with powder, Coating. C. P. Fagan. 2,407,146; Sept. 3.
Suspended matter from suspensions, Removing. H. F. Fisher and A. C. Peck. 2,406,820; Sept. 3.
Switch: *See*—
Rotary switch. Snap switch.
Synchronizing system. K. R. Wendt. 2,406,977; Sept. 3.
Tablet, Vitamin B-complex. W. A. Compton and R. S. Nicholls. 2,406,741; Sept. 3.
Tag or the like, Reflected price. E. E. Crowson. 2,406,743; Sept. 3.
Teaching device, Music. F. A. Firestone. 2,406,946; Sept. 3.
Telegraph system. W. M. Bacon. 2,406,787; Sept. 3.
Telegraph system. H. H. Haglund and A. W. Breyfogel. 2,406,829; Sept. 3.
Telephone or like signaling system. C. Gillings, C. E. Beale, and T. B. Terroni. 2,407,150; Sept. 3.
Television, Color. P. C. Goldmark. 2,406,760; Sept. 3.
Testing device, Tack. R. E. Bonner and M. D. Brewster. 2,406,989; Sept. 3.
Throttle control. P. M. Waite. 2,406,872; Sept. 3.
Tire removing apparatus. G. F. Cooley. 2,406,996; Sept. 3.
Tires, Building pneumatic. J. I. Haase. 2,407,152; Sept. 3.
Toilet or the like, Cabinet. J. H. Dyett. 2,406,750; Sept. 3.
Top, Trailer. D. E. Bramble. 2,406,737; Sept. 3.
Toy, Construction. B. R. Glukes. 2,406,759; July 3.
Trailer brake. J. T. Horne. 2,407,156; Sept. 3.
Trains of electric impulses, Arrangement for receiving predetermined. G. C. Hartley, L. P. Lowry, and F. H. Bray. 2,406,834; Sept. 3.
Transceiver for sound, Directive. H. C. Hayes. 2,406,767; Sept. 3.
Transmission line, Adjustable. N. V. Fedotoff. 2,407,147; Sept. 3.
Transmission of sound and other waves, System for the electric. W. A. Beatty and L. W. Houghton. 2,406,790; Sept. 3.
Transmission, Speed indicator. S. Hamilton. 2,407,077; Sept. 3.
Transmission system, Intelligence. L. A. de Rosa. 2,406,813; Sept. 3.
Transmission system, Intelligence. N. H. Young, Jr. 2,406,880; Sept. 3.
Transmission system, Secret. M. M. Levy. 2,406,841; Sept. 3.
Transmitting intelligence. J. A. Herbst. 2,406,835; Sept. 3.
Transmitting system, Wave. M. D. Fiske and J. M. Lafferty. 2,407,068; Sept. 3.
Tray for egg treating machines, Holding. W. G. Howard. 2,407,079; Sept. 3.
Triazolo (d) pyrimidines and preparing the same. J. P. English, J. R. Vaughan, Jr., and R. O. Roblin, Jr. 2,407,204; Sept. 3.
Triode oscillator circuit. A. A. Varela. 2,406,871; Sept. 3.
Tube ends, Closing bag. D. Belcher. 2,406,791; Sept. 3.

Tube from a strip, Forming corrugated. S. J. Carter. 2,406,948; Sept. 3.
Tubing, Capping. M. Curtze. 2,406,745; Sept. 3.
Tubing, Forming bent. F. M. Kepler. 2,406,838; Sept. 3.
Twisting apparatus, Yarn. O. A. Hitt. 2,406,768; Sept. 3.
Two and one direction silent overriding and positive driving overriding mechanism. C. H. Richards. 2,407,099; Sept. 3.
2-ethylhexyl phosphates. T. F. Carruthers. 2,406,802; Sept. 3.
2,6-nitro chlor benzyl alcohol, Preparing. F. Sievenpiper. 2,407,182; Sept. 3.
Typewriting machine. R. Von Reppert. 2,407,195; Sept. 3.
Ultra high frequency power measurement. A. M. Gurewitsch. 2,407,075; Sept. 3.
Valve: *See*—
Solenoid valve.
Valve seat insert assembly and assembly method and means. S. H. Norton. 2,406,963; Sept. 3.
Valve structure, Combination. J. A. Brooks. 2,406,941; Sept. 3.
Vanadium, Recovery of. A. Hixson and R. Miller. 2,407,008; Sept. 3.
Variable delivery and reversing pump. D. J. Orr. 2,406,964; Sept. 3.
Vehicle. R. E. and E. W. Choate. 2,406,944; Sept. 3.
Vehicle. G. G. McNamara, Jr. 2,407,092; Sept. 3.
Ventilation system and apparatus, Crankcase. D. G. Roos. 2,407,178; Sept. 3.
Vinyl chloride, Manufacture of. H. M. Stanley. 2,407,039; Sept. 3
Visual position and phase sense indicator. J. E. Shepherd and J. D. Mallett. 2,406,858; Sept. 3.
Vitamin products, Antianemia. J. J. Pfiffner, S. B. Binkley, E. S. Bloom, and A. D. Emmett. 2,407,096; Sept. 3.
Warps, Method of and apparatus for use in preparing weaming. J. Bolton. 2,406,988; Sept. 3.
Water-cooled ammunition rack. J. H. Davis, R. W. Matthews, and N. G. McLean. 2,406,809; Sept. 3.
Wave conversion. H. Tunick. 2,406,932; Sept. 3.
Wave filter. F. R. Bies. 2,406,796; Sept. 3.
Waxes and greases, Artificial. S. L. Scott. 2,407,181; Sept. 3.
Weighing and dispensing apparatus. R. E. Williams and L. J. Nowak, Jr. 2,406,934; Sept. 3.
Weighing apparatus embodying a totalizing mechanism, Automatic. A. E. Page. 2,406,897; Sept. 3.
Winding machine. A. H. Muller. 2,406,846; Sept. 3.
Winding machine, Plate. H. W. Seher. 2,406,968; Sept. 3.
Window construction, especially for rail cars. J. Ledwinka and G. Trautvetter. 2,407,086; Sept. 3.
Wing. E. A. Stalker. 2,406,917–18; Sept. 3.
Wing. E. A. Stalker. 2,406,920; Sept. 3.
Wing. E. A. Stalker. 2,406,922; Sept. 3.
Wing, Flow. H. Allen and R. N. Bean. 2,407,050; Sept. 3.
Wing with flap enclosing a blower means. E. A. Stalker. 2,407,185; Sept. 3.
Wings and other aerodynamic bodies. E. A. Stalker. 2,406,916; Sept. 3.
Wool, Chemically modified. D. M. McQueen. 2,406,958; Sept. 3.
Wrapper, etc., Antifungus. G. C. Borden, Jr., and K. R. Karlson. 2,406,990; Sept. 3.
Wringer. G. H. Jantz. 2,406,951; Sept. 3.
Wringer, Clothes. A. P. Barcus. 2,406,788; Sept. 3.

CLASSIFICATION OF PATENTS

ISSUED SEPTEMBER 3, 1946

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number—class, second number—subclass, third number—patent number

1— 11: 2,407,090
2— 14: 2,406,998
42: 2,406,893
73: 2,406,849
162: 2,406,991

U. S. GOVERNMENT PRINTING OFFICE: 1946

Patents Nos. 2,407,214 to 2,407,623

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office

Vol. 590—No. 2 TUESDAY, SEPTEMBER 10, 1946 Price—$16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $18.75; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

Public Law 620—79th Congress

[Chapter 775—2d Session]

[H. R. 4080]

AN ACT

To authorize the Commissioner of Patents to designate Examiners to serve temporarily as Examiners in Chief.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That notwithstanding the provisions of section 476 of the Revised Statutes (U. S. C., title 35, sec. 2), the Commissioner of Patents is authorized to designate Examiners of the Principal Examiner grade or higher, having the requisite ability, to serve as Examiners in Chief and such Examiners so designated shall be fully qualified to act as members of the Board of Appeals constituted by section 482 of the Revised Statutes (U. S. C., title 35, sec. 7): *Provided,* That no such Examiner shall so serve for more than ninety days in any calendar year but thereafter they shall have authority to act and sign decisions and papers necessary to complete action on cases heard during such ninety days: *And provided further,* That not more than one such Examiner shall be among the members of the Board of Appeals hearing an appeal.

Sec. 2. This act shall take effect on the date of approval and shall expire three years after such date.

Approved August 7, 1946.

Order No. 4079

August 16, 1946.

The following units of the United States Patent Office are hereby transferred from Richmond, Va., to Gravelly Point, Washington, D. C., beginning on or about September 30, 1946:

The First Assistant Commissioner's Office;
The Law Examiner's Office;
The Supervisory Examiners' Office;
The Law Library;
The Drafting Division;
The parts of the following divisions still remaining in Richmond:
The Chief Clerk's Office;
The Personnel Office;
The Issue and Gazette Division;
The Docket Clerk's Division;
The Financial Clerk's Division;
The Mail Room;
The Assignment Division;
The Stockroom;
The following Examining Divisions: 1, 2, 4, 5, 8, 9, 11, 12, 13, 14, 17, 18, 19, 20, 22, 28, 29, 30, 32, 33, 34, 35, 36, 39, 40, 44, 45, 46, 47, 49, 52, 53, 57, 58, 61, and 62; and any and all units or parts thereof now remaining in Richmond.

THOMAS F. MURPHY,
Acting Commissioner.

Approved for change of station:

H. A. WALLACE,
Secretary of Commerce.

Notice of Cancellation

U. S. Patent Office, *Richmond, Va., August 21, 1946.*

American Gear Company, its assigns or legal representatives, take notice:

A petition for cancellation having been filed in this Office by Burd Piston Ring Company, 2401 Tenth Street, Rockford, Ill., to effect the cancellation of trade-mark registration of American Gear Company, 212 South Horton Street, Jackson, Mich., No. 228,726, dated June 7, 1927, and the notice of such proceeding sent by registered mail to the said American Gear Company, at the said address, having been returned by the post office undeliverable, notice is hereby given that unless said American Gear Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the cancellation will be proceeded with as in the case of default. This notice will be published in the Official Gazette for three consecutive weeks.

LESLIE FRAZER,
First Assistant Commissioner.

Condition of Applications Under Examination at Close of Business August 23, 1946

(Total number of applications awaiting action, excluding Trade-Mark Division, 122,708; Trade-Mark Division, 9,909. Oldest new case, March 18, 1945; oldest amended, March 21, 1945.)

(The dates given are 1945 except where † indicates 1946.)

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

In re Mork

No. 5,142. Decided May 7, 1946

[155 F.(2d) 276; 69 USPQ 527]

1. Appeal—Decision.

Where the Board of Appeals agreed with the Examiner's analyses of the disclosures of appellant's application and the references, *Held* that "it was not incumbent upon it to state in minute detail the reasons for its agreement, even though it might properly have done so."

2. Same—Jurisdiction.

"We have quoted appellant's suggestion to the effect that we disregard the action of the Examiner and the Board and 'start from scratch' in comparing the claims and the references. The suggestion is somewhat novel to say the least of it. It would seem to require that the court assume the functions of the Primary Examiner which we may not do. The statute defines our duty and limits our authority. We are required to review the decision of the Board affirming the decision of the Examiner when that decision is adverse to an appellant, and our review must be confined to the errors alleged in the reasons of appeal. Obviously, we cannot disregard a decision and at the same time review it."

3. Patentability—Fairlead.

Claims to a fairlead for a two-drum winch *Held* unpatentable over the prior art.

4. Same—Invention—"Crowded Art."

"It may be that appellant's activity was in a 'crowded art,' or field, but unless his modification required the exercise of the inventive faculty, he may not be granted a patent because of such modification."

Appeal from the Patent Office. Affirmed.

Mr. Roger Sherman Hoar for Mork.

Mr. W. W. Cochran (*Mr. R. F. Whitehead* of counsel) for the Commissioner of Patents.

Garrett, *P. J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming that of the Primary Examiner rejecting four claims, numbered 6, 7, 9, and 11 of appellant's application for a patent for alleged "Improvements in Fairleads for Winches." No claims were allowed.

We quote the claims as follows:

6. In a fairlead for a two-drum winch, the combination of: a base; a T-shaped mast, comprising an erect portion and a cross-piece at the top of the erect portion; two fixed sheaves, each journaled on one end of the cross-piece; a bar secured across one face of the erect portion of the mast, parallel to the cross-piece of the mast; two swivel sheaves; two housings, one being for each swivel sheave, each housing having a swivel-axle; two sockets carried by the base, one being for each axle; two sockets carried by the bar, one being for each axle; and means for removably securing the mast to the base, so as to demountably secure the swivel housings.

7. In a fairlead for a two-drum winch, the combination of: a base; a deck-plate; a T-shaped mast, supported by the deck-plate, and comprising an erect portion and a cross-piece at the top of the erect portion; two sheave-housings, one being rigidly mounted at the extreme end face of each end of the cross-piece; a fin along the cross-piece, rigidly secured thereto and to the two sheave-housings; two sheaves, one being journaled in each sheave housing; two swivel-housings, swiveled on the base and mast; and two sheaves, one being journaled in each swivel-housing.

9. In a fairlead for a two-drum winch, the combination of: a base; a T-shaped mast, supported by the base, and comprising an erect portion and a cross-piece; and two sheaves each journaled on one end of the cross-piece.

11. A fairlead according to claim 7, further characterized by the fact that the erect portion of the mast is made out of a single piece of sheet metal bent into a C horizontal cross-section.

The following general description is taken from the decision of the board:

This application is concerned with improvements in winches of the type used with tractors. The winch is of the two drum type in which the drums are in alignment. These drums are supported by a base member bolted to the rear end of the tractor frame, and are activated from the power take-off of the tractor. The base frame extends over the drums and to this part is attached a plate carrying an upright mast of T-shape. To the head or cross member of this mast are pivoted two sheaves, one on each end of the head. About midway of the pedestal of the mast is attached a horizontal bar having openings for two sheave housings. These housings have pintles mounted in the openings in this plate and at the bottom there are smaller bearings for the lower ends of the pintles. Within these housings are sheaves over which ropes pass to the work not shown.

In rejecting the claims the Examiner cited the following references: Le Tourneau, 1,912,645, June 6, 1933; Lawler, 2,301,782, November 10, 1942; Hutchins, 2,312,552, March 2, 1943; French, 2,321,905, June 15, 1943.

It is noted that the Le Tourneau patent was cited in connection with the rejection of claim 6, and also another claim numbered 5, which was dismissed from the appeal before the Board and is not involved here. The Board made no reference to that patent in its decision but it was not overruled as a reference and appellant has covered it in the reasons of appeal before us.

In the brief for appellant each of the claims is separately analyzed and discussed. Before making such analysis, however, the brief set forth a general statement, the substance of which is that the application is in a crowded art; that the "outstanding feature" of appellant's fairlead is that the housings of his upper sheaves are rigidly mounted on the ends of the top piece of a T-shaped mast; that additional details (claimed to be important) are the presence of a bracing-fin extending from sheave-housing to sheave-housing along the top piece of the T and the fact that the stem of the T is C-shaped in horizontal cross-section, and that "Of some cumulative importance" is the method of demounting the swiveled housings of the two lower sheaves by unbolting certain described bolts.

It is alleged that "The whole ensemble produces a more sturdy and compact tractor-winch fairlead than has ever been known before."

Much emphasis is placed upon the allegation that the application is in a crowded art. Appellant concedes that there are many similarities between his fairlead and the fairleads of the references but contends that "the recital of as much as one essential element, patentably distinct from anything in any of the references, should render a claim allowable."

Near the end of the brief five elements, claimed to constitute novel features in appellant's winch, are set forth as follows, the italics being those used in the brief:

First, a T-*shaped* mast. French's sheave-support *approaches T shape*. Hutchins' sheave support *is* T-shaped, it is true, but is associated with his sheaves in a manner not at all comparable with appellant's device.

Secondly, the *rigid* mounting of the housings of the upper sheaves transversely *on the end faces* of the cross-

piece. None of the references mounts its upper sheaves rigidly on the end faces of *anything*.

Thirdly, the ready demountability of the *swiveled* housings of the two *lower* sheaves (not to be confused with the *rigid* housings of the two upper sheaves mentioned above). Although each of the four references has lower sheaves which are swiveled, none of the references plans to demount its sheaves in the manner claimed by appellant.

Fourthly, the reinforcing fin 32. Not only does none of the references have such a fin—*none of them has even some other form of reinforcement performing the function of such a fin.*

Fifthly, the C-shaped cross-section of the *stem of the mast*. None of the references has this structure. Lawler has merely a D-shaped *flat slab*, which is something quite different.

The brief then adds:

Surely these five features, which singly and in combination make appellant's fairlead the light compact sturdy little tractor-accessory that it is, entitle this fairlead to the limited degree of patent protection which appellant is asking.

The brief criticizes with some severity both the decision of the Examiner and that of the Board.

It alleges, in substance, that the former's analyses of appellant's fairlead and the fairleads of the references are "verbose and complicated"; that he gave most emphasis to features not relied upon by appellant for patentability, and that his rejection was based on a most complicated combining of the references.

Concerning the decision of the Board, the brief asserts, inter alia:

The Board of Appeals of the Patent Office appear to have given this case a very superficial and ununderstanding [sic] consideration. This fact is indicated by their complete failure to grasp the identity of one of the elements relied upon. In this connection, will the court please note that claim 7 * * * calls for:

"a fin along the cross-piece, rigidly secured thereto and to the two sheave-housings";

Elsewhere in the brief it is alleged:

The Examiner's complicated analysis seems to have so bewildered the Board, that in the first place they did not attempt to follow and confirm it, and in the second place they showed their lack of understanding of the structure by misapplying claim 7. * * *

So we suggest that your honors totally disregard the actions of the Examiner and the Board, and start from scratch in a comparison of appellant's claims with the showings of the three reference patents.

In an early part of the brief, counsel for appellant states, in substance, that he was prevented "by urgent personal reasons" from attending the hearing before the Board to make oral argument in consequence of which he submitted on briefs, and expressed regret that he did so submit the case. In connection with this statement the brief before us states:

That the Board did not make sufficient study of the papers to identify correctly the element in which the inventiveness of one of the claims inhered, coupled with the fact of submission to the Board, without argument, is a strong indication that appellant has not yet had his day in court.

Discussing, first, the criticism leveled at the decision of the Examiner, we do not share the view that his statements describing the features of the application and the features of the references are "verbose and complicated" to any objectionable degree. It is true that it required considerable space to analyze them so as to bring out clearly the elements of structure and their arrangement in the combination, but it does not seem to us that the Examiner is subject to criticism for taking the necessary space to explain them.

Of course, the question of whether his application of the references to the disclosures of the application was correct is a matter for legitimate argument, but so far as his descriptions of the features are concerned, we do not find their correctness challenged by appellant.

We deem it unnecessary to our decision, therefore, to quote, or paraphrase, the Examiner's detailed descriptions of the features of the application and those of the references, but we think it proper to quote that part of his statement applying the references to the claims before him. It reads:

The claims have been rejected as follows:

Claims 5 and 6 are rejected as unpatentable over Lawler in view of Le Tourneau, Hutchins and French combined as indicated below. It would be merely following the teachings of Le Tourneau to provide the sheaves 24 of Lawler with an axle and the plates 21 and 22 of Lawler with sockets. It would be merely following the teachings of Hutchins or French to have the mast of Lawler T-shaped. Matching the elements in claim 5 (claim 6 is similar to claim 5) with the equivalent parts in Lawler; "a base" would be the transmission housing A; "a deck-plate" would be plate 12; "a T-shaped mast" would be column 14, the "erect portion," and plate 17, the "cross piece" (the patents to Hutchins and French show constructions having their erect portions supporting their cross pieces in the center and such construction is merely a matter of choice in Lawler); "two fixed sheaves" would be sheaves 18; "each journaled on one end of the cross piece" interpreted broadly would appear to be fairly met by the structure of Lawler wherein sheaves 18 are journaled in housings secured to the ends of plate 17; "a bar secured across one face of the mast" is plate 21 which is integrally secured to plate 12; "two swivel sheaves" would be sheaves 24 when the sheave on the right looking at Fig. 2 of Lawler is in its lower position between plates 21 and 22; "two housings" are the housings for sheaves 24; "each housing having an offset swivel-axle" is structure equivalent to that shown by Lawler and shown in Fig. 2 of Le Tourneau; "two sockets carried by the base" is the plate 22 with its perforations carried by transmission housing A; "two sockets carried by the bar" is the plate 21 with its perforations; "and means removably securing the deck-plate to the base, so as to demountably secure the swivel housings" would be bolts 13 which would removably secure the swivel housings of Lawler with the swivel mounting shown by him or with swivel mountings such as shown by Le Tourneau.

Claim 7 is rejected as unpatentable over Lawler. The particular form of support and bracing used by applicant does not involve invention over Lawler. Many forms of frame and bracing could be used to support the upper sheaves of Lawler and in the absence of a novel result the use of another form than that shown by Lawler would not involve invention. It does not appear to the Examiner that the statement "one being rigidly mounted at the extreme end face of each end of the cross-piece" is sufficiently definite as to how it applies to applicant's own structure to define invention over the structure shown by Lawler or such modifications of Lawler's structure that could be made by those skilled in the art without involving invention.

Claim 9 is rejected as fully met by French.

Claim 11 is rejected as unpatentable over Lawler like claim 7. To do away with plates 15 and 16 in Lawler would not involve invention.

[1] The Board approved the decision of the Examiner for the reasons embraced in his statement following the appeal to it, but it did not give descriptions with the same minuteness as those given by the Examiner. We find no justification for the assertion in the brief for appellant hereinbefore quoted to the effect that the Board seems to have been "so bewildered" by the "Examiner's complicated analysis" that "they did not attempt to follow and confirm it." Had the Board disagreed with the Examiner's analysis, or with his application of the references, doubtless it would have so stated, and given its reasons for disagreement. Since it agreed, it was not incumbent upon it to state in minute detail the reasons for its agreement, even though it might properly have done so.

Furthermore, we find no justification for the assertion in appellant's brief, as hereinabove quoted, to the effect that the Board "showed their lack of understanding of the structure by *misapplying* claim 7." [Italics ours.]

We do not understand just what is meant by the expression "misapplying" the claim.

The particular feature of claim 7 which appellant emphasizes is "a fin along the cross-piece, rigidly secured thereto and to the two sheave-housings."

In its decision the Board said, inter alia: "The patent to Lawler shows at 16 a reinforced web used in much the same manner as appellant's webs 36."

The accuracy of this statement does not appear to be questioned by appellant, but it is insisted that "Appellant is not claiming his webs 36; rather he is claiming his fin 32," and it seems to be his view that the above statement of the Board constituted the basis of the Board's rejection of claim 7.

We do not so understand the Board's decision. It made no specific analysis of any one of the claims, and the statement quoted was simply as to one feature of the Lawler reference.

It is true that the Examiner specifically rejected claim 7 as unpatentable *over* Lawler, but it was not held that Lawler disclosed a fin such as that of appellant. The specific holding reads in part, "Many forms of frame and bracing could be used to support the upper sheaves of Lawler and *in the absence of a novel result* the use of another form than that shown by Lawler would not involve invention." [Italics ours.]

We are not convinced that the holding of the Examiner was erroneous, and, as of course, are not convinced that the Board erred in affirming it.

[2] Hereinbefore we have quote appellant's suggestion to the effect that we disregard the action of the Examiner and the Board and "start from scratch" in comparing the claims and the references. The suggestion is somewhat novel to say the least of it. It would seem to require that the court assume the functions of the Primary Examiner which we may not do. The statute defines our duty and limits our authority. We are required to review the decision of the Board affirming the decision of the Examiner when that decision is adverse to an appellant, and our review must be confined to the errors alleged in the reasons of appeal. Obviously, we cannot disregard a decision and at the same time review it.

[3][4] We have quite carefully considered the decision appealed from in the light of the reasons of appeal and the arguments made thereon, and we are not convinced that appellant's modifications of the prior art constituted invention. It may be that appellant's activity was in a "crowded art," or field, but unless his modification required the exercise of the inventive faculty, he may not be granted a patent because of such modification.

We do not share appellant's view that he did not have his day in court.

The decision of the Board of Appeals is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

THYMO BORINE LABORATORY

v.

WINTHROP CHEMICAL COMPANY, INC.

No. 5,129. Decided May 7, 1946

[155 F.(2d) 402; 69 USPQ 512]

1. TRADE-MARKS—GOODS OF THE SAME DESCRIPTIVE PROPERTIES.

The thyroid extract preparation for treatment of goiter, obesity and kindred ailments, to which appellee applies its registered trade-mark "Thyractin," *Held* to be goods of the same descriptive properties as the antiseptic mouth wash, to which appellant applies the trade-mark "Thy-Rin," since they "are both medicinal, may be sold in drugstores without prescription to the same class of buyers, and are self-administered for medicinal effect."

2. SAME—CONFUSING SIMILARITY.

Held that appellant's mark "Thy-Rin" is made up in the same order of the same letters as appellee's registered mark "Thyractin," except for the omission of three intermediate letters; that the marks "are more similar than different in spelling, appearance and sound;" and that "there is a strong likelihood that confusion would arise between them in the spoken word, memory and writing."

3. SAME—SAME—SOUND—HYPHEN.

Held that the hyphen in appellant's mark "Thy-Rin" has no significance in speech.

4. SAME—SAME.

In regard to the marks "Thy-Rin" and "Thyractin," *Held* that the former might be termed a telescoped version of the latter.

APPEAL from the Patent Office. Affirmed.

Mr. Ira Milton Jones for Thymo Borine Laboratory.

Mr. James F. Hoge, Mr. L. B. Stoughton, and *Mr. E. F. Wenderoth* for Winthrop Chemical Company, Inc.

JACKSON, *J.*:

This is an appeal in a trade-mark opposition proceeding wherein the Commissioner of Patents affirmed, 63 USPQ 94, a decision of the Examiner of Trade-Mark Interferences sustaining the notice of opposition and adjudging that appellant is not entitled to register its trade-mark "Thy-Rin" as applied to an "antiseptic mouth wash."

In its notice of opposition appellee alleged that the mark "Thy-Rin" as used by appellant is applied to merchandise of the same descriptive properties as a product of appellee to which is applied its trade-mark "Thyractin," registration No. 301,090, dated February 14, 1933, and that the marks of the parties are of such near resemblance "as to be likely to cause confusion or mistake in the mind of the public" and "to deceive purchasers." The allegations in the notice of opposition were traversed by appellant's answer.

The registered mark of appellee is applied to a "thyroid extract preparation for treatment of goiter, obesity, [and] kindred ailments."

The case was submitted below on a joint stipulation of facts in which it appears that appellee's use of its mark was prior to that of appellant, so that the only issues are whether or not the goods of the parties are of the same descriptive properties, and if it be decided that they are, whether the involved trade-marks are so similar as to warrant the sustaining of the notice of opposition.

It appears in the stipulation that appellee is in the business of manufacturing, distributing and selling many medicinal and pharmaceutical preparations to which many different trade-marks are applied, including "Thyractin" and other preparations for "general antiseptic uses including use as an antiseptic mouth wash;" that its product to which the mark "Thyractin" is applied is in tablet form for oral use with water and is "widely advertised to the drug trade and medical profession" and "extensively sold in drugstores throughout the United States." While usually procured by prescription or as directed by a physician, "Thyractin" may be, and at times is, purchased by the general public without prescription.

The product of appellant as it appears from the stipulation is a germicidal mouth wash which may be used in either diluted or undiluted form and is sold to the general public in drug, five-and-ten, and department stores. It is advertised to the public chiefly in newspapers. It is frequently used in the treatment of oral conditions such as sore throat, trench mouth and gingivitis on the advice of physicians or dentists where the condition may be such that professional attention is required. It is generally used, however, as an antiseptic mouth wash.

In the stipulation the parties agreed that antiseptic mouth washes are medicinal in character within the meaning of the Federal Food, Drug and Cosmetic Act, 52 Stat. L. 1040, and that the medical and dental professions, druggists and pharmacists so regard them.

The Examiner of Interferences held the involved goods of the parties to possess the same descriptive properties within the meaning of the Trade-Mark Act because even though specifically different they are in the nature of medicinal products, "at times at least both products are sold in the same trade channels by the same method of distribution, to the same class of customers," and that therefore there seemed to be a likelihood that purchasers of the involved goods of the parties might reasonably believe they originated in a common source.

The Examiner also held the marks to be confusingly similar. He noted that the mark "Thy-Rin" consists of all the letters of the mark "Thyractin" omitting only the letters "act," and concluded that such omission was not enough to differentiate the marks so as to negative likelihood of confusion.

The reasoning of the Examiner was in effect followed, and was approved, in the Commissioner's decision.

[1] In our opinion the involved products of the parties are of the same descriptive properties.

It is true, as pointed out in the Commissioner's decision, that appellant's mouth wash and appellee's thyroid tablets would in all likelihood "be recognized as different preparations adapted for different uses" and that as far as their specific natures are concerned confusion would be unlikely. However, they are both medicinal or pharmaceutical preparations and appellee, as before stated, produces and sells a large number of preparations of that kind, including an antiseptic preparation used as a mouth wash for oral and dental hygiene. In view of the fact that the goods of the parties are both medicinal, may be sold in drugstores without prescription to the same class of buyers, and are self-administered for medicinal effect, we are convinced that they are goods of the same descriptive properties. *Noll* v. *Krembs*, 22 C. C. P. A. (Patents) 722, 73 F.(2d) 491, 23 USPQ 282, 450 O. G. 503.

[2][3] In comparing the involved marks of the parties, their difference and similarity in sound and appearance are obvious. They are more similar than different in spelling, appearance and sound, and in our opinion there is a strong likelihood that confusion would arise between them in the spoken word, memory and writing. The slight difference in the spelling of the marks appears to be overshadowed by their close similarities. The hyphen in appellant's mark has no significance in speech. Furthermore, appellant's mark is made up in the same order of the same letters as the involved mark of appellee, except for the omission of three intermediate letters.

[4] While we have repeatedly stated that in trade-mark litigation such as in this case prior decisions are of little assistance, and that each case must be determined on its own facts, we think this court has been consistent in its opinions with respect to likelihood of confusion between marks when questions similar to that presented here have been decided. In the case of *The Procter & Gamble Co.* v. *J. L. Prescott Co.*, 18 C. C. P. A. (Patents) 1433, 49 F.(2d) 959, 9 USPQ 454, 413 O. G. 1105, the mark "Oxol" as applied to a disinfectant, cleaner and bleacher and put up in bottles was held to be confusingly similar to the mark "Oxydol" for soap powder in paper cartons; in *Barton Manufacturing Company* v. *Hercules Powder Co.*, 24 C. C. P. A. (Patents) 982, 88 F.(2d) 708, 33 USPQ 105, 483 O. G. 459, "Dishine" for a cleaning compound was held to be confusingly similar to "Dyanshine" used for a polish on leather goods; in *In re Dutch Maid Ice Cream Company*, 25 C. C. P. A. (Patents) 1009, 95 F.(2d) 262, 37 USPQ 202, 495 O. G. 221, "Dutch Maid" applied to ice cream was held to be unregistrable in view of "Dutchland Made" also for ice cream; in *Otard, Inc.*, v. *Italian Swiss Colony, etc.*, 31 C. C. P. A. (Patents) 955, 141 F.(2d) 706, 61 USPQ 131, 565 O. G. 6, the term "Calognac" for California brandy was held to be confusingly similar to "Cognac" for brandy from the Cognac region of France; in the case of *International Vitamin Corp. Etc.* v. *Winthrop Chemical Co., Inc.*, 32 C. C. P. A. (Patents) 899, 147 F.(2d) 1016, 64 USPQ 574, 574 O. G. 7, the mark "Blexin" applied to a vitamin B complex preparation was held to be confusingly similar to the mark "Betaplexin" for a like preparation. There we observed that the former of those marks might be termed a telescoped version of the latter. The same observation might be made here.

Since in our opinion the involved goods of the parties are of the same descriptive properties and the concurrent use of the marks as applied thereto is likely to cause confusion in the mind of the purchasing public as to origin and deceive purchasers, the decision of the Commissioner of Patents is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

IN RE CROSTHWAIT, JR. ET AL.

No. 5,145. Decided May 7, 1946. Petition for rehearing denied June 7, 1946

[155 F.(2d) 394; 69 USPQ 606]

1. PATENTABILITY—TEMPERATURE CONTROL APPARATUS.
The appealed claims to a Wheatstone bridge temperature control apparatus *Held* unpatentable over the prior art.

2. CLAIM—FUNCTIONAL STATEMENTS.
"It is stated in claim 5 that the means connected in two branches of the bridge for increasing or decreasing the rate of heat supply may be automatically or manually adjustable. There is, however, no recitation of structure defining those means and therefore those statements cannot impart patentability to the claim."

APPEAL from the Patent Office. Affirmed.

Mr. Harvey M. Gillespie (*Mr. Karl Fenning* of counsel) for Crosthwait, Jr. et al.

Mr. W. W. Cochran for the Commissioner of Patents.

JACKSON, *J.*:

This is an appeal from a decision of the Board of Appeals of the United States Patent Office affirming that of the Primary Examiner rejecting as unpatentable over the prior art claims 3 to 6 inclusive of an application for a patent for a "Balanced Resistance Type Temperature Control Apparatus." Claims 7 to 17 inclusive were allowed by the Examiner.

Claims 3 and 4 are illustrative of the subject matter and read as follows:

3. In a Wheatstone bridge temperature control apparatus, means for setting the rate of heat supply in proportion to the rate of heat loss through an outside window, and a dual potentiometer comprising simultaneously adjusted resistances in two branches of the bridge for increasing or decreasing the rate of heat supply corresponding to any given temperature at the inner surface of the window, and also increasing or decreasing the rate of change of heat supply for equal increments of change in the temperature at the inner surface of the window.

4. Means for controlling the temperature within a space, comprising a valve for regulating the flow of heating medium to the space, motor-mechanism actuated at regularly spaced intervals for setting the valve, and a Wheatstone bridge apparatus associated with the motor-mechanism to determine the extent and direction of the valve adjustments, the bridge comprising means for setting the rate of heat supply in proportion to the rate of heat loss through an outside window, and means connected in two bridge branches for increasing or decreasing this rate.

The references relied upon are: Otis, 2,012,285, August 27, 1935; Coleman, 2,246,575, June 24, 1941; Russel, 2,279,52, April 14, 1942.

Appellants have invented an apparatus by means of which the heat supply in a space to be heated is automatically controlled to a desired temperature. The supply of the heating medium (steam in the device illustrated in the application) to the radiators is through a valve, the operation of which is controlled by two separate means in a Wheatstone bridge. One means in a branch of the bridge includes a thermostat called a "window-selector." It is fixed to the inner surface of an outside glass window and is responsive to the temperature there. It is intended to measure the loss of heat, if any, from the room. The other means in a different branch is called a "heat-balancer," and consists of two electric circuits in each of which is a resistance coil. One coil is below a radiator and one above it. The resistance of the coils becomes greater with increase in temperature. The difference between the resistances indicates the rate of heat being supplied.

When the temperature at the window becomes lower than the desired room temperature the apparatus must be so operated that the heat output increases to make up for the heat loss. In other words the steam valve is so regulated that the rate of heat supply indicated by the "heat-balancer" just offsets the rate of heat loss shown by the "window-selector." By balancing those rates a constant room temperature is obtained.

The circuits which include the "window-selector" and the "heat-balancer" are connected with a galvanometer in which there is a pointer registered at zero when sufficient steam is being supplied to keep the temperature at a determined level. The pointer moves to the right making connections with a relay in the bridge when more heat is required, thus bringing into action a valve-opening motor which further opens the steam valve, resulting in more heat being supplied to the system. When less heat is required the pointer turns to the left, activating a valve-closing motor lessening the valve opening. The opening and closing of the valve is in short regularly spaced intervals. On opposite sides of the galvanometer in separate branches of the Wheatstone bridge are two simultaneously knob-adjustable potentiometers by means of which the steam supply may be increased or decreased over or under normal as desired.

The Coleman reference relates particularly to Wheatstone bridge circuits for temperature control systems in buildings. It is stated in the specification that the invention is especially suited for use in a temperature control device shown in the patentee's prior Patent No. 2,144,105, dated January 17, 1939. In that patent a Wheatstone bridge circuit is disclosed comprising resistors responsive respectively to outdoor temperature entirely and to the temperature of the heating system. The heat in the space to be heated is said to be regulated in accordance with the relation between the two temperatures, taking the outside temperature as indicating the rate of loss of heat and the tem-

perature of the heating system as an index of the rate of input of heat. The system is so regulated as to keep the resistance of the two thermometers constant.

The Coleman reference substantially shows the structure recited in the appealed claims, and it is not deemed necessary to analyze it in greater detail.

The Russel patent relates to a device for the control of humidity in an enclosed space. It discloses a thermostat control means on the inside surface of a window pane where it is affected by outdoor temperatures.

The Otis patent is for a method of room temperature regulation. The apparatus shown contains a thermostat mounted on the inside of an outside wall and responsive to outdoor temperatures.

The Examiner rejected the appealed claims as unpatentable over the Coleman reference in view of either the Russel or the Otis patents. The Board affirmed the rejection on the same grounds.

[1] Claims 5 and 6 differ from claim 4, the former by the limitation "the bridge comprising means for automatically setting the rate of heat supply," and the latter by the recitation of "a dual potentiometer" as the means for changing the rate of change of the heat supply.

It appears to us that the apparatus described in the appealed claims is not patentably different from that shown in the Coleman reference in view of the other references. In appellants' structure the "window-selector" is on the inside of the window pane and the like means in the Coleman structure is on the outside. Therefore the latter means cannot be affected by the temperature on the inside of the space to be heated as is the former. Appellants stress the fact that their "window-selector" is responsive not only to outdoor temperature but is also slowly affected by the room temperature. It may well be that in appellants' system the placing of the "window-selector" results in a better and more efficient measure of heat loss than the location of the same means in the Coleman structure. But the placing of the thermostat, as disclosed in the Russel patent, on the inside of a window pane is clearly a suggestion to the ordinary skilled worker in the art, and it surely would not require the exercise of invention for appellants to so locate their "window-selector." The same reasoning applies to the Otis patent, wherein the heat control thermostat is on the inside surface of an outer wall. That means is also sensitive to indoor as well as outdoor temperatures. Therefore we hold it would not require invention to locate the outdoor temperature responsive means of the Coleman apparatus on the inside as shown by the Russel and Otis patents.

It is true that in the measuring of "the rate of heat supply in proportion to the rate of heat loss" the "heat-balancer" of appellants measures the difference in temperature between the incoming heat at the bottom of the radiator and the outgoing heat at the top thereof while the inside temperature responsive means of the Coleman patent, more fully described in his Patent No. 2,144,105, is "wrapped about one of the steam or hot water outlet pipes from the boiler." But the temperature of a heated room must depend upon the temperature of the heating medium emanating from the boiler or other heating means. Where the heat at its source is of a higher order the room temperature must be correspondingly raised. Since the inside resistance means of the Coleman device is designed to measure the heat of steam coming from the boiler, it must necessarily measure the heat supply coming into the room. The cooperation between the "window-selector" and the "heat-balancer" of appellants is the same in a patentable sense with respect to the involved claims as that shown by the Coleman reference, wherein the outside thermostat "is taken as an index of the rate of loss of heat from the interior of the building" and "the temperature of the heating system is taken as an index of the rate of heat input to the space." In both systems the bridge is designed to be kept in balance as the increased rate of heat loss is compensated by an increased rate of heat supply. Therefore in our opinion the inside temperature means of Coleman is the equivalent of the "heat-balancer" of the device of appellants.

The Coleman reference discloses a dual potentiometer. Appellants contend that it does not comprise "simultaneously adjusted resistances in two branches of the bridge." The Wheatstone bridge of the Coleman reference shows one of the resistances to be in one branch connected in parallel to the galvanometer and a second containing another resistance in another branch likewise connected. They are simultaneously adjustable by means of a knob so that "the rate of change of heat supplied" may be varied by varying "the relative effects of outdoor temperature and boiler temperature on the supply of heat."

Claim 4 includes "a valve for regulating the flow of heating medium to the space, motor-mechanism actuated at regularly spaced intervals for setting the valve." While the Coleman reference does not specifically show such a mechanism operative at intervals, it refers to the patentee's said earlier patent in which is disclosed a constantly rotating cam for a periodical on-and-off switch. That switch appears to be identical with the switch shown in the present Coleman reference which is clearly designed to operate in the same way as the structure in his earlier patent. The control means of the heat supply in the earlier Coleman patent, in our opinion, is the equivalent of the control valve described in claim 4.

[2] It is stated in claim 5 that the means connected in two branches of the bridge for increasing or decreasing the rate of heat supply may be automatically or manually adjustable. There is, however, no recitation of structure defining those means and therefore those statements cannot impart patentability to the claim. *In re Rundell*, 18 C. C. P. A. (Patents) 1290, 48 F.(2d) 958, 9 USPQ 220, 411 O. G. 537.

The limitation of a dual potentiometer contained in claim 6 has hereinbefore been disposed of.

In our opinion the tribunals below committed no error, and the decision appealed from is affirmed.

Affirmed.

Extract from Atomic Energy Act of 1946

[PUBLIC LAW 585—79TH CONGRESS]

[CHAPTER 724—2D SESSION]

[S. 1717]

AN ACT

For the development and control of atomic energy.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

* * * * * * *

PATENTS AND INVENTIONS

SEC. 11. (*a*) PRODUCTION AND MILITARY UTILIZATION. (1) No patent shall hereafter be granted for any invention or discovery which is useful solely in the production of fissionable material [1] or in the utilization of fissionable material or atomic energy for a military weapon. Any patent granted for any such invention or discovery is hereby revoked, and just compensation shall be made therefor.

(2) No patent hereafter granted shall confer any rights with respect to any invention or discovery to the extent that such invention or discovery is used in the production of fissionable material or in the utilization of fissionable material or atomic energy for a military weapon. Any rights conferred by any patent heretofore granted for any invention or discovery are hereby revoked to the extent that such invention or discovery is so used, and just compensation shall be made therefor.

(3) Any person who has made or hereafter makes any invention or discovery useful in the production of fissionable material or in the utilization of fissionable material or atomic energy for a military weapon shall file with the Commission a report containing a complete description thereof, unless such invention or discovery is described in an application for a patent filed in the Patent Office by such person within the time required for the filing of such report. The report covering any such invention or discovery shall be filed on or before whichever of the following is the latest: (A) The sixtieth day after the date of enactment of this act; (B) the sixtieth day after the completion of such invention or discovery; or (C) the sixtieth day after such person first discovers or first has reason to believe that such invention or discovery is useful in such production or utilization.

(*b*) USE OF INVENTIONS FOR RESEARCH.—No patent hereafter granted shall confer any rights with respect to any invention or discovery to the extent that such invention or discovery is used in the conduct of research or development activities in the fields specified in section 3. Any rights conferred by any patent heretofore granted for any invention or discovery are hereby revoked to the extent that such invention or discovery is so used, and just compensation shall be made therefor.

(*c*) NONMILITARY UTILIZATION.—

(1) It shall be the duty of the Commission to declare any patent to be affected with the public interest if (A) the invention or discovery covered by the patent utilizes or is essential in the utilization of fissionable material or atomic energy; and (B) the licensing of such invention or discovery under this subsection is necessary to effectuate the policies and purposes of this act.

(2) Whenever any patent has been declared, pursuant to paragraph (1), to be affected with the public interest—

(A) The Commission is hereby licensed to use the invention or discovery covered by such patent in performing any of its powers under this act; and

(B) Any person to whom a license has been issued under section 7 is hereby licensed to use the invention or discovery covered by such patent to the extent such invention or discovery is used by him in carrying on the activities authorized by his license under section 7. The owner of the patent shall be entitled to a reasonable royalty fee for any use of an invention or discovery licensed by this subsection. Such royalty fee may be agreed upon by such owner and the licensee, or in the absence of such agreement shall be determined by the Commission.

(3) No court shall have jurisdiction or power to stay, restrain, or otherwise enjoin the use of any invention or discovery by a licensee, to the extent that such use is licensed by paragraph (2) above, on the ground of infringement of any patent. If in any action for infringement against such licensee the court shall determine that the defendant is exercising such license, the measure of damages shall be the royalty fee determined pursuant to this section, together with such costs, interest, and reasonable attorney's fees as may be fixed by the court. If no royalty fee has been determined, the court shall stay the proceeding until the royalty fee is determined pursuant to this section. If any such licensee shall fail to pay such royalty fee, the patentee may bring an action in any court of competent jurisdiction for such royalty fee, together with such costs, interest, and reasonable attorney's fees as may be fixed by the court.

(*d*) ACQUISITION OF PATENTS.—The Commission is authorized to purchase, or to take, requisition, or condemn, and make just compensation for, (1) any invention or discovery which is useful in the production of fissionable material or in the utilization of fissionable material or atomic energy for a military weapon, or which utilizes or is essential in the utilization of fissionable material or atomic energy, or (2) any patent or patent application covering any such invention or discovery. The Commissioner of Patents shall notify the Commission of all applications for patents heretofore or hereafter filed which in his opinion disclose such inventions or discoveries and shall provide the Commission access to all such applications.

(*e*) COMPENSATION AWARDS, AND ROYALTIES.—

(1) PATENT COMPENSATION BOARD.—The Commission shall designate a Patent Compensation Board, consisting of two or more employees of the Commission, to consider applications under this subsection.

(2) ELIGIBILITY.—

(A) Any owner of a patent licensed under subsection (*c*) (2) or any licensee thereunder may make application to the Commission for the determination of a reasonable royalty fee in accordance with such procedures as it by regulation may establish.

(B) Any person seeking to obtain the just compensation provided in subsections (*a*), (*b*), or (*d*) shall make application therefor to the Commission in accordance with such procedures as it may by regulation establish.

(C) Any person making any invention or discovery useful in the production of fissionable material or in the utilization of fissionable material or atomic energy for a military weapon who is not entitled to compensation therefor under subsection (*a*) and who has complied with subsection (*a*) (3) above may make application to the Commission for, and the Commission may grant, an award.

(D) Any person making application under this subsection shall have the right to be represented by counsel.

(3) STANDARDS.—

(A) In determining such reasonable royalty fee, the Commission shall take into consideration any defense, general or special, that might be pleaded by a defendant in an action for infringement, the extent to which, if any, such patent was developed through federally financed research, the degree of utility, novelty, and importance of the invention or discovery, and may consider the cost to the owner of the patent of developing such invention or discovery or acquiring such patent.

(B) In determining what constitutes just compensation under subsection (*a*), (*b*), or (*d*) above, the Commission shall take into account the considerations set forth in paragragh (A) above, and the actual use of such invention or discovery, and may determine that such compensation be paid in periodic payments or in a lump sum.

(C) In determining the amount of any award under paragraph (2) (C) of this subsection, the Commission shall take into account the considerations set forth in paragraph (A) above, and the actual use of such invention or discovery. Awards so made may be paid by the Commission in periodic payments or in a lump sum.

(4) JUDICIAL REVIEW.—Any person aggrieved by any determination of the Commission of an award or of a reasonable royalty fee may obtain a review of such determination in the Court of Appeals for the District of Columbia by filing in such court, within thirty days after notice of such determination, a written petition praying that such determination be set aside. A copy of such petition shall be forthwith served upon the Commission and thereupon the Commission shall file with the court a certified transcript of the entire record in the proceeding, including the findings and conclusions upon which the determination was based. Upon the filing of such transcript the court shall have exclusive jurisdiction upon the record certified to it to affirm the determination in its entirety or set it aside and remand it to the Commission for further proceedings. The findings of the Commission

[1] SEC. 5 (*a*) (1) defines "fissionable material" as follows: "As used in this act, the term "fissionable material" means plutonium, uranium enriched in the isotope 235, any other material which the Commission determines to be capable of releasing substantial quantities of energy through nuclear chain reaction of the material, or any material artificially enriched by any of the foregoing; but does not include source materials, as defined in section 5 (*b*) (1)."

as to the facts, if supported by substantial evidence, shall be conclusive. The court's judgment shall be final, subject, however, to review by the Supreme Court of the United States upon writ of certiorari on petition therefor under section 240 of the Judicial Code (U. S. C., title 28, sec. 347), by the Commission or any party to the court proceeding.

Hereby enters this disclaimer to that part of claim 7 in said specification which is in the following words, to wit: and knitting the desired articles from the yarn.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

Petrolite Corporation, Ltd., has entered on the Register of Patents Available for Licensing, the following United States Letters Patent, relating to the resolution, demulsification, breaking, or treatment of petroleum emulsions, cut oil, roily oil, bottom settlings, basic sediment, BS, and the like, by the use of chemicals as set forth in said patents. Licenses will be granted under the aforesaid Letters Patent upon the terms and conditions of the Standard License Agreements at the time in effect, copies of which may be obtained from Petrolite Corporation, Ltd., 937 Pacific Ave., Webster Groves 19, Mo. Group 29—11. Reg. Nos. 3,415 to 3,740 inclusive.

Pat. 1,747,119. PROCESS AND PRODUCT FOR TREATING EMULSIONS OF MINERAL OILS. Patented Feb. 11, 1930.

Pat. 1,747,987. ART OF TREATING EMULSIONS. Patented Feb. 18, 1930.

Pat. 1,758,802. PROCESS OF RESOLVING OIL EMULSIONS AND REAGENTS THEREFOR. Patented May 13, 1930.

Pat. 1,766,057. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented June 24, 1930.

Pat. 1,766,058. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented June 24, 1930.

Pat. 1,766,059. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented June 24, 1930.

Pat. 1,766,060. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented June 24, 1930.

Pat. 1,766,061. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented June 24, 1930.

Pat. 1,766,062. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented June 24, 1930.

Pat. 1,766,063. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented June 24, 1930.

Pat. 1,766,064. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented June 24, 1930.

Pat. 1,766,065. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented June 24, 1930.

Pat. 1,766,066. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented June 24, 1930.

Pat. 1,766,067. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented June 24, 1930.

Pat. 1,766,112. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented June 24, 1930.

Pat. 1,771,096. PROCESS OF RESOLVING EMULSIONS. Patented July 22, 1930.

Pat. 1,773,517. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Aug. 19, 1930.

Pat. 1,780,343. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Nov. 4, 1930.

Pat. 1,780,344. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Nov. 4, 1930.

Pat. 1,780,345. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Nov. 4, 1930.

Pat. 1,802,090. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Apr. 21, 1931.

Pat. 1,812,393. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented June 30, 1931.

Pat. 1,829,205. METHOD OF TREATING OIL-WATER EMULSIONS. Patented Oct. 27, 1931.

Pat. 1,834,940. PROCESS FOR CONDITIONING PETROLEUM OILS. Patented Dec. 8, 1931.

Pat. 1,837,130. TREATMENT OF OIL AND WATER EMULSIONS. Patented Dec. 15, 1931.

Pat. 1,842,934. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Jan. 26, 1932.

Pat. 1,858,186. METHOD OF AND REAGENT FOR TREATING WET OILS. Patented May 10, 1932.

Pat. 1,863,143. METHOD OF TREATING WET OILS. Patented June 14, 1932.

Pat. 1,872,286. PROCESS OF AND REAGENT FOR TREATING PETROLEUM EMULSIONS. Patented Aug. 16, 1932.

Pat. 1,872,333. EMULSION BREAKING. Patented Aug. 16, 1932.

Pat. 1,873,165. METHOD OF AND REAGENT FOR TREATING WET OILS. Patented Aug. 23, 1932.

Pat. 1,882,444. PROCESS AND REAGENT FOR TREATING EMULSIONS. Patented Oct. 11, 1932.

Pat. 1,890,789. PROCESS AND PRODUCT FOR TREATING EMULSIONS OF MINERAL OILS OR THE LIKE. Patented Dec. 13, 1932.

Pat. 1,890,849. USE OF PINE OIL IN EMULSION BREAKERS. Patented Dec. 13, 1932.

Pat. 1,897,019. TREATMENT OF CUT OILS. Patented Feb. 7, 1933.

Pat. 1,897,021. MEDIUM FOR DEHYDRATING CUT OILS. Patented Feb. 7, 1933.

Pat. 1,897,574. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Feb. 14, 1933.

Pat. 1,897,575. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Feb. 14, 1933.

Pat. 1,902,129. MEANS FOR BREAKING WATER IN OIL EMULSIONS. Patented Mar. 21, 1933.

Pat. 1,908,129. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented May 9, 1933.

Pat. 1,908,130. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented May 9, 1933.

Pat. 1,910,680. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented May 23, 1933.

Pat. 1,913,538. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented June 13, 1933.

Pat. 1,926,715. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Sept. 12, 1933.

Pat. 1,929,399. MEDIUM FOR SEPARATING OIL-WATER EMULSIONS (BLOWN OIL). Patented Oct. 3, 1933.

Pat. 1,938,322. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Dec. 5, 1933.

Pat. 1,938,323. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Dec. 5, 1933.

Pat. 1,940,390. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Dec. 19, 1933.

Pat. 1,940,391. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Dec. 19, 1933.

Pat. 1,940,392. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Dec. 19, 1933.

Pat. 1,940,393. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Dec. 19, 1933.

Pat. 1,940,394. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Dec. 19, 1933.

Pat. 1,940,395. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Dec. 19, 1933.

Pat. 1,940,396. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Dec. 19, 1933.

Pat. 1,940,397. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Dec. 19, 1933.

Pat. 1,940,398. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Dec. 19, 1933.

Pat. 1,941,886. EMULSION DECOMPOSING BODY. Patented Jan. 2, 1934.

Pat. 1,943,815. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Jan. 16, 1934.

Pat. 1,944,021. TREATMENT OF WET OIL. Patented Jan. 16, 1934.

Pat. 1,954,585. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Apr. 10, 1934.

Pat. 1,961,963. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented June 5, 1934.

Pat. 1,975,839. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Oct. 9, 1934.

Pat. 1,976,602. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Oct. 9, 1934.

Pat. 1,977,048. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Oct. 16, 1934.

Pat. 1,977,089. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Oct. 16, 1934.

Pat. 1,977,146. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Oct. 16, 1934.

Pat. 1,978,227. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Oct. 23, 1934.

Pat. 1,979,347. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Nov. 6, 1934.

Pat. 1,984,633. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Dec. 18, 1934.

Pat. 1,985,692. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Dec. 25, 1934.

Pat. 1,985,720. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Dec. 25, 1934.

Pat. 1,988,832. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Jan. 22, 1935.

Pat. 1,988,833. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Jan. 22, 1935.

Pat. 1,988,834. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Jan. 22, 1935.

Pat. 1,988,835. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Jan. 22, 1935.

Pat. 1,994,758. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Mar. 19, 1935.

Pat. 2,000,717. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented May 7, 1935.

Pat. 2,000,725. BREAKING OF OIL-WATER EMULSIONS. Patented May 7, 1935.

Pat. 2,000,802. BREAKING OF OIL-WATER EMULSIONS. Patented May 7, 1935.

Pat. 2,015,260. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Sept. 24, 1935.

Pat. 2,023,976. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Dec. 10, 1935.

Pat. 2,023,979. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Dec. 10, 1935.

Pat. 2,023,980. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Dec. 10, 1935.

Pat. 2,023,981. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Dec. 10, 1935.

Pat. 2,023,982. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Dec. 10, 1935.

Pat. 2,023,993. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Dec. 10, 1935.

Pat. 2,023,994. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Dec. 10, 1935.

Pat. 2,023,995. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Dec. 10, 1935.

Pat. 2,023,996. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Dec. 10, 1935.

Pat. 2,023,997. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Dec. 10, 1935.

Pat. 2,025,804. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Dec. 31, 1935.

Pat. 2,025,805. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Dec. 31, 1935.

Pat. 2,026,195. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Dec. 31, 1935.

Pat. 2,026,217. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Dec. 31, 1935.

Pat. 2,026,218. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Dec. 31, 1935.

Pat. 2,026,219. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Dec. 31, 1935.

Pat. 2,034,941. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Mar. 24, 1936.

Pat. 2,034,963. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Mar. 24, 1936.

Pat. 2,037,885. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Apr. 21, 1936.

Pat. 2,037,886. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Apr. 21, 1936.

Pat. 2,050,923. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Aug. 11, 1936.

Pat. 2,050,924. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Aug. 11, 1936.

Pat. 2,050,925. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Aug. 11, 1936.

Pat. 2,050,926. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Aug. 11, 1936.

Pat. 2,050,927. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Aug. 11, 1936.

Pat. 2,050,928. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Aug. 11, 1936.

Pat. 2,050,929. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Aug. 11, 1936.

Pat. 2,050,930. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Aug. 11, 1936.

Pat. 2,052,281. PROCESSES FOR BREAKING PETROLEUM EMULSIONS. Patented Aug. 25, 1936.

Pat. 2,052,282. PROCESSES FOR BREAKING PETROLEUM EMULSIONS. Patented Aug. 25, 1936.

Pat. 2,052,283. PROCESSES FOR BREAKING PETROLEUM EMULSIONS. Patented Aug. 25, 1936.

Pat. 2,052,284. PROCESSES FOR BREAKING PETROLEUM EMULSIONS. Patented Aug. 25, 1936.

Pat. 2,058,568. PROCESS OF BREAKING PETROLEUM EMULSIONS. Patented Oct. 27, 1936.

Pat. 2,058,569. PROCESS FOR SEPARATING PETROLEUM EMULSIONS. Patented Oct. 27, 1936.

Pat. 2,058,570. PROCESS FOR SEPARATING PETROLEUM EMULSIONS. Patented Oct. 27, 1936.

Pat. 2,072,085. PROCESS FOR BREAKING EMULSIONS. Patented Mar. 2, 1937.

Pat. 2,076,623. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Apr. 13, 1937.

Pat. 2,076,624. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Apr. 13, 1937.

Pat. 2,077,229. PROCESSES FOR BREAKING PETROLEUM EMULSIONS. Patented Apr. 13, 1937.

Pat. 2,077,230. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Apr. 13, 1937.

Pat. 2,077,745. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Apr. 20, 1937.

Pat. 2,077,746. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Apr. 20, 1937.

Pat. 2,078,652. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Apr. 27, 1937.

Pat. 2,078,653. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Apr. 27, 1937.

Pat. 2,078,654. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Apr. 27, 1937.

Pat. 2,078,655. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Apr. 27, 1937.

Pat. 2,079,762. PROCESSES FOR BREAKING PETROLEUM EMULSIONS. Patented May 11, 1937.

Pat. 2,079,763. PROCESSES FOR BREAKING PETROLEUM EMULSIONS. Patented May 11, 1937.

Pat. 2,079,764. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented May 11, 1937.

Pat. 2,081,003. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented May 18, 1937.

Pat. 2,081,004. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented May 18, 1937.

Pat. 2,081,005. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented May 18, 1937.

Pat. 2,083,220. PROCESS FOR BREAKING PETROLEUM. Patented June 8, 1937.

Pat. 2,083,221. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented June 8, 1937.

Pat. 2,083,222. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented June 8, 1937.

Pat. 2,083,223. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented June 8, 1937.

Pat. 2,083,224. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented June 8, 1937.

Pat. 2,083,225. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented June 8, 1937.

Pat. 2,085,298. PROCESSES FOR BREAKING PETROLEUM EMULSIONS. Patented June 29, 1937.

Pat. 2,085,299. PROCESSES FOR BREAKING PETROLEUM EMULSIONS. Patented June 29, 1937.

Pat. 2,086,215. PROCESSES FOR BREAKING PETROLEUM EMULSIONS. Patented July 6, 1937.

Pat. 2,086,216. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented July 6, 1937.

Pat. 2,086,217. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented July 6, 1937.

Pat. 2,089,035. PROCESS FOR TREATING COGNATE LIQUIDS OF A WELL. Patented Aug. 3, 1937.

Pat. 2,104,793. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Jan. 11, 1938.

Pat. 2,104,794. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Jan. 11, 1938.

Pat. 2,104,795. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Jan. 11, 1938.

Pat. 2,106,239. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Jan. 25, 1938.

Pat. 2,106,240. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Jan. 25, 1938.

Pat. 2,106,241. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Jan. 25, 1938.

Pat. 2,106,242. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Jan. 25, 1938.

Pat. 2,106,243. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Jan. 25, 1938.

Pat. 2,106,244. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Jan. 25, 1938.

Pat. 2,108,960. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Feb. 22, 1938.

Pat. 2,108,961. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Feb. 22, 1938.

Pat. 2,110,837. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Mar. 8, 1938.

Pat. 2,110,846. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Mar. 8, 1938.

Pat. 2,110,847. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Mar. 8, 1938.

Pat. 2,110,848. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Mar. 8, 1938.

Pat. 2,110,849. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Mar. 8, 1938.

Pat. 2,114,651. PROCESS FOR SEPARATING PETROLEUM EMULSIONS. Patented Apr. 19, 1938.

Pat. 2,122,976. PROCESS FOR SEPARATING PETROLEUM EMULSIONS. Patented July 5, 1938.

Pat. 2,126,368. PROCESS FOR BREAKING EMULSIONS. Patented Aug. 9, 1938.

Pat. 2,127,905. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Aug. 23, 1938.

Pat. 2,153,744. PROCESS FOR RESOLVING PETROLEUM EMULSIONS. Patented Apr. 11, 1939.

Pat. 2,153,745. PROCESS FOR RESOLVING PETROLEUM EMULSIONS. Patented Apr. 11, 1939.

Pat. 2,153,746. PROCESS FOR RESOLVING PETROLEUM EMULSIONS. Patented Apr. 11, 1939.

Pat. 2,154,422. COMPOSITION OF MATTER AND PROCESS FOR RESOLVING PETROLEUM EMULSIONS. Patented Apr. 18, 1939.

Pat. 2,154,423. COMPOSITION OF MATTER AND PROCESS FOR RESOLVING PETROLEUM EMULSIONS. Patented Apr. 18, 1939.

Pat. 2,166,431. PROCESS FOR RESOLVING PETROLEUM EMULSIONS. Patented July 18, 1939.

Pat. 2,166,432. PROCESS FOR RESOLVING PETROLEUM EMULSIONS. Patented July 18, 1939.

Pat. 2,166,433. PROCESS FOR RESOLVING PETROLEUM EMULSIONS. Patented July 18, 1939.

Pat. 2,166,434. PROCESS FOR RESOLVING PETROLEUM EMULSIONS. Patented July 18, 1939.

Pat. 2,167,346. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented July 25, 1939.

Pat. 2,167,347. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented July 25, 1939.

Pat. 2,167,348. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented July 25, 1939.

Pat. 2,167,349. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented July 25, 1939.

Pat. 2,171,328. PROCESS FOR RESOLVING PETROLEUM EMULSIONS. Patented Aug. 29, 1939.

Pat. 2,176,702. PROCESS FOR RESOLVING PETROLEUM EMULSIONS. Patented Oct. 17, 1939.

Pat. 2,176,703. PROCESS FOR RESOLVING PETROLEUM EMULSIONS. Patented Oct. 17, 1939.

Pat. 2,176,704. PROCESS FOR RESOLVING PETROLEUM EMULSIONS. Patented Oct. 17, 1939.

Pat. 2,183,487. PROCESS OF BREAKING EMULSIONS. Patented Dec. 12, 1939.

Pat. 2,192,993. PROCESS FOR RESOLVING PETROLEUM EMULSIONS. Patented Mar. 12, 1940.

Pat. 2,192,994. PROCESS FOR RESOLVING PETROLEUM EMULSIONS. Patented Mar. 12, 1940.

Pat. 2,192,995. PROCESS FOR RESOLVING PETROLEUM EMULSIONS. Patented Mar. 12, 1940.

Pat. 2,225,824. PROCESS FOR RESOLVING PETROLEUM EMULSIONS. Patented Dec. 24, 1940.

Pat. 2,226,118. PROCESS FOR RESOLVING PETROLEUM EMULSIONS. Patented Dec. 24, 1940.

Pat. 2,226,120. PROCESS FOR RESOLVING PETROLEUM EMULSIONS. Patented Dec. 24, 1940.

Pat. 2,226,121. PROCESS FOR RESOLVING PETROLEUM EMULSIONS. Patented Dec. 24, 1940.

Pat. 2,226,122. PROCESS FOR RESOLVING PETROLEUM EMULSIONS. Patented Dec. 24, 1940.

Pat. 2,226,123. PROCESS FOR RESOLVING PETROLEUM EMULSIONS. Patented Dec. 24, 1940.

Pat. 2,231,752. PROCESS FOR RESOLVING PETROLEUM EMULSIONS. Patented Feb. 11, 1941.

Pat. 2,231,753. PROCESS FOR RESOLVING PETROLEUM EMULSIONS. Patented Feb. 11, 1941.

Pat. 2,231,754. PROCESS FOR RESOLVING PETROLEUM EMULSIONS. Patented Feb. 11, 1941.

Pat. 2,231,755. PROCESS FOR RESOLVING PETROLEUM EMULSIONS. Patented Feb. 11, 1941.

Pat. 2,231,756. PROCESS FOR RESOLVING PETROLEUM EMULSIONS. Patented Feb. 11, 1941.

Pat. 2,231,757. PROCESS FOR RESOLVING PETROLEUM EMULSIONS. Patented Feb. 11, 1941.

Pat. 2,231,758. PROCESS FOR RESOLVING PETROLEUM EMULSIONS. Patented Feb. 11, 1941.

Pat. 2,231,759. PROCESS FOR RESOLVING PETROLEUM EMULSIONS. Patented Feb. 11, 1941.

Pat. 2,241,011. PROCESS FOR RESOLVING PETROLEUM EMULSIONS. Patented May 6, 1941.

Pat. 2,243,329. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented May 27, 1941.

Pat. 2,243,330. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented May 27, 1941.

Pat. 2,246,842. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented June 24, 1941.

Pat. 2,246,856. PROCESS FOR RESOLVING PETROLEUM EMULSIONS. Patented June 24, 1941.

Pat. 2,248,342. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented July 8, 1941.

Pat. 2,250,176. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented July 22, 1941.

Pat. 2,250,404. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented July 22, 1941.

Pat. 2,250,405. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented July 22, 1941.

Pat. 2,250,406. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented July 22, 1941.

Pat. 2,250,407. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented July 22, 1941.

Pat. 2,250,408. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented July 22, 1941.

Pat. 2,252,959. PROCESS FOR TREATING PIPE-LINE OIL. Patented Aug. 19, 1941.

Pat. 2,259,704. PROCESS FOR RESOLVING PETROLEUM EMULSIONS. Patented Oct. 21, 1941.

Pat. 2,262,357. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Nov. 11, 1941.

Pat. 2,262,358. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Nov. 11, 1941.

Pat. 2,262,736. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Nov. 11, 1941.

Pat. 2,262,743. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Nov. 11, 1941.

Pat. 2,273,181. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Feb. 17, 1942.

Pat. 2,278,164. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Mar. 31, 1942.

Pat. 2,278,165. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Mar. 31, 1942.

Pat. 2,278,166. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Mar. 31, 1942.

Pat. 2,278,167. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Mar. 31, 1942.

Pat. 2,278,168. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Mar. 31, 1942.

Pat. 2,278,169. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Mar. 31, 1942.

Pat. 2,278,170. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Mar. 31, 1942.

Pat. 2,278,171. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Mar. 31, 1942.

Pat. 2,290,154. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented July 21, 1942.

Pat. 2,290,411. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented July 21, 1942.

Pat. 2,290,417. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented July 21, 1942.

Pat. 2,295,163. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Sept. 8, 1942.

Pat. 2,295,164. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Sept. 8, 1942.

Pat. 2,295,165. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Sept. 8, 1942.

Pat. 2,295,166. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Sept. 8, 1942.

Pat. 2,295,167. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Sept. 8, 1942.

Pat. 2,295,168. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Sept. 8, 1942.

Pat. 2,295,169. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Sept. 8, 1942.

Pat. 2,295,170. PROCESS FOR BREAKING PETROLEUM EMULSIONS Patented Sept. 8, 1942.

Pat. 2,296,600. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Sept. 22, 1942.

Pat. 2,300,103. PROCESS FOR BREAKING PETROLEUM EMULSION. Patented Oct. 27, 1942.

Pat. 2,300,554. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Nov. 3, 1942.

Pat. 2,300,555. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Nov. 3, 1942.

Pat. 2,305,067. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Dec. 15, 1942.

Pat. 2,306,329. PROCESS FOR BREAKING PETROLEUM EMUISIONS. Patented Dec. 22, 1942.

Pat. 2,306,718. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Dec. 29, 1942.

Pat. 2,306,775. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Dec. 29, 1942.

Pat. 2,309,243. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Jan. 26, 1943.

Pat. 2,309,935. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Feb. 2, 1943.

Pat. 2,319,885. PROCESS AND COMPOSITION FOR TREATMENT OF EMULSIONS. Patented May 25, 1943.

Pat. 2,322,494. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented June 22, 1943.

Pat. 2,324,488. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented July 20, 1943.

Pat. 2,324,489. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented July 20, 1943.

Pat. 2,324,490. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented July 20, 1943.

Pat. 2,324,491. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented July 20, 1943.

Pat. 2,324,492. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented July 20, 1943.

Pat. 2,324,493. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented July 20, 1943.

Pat. 2,324,494. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented July 20, 1943.

Pat. 2,326,599. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Aug. 10, 1943.

Pat. 2,326,602. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Aug. 10, 1943.

Pat. 2,329,025. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Sept. 7, 1943.

Pat. 2,329,026. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Sept. 7, 1943.

Pat. 2,329,699. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Sept. 21, 1943.

Pat. 2,329,700. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Sept. 21, 1943.

Pat. 2,329,701. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Sept. 21, 1943.

Pat. 2,329,702. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Sept. 21, 1943.

Pat. 2,329,703. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Sept. 21, 1943.

Pat. 2,330,474. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Sept. 28, 1943.

Pat. 2,333,769. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Nov. 9, 1943.

Pat. 2,335,262. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Nov. 30, 1943.

Pat. 2,340,305. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Feb. 1, 1944.

Pat. 2,340,306. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Feb. 1, 1944.

Pat. 2,340,307. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Feb. 1, 1944.

Pat. 2,340,308. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Feb. 1, 1944.

Pat. 2,340,355. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Feb. 1, 1944.

Pat. 2,342,648. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Feb. 29, 1944.

Pat. 2,342,649. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Feb. 29, 1944.

Pat. 2,342,650. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Feb. 29, 1944.

Pat. 2,344,976. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Mar. 28, 1944.

Pat. 2,344,977. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Mar. 28, 1944.

Pat. 2,344,978. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Mar. 28, 1944.

Pat. 2,344,979. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Mar. 28, 1944.

Pat. 2,344,980. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Mar. 28, 1944.

Pat. 2,351,017. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented June 13, 1944.

Pat. 2,353,694. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented July 18, 1944.

Pat. 2,353,695. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented July 18, 1944.

Pat. 2,353,696. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented July 18, 1944.

Pat. 2,353,697. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented July 18, 1944.

Pat. 2,353,698. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented July 18, 1944.

Pat. 2,353,699. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented July 18, 1944.

Pat. 2,353,700. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented July 18, 1944.

Pat. 2,353,701. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented July 18, 1944.

Pat. 2,353,702. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented July 18, 1944.

Pat. 2,353,703. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented July 18, 1944.

Pat. 2,353,704. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented July 18, 1944.

Pat. 2,353,705. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented July 18, 1944.

Pat. 2,353,706. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented July 18, 1944.

Pat. 2,353,707. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented July 18, 1944.

Pat. 2,353,708. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented July 18, 1944.

Pat. 2,353,709. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented July 18, 1944.

Pat. 2,353,710. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented July 18, 1944.

Pat. 2,353,711. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented July 18, 1944.

Pat. 2,360,853. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Oct. 24, 1944.

Pat. 2,363,504. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Nov. 28, 1944.

Pat. 2,363,505. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Nov. 28, 1944.

Pat. 2,363,506. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Nov. 28, 1944.

Pat. 2,372,254. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Mar. 27, 1945.

Pat. 2,372,255. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Mar. 27, 1945.

Pat. 2,372,256. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Mar. 27, 1945.

Pat. 2,372,257. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Mar. 27, 1945.

Pat. 2,372,258. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Mar. 27, 1945.

Pat. 2,372,259. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Mar. 27, 1945.

Pat. 2,373,102. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Apr. 10, 1945.

Pat. 2,373,174. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Apr. 10, 1945.

Pat. 2,375,534. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented May 8, 1945.

Pat. 2,375,535. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented May 8, 1945.

Pat. 2,375,536. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented May 8, 1945.

Pat. 2,375,537. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented May 8, 1945.

Pat. 2,375,538. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented May 8, 1945.

Pat. 2,375,539. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented May 8, 1945.

Pat. 2,385,969. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Oct. 2, 1945.

Pat. 2,385,970. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Oct. 2, 1945.

Pat. 2,390,078. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Dec. 4, 1945.

Pat. 2,390,079. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Dec. 4, 1945.

Pat. 2,390,080. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Dec. 4, 1945.

Pat. 2,390,081. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Dec. 4, 1945.

Pat. 2,390,082. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Dec. 4, 1945.

Pat. 2,390,083. PROCESS FOR BREAKING PETROLEUM EMULSIONS. Patented Dec. 4, 1945.

Petrolite Corporation, Ltd., has also entered, in accordance with the rules of the United States Patent Office applicable to such entry which are in effect on the date hereof, on the Register of Patents Available for Licensing, the following United States Letters Patent, relating to the electrical dehydration or desalting of petroleum oils. Licenses will be granted under the aforesaid Letters Patent upon the terms and conditions of Standard License Agreements at the time in effect, copies of which may be obtained from Petrolite Corporation, Ltd., 530 West Sixth Street, Los Angeles 14, Calif. Group 29—11. Reg. Nos. 3,741 to 3,822.

Pat. 1,754,009. DEHYDRATION OF OIL AND WATER EMULSIONS. Patented Apr. 8, 1930.

Pat. 1,796,750. DEHYDRATING APPARATUS HAVING PRELIMINARY AGGLOMERATOR. Patented Mar. 17, 1931.

Pat. 1,825,309. METHOD OF REMOVING A SALT FROM OIL. Patented Sept. 29, 1931.

Pat. 1,826,276. METHOD OF SALVAGING OIL FROM SLUDGE. Patented Oct. 6, 1931.

Pat. 1,838,374. DEHYDRATOR HAVING VARIOUS INTERMITTENT VOLTAGES. Patented Dec. 29, 1931.

Pat. 1,838,375. TREATER FOR INTERMITTENTLY TREATING FLUID. Patented Dec. 29, 1931.

Pat. 1,838,376. TREATER HAVING CENTRIFUGAL DRY OIL CIRCULATION. Patented Dec. 29, 1931.

Pat. 1,838,379. METHOD OF INVERTING THE PHASE OF EMULSIONS. Patented Dec. 29, 1931.

Pat. 1,838,386. SPECIAL DESIGN ELECTRODE. Patented Dec. 29, 1931.

Pat. 1,838,847. METHOD OF AND APPARATUS FOR MECHANICALLY REESTABLISHING THE DIELECTRIC FIELD IN DEHYDRATORS. Patented Dec. 29, 1931.

Pat. 1,838,848. METHOD OF AND APPARATUS FOR DEHYDRATING EMULSIONS. Patented Dec. 29, 1931.

Pat. 1,838,849. TREATER HAVING ROTATABLE LIVE AND GROUNDED ELECTRODES. Patented Dec. 29, 1931.

Pat. 1,838,890. ELECTRICAL DEHYDRATOR. Patented Dec. 29, 1931.

Pat. 1,838,910. METHOD OF AND APPARATUS FOR DEHYDRATING PETROLEUM OIL. Patented Dec. 29, 1931.

Pat. 1,838,915. SINGLE ELECTRODE TREATER. Patented Dec. 29, 1931.

Pat. 1,838,916. COMBINED WASHER AND DEHYDRATOR. Patented Dec. 29, 1931.

Pat. 1,838,917. DOUBLE-FIELD DEHYDRATOR. Patented Dec. 29, 1931.

Pat. 1,838,924. DEHYDRATOR WITH HIGH FIELD INTENSITY GROUNDED ELECTRODE. Patented Dec. 29, 1931.

Pat. 1,838,925. DEHYDRATOR HAVING MEANS FOR PROVIDING INTERNAL DRY OIL CIRCULATION. Patented Dec. 29, 1931.

Pat. 1,838,928. DEHYDRATOR WITH MEANS FOR DIRECTING EMULSION THROUGH A HIGH INTENSITY COIL. Patented Dec. 29, 1931.

Pat. 1,838,929. ELONGATED HIGH VELOCITY TYPE TREATER. Patented Dec. 29, 1931.

Pat. 1,838,930. ELECTRIC TREATER HAVING VARIABLE RATE OF FLOW WITH CONSTANT CONDITIONS IN WORKING FIELD. Patented Dec. 29, 1931.

Pat. 1,838,931. APPARATUS FOR CONVERTING COMMERCIAL FREQUENCY CIRCUITS INTO HIGH FREQUENCY CIRCUITS. Patented Dec. 29, 1931.

Pat. 1,838,932. ELECTRICAL TREATER HAVING ELONGATED CIRCULATION PATH AND EDGE EFFECT. Patented Dec. 29, 1931.

Pat. 1,838,933. ELECTRICAL TREATER HAVING DRY OIL BARRIER SUPPLY. Patented Dec. 29, 1931.

Pat. 1,838,938. METHOD OF AND APPARATUS FOR TREATING EMULSIONS WITH ALTERNATING CURRENT. Patented Dec. 29, 1931.

Pat. 1,838,976. TREATER HAVING REVOLVING ELECTRODE WITH WAVE SHAPED ARMS. Patented Dec. 29, 1931.

Pat. 1,847,541. TREATER WITH VARIABLE PRESSURE. Patented Mar. 1, 1932.

Pat. 1,847,602. METHOD OF AND APPARATUS FOR TREATING OIL UNDER VACUUM. Patented Mar. 1, 1932.

Pat. 1,864,723. TREATER USING HIGH TENSION REACTANCE. Patented June 28, 1932.

Pat. 1,926,013. ELECTRICAL PROCESS. Patented Sept. 5, 1933.

Pat. 1,942,480. METHOD OF AND APPARATUS FOR AGGLOMERATING. Patented Jan. 9, 1934.

Pat. 1,949,660. PROCESS AND APPARATUS FOR SEPARATING EMULSIONS BY THE COMBINED ACTION OF MAGNETIC AND ELECTRIC FIELDS. Patented Mar. 6, 1934.

Pat. 1,959,385. ELECTRICAL PROCESSES AND APPARATUS FOR SEPARATING EMULSIONS. Patented May 22, 1934.

Pat. 1,963,325. DEHYDRATOR HAVING EMULSION GUIDING SURFACE. Patented June 19, 1934.

Pat. 1,978,509. PROCESS FOR MAGNETIC SEPARATION OF EMULSIONS. Patented Oct. 30, 1934.

Pat. 1,978,793. BUSHING FOR DEHYDRATORS. Patented Oct. 30, 1934.

Pat. 1,978,794. DEHYDRATOR HAVING GAS POCKET. Patented Oct. 30, 1934.

Pat. 1,980,722. METHOD OF AND APPARATUS FOR AGGLOMERATING SUSPENDED PARTICLES. Patented Nov. 13, 1934.

Pat. 2,000,018. METHOD FOR THE SEPARATION OF EMULSIONS BY ELECTRICAL ACTION. Patented May 7, 1935.

Pat. 2,001,776. METHOD AND APPARATUS FOR ELECTRICALLY TREATING EMULSIONS. Patented May 21, 1935.

Pat. 2,001,809. METHOD AND APPARATUS FOR SETTLING. Patented May 21, 1935.

Pat. 2,029,362. ELECTRIC DEHYDRATOR. Patented Feb. 4, 1936.

Pat. 2,029,527. ELECTRICAL DEHYDRATOR. Patented Feb. 4, 1936.

Pat. 2,033,137. DEHYDRATOR WITH PRELIMINARY TREATMENT. Patented Mar. 10, 1936.

Pat. 2,033,143. MULTIPLE ELECTRODE TREATER AND METHOD. Patented Mar. 10, 1936.

Pat. 2,033,152. ELECTRIC DEHYDRATION SYSTEM. Patented Mar. 10, 1936.

Pat. 2,033,429. MULTIPLE ELECTRODE TREATER AND METHOD. Patented Mar. 10, 1936.

Pat. 2,033,446. ELECTRIC TREATER WITH DIVERGING STREAM AND METHOD. Patented Mar. 10, 1936.

Pat. 2,033,567. SYSTEM FOR ELECTRIC DEHYDRATION. Patented Mar. 10, 1936.

Pat. 2,038,479. ELECTRICAL DEHYDRATOR HIGH VOLTAGE SUPPLY. Patented Apr. 21, 1936.

Pat. 2,047,538. CLOSED TYPE DEHYDRATOR AND METHOD. Patented July 14, 1936.

Pat. 2,049,561. METHOD AND APPARATUS FOR ELECTRICAL TREATMENT OF GASES OR LIQUIDS. Patented Aug. 4, 1936.

Pat. 2,060,839. ELECTRIC TREATING SYSTEM FOR EMULSIONS. Patented Nov. 17, 1936.

Pat. 2,061,197. METHOD AND APPARATUS FOR TREATING EMULSIONS. Patented Nov. 17, 1936.

Pat. 2,072,888. METHOD OF AND APPARATUS FOR PROTECTING INSULATING BUSHINGS OF A DEHYDRATOR. Patented Mar. 9, 1937.

Pat. 2,072,917. METHOD OF AND APPARATUS FOR ELECTRICALLY TREATING TAR EMULSIONS. Patented Mar. 9, 1937.

Pat. 2,072,918. METHOD OF AND APPARATUS FOR INTRODUCING HIGH POTENTIALS INTO A DEHYDRATOR. Patented Mar. 9, 1937.

Pat. 2,083,798. METHOD AND APPARATUS FOR ELECTRICALLY TREATING EMULSIONS. Patented June 15, 1937.

Pat. 2,083,799. METHOD OF AND APPARATUS FOR ELECTRICALLY TREATING EMULSIONS. Patented June 15, 1937.

Pat. 2,083,800. PIPE LINE TREATING SYSTEM. Patented June 15, 1937.

Pat. 2,083,801. METHOD AND APPARATUS FOR DEHYDRATING PETROLEUM. Patented June 15, 1937.

Pat. 2,083,802. PROCESS AND APPARATUS FOR TREATING EMULSIONS. Patented June 15, 1937.

Pat. 2,096,774. ELECTRICAL DEHYDRATION SYSTEM. Patented Oct. 26, 1937.

Pat. 2,098,982. ELECTRIC DEHYDRATOR. Patented Nov. 16, 1937.

Pat. 2,105,614. METHOD AND APPARATUS FOR ELECTRIC DEHYDRATION OF EMULSIONS. Patented Jan. 18, 1938.

Pat. 2,108,258. ELECTRIC DEHYDRATOR. Patented Feb. 15, 1938.

Pat. 2,120,932. HIGH FREQUENCY INDUCTION DEHYDRATOR. Patented June 14, 1938.

Pat. 2,159,682. METHOD AND APPARATUS FOR TREATING EMULSIONS. Patented May 23, 1939.

Pat. 2,182,145. PROCESS AND APPARATUS FOR TREATING OIL. Patented Dec. 5, 1939.

Pat. 2,216,977. METHOD AND APPARATUS FOR CONTROLLING THE RELATIVE QUANTITIES OF LIQUIDS IN A TANK. Patented Oct. 8, 1940.

Pat. 2,296,239. ELECTRIC PROCESS FOR DESALTING MINERAL OIL. Patented Sept. 22, 1942.

Pat. 2,313,939. METHOD AND APPARATUS FOR ELECTRICALLY TREATING OILS. Patented Mar. 16, 1943.

Pat. 2,315,051. ELECTRICAL TREATER METHOD. Patented Mar. 30, 1943.

Pat. 2,325,850. PROCESS OF TREATING OIL. Patented Aug. 3, 1943.

Pat. 2,338,986. PROCESS AND APPARATUS FOR SEPARATING DISPERSIONS OF OIL AND WATER. Patented Jan. 11, 1944.

Pat. 2,355,678. METHOD FOR REMOVING IMPURITIES FROM HYDROCARBONS. Patented Aug. 15, 1944.

Pat. 2,364,118. METHOD AND APPARATUS FOR ELECTRICALLY TREATING FLUIDS. Patented Dec. 5, 1944.

Pat. 2,377,565. METHOD OF RESOLVING WATER-IN-OIL EMULSIONS. Patented June 5, 1945.

Pat. 2,380,458. METHOD OF DESALTING MINERAL OIL. Patented July 31, 1945.

Pat. 2,387,250. METHOD FOR TREATING OIL. Patented Oct. 23, 1945.

Pat. 2,402,844. METHOD FOR PURIFYING MINERAL OILS. Patented June 25, 1946.

TRADE-MARKS

OFFICIAL GAZETTE, SEPTEMBER 10, 1946

[VOL. 590. No. 2]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Ser. No. 470,020. EVERSOLE, MACLAY & CO., Potosi, Mo. Filed May 8, 1944.

BUCKEYE BB BARITE

Applicant disclaims the exclusive use of the word "Barite", apart from the mark.

FOR GROUND BARYTES.

Claims use since Mar. 22, 1944.

Ser. No. 489,577. ALOSIUM PRODUCTS COMPANY, Pittsburgh, Pa. Filed Oct. 8, 1945.

ALOSIUM

FOR CLAYS THAT ARE SUITABLE FOR USE IN TOOTH PASTE, LOTIONS, FACE PACKS, SOAPS, AND VARIOUS COSMETICS.

Claims use since Feb. 11, 1945.

Ser. No. 489,956. GERMAIN SEED AND PLANT CO., Los Angeles, Calif. Filed Oct. 15, 1945.

PREMIUM

FOR GRASS SEED.

Claims use since Nov. 30, 1943.

Ser. No. 496,024. WILLARD HELBURN, INC., Peabody, Mass. Filed Feb. 5, 1946.

SECOTAN

FOR LEATHER.

Claims use since Jan. 22, 1946.

CLASS 2

RECEPTACLES

Ser. No. 455,884. ROBERT E. BIRDSALL, Fontana, Wis. Filed Oct. 1, 1942.

Ply-Ty

The word "Ply" is disclaimed apart from the mark.

FOR BOX AND CRATE SHOOKS, AND KNOCKDOWN AND ASSEMBLED WOODEN AND METAL BOXES, AND SHIPPING CASES AND CRATES.

Claims use since Mar. 3, 1942.

Ser. No. 479,954. SHERMAN PAPER PRODUCTS CORPORATION, Newton, Mass. Filed Feb. 17, 1945.

Glo-Tone

FOR PAPER—NAMELY, FLUTED LINERS AND BAKING CUPS.

Claims use since Nov. 1, 1944.

Ser. No. 482,269. BONNEY FORGE AND TOOL WORKS, Allentown, Pa. Filed Apr. 18, 1945. Under the 10-year proviso as to the word "Bonney".

BONNEY

FOR TOOL BOXES.
Claims use since 1876 as to the word "Bonney"; and since 1935 on the mark presented.

Ser. No. 487,740. RIVER RAISIN PAPER COMPANY, Monroe, Mich. Filed Aug. 29, 1945.

RR PAPER COMPANY

The words "Paper Company" are disclaimed apart from the mark.
FOR CORRUGATED AND SOLID FIBRE SHIPPING CASES AND CARTONS.
Claims use since June 1, 1945.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 474,654. COLONIAL DAMES COMPANY, LTD., Los Angeles, Calif. Filed Sept. 27, 1944.

COLONIAL BOUQUET

The word "Bouquet" is disclaimed apart from the mark.
FOR SOAP.
Claims use since May 6, 1940.

Ser. No. 483,228. MARION MANUFACTURING COMPANY, Atlanta, Ga. Filed May 11, 1945.

Min-it-sol

FOR LIQUID SOAP SOLUTION.
Claims use since Dec. 1, 1944.

Ser. No. 493,660. COLGATE-PALMOLIVE-PEET COMPANY, Jersey City, N. J. Filed Dec. 21, 1945.

Coleo

FOR DENTURE CLEANER AND SOAPS FOR TOILET, LAUNDRY, AND HOUSEHOLD USE AND SOAP POWDERS.
Claims use since Mar. 25, 1890, on soaps for toilet, laundry, and household use, and soap powders; and since Dec. 20, 1945, on denture cleanser.

Ser. No. 494,451. KELITE PRODUCTS, INC., doing business as Kenu Products Company, Los Angeles, Calif. Filed Jan. 8, 1946.

KE-TEC

FOR CLEANING AND WASHING POWDER FOR ELECTRIC DISHWASHING.
Claims use since Oct. 1, 1945.

Ser. No. 496,147. KNOMARK MANUFACTURING CO., New York, N. Y. Filed Feb. 7, 1946.

LANO. WITE

The word "Wite" is disclaimed apart from the mark.
FOR DRESSING, CLEANSER AND POLISH FOR SHOES, BOOTS, LEATHER GOODS, AND LEATHER TRIMMINGS OR OTHER ARTICLES, SUCH AS BELTS, BAGS, AND THE LIKE.
Claims use since Feb. 1, 1946.

Ser. No. 496,389. HAROLD A. MEYER, doing business as Demand Products Company, San Francisco, Calif. Filed Feb. 11, 1946.

Y-RUB

FOR CLEANING FLUID.
Claims use since July 10, 1945.

Ser. No. 496,497. BLUE RIBBON PRODUCTS COMPANY, San Francisco, Calif. Filed Feb. 13, 1946.

THEEF

FOR WASHING AND CLEANING COMPOUND.
Claims use since Nov. 21, 1945.

Ser. No. 496,543. COSMEX CORP., New York, N. Y. Filed Feb. 14, 1946.

Make Off

FOR LIQUID PREPARATION FOR USE AS A SUBSTITUTE FOR SOAP FOR CLEANING THE SKIN.
Claims use since May 31, 1945.

Ser. No. 475,289. WINNING-PEPLOW, Glendale, Calif. Filed Oct. 12, 1944.

WIN-PEP

The term "Pep" is disclaimed apart from the mark.
FOR COMPRESSED, MEDICINAL TABLETS—NAMELY, VITAMIN A, VITAMIN C, VITAMIN D, VITAMIN E, VITAMIN A AND D, VITAMIN B COMPLEX, VITAMIN B COMPLEX WITH LIVER AND IRON, THIAMIN HYDROCHLORIDE, VEGETABLE CONCENTRATE CONSISTING OF PARSLEY, BEET, ASPARAGUS, OKRA, CELERY LEAVES, AND BEET LEAVES, AS A SUPPLEMENT TO THE DIET; THYROID, WHOLE ADRENAL, ANTERIOR PITUITARY, OVARIAN, ORCHIC, SULFATHIAZOLE, SULFADIAZINE, ASPIRIN, PAPAIN-BILE SALTS COMPOUND, RIBOFLAVIN, AND COMPRESSED TABLETS CONTAINING CAFFEINE ALKALOID, ACETOPHENETIDIN AND ASPIRIN (ACETYLSALICYLIC ACID).
Claims use since June 22, 1942.

Ser. No. 482,063. JACK MAY, doing business as Sardeau, New York, N. Y. Filed Apr. 12, 1945.

SARDEAU

FOR PERFUME, LIPSTICKS, ROUGE, FACE POWDER, FACIAL MAKE-UP, COLD CREAM, HAND LOTION, COLOGNE, TOILET WATER, BRILLIANTINE, SHAMPOO, AND NAIL POLISH.
Claims use since Jan. 5, 1939.

Ser. No. 484,414. HORACE MERCK, doing business as The Merck Pharmacal Co., Jacksonville, Fla. Filed June 11, 1945.

FUHSOL

(FEW'SOL)

FOR MEDICAL PREPARATION FOR USE IN RELIEVING ITCHING, IRRITATION, AND SORENESS ASSOCIATED WITH CERTAIN FORMS OF ATHLETE'S FOOT, RINGWORM, AND GROUND ITCH; THE ITCHING OF ECZEMA, AND THE STINGING AND ITCHING OF NON-POISONOUS INSECT BITES.
Claims use since February 1940.

Ser. No. 486,500. "PEAU D'OR" SALES CORPORATION, Miami, Fla. Filed July 30, 1945.

PEAU D'OR

FOR TOILET PREPARATIONS—NAMELY, COCOANUT OIL, BURN PROOF LOTION, PRICKLY HEAT LOTION, BRILLIANTINE, A PREPARATION TO RELIEVE SUNBURN, GREASELESS AND STAINLESS HAIR OIL, AND NAIL POLISH REMOVER.
Claims use since December 1928.

Ser. No. 487,672. GENERAL ANILINE & FILM CORPORATION, New York, N. Y. Filed Aug. 28, 1945.

DICOLAMINE

FOR CHEMICALS AND PREPARATIONS AND COMPOUNDS THEREOF USED IN PHOTOGRAPHIC PROCESSES, PARTICULARLY PHOTOGRAPHIC DEVELOPERS.
Claims use since Aug. 9, 1945.

Ser. No. 488,577. THE DE PREE COMPANY, Holland, Mich. Filed Sept. 17, 1945.

PIED-PIPER

FOR INSECTICIDE IN POWDERED FORM FOR USE IN THE EXTERMINATION OF ROACHES, ANTS, AND BEDBUGS.
Claims use since Mar. 1, 1945.

Ser. No. 488,669. RAYMOND LABORATORIES, INC., St. Paul, Minn. Filed Sept. 18, 1945.

PENETREME

FOR HAIR SHAMPOOS, HAIR RINSES, AND HAIR WAVING LOTIONS.
Claims use since Nov. 1, 1944.

Ser. No. 488,687. L. B. COULTER, Salisbury, N. C. Filed Sept. 19, 1945.

Juvauce

FOR HAIR TONIC, BRILLIANTINE, AFTER-SHAVE LOTION, AND SHAMPOO.
Claims use since May 8, 1944.

Ser. No. 489,362. MICHAEL SIEGEL, doing business as House of Pine, Roselle, N. J. Filed Oct. 3, 1945.

House of Pine

No claim is made to the word "Pine" apart from the mark.
FOR AFTER SHAVE LOTION.
Claims use since Sept. 1, 1945.

Ser. No. 489,413. PHYSICIANS & HOSPITAL SUPPLY COMPANY, INC., doing business as Ulmer Pharmacal Company, Minneapolis, Minn. Filed Oct. 4, 1945.

VA-TAR "A"

The mark is always imprinted in white on a red background as indicated by the lining for red. The word "Tar" and the letter "A" are disclaimed except as they are associated with the other elements of the mark.
FOR MEDICINAL PREPARATION—NAMELY, A NON-IRRITATING STAINLESS TAR CREAM USED IN THE TREATMENT OF SKIN DISEASES.
Claims use since Aug. 6, 1945.

Ser. No. 489,471. LEDERLE LABORATORIES, INC., New York, N. Y. Filed Oct. 5, 1945.

VETA-DIAZINE

Applicant makes no claim to the term "Diazine" apart from the mark.
FOR SULFADIAZINE PREPARATIONS FOR USE IN VETERINARY MEDICINE.
Claims use since May 23, 1945.

Ser. No. 489,508. HARRY GELKE, Cincinnati, Ohio. Filed Oct. 6, 1945.

ATOMIC

FOR INFLAMMABLE LIQUID FUEL FOR CIGAR AND CIGARETTE LIGHTERS.
Claims use since Sept. 19, 1945.

Ser. No. 489,975. THE METRO-NITE COMPANY, Milwaukee, Wis. Filed Oct. 15, 1945.

MICRO-NITE

FOR PIGMENTS TO BE USED IN THE PREPARATION OF AN EXTENDER FOR READY-MIXED OR PASTE PAINTS AND ENAMELS.
Claims use since Sept. 17, 1945.

Ser. No. 490,265. JOAQUIN BELENDEZ SOLA, New York, N. Y. Filed Oct. 20, 1945.

CorpoTone

FOR TONIC FOR ANEMIA, FOR INTERNAL HUMAN CONSUMPTION.
Claims use since July 1, 1944.

Ser. No. 491,391. BEE CHEMICAL COMPANY, Chicago, Ill. Filed Nov. 10, 1945.

WHEELYFE

FOR GRINDING CHEMICALS, ADDITIVES AND CUTTING CHEMICALS FOR USE WITH NON-METALLIC CUTTING TOOLS, SUCH AS CARBIDE-TOOLS OR ABRASIVE GRIT WHEELS, SAID CHEMICALS TO BE APPLIED TO SAID NON-METALLIC CUTTING TOOLS DURING THE MACHINE OPERATIONS, EITHER AS FURNISHED OR IN SOLUTION IN WATER OR IN ANOTHER LIQUID SOLVENT IN ORDER TO COOL THE METAL AND TO FACILITATE THE OPERATION.
Claims use since September 1945.

Ser. No. 491,759. IRRESISTIBLE, INC., New York, N. Y. Filed Nov. 17, 1945.

Special Reserve

Applicant disclaims the word "Special" apart from the mark.
FOR PERFUME.
Claims use since Oct. 5, 1945.

Ser. No. 492,888. GOTTLIEB BASS, doing business as Sapo Elixir Chemical Company, St. Louis, Mo. Filed Dec. 8, 1945.

KELWA

FOR RUBBING MASSAGE COMPOUND, HAIR OIL, AND BRILLIANTINE.
Claims use since Nov. 15, 1944.

Ser. No. 493,514. MARIE RICHELIEU PARFUM ODESANT, INC., New York, N. Y. Filed Dec. 18, 1945.

BLACK JADE

FOR TOILET WATER.
Claims use since April 1941.

Ser. No. 493,659. COLGATE-PALMOLIVE-PEET COMPANY, Jersey City, N. J. Filed Dec. 21, 1945.

COCATE

FOR METHYL ESTER OF COCOANUT OIL FATTY ACIDS USED AS A SOLVENT, EMULSION STABILIZER, PLASTICIZER, SURFACE ACTIVE AGENT, AND OTHER PURPOSES.
Claims use since May 28, 1945.

Ser. No. 494,147. GEORGE J. WALLAU, INC., New York, N. Y. Filed Dec. 29, 1945.

BOLINE HOUDÉ

No claim is made to the word "Houdé" apart from the mark.
FOR MILD HEPATIC STIMULANT USED FOR OCCASIONAL CONSTIPATION.
Claims use since 1923.

Ser. No. 494,177. CARREL, LTD., Chicago, Ill. Filed Jan. 2, 1946.

TAHINI

FOR COSMETIC PREPARATIONS—NAMELY, PERFUME AND COLOGNE.
Claims use since Dec. 3, 1937.

Ser. No. 494,246. WELDON, INC., West Haven, Conn., and New York, N. Y. Filed Jan. 3, 1946.

Flower Garden

FOR PERFUMES, COLOGNE, SACHET POWDER, TALCUM POWDER, DUSTING POWDER, BUBBLE BATH OIL, AND BUBBLE BATH SALT.
Claims use since Feb. 4, 1942.

Ser. No. 494,280. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio. Filed Jan. 4, 1946.

Prizma

FOR SHAMPOO.
Claims use since Dec. 8, 1945.

Ser. No. 494,673. GREEN CIRCLE PRODUCTS, Chicago, Ill. Filed Jan. 12, 1946.

THE GREEN CIRCLE

FOR LINIMENT FOR THE RELIEF OF MUSCULAR CRAMPS, STIFFNESS AND SORENESS, STIFF NECK, AND MINOR SPRAINS.
Claims use since Jan. 2, 1945.

Ser. No. 494,794. DAVID KAYE, doing business as Kaye Laboratories, Brooklyn, N. Y. Filed Jan. 15, 1946.

RACAL

FOR VITAMINIC PREPARATIONS TO BE USED AS PRESCRIBED BY A PHYSICIAN.
Claims use since 1939.

Ser. No. 494,804. ABBOTT LABORATORIES, North Chicago, Ill. Filed Jan. 16, 1946.

NEMBUDEINE

FOR SEDATIVE, ANALGESIC, AND ANTIPYRETIC COMPOUND.
Claims use since Dec. 27, 1945.

Ser. No. 494,829. ROBERT B. FALLENBERG, doing business as R. B. F. Chemical Co., and also as R. B. Fallenberg Laboratory, Glendale, Calif. Filed Jan. 16, 1946.

TRAILEZE

FOR VETERINARY REMEDY FOR THE RELIEF OF HOOF AILMENTS IN HORSES.
Claims use since June 1, 1945.

Ser. No. 495,011. CHEMICAL COATING MATERIALS COMPANY, Belleville, N. J. Filed Jan. 19, 1946.

TRANS E

FOR FINISHING COMPOSITIONS COMPRISING LACQUER AND RESIN-MIXED EMULSIONS FOR COLORING AND WATERPROOFING LEATHER, FABRICS, AND THE LIKE.
Claims use since Nov. 1, 1945.

Ser. No. 495,231. GEO. H. GOULD COMPANY, Louisville, Ky. Filed Jan. 23, 1946.

FUTPOWR

FOR MEDICATED POWDER FOR THE TREATMENT OF SIMPLE RINGWORM OF THE TOES AND FEET.
Claims use since Nov. 20, 1945.

Ser. No. 495,274. COSMOS INTERNATIONAL CORPORATION, New York, N. Y. Filed Jan. 24, 1946.

ENZYNORM

FOR PREPARATION TO BE TAKEN INTERNALLY TO RELIEVE GASTRIC DISTURBANCES.
Claims use since December 1937.

Ser. No. 495,669. HARDESTY CHEMICAL CO., INC., New York, N. Y. Filed Jan. 30, 1946.

HARCOL

FOR ARYL BENZENE, BEING AN INTERMEDIATE PRODUCT FOR INDUSTRIAL CONVERSION TO VARIOUS FINISHED PRODUCTS SUCH AS SYNTHETIC DETERGENTS.
Claims use since Jan. 8, 1946.

Ser. No. 496,419. ANABOLIC FOOD PRODUCTS, INC., Glendale, Calif. Filed Feb. 12, 1946.

SUPERLEUM

FOR MULTI-VITAMIN PERLES USED AS A DIETARY SUPPLEMENT FOR NUTRITIONAL PURPOSES.
Claims use since Nov. 17, 1944.

Ser. No. 496,765. JOHN M. CENICOLA, Los Angeles, Calif. Filed Feb. 18, 1946.

Lanico OINTMENT

The word "Ointment" is disclaimed apart from the mark.
FOR OINTMENTS USED IN THE TREATMENT OF ATHLETE'S FOOT, CHAPPED SKIN, INSECT STINGS, MINOR BURNS, AND SCALDS, MINOR SCALP IRRITATIONS, MINOR SUN BURN, POISON IVY, POISON OAK, PRICKLY HEAT, AND MINOR RECTAL IRRITATIONS.
Claims use since Aug. 15, 1945.

Ser. No. 496,863. FRANK M. SAGONA, doing business as Scharmouché Parfum Labs., Chicago and Rockford, Ill. Filed Feb. 18, 1946.

Jabali

FOR PERFUMES, COLOGNE, TOILET WATER, SACHET POWDER, BATH POWDER, TALCUM POWDER, FACE POWDER, AND HAND CREAM.
Claims use since Feb. 6, 1946.

Ser. No. 497,024. MARVIN GORDON, New York, N. Y., assignor to Carosel Parfum Co., New York, N. Y. Filed Feb. 21, 1946.

FOR TOILET WATER.
Claims use since Sept. 19, 1944.

Ser. No. 497,133. THEO. ROSS, doing business as Theo. Ross Associates, a division of Timsol Company of America, Los Angeles, Calif. Filed Feb. 23, 1946.

TIMSOL

FOR LIQUID COMPOUND USED AS A DISINFECTANT, GERMICIDE, FUNGICIDE, AND DEODORANT, HAVING INCIDENTAL CLEANSING PROPERTIES.
Claims use since Feb. 4, 1946.

Ser. No. 497,770. M. J. BENNETT & Co., New York, N. Y. Filed Mar. 7, 1946.

RID-O-SECT

FOR INSECTICIDE.
Claims use since Feb. 20, 1946.

Ser. No. 497,981. SOCIETE D'ETUDES ET D'EXPANSION DE LA PARFUMERIE DE LUXE, Paris and Asnieres, near Paris, France. Filed Mar. 9, 1946.

VISA

FOR PERFUMES.
Claims use since Nov. 16, 1945.

Ser. No. 498,482. ASSOCIATED PRODUCTS, INC., Chicago, Ill. Filed Mar. 19, 1946.

DYNASTY

FOR FACE POWDER, FACE MAKEUP IN LIQUID FORM, CREAMS FOR THE HANDS AND FACE, SHAMPOOS, HAND LOTIONS, LIPSTICKS, NAIL LACQUERS, AND PERFUME.
Claims use since Mar. 13, 1946.

Ser. No. 498,484. ASSOCIATED PRODUCTS, INC., Chicago, Ill. Filed Mar. 19, 1946.

ISOLDE

FOR FACE POWDER, FACE MAKEUP IN LIQUID FORM, CREAMS FOR THE HANDS AND FACE, SHAMPOOS, HAND LOTIONS, LIPSTICKS, NAIL LACQUERS, AND PERFUME.
Claims use since Feb. 28, 1946.

Ser. No. 498,674. WYETH INCORPORATED, Philadelphia, Pa. Filed Mar. 20, 1946.

THYPTOL

FOR LOTION FOR THE RELIEF OF SKIN IRRITATIONS DUE TO POISON IVY AND KINDRED TOXIC CONDITIONS.
Claims use since Mar. 6, 1946.

Ser. No. 499,772. E. I. DU PONT DE NEMOURS AND COMPANY, Wilmington, Del. Filed Apr. 6, 1946.

FLUOROLEUM

FOR DYES AND DYESTUFFS.
Claims use since Dec. 12, 1945.

Ser. No. 503,944. SANDOZ CHEMICAL WORKS, INC., New York, N. Y. Filed June 14, 1946.

MESANTOIN

FOR MEDICINAL PREPARATION RECOMMENDED FOR THE TREATMENT OF EPILEPSY.
Claims use since June 5, 1946.

CLASS 8

SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS

Ser. No. 496,534. ERIC R. BACHMANN, Jackson Heights, Long Island, N. Y. Filed Feb. 14, 1946.

PIPE MASTER

No claim is made to the word "Pipe" apart from the mark.

FOR SMOKING PIPE CLEANING TOOL.

Claims use since Feb. 6, 1946.

CLASS 10

FERTILIZERS

Ser. No. 482,117. THE POLY-BLOOM CO., Brooklyn, N. Y. Filed Apr. 13, 1945.

POLY-BLOOM

Applicant disclaims the word "Bloom".

FOR CONCENTRATED PLANT FOOD AND FERTILIZER.

Claims use since Mar. 13, 1945.

CLASS 11

INKS AND INKING MATERIALS

Ser. No. 487,688. WHITNEY K. MUNSON, doing business as Ranger Products Company, East Orange, N. J. Filed Aug. 28, 1945.

FOR NON-SMEAR STAMP PADS AND NON-SMEAR INK.

Claims use since January 1938.

Ser. No. 493,794. MARVEL PRODUCTS, INC., New York, N. Y. Filed Dec. 22, 1945.

Marvel

FOR WRITING INKS, DRAWING INKS, STAMP PAD INKS, AND DUPLICATING INKS.

Claims use since Dec. 11, 1945.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 459,807. ALBERT C. FISCHER, doing business as Servicised Products Company, Chicago, Ill. Filed Apr. 12, 1943.

SERVICISED

FOR PLYWOOD; ASPHALT FIBER BOARDS AND PLANKS; CORRUGATED EAVE CLOSURE STRIPS FORMED OF ASPHALT AND/OR RUBBER COMPOSITION; ASPHALT COMPOSITION CABLE CONDUITS; BULK ASPHALT FOR FILLING EXPANSION JOINTS AND FOR OTHER STRUCTURAL PURPOSES; RUBBER TILE FLOORING; SEWER JOINTING COMPOUNDS; CLAY UNDERLAY SLABS; ASPHALT FELT ROOFING SHEETS AND SHINGLES; ASBESTOS CEMENT SHINGLES; STRUCTURAL SLABS OF FIBROUS MATERIAL; ASBESTOS ROOF-CEMENT; METAL PAVING JOINT TRANSLOADING DEVICES; SLATE-SURFACED ROOFING; BUILDING PAPERS; ASBESTOS-PAPER PIPE AND WALL INSULATION; FURNACE PIPE COVERING OF ASBESTOS PAPER OR THE LIKE; PAVING EXPANSION JOINTS; AND BITUMINOUS RAIL FILLERS FOR USE ALONGSIDE THE RAILS OF TRACTION LINES.

Claims use since Dec. 1, 1915.

Ser. No. 496,722. LAURENCE J. MCKNIGHT, Cleveland, Ohio. Filed Feb. 16, 1946.

FIXAG

FOR ADJUSTABLE LOAD BEARING METAL POSTS, COLUMNS AND STANCHIONS ADAPTED FOR PERMANENT USE IN BUILDING STRUCTURES FOR ADJUSTABLE COLUMNAR REENFORCEMENT AND SUPPORT OF BEAMS, JOISTS, AND THE LIKE.

Claims use since Nov. 10, 1945.

Ser. No. 497,027. KINKEAD INDUSTRIES INCORPORATED, Chicago, Ill. Filed Feb. 21, 1946.

kintrim

FOR METAL AND PLASTIC MOULDINGS FOR USE AS CONSTRUCTION MATERIAL.

Claims use since Oct. 15, 1945.

Ser. No. 499,629. THE JOHNSON-MARCH CORPORATION, New York, N. Y. Filed Apr. 4, 1946.

JOMCO

FOR MATERIAL FOR WATERPROOFING BRICK, STONE, CONCRETE AND STUCCO SURFACES; HARDENER AND ACCELERATOR FOR CONCRETE MIXES AND CEMENT MORTARS; WATERPROOFING, BONDING AND GROUTING MATERIAL FOR USE WITH PORTLAND CEMENT; QUICK-SETTING CONCRETE, CEMENT COMPOSITION FOR PATCHING CONCRETE FLOORS; CONCRETE MATERIAL FOR PORTLAND CEMENT MIXES.

Claims use since August 1944.

Ser. No. 500,328. SUNRAY AWNING SHUTTER COMPANY, Fort Lauderdale, Fla. Filed Apr. 16, 1946.

SUNRAY

FOR LOUVRE AWNINGS, LOUVRE PANELS, AND JALOUSIES.

Claims use since 1936.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Ser. No. 478,041. THE ELECTRIC RAILWAY IMPROVEMENT COMPANY, Cleveland, Ohio. Filed Dec. 29, 1944.

CADWELD

FOR METALS, METAL COMPOUNDS AND ALLOYS FOR USE IN THE PRODUCTION OF METAL BY EXOTHERMIC REACTION AND IN THE PROCESS OF WELDING METALS.

Claims use since Feb. 7, 1940.

CLASS 15

OILS AND GREASES

Ser. No. 486,261. KENDALL REFINING COMPANY, Bradford, Pa. Filed July 25, 1945.

FLEETLUBE

FOR LUBRICATING OILS.

Claims use since Mar. 14, 1942.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Ser. No. 491,522. STRAND CASTLE COMPANY, Lynwood, Calif. Filed Nov. 13, 1945.

AZTEC GLAZE

No claim is made to the word "Glaze" apart from the mark.

FOR GLAZE IN LIQUID AND PASTE FORM FOR POLISHING AND CLEANING AUTOMOBILES, AIRPLANES, AND FINISHED, LACQUERED, AND ENAMELED SURFACES.

Claims use since Oct. 9, 1938.

Ser. No. 492,556. GARRETT M. GOLDBERG, doing business as Garrett M. Goldberg Paint Company, San Francisco, Calif. Filed Dec. 3, 1945.

GMG

FOR PAINTS IN DRY, PASTE, AND/OR READY-MIXED FORMS, AND PAINTERS' MATERIALS—NAMELY, PAINTS, VARNISHES, PAINT ENAMELS, AND LACQUERS.

Claims use since June 1, 1906.

Ser. No. 493,866. G. H. WOOD & CO. LIMITED, Toronto, Ontario, Canada. Filed Dec. 22, 1945.

CROMAX

The lining on the drawing represents shading.

FOR FLOOR WAX.

Claims use since Oct. 27, 1939.

Ser. No. 494,741. ELLIS PAINT COMPANY, Long Beach, Calif. Filed Jan. 14, 1946.

PAR-LAY

FOR BRUSHING TYPE SYNTHETIC ENAMELS AND GENERAL PROTECTIVE COATINGS IN THE NATURE OF PAINT, FOR BRUSH, SPRAY, AND DIP APPLICATION.

Caims use since Dec. 1, 1945.

Ser. No. 496,553. JOHN F. GERMAIN, Brooklyn, N. Y. Filed Feb. 14, 1946.

SEZE-ON

FOR PAINTS AND PROTECTIVE COATINGS IN THE NATURE OF PAINTS.
Claims use since Jan. 7, 1946.

CLASS 17

TOBACCO PRODUCTS

Ser. No. 496,266. PENINSULAR CIGAR CO., Tampa, Fla. Filed Feb. 8, 1946.

EL PLANO

FOR CIGARS.
Claims use since Nov. 4, 1899.

CLASS 19

VEHICLES

Ser. No. 473,436. TUCKER & SONS, Grass Valley, Calif. Filed Aug. 18, 1944.

SNO-CAT

No claim is made to the exclusive use of the word "Sno" apart from the mark.
FOR AUTOMOTIVE VEHICLES FOR TRAVELING OVER SNOW.
Claims use since Sept. 1, 1941.

Ser. No. 489,285. ROBINS-BERKE CO., Norwalk, Conn., assignor to The Roberk Company, Norwalk, Conn., a corporation of Connecticut. Filed Oct. 2, 1945.

FOR REAR VISION MIRRORS AND PARTS THEREFOR, EXHAUST PIPE GAS DEFLECTORS, AND GAS TANK CAPS.
Claims use since August 1945.

Ser. No. 491,004. THE GEMCO ENGINEERING & MANUFACTURING CO., INC., Cincinnati, Ohio. Filed Nov. 3, 1945.

GEMCO

FOR TRAILERS AND PARTS THEREOF.
Claims use since July 1942.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 473,600. FRANKLIN PHOTOGRAPHIC INDUSTRIES, Chicago, Ill. Filed Aug. 25, 1944.

MUSICTRON

FOR ELECTRIC PHONOGRAPHS AND REPRODUCERS.
Claims use since July 10, 1944.

Ser. No. 485,922. RADIO RECEPTOR COMPANY, INC., New York, N. Y. Filed July 17, 1945.

Thermatron

FOR ELECTRONIC HIGH FREQUENCY GENERATORS FOR HEATING DIELECTRIC MATERIALS.
Claims use since November 1944.

Ser. No. 493,023. PHELPS DODGE COPPER PRODUCTS CORPORATION, New York, N. Y. Filed Dec. 10, 1945.

PD-X

FOR NON-METALLIC SHEATHED CABLE.

423,873. FACE CREAM. FIRST LADY COMPANY, INC., Fort Worth, Tex.
Filed March 14, 1946. Serial No. 498,219. PUBLISHED JUNE 11, 1946. Class 6.

[ACT OF MARCH 19, 1920, SEC. 1 (b)]

THESE REGISTRATIONS ARE NOT SUBJECT TO OPPOSITION

423,874. (CLASS 27. HOROLOGICAL INSTRUMENTS.) FABRIQUE EBEL, SOCIETE ANONYME, La Chaux-de-Fonds, Switzerland. Filed May 14, 1943. Serial No. 460,612.

Ebel

FOR WATCHES.
Claims use since 1913.

423,875. (CLASS 19. VEHICLES.) SINKO TOOL & MANUFACTURING COMPANY, Chicago, Ill. Filed May 29, 1944. Serial No. 470,776.

Sinko

FOR AUTOMOTIVE SPECIALTIES—NAMELY, STEERING WHEEL KNOBS, GEAR SHIFT BALLS AND KNOBS, LICENSE HOLDERS, GAS TANK CAPS AND RADIATOR CAPS.
Claims use since October 1932.

423,876. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS.) SECURITY MANUFACTURING COMPANY, Kansas City, Mo. Filed June 8, 1944. Serial No. 471,053.

SECURITY QUICK THE S&P Line HEATER

FOR GAS FIRED WATER HEATERS.
Claims use since Apr. 26, 1944.

423,877. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) MAGNUS BJORNDAL, doing business as Tech Laboratories, Jersey City, N. J. Filed Aug. 21, 1944. Serial No. 473,465.

DESIGN SERVICE TECH TL LAB QUALITY INTEGRITY CO OPERATION

FOR POTENTIOMETERS, VISCOSITY METERS, MOISTURE METERS, MEGOHM BRIDGES, MICROHMMETERS, WHEATSTONE BRIDGES, MICROVOLTERS, AND DIELECTRIC CONSTANT RECORDERS.
Claims use since June 1, 1944.

423,878. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) MAGNUS BJORNDAL, doing business as Tech Laboratories, Jersey City, N. J. Filed Aug. 22, 1944. Serial No. 473,496.

TECH-LAB

FOR POTENTIOMETERS, VISCOSITY METERS, MOISTURE METERS, MEGOHM BRIDGES, MICROHMMETERS, WHEATSTONE BRIDGES, MICROVOLTERS, AND DIELECTRIC CONSTANT RECORDERS.
Claims use since October 1933.

423,879. (CLASS 32. FURNITURE AND UPHOLSTERY.) BOSTON LEATHER SPECIALTIES CO., Everett, Mass. Filed Nov. 7, 1944. Serial No. 476,192.

COVA TUFTED

FOR MATTRESSES.
Claims use since June 1, 1941.

423,880. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) HECKTHORN MANUFACTURING & SUPPLY CO., Littleton, Colo. Filed Dec. 29, 1944. Serial No. 478,050.

FLEX-TIP

FOR FLEXIBLE, COMBINED NOZZLES AND VALVES FOR AIR AND WATER HOSES, THE VALVES BEING OPERABLE BY BENDING THE NOZZLES.
Claims use since Feb. 25, 1933.

423,881. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SOCIEDAD INDUSTRIAL PESQUERA DE TARAPACA S. A., Santiago, Chile. Filed Jan. 4, 1945. Serial No. 478,258.

PRODUCTOS CAVANCHA IQUIQUE CHILE SOCIEDAD INDUSTRIAL PESQUERA DE TARAPACA

FOR CANNED FISH AND CANNED SHELLFISH.
Claims use since August 1941.

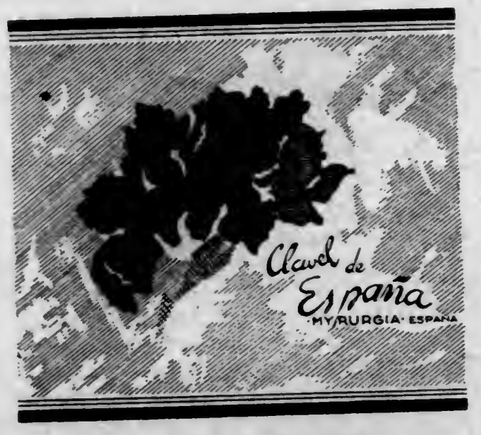
423,882. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JACQUELINE COCHRAN, Roselle, N. J. Filed Mar. 10, 1945. Serial No. 480,739.

SUN 'N SNOW

FOR HAND AND FACE LOTIONS.
Claims use since Mar. 5, 1945.

423,883. (CLASS 37. PAPER AND STATIONERY.) WILSON K. CHAPMAN, Washington, D. C. Filed Apr. 10, 1945. Serial No. 481,943.

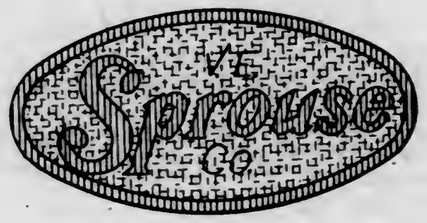
GRIPRITE



FOR WOOD ENCASED PENCILS.
Claims use since Nov. 29, 1944.

423,884. (CLASS 38. PRINTS AND PUBLICATIONS.) INDEPENDENT DIRECTORY CORP., Los Angeles, Calif., and New York, N. Y. Filed Apr. 25, 1945. Serial No. 482,580.

INTERSTATE INDUSTRIAL REGISTER



FOR AN INDUSTRIAL CLASSIFIED TELEPHONE DIRECTORY.
Claims use since Dec. 18, 1944.

423,885. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MYRURGIA, S. A., Barcelona, Spain. Filed May 1, 1945. Serial No. 482,849.

The drawing is lined for shading only.
FOR PERFUMES, TOILET CREAMS, EAU DE COLOGNE, FACE POWDER, FACE LOTIONS, ROUGES, NAIL POLISHES, DENTIFRICES, AND MASCARA.
Claims use since February 1936.

423,886. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS.) V. E. SPROUSE COMPANY, Columbus, Ind. Filed May 16, 1945. Serial No. 483,456.

The drawing is lined for the colors gold and red.
FOR AUTOMOTIVE HEATERS OF THE EXHAUST GAS HEAT EXCHANGE TYPE AND BLOWERS FOR STOKERS, AND FOR HEATING AND VENTILATING SYSTEMS.
Claims use since Jan. 1, 1943 on heaters; and since June 1, 1944 on blowers.

423,887. (CLASS 38. PRINTS AND PUBLICATIONS.) CLARK EQUIPMENT COMPANY, Battle Creek, Mich. Filed May 30, 1945. Serial No. 483,959.

Material Handling News

FOR A QUARTERLY TRADE PUBLICATION.
Claims use since May 8, 1945.

423,888. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) BYCK BROS. & COMPANY, INCORPORATED, Louisville, Ky. Filed June 2, 1945. Serial No. 484,083.

Magnolia White

FOR PERFUME AND TOILET WATER.
Claims use since May 15, 1945.

423,889. (CLASS 27. HOROLOGICAL INSTRUMENTS.) HALGREEN, INC., New York, N. Y. Filed June 27, 1945. Serial No. 485,083.

HALGREEN

FOR WATCHES AND PARTS THEREOF.
Claims use since May 31, 1945.

423,890. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ARNOLD PALM, doing business as Palm Pharmacal Co., New York, N. Y. Filed July 2, 1945. Serial No. 485,362.

Thyrocholine

FOR THYROID-CHOLINE-THIAMINE PREPARATIONS FOR OBESITY.
Claims use since April 1945.

423,891. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) WILLIAM G. BARCROFT, doing business as Associated Engineering Laboratories, Boulder, Colo. Filed July 5, 1945. Serial No. 485,473.

SURE FIRE

FOR CHEMICALS FOR INCREASING THE EXPLOSIVE POWER OF MOTOR FUEL.
Claims use since April 1, 1945.

423,892. (CLASS 38. PRINTS AND PUBLICATIONS.) MAGNOLIA STATE PUBLISHING COMPANY, Jackson, Miss. Filed July 7, 1945. Serial No. 485,534.

STOCKMAN Mississippi FARMER

FOR A PERIODICAL PUBLISHED FROM TIME TO TIME.
Claims use since June 5, 1945.

423,893. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MACIA CORPORATION, Holyoke, Mass. Filed July 13, 1945. Serial No. 485,788.

MACIA

FOR LIQUID INHALANT FOR THE TREATMENT OF COLDS, HAY FEVER AND THE LIKE.
Claims use since June 16, 1945.

423,894. (CLASS 3. BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS.) MARSAC HANDBAG STUDIO, New York, N. Y. Filed July 14, 1945. Serial No. 485,821.

Marsac

★★★★

FOR LADIES' HANDBAGS.
Claims use since July 1940.

423,895. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) EMERSON EUGENE HESS, Powell, Ohio. Filed Aug. 1, 1945. Serial No. 486,575.

ELECTROWEIGH

FOR WEIGHING SCALES AND BALANCE INDICATORS THEREFOR.
Claims use since June 1, 1945.

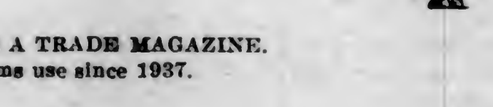
423,896. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) BURKE & JAMES, INC., Chicago, Ill. Filed Aug. 2, 1945. Serial No. 486,606.

SOLER

FOR ELECTRIC FOOT SWITCHES.
Claims use since Jan. 5, 1945.

423,897. (CLASS 1. RAW OR PARTLY PREPARED MATERIALS.) THE OHIO LEATHER COMPANY, Girard, Ohio. Filed Aug. 7, 1945. Serial No. 486,864.

BEIRA



FOR LEATHER.
Claims use since July 20, 1945.

423,898. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) DOLEITH, INC., Chicago, Ill. Filed Sept. 1, 1945. Serial No. 487,898.

Gay Patton

FOR FACIAL CLEANSING CREAMS, TONE CREAM, NIGHT CREAM, THROAT CREAM, TONING LOTION, ASTRINGENT LOTION, CLEANSING LOTION, FACIAL CLEANSING MASK, SKIN OIL, HAND CREAM, HAND LOTION, DEODORANT CREAM, EYELID CREAM, FACE POWDER, DUSTING POWDER, POWDER-BASE EMULSION, POWDER LOTION, EYE BATH, EYE SHADOW, CREAM AND DRY ROUGE, LIPSTICK, PERFUMES, COLOGNES, SACHET, LEG MAKE-UP, AND SUN OIL.
Claims use since June 26, 1945.

423,899. (CLASS 7. CORDAGE.) THE THOMAS JACKSON & SON CO., Reading, Pa. Filed Oct. 3, 1945. Serial No. 489,330.

The trade-mark consists of the representation of two pieces of rope and a strand guide or separation element used in connection with the manufacture of rope by the old rope walk method.
FOR CORDAGE—NAMELY, ROPE AND TWINE MADE FROM JUTE FIBERS, AGAVE FIBERS, AND ABACA FIBERS.
Claims use since Jan. 3, 1945.

423,900. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) DAVID F. CLARKE, doing business as The Clarke Co., Lenoir, N. C. Filed Oct. 8, 1945. Serial No. 489,565.

CLARKE'S
TOE HEALER

FOR MEDICINAL PREPARATION FOR RELIEVING AND HEALING INGROWN TOE NAILS.
Claims use since Feb. 17, 1945.

423,901. (CLASS 38. PRINTS AND PUBLICATIONS.) FISHING GAZETTE PUBLISHING CORP., New York, N. Y. Filed Oct. 11, 1945. Serial No. 489,797.

Fishing Gazette

FOR A TRADE MAGAZINE.
Claims use since 1937.

423,902. (CLASS 45. BEVERAGES, NONALCOHOLIC.) RICHARDSON CORPORATION, Rochester, N. Y. Filed Oct. 22, 1945. Serial No. 490,328.

RICHie

FOR CONCENTRATED SODA FOUNTAIN SYRUP.
Claims use since May 18, 1945.

423,903. (CLASS 37. PAPER AND STATIONERY.) DISTRICT OF COLUMBIA PAPER MILLS, INC., Washington, D. C. Filed Nov. 9, 1945. Serial No. 491,314.

BIRCH

FOR BLOTTING PAPER, BOX COVER PAPER, COVER PAPERS, AND PRINTING PAPERS.
Claims use since Dec. 31, 1932.

423,904. (CLASS 37. PAPER AND STATIONERY.) DISTRICT OF COLUMBIA PAPER MILLS, INC., Washington, D. C. Filed Nov. 9, 1945. Serial No. 491,316.

SANDALWOOD

FOR BLOTTING PAPER, BOX COVER PAPER, COVER PAPERS, AND PRINTING PAPERS.
Claims use since Aug. 30, 1940.

423,905. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE B. F. GOODRICH COMPANY, New York, N. Y., and Akron, Ohio, doing business as B. F. Goodrich Chemical Company, a division of The B. F. Goodrich Company, Cleveland, Ohio. Filed Nov. 14, 1945. Serial No. 491,564.

ERIE

FOR ORGANIC CHEMICAL MATERIAL TO BE INCORPORATED IN NATURAL RUBBER OR A SYNTHETIC RUBBER AS A VULCANIZATION ACCELERATOR.
Claims use since Nov. 2, 1942.

423,906. (CLASS 15. OILS AND GREASES.) THE BELL COMPANY, INC., Chicago, Ill. Filed Jan. 10, 1946. Serial No. 494,537.

LIQUIDRIVE

FOR FLUIDS USED AS A FLUID COUPLING FOR THE TRANSMISSION OF POWER IN MOTOR DRIVEN DEVICES, SAID FLUIDS HAVING A MINERAL OIL BASE.
Claims use since Jan. 8, 1943.

423,907. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) BIRDSALL & WILCOX, New Haven, Conn.

BIRDS-ALL

Filed Jan. 23, 1946. Serial No. 495,212.

216,572. **TEXASWEET.** FRESH CITROUS FRUITS—NAMELY, GRAPEFRUIT, ORANGES, TANGERINES, AND LEMONS; CANNED CITROUS FRUITS—NAMELY, CANNED GRAPEFRUIT, ORANGE MARMALADE, GRAPEFRUIT MARMALADE. Registered Aug. 17, 1926. TEXAS CITRUS FRUIT GROWERS EXCHANGE, Mission, Tex., a corporation of Texas. Renewed Aug. 17, 1946. Class 46.

216,658. **"PURITAN BRAND" AND DESIGN.** CANNED VEGETABLES, PARTICULARLY CANNED PEAS, CANNED STRING AND STRINGLESS BEANS, CORN, SUCCOTASH, AND LIMA BEANS. Registered Aug. 17, 1926. H. C. BAXTER & BRO., Brunswick, Maine, a firm. Renewed Aug. 17, 1946. Class 46.

216,693. **"HUSKY" AND DESIGN.** LOGGING BLOCKS. Registered Aug. 17, 1926. DRAPER ENGINE WORKS CO., Seattle, Wash., a corporation of Washington. Renewed Aug. 17, 1946. Class 23.

216,915. **SERENE.** LUBRICATING OILS AND AUTOMOBILE LUBRICANTS. Registered Aug. 24, 1926. BEACON OIL COMPANY. Renewed Aug. 24, 1946, to Colonial Beacon Oil Company, Boston, Mass., a corporation of Massachusetts. Class 15.

216,990. **REPRESENTATION OF A HEART FIGURE.** CANVAS AND LEATHER BOOTS AND SHOES. Registered Aug. 24, 1926. HEYWOOD BOOT & SHOE COMPANY, Worcester, Mass., a corporation of Massachusetts. Renewed Aug. 24, 1946. Class 39.

217,081. **REPRESENTATION OF A SIX-LOBED FLOWER DESIGN.** PERFUMERY, EXTRACTS, AND CERTAIN TOILET PREPARATIONS. Registered Aug. 24, 1926. CARON CORPORATION, New York, N. Y., a corporation of New York. Renewed Aug. 24, 1946. Class 6.

217,315. **"DALLWIG POLICY AND COMMISSION RECORD" AND DESIGN.** BLANKS FOR KEEPING INSURANCE POLICY AND COMMISSION RECORDS. Registered Aug. 31, 1926. PAUL G. DALLWIG, Chicago, Ill. Renewed Aug. 31, 1946. Class 37.

217,368. **TEXASWEET.** GRAPEFRUIT AND ORANGE JUICES SOLD FOR SOFT-DRINK PURPOSES. Registered Aug. 31, 1926. TEXAS CITRUS FRUIT GROWERS EXCHANGE, Mission, Tex., a corporation of Texas. Renewed Aug. 31, 1946. Class 46.

217,504. **PILGRIM.** HYDRATED LIME. Registered Aug. 31, 1926. ROCKLAND & ROCKPORT LIME CORPORATION. Renewed Aug. 31, 1946, to Rockland-Rockport Lime Co. Inc., of Rockland, Maine, a corporation of Maine. Class 12.

217,534. **GYRO GAS.** MOTOR SPIRITS. Registered Aug. 31, 1926. CHEMICAL RESEARCH SYNDICATE, LTD. Renewed Aug. 31, 1946, to GYRO PROCESS COMPANY, Detroit, Mich., a corporation of Michigan. Class 15.

217,561. **RADIO.** MALT BEVERAGE CONTAINING LESS THAN ONE-HALF OF ONE PER CENT OF ALCOHOL BY VOLUME. Registered Sept. 7, 1926. LIEBMANN BREWERIES, INC., Brooklyn, N. Y., a corporation of New York. Renewed Sept. 7, 1946. Class 48.

217,587. **SILVER SHIELD.** CANNED VEGETABLES, FRUITS, BERRIES, FISH AND SHELLFISH; SPICES, FOOD-FLAVORING EXTRACTS, AND OTHER FOOD PRODUCTS. Registered Sept. 7, 1926. SCHWABACHER BROS. & CO., INC., Seattle, Wash., a corporation of Washington. Renewed Sept. 7, 1946. Class 46.

217,595. **KITTEN.** TEXTILE BLANKETS. Registered Sept. 7, 1926. THE ESMOND MILLS. Renewed Sept. 7, 1946, to The Esmond Mills, Incorporated, Esmond, Smithfield, R. I., a corporation of Delaware. Class 42.

217,596. **BOWKNOT.** TEXTILE BLANKETS. Registered Sept. 7, 1926. THE ESMOND MILLS. Renewed Sept. 7, 1946, to The Esmond Mills, Incorporated, Esmond, Smithfield, R. I., a corporation of Delaware. Class 42.

217,603. **BLUE BLOOD.** CERTAIN FRESH FRUITS AND VEGETABLES. Registered Sept. 7, 1926. MATTHEW J. ZEUZIUS, Los Angeles, Calif. Renewed Sept. 7, 1946. Class 46.

217,630. **PABST-ETT.** CHEESE PREPARATION TO BE USED AS A SANDWICH SPREAD. Registered Sept. 7, 1926. PABST CORPORATION, Milwaukee, Wis. Renewed Sept. 7, 1946, to Kraft Foods Company of Wisconsin, Green Bay, Wis., a corporation of Wisconsin. Class 46.

217,777. **GOLD SHIELD.** CERTAIN FOOD-FLAVORING EXTRACTS AND SPICES; AND TEA AND COFFEE. Registered Sept. 7, 1926. SCHWABACHER BROS. & CO., INC., Seattle, Wash., a corporation of Washington. Renewed Sept. 7, 1946. Class 46.

217,928. **"FOX'S" AND DRAWING.** NONALCOHOLIC MALTLESS CONCENTRATES AND SIRUPS FOR MIXING SOFT DRINKS. Registered Sept. 14, 1926. GEORGE A. FOX. Renewed Sept. 14, 1946, to George A. Fox Products Company, Kansas City, Mo., a corporation of Missouri. Class 45.

217,972. **PURITAN.** MINCEMEAT, HONEY, AND PEANUT BUTTER. Registered Sept. 14, 1926. PURITAN PRESERVE COMPANY. Renewed Sept. 14, 1946, to Puritan Preserve Company, San Francisco, Calif., a firm. Class 46.

218,040. **MOTH-TOX.** INSECTICIDE. Registered Sept. 21, 1926. THE TOLEDO REX SPRAY COMPANY, assignor to Rex Research Corporation. Renewed Sept. 21, 1946, to Rex Research Corporation, Toledo, Ohio, a corporation of Delaware. Class 6.

218,171. **MELLOTONES.** WOOLEN GOODS IN THE PIECE. Registered Sept. 21, 1926. WORUMBO MANUFACTURING COMPANY, Bath, Maine. Renewed Sept. 21, 1946, to Worumbo Manufacturing Company, Lisbon Falls, Maine, a corporation of Maine. Class 42.

218,237. **TOPSY.** ICE CREAM AND FROZEN CONFECTIONS. Registered Sept. 21, 1926. THEONETT & CO., Chicago, Ill., a corporation of Illinois. Renewed Sept. 21, 1946. Class 46.

218,250. **BARBAROSSA.** MALT AND HOP SIRUP. Registered Sept. 21, 1926. THE RED TOP MALT EXTRACT COMPANY. Renewed Sept. 21, 1946, to Red Top Brewing Company, Cincinnati, Ohio, a corporation of Ohio. Class 46.

218,292. **REPRESENTATION OF A TIE-BAND FOR SKEINS OF YARN.** SKEINS OF YARNS OF VARIOUS KINDS. Registered Sept. 21, 1926. JAMES LEES AND SONS COMPANY, Bridgeport, Pa., a corporation of Pennsylvania. Renewed Sept. 21, 1946. Class 43.

218,376. **ALLISATIN.** PHARMACEUTICAL PRODUCTS FOR CERTAIN DISEASES. Registered Sept. 28, 1926. CHEMICAL WORKS FORMERLY SANDOZ, Basel, Switzerland. Renewed Sept. 28, 1946, to Sandoz Chemical Works, Inc., New York, N. Y., a corporation of New York. Class 6.

218,391. **AMENOTONE.** MEDICINAL PREPARATION FOR THE TREATMENT OF CERTAIN DISEASES. Registered Sept. 28, 1926. JOHN T. MILLIKEN & COMPANY, St. Louis, Mo. Renewed Sept. 28, 1946, to Abbott Laboratories, North Chicago, Ill., a corporation of Illinois. Class 6.

218,396. **"D. H. CASTILLE" ETC. AND DRAWING.** CERTAIN AUTOMOBILE ELECTRICAL PARTS; AND RADIO RECEIVING SETS AND PARTS THEREOF. Registered Sept. 28, 1926. D. H. CASTILLE, New Iberia, La. Renewed Sept. 28, 1946. Class 21.

218,427. **"GOHI" ETC. AND DESIGN.** CERTAIN NAMED MATERIALS. Registered Sept. 28, 1926. NEWPORT ROLLING MILL CO., Newport, Ky., a corporation of Delaware. Renewed Sept. 28, 1946. Class 12.

218,449. **ONCE-ALWAYS.** GASOLINE, LUBRICATING OILS AND GREASES. Registered Sept. 28, 1926. CITIES SERVICE OIL COMPANY, Cleveland, Ohio. Renewed Sept. 28, 1946, to Cities Service Oil Company, Bartlesville, Okla., a corporation of Delaware. Class 15.

218,460. **REPRESENTATION OF A SQUARE DESIGN HAVING INTERLACED TRIANGLES ETC.** PRAYER SHAWLS. Registered Sept. 28, 1926. M. WOLOZIN, INC. Renewed Sept. 28, 1946, to M. Wolozin, New York, N. Y. Class 39.

218,472. **"KANSAS LEADER" AND DRAWING.** WHEAT FLOUR AND GRAHAM FLOUR. Registered Sept. 28, 1926. J. W. SCOTT, doing business as State Line Milling Company, Kiowa, Kans. Renewed Sept. 28, 1946. Class 46.

218,490. **"TIP TOP" AND DRAWING.** AMMONIA, JAVELLE WATER. Registered Sept. 28, 1926. CRESCENT BOTTLING WORKS, Newark, N. J., a corporation of New Jersey. Renewed Sept. 28, 1946. Class 6.

218,502. **TRAZITE.** COMPOSITION FLOORING. Registered Sept. 28, 1926. MARINE DECKING & SUPPLY CO., Philadelphia, Pa. Renewed Sept. 28, 1946, to Oakite Products, Inc., New York, N. Y., a corporation of New York. Class 12.

218,538. **REMEDEX.** PREPARATION FOR THE TREATMENT OF COUGHS AND COLDS. Registered Sept. 28, 1926. JACOB D. KAPLAN, doing business as Remedex Laboratories, Union City, N. J. Renewed Sept. 28, 1946. Class 6.

218,544. **RECTIGRAPH.** PHOTOGRAPHIC DEVELOPING AND FIXING CHEMICALS. Registered Sept. 28, 1926. RECTIGRAPH COMPANY. Renewed Sept. 28, 1946, to The Haloid Company, Rochester, N. Y., a corporation of New York. Class 6.

218,634. **CHURCH BUSINESS.** PERIODICALS. Registered Sept. 28, 1926. THE DUPLEX ENVELOPE COMPANY, Richmond, Va., a corporation of Virginia. Renewed Sept. 28, 1946. Class 38.

218,757. **SKIP FLEA.** DOG SOAP. Registered Oct. 5, 1926. POLK MILLER PRODUCTS CORPORATION, Richmond, Va., a corporation of Virginia. Renewed Oct. 5, 1946. Class 4.

218,794. **SANIGENIC.** BREAD-WRAPPING PAPER. Registered Oct. 5, 1926. AMERICAN TISSUE MILLS, Holyoke, Mass., a corporation of Massachusetts. Renewed Oct. 5, 1946. Class 37.

218,815. **"C & C" ETC. AND DESIGN.** EXPANDING AND FLAT ENVELOPES FOR CORRESPONDENCE AND PAPERS, FILES FOR CORRESPONDENCE AND PAPERS, WALLETS OF PAPER AND OF PAPER AND FABRIC; AND CERTAIN OTHER NAMED ARTICLES OF STATIONERY. Registered Oct. 5, 1926. THE COOKE & COBB COMPANY, Brooklyn, N. Y. Renewed Oct. 5, 1946, to The Cooke & Cobb Company, New York, N. Y., a corporation of New York. Class 37.

218,844. **HOMIL-OPE.** CHURCH CONTRIBUTION ENVELOPES. Registered Oct. 5, 1926. THE DUPEX ENVELOPE COMPANY, Richmond, Va., a corporation of Virginia. Renewed Oct. 5, 1946. Class 37.

218,867. **UNITPAK.** CORRUGATED-PASTEBOARD BOXES. Registered Oct. 5, 1926. STROHMEYER & ARPE COMPANY, New York, N. Y., a corporation of New York. Renewed Oct. 5, 1946. Class 2.

218,885. **"TABER" AND DESIGN.** PIANOS, PLAYER PIANOS, AND PHONOGRAPHS ADAPTED FOR COMBINATION WITH RADIO SETS. Registered Oct. 5, 1926. FITZGERALD MUSIC COMPANY, Los Angeles, Calif., a corporation of California. Renewed Oct. 5, 1946. Class 36.

218,897. **AZURINE.** OPTICAL LENSES, SPECTACLES, AND PARTS THEREOF. Registered Oct. 5, 1926. AMERICAN SPECTACLE CO., INC., New York, N. Y., a corporation of New York. Renewed Oct. 5, 1946. Class 26.

218,898. **GOSLING.** FRESH ORANGES, LEMONS, AND GRAPEFRUIT. Registered Oct. 5, 1926. EDISON CITRUS ASSOCIATION, Edison, Calif. Renewed Oct. 5, 1946, to Edison Citrus Association, Edison and Bakersfield, Calif., a corporation of California. Class 46.

218,908. **BESTOLITE.** SHEET PACKING AND GASKETS PRODUCED FROM FIBROUS MATERIAL AND RUBBER. Registered Oct. 5, 1926. STEWART R. BROWNE MANUFACTURING CO. INC., New York, N. Y., a corporation of New York. Renewed Oct. 5, 1946. Class 35.

218,917. **THE OAKLAND POST ENQUIRER.** DAILY NEWSPAPER. Registered Oct. 5, 1926. THE POST-ENQUIRER PUBLISHING COMPANY, Oakland, Calif. Renewed Oct. 5, 1946, to Hearst Publications, Incorporated, San Francisco, Calif., a corporation of California. Class 38.

218,921. **"BELARO" AND DESIGN.** ELECTRIC HAIR DRIERS. Registered Oct. 5, 1926. PETER J. MICHELS. Renewed Oct. 5, 1946, to Peter J. Michels, Inc., Brooklyn, N. Y., a corporation of New York. Class 21.

218,943. **SIMPLEX.** EMPLOYEES' TIME RECORDERS AND WATCHMEN'S RECORDERS. Registered Oct. 5, 1926. SIMPLEX TIME RECORDER CO., Gardner, Mass., a corporation of Massachusetts. Renewed Oct. 5, 1946. Class 27.

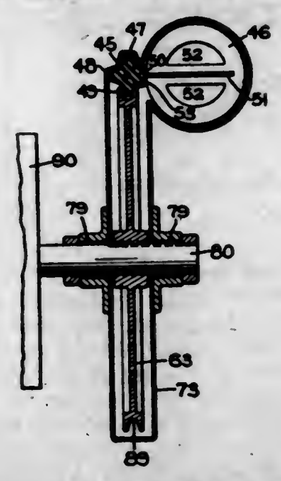
218,951. **"IDEAL" ETC. AND DESIGN.** FIBER SHIPPING CASES, CARTONS, AND BOXES. Registered Oct. 5, 1926. IDEAL CORRUGATED BOX COMPANY, Parkersburg, W. Va., a corporation of West Virginia. Renewed Oct. 5, 1946. Class 2.

218,964. **RECTIGRAPH.** CAMERAS, PHOTOGRAPHIC DEVELOPING APPARATUS, PHOTOGRAPHIC PAPER AND FILM. Registered Oct. 5, 1926. RECTIGRAPH COMPANY. Renewed Oct. 5, 1946, to The Haloid Company, Rochester, N. Y., a corporation of New York. Class 26.

219,096. **REPRESENTATION OF A FEMALE IN SILHOUETTE.** CAKES AND CRACKERS. Registered Oct. 12, 1926. SOUTHERN BISCUIT WORKS. Renewed Oct. 12, 1946, to Southern Biscuit Company, Incorporated, Richmond, Va., a corporation of Virginia. Class 46.

219,122. **"DULCINEE" AND DESIGN.** FACE POWDERS, FACE CREAMS, FACE PACKS, TOILET WATERS, ROUGES, LIP STICKS, EYEBROW PENCILS, PERFUMES, HAIR TONICS, HAIR OILS, DENTIFRICES, TOOTH POWDERS, NAIL POLISHES, FOOT POWDERS, BATH SALTS, SMELLING SALTS, SACHETS, AND INCENSES. Registered Oct. 12, 1926. LEIGH CHEMIST, INC., New York, N. Y. Renewed Oct. 12, 1946, to Shulton, Inc., New York, N. Y. and Hoboken, N. J., a corporation of New Jersey. Class 6.

219,217. **MILLER.** LOCKS. Registered Oct. 12, 1926. THE YALE & TOWNE MANUFACTURING COMPANY, Stamford, Conn. Renewed Oct. 12, 1946, to The Yale & Towne Manufacturing Company, New York, N. Y., a corporation of Connecticut. Class 25.

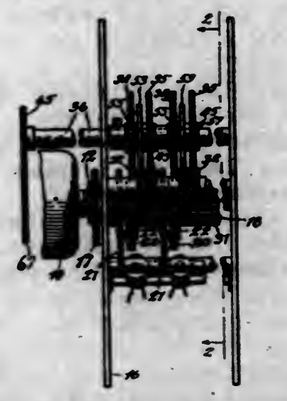


219,248. **P-NUT-PI.** CANDY. Registered Oct. 12, 1926. CRYSTAL CANDY COMPANY. Renewed Oct. 12, 1946, to Rawls Delicious Foods, Inc., Winston-Salem, N. C., a corporation of North Carolina. Class 46.

219,257. **MILK GRAINS.** COMPOUNDED DAIRY RATION. Registered Oct. 12, 1926. ELMORE MILLING COMPANY, INC., Oneonta, N. Y., a corporation of New York. Renewed Oct. 12, 1946. Class 46.

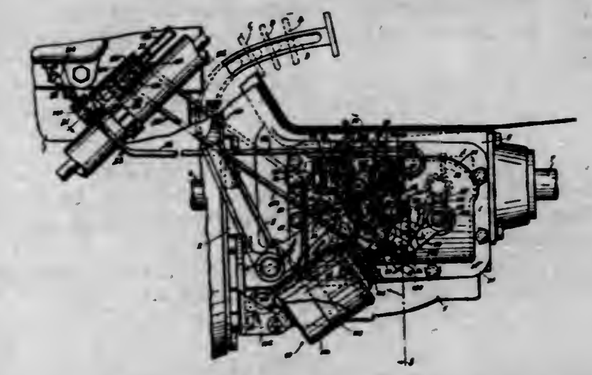
219,266. **UDYBRITE.** MATERIALS FOR CADMIUM PLATING SALTS. Registered Oct. 12, 1926. UDYLITE PROCESS COMPANY, Kokomo, Ind. Renewed Oct. 12, 1946, to The Udylite Corporation, Detroit, Mich., a corporation of Delaware. Class 6.

219,299. **BUD & BLOSSOM.** FINGER RINGS AND FINGER-RING MOUNTINGS. Registered Oct. 12, 1926. MICHAEL LEVY, New York, N. Y. Renewed Oct. 12, 1946. Class 28.



22,789
CONVEYER
Eugene E. Brunner, York, Pa., assignor to Read Machinery Co. Inc., York, Pa., a corporation of Pennsylvania
Original No. 2,383,932, dated September 4, 1945, Serial No. 493,639, July 6, 1943. Application for reissue January 8, 1946, Serial No. 639,733
9 Claims. (Cl. 198—168)

1. In a conveyer, an endless conveying element adapted to be drawn through an endless casing, comprising a series of flight units, each of said flight units having a main body portion formed of sheet metal, a reinforcing rib of sheet metal fastened edgewise to one face of the main body and having an end portion disposed substantially in alinement with one side edge of the main body portion, a bracket secured to said main body portion and to the end portion of said rib, an endless belt having a series of longitudinal ribs, means for attaching the bracket of each of said flight units to one of the ribs of said belt, and sheaves mounted in the conveyer casing for engaging other ribs of said belt for guiding the conveying element through said casing.



22,790
PRESELECTING MECHANISM
Edward J. Mastney, Berwyn, and John H. Williams, Chicago, Ill., assignors to Oak Manufacturing Co., a corporation of Illinois
Original No. 2,293,299, dated August 18, 1942, Serial No. 390,514, April 26, 1941. Application for reissue January 19, 1944, Serial No. 518,900
10 Claims. (Cl. 74—10)

1. A preselecting mechanism comprising a shaft having a rotational range of over 360°, a coupling member normally rigid on said shaft, a pair of rotary intermittent movements, each movement having a power input and output, each movement including step down means for converting a predetermined angular travel at the input to a smaller angular travel at the output, means on each movement for defining a range of free angular travel, means for supplying power to said movement inputs tending to operate them at equal speeds, each movement including means for transmitting force from the output of said movement to said shaft for shaft rotation when each movement has reached the end of its free travel range, said two movements tending to turn said shaft in opposite directions, and positive locking means for maintaining the relative positions of the parts of each movement to each other and

to the coupling member, each movement having a free travel range corresponding to the shaft range, said locking means preventing range displacement and said movements tending to take up the free travel range and thereafter tending to turn said shaft until equal and opposite shaft turning forces define a preselected point.

22,791
CONTROL MEANS FOR CHANGE-SPEED TRANSMISSIONS
Glenn T. Randol, St. Louis, Mo.
Original No. 2,351,067, dated June 13, 1944, Serial No. 380,752, February 27, 1941. Application for reissue August 7, 1944, Serial No. 548,493
54 Claims. (Cl. 192—3.5)

1. In a control mechanism for a change speed transmission provided with a member shiftable to two gear ratio operative positions and a central neutral position, control means for alternately shifting said member to its two operative positions including fluid power means having an element movable in opposite directions and means for causing said element to alternately move in said opposite directions solely at the will of the operator, a manual member movable from a normally inoperative position to another position for conditioning said control means to be operative, and mechanical connecting means between the manual member and the shiftable member which is operable when the manual member is moved back to its inoperative position for freeing said element by causing the conditioning to be inoperative and then positively moving the shiftable member to its neutral position from an operative position independently of operation of the control means.

PATENTS

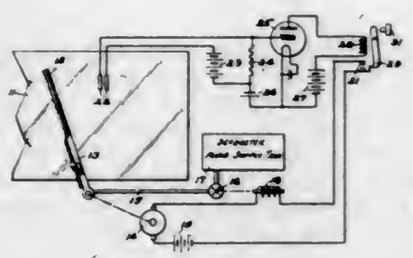
GRANTED SEPTEMBER 10, 1946

2,407,214

PRODUCTION OF AN AVIATION OR MOTOR FUEL OR AN AVIATION OR MOTOR FUEL CONSTITUENT

Stanley Francis Birch, Frederick Arnold Fidler, and Leslie Senior Thornes, Sunbury-on-Thames, England, assignors to Anglo-Iranian Oil Company Limited, London, England, a British joint-stock corporation

No Drawing. Application September 16, 1943, Serial No. 502,644. In Great Britain July 1, 1942
3 Claims. (Cl. 260—666)



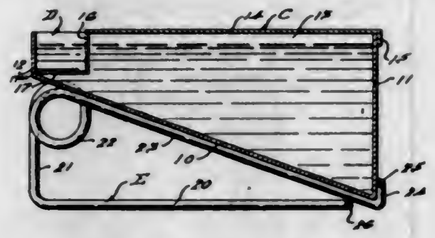
1. A process for the production of cyclopentane from the benzol forerunnings of a coal tar distillate, comprising the steps of subjecting the forerunnings to polymerisation, and producing a concentrate having an approximate boiling range of 75° to 175° C., distilling the said concentrate for the separation as overhead of the light ends boiling approximately at 78° to 80° C., consisting of benzene mainly, together with some unsaturated and sulphur compounds, and a residue fraction as bottoms containing dicyclopentadiene, subjecting said residue fraction to a depolymerising operation to convert dicyclopentadiene in said fraction to cyclopentadiene, and directly subjecting cyclopentadiene so obtained to hydrogenation in the presence of a temperature moderating and reaction stabilising diluent, to yield the cyclopentane product, said depolymerising operation being carried out in a column packed with iron or steel in a divided state such as small pieces or fibre to yield substantially sulphur-free cyclopentadiene as overhead at a column head temperature of 40° to 42° C. at a rate corresponding to the required feed rate of the cyclopentadiene in its hydrogenation.

2,407,215

WINDSHIELD WIPER SYSTEM

John W. Anderson, Gary, Ind., assignor to Productive Inventions, Inc., a corporation of Indiana

Application November 16, 1942, Serial No. 465,649
3 Claims. (Cl. 15—250.4)



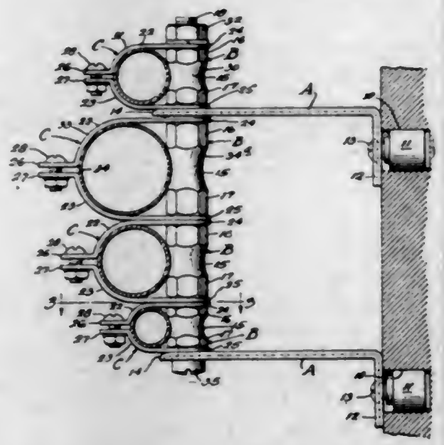
1. In a windshield wiper apparatus, a pair of spaced electrodes mounted on the outer surface of said windshield, a source of potential and an impedance connected thereto, a normally non-conductive electric valve having a control circuit including said impedance, means for delivering de-icing fluid to the windshield, and control means therefor energized through said electric valve whenever the voltage drop appearing across said impedance exceeds a predetermined value characteristic of the accumulation of ice.

2,407,216

WATERING DEVICE FOR FOWL

Albert P. Ball, Detroit, Mich.

Application June 5, 1942, Serial No. 445,896
17 Claims. (Cl. 119—74)



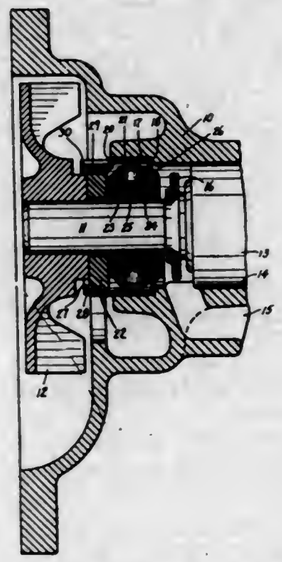
1. In a drinking device for poultry or stock, a tank adapted to contain a supply of water, a relatively narrow trough at one side of the tank separated from said tank but in communication therewith whereby the level of water in the tank and trough is maintained uniform, and spring means beneath the tank supporting the same and operative for automatically elevating only the side of said tank opposite to said trough as the water in the trough is consumed.

2,407,217

CONDUIT SUPPORTING DEVICE

Joseph Banneyer, Chicago, Ill.

Application May 8, 1944, Serial No. 534,581
11 Claims. (Cl. 248—68)



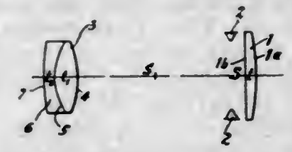
1. A conduit supporting device of the character set forth, comprising a conduit engaging member adapted to contact a conduit at its central portion, clamping means for securing a conduit with said member, said means including one arm extending adjacent one end of said member and another arm which extends adjacent the other end of said member, a bracket for supporting said member, means for securing said bracket and one of said arms to one end of said member, and means for securing the other arm to the other end of said member, one of said securing means being responsive to the turning of said member about its axis transverse with said conduit to tighten one of said arms against an end of said member.

2,407,218

FLUID SEALING DEVICE

Kurt A. Beier, Indianapolis, Ind., assignor to Schwitzer-Cummins Company, Indianapolis, Ind., a corporation

Application February 9, 1945, Serial No. 577,040
1 Claim. (Cl. 286—11)



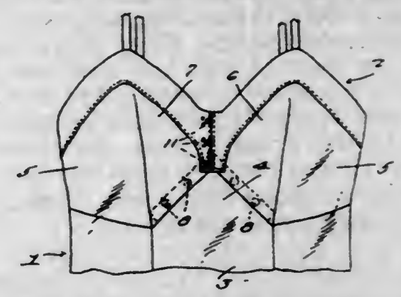
In a fluid seal, a self-contained unit comprising a flexible rubber sleeve of an annular formation adapted to surround a shaft in spaced relation thereto and having an intermediate bulged portion to permit axial expansion and contraction, spaced resilient integral flanges on said sleeve to form spaced end walls therefor, an expanding spring within said sleeve and acting between said flanges for flexing said flanges about their connections with said sleeve, a rigid sealing washer formed with a plurality of arcuate recesses in the periphery thereof, a seal retaining cup embracing said sleeve and washer, a plurality of inwardly bent tongues formed about said cup inwardly of the periphery of said washer for retaining it with said sleeve in unitary sealing relation against the tension of said spring, inwardly extending arcuate lugs formed from the periphery of said cup conforming to and seatable in said arcuate recesses respectively for interlocking engagement therewith to prevent relative rotation therebetween, and an annular centering shoulder formed in the opposite end portion of said retaining cup to provide an annular seating and centering shoulder for said sleeve.

2,407,219

OPTICAL SYSTEM

Alva H. Bennett, Kenmore, N. Y., assignor by mesne assignments, to American Optical Company, Southbridge, Mass., a voluntary association

Application December 2, 1943, Serial No. 512,569
5 Claims. (Cl. 88—57)



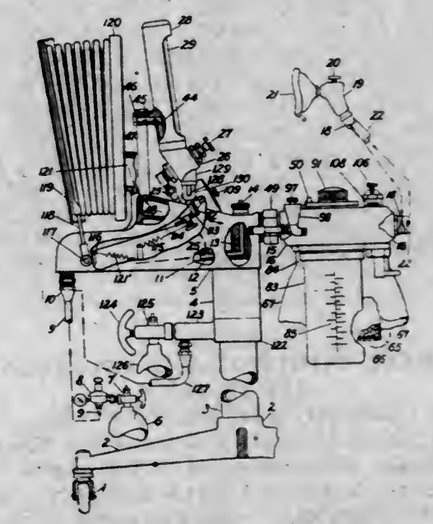
2. In a projection eyepiece for use as a projection ocular, an optical system comprising a singlet plano-convex field lens and a doublet eye lens, the primary image plane of said eyepiece falling between said field lens and said eye lens, the first order characteristics of the system being determined by a ratio between the focal length of said field lens and the focal length of said eyepiece of approximately 2.9 to 1, and a ratio between the focal length of said eye lens and the focal length of said eyepiece of approximately 0.96 to 1.

2,407,220

NURSING SLIP

Mary Alice Blocker, Jupiter, Fla.

Application December 14, 1943, Serial No. 514,260
2 Claims. (Cl. 2—73)

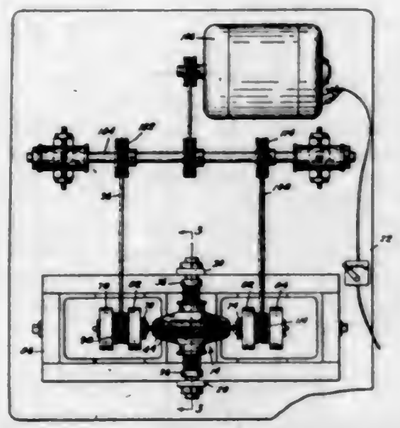


1. A slip comprising a body having a center front panel provided at the top with a projecting upper end of inverted V-shape, and a brassière permanently secured to the upper end of the body and having front pockets provided with downwardly diverging inclined edges at the inner sides thereof and adjacent and parallel with the inclined side edges of the projecting upper end of the center front panel, means separably connecting the inclined edges of the pockets to the adjacent inclined edges of the projecting upper end of the center front panel, said pockets having short vertical edges extending upwardly from the upper ends of the inclined edges thereof and above the upper end of the center front panel, and means to separably connect said short vertical edges together, substantially the inner half of each pocket being turnable outwardly upon release of said first and second-named means to facilitate nursing.

2,407,221

MULTIPLE PURPOSE GAS UNIT

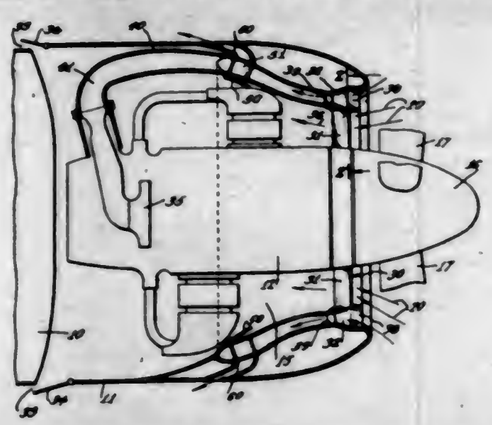
John L. Bloomheart, Toledo, Ohio, assignor to Martha F. McKesson



Application March 20, 1944, Serial No. 527,249
4 Claims. (Cl. 128—188)

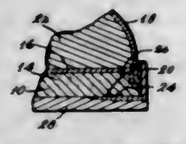
1. Respiration equipment comprising a head, a manifold unit mounted on the head having a line of parallel intakes thereto, a common discharge

therefrom with an intermediate chamber, a panel provided with individually adjustable controls for gas supplies to the respective intakes for the manifold, a variable capacity gas receiver mounted with the head and in open communication at all times with the manifold chamber, an additional flow control body medially forward from the panel in the extent of the panel transversely of the head, said body being in communication with the manifold chamber by way of a passage thru the head, said body including a plurality of valve chambers, an absorber unit, and laterally therefrom, a vaporizer unit, each unit directly and independently upwardly connected to different chambers from the underside of the body to be there supported by the body, relatively movable valves in the body for the absorber and vaporizer units, a mask, and in addition to said relatively movable valves, a manually operable single way valve in the passage from the head to the body for restricting gas flow from the head to the body, and duct means extending from the said flow control body to the mask.



2,407,222
GRINDING MACHINE
Malcolm B. Boyce, Haverhill, Mass.
Application October 12, 1945, Serial No. 622,017
9 Claims. (Cl. 51—118)

9. In a grinding machine, a pair of rotary grinding members resiliently urged toward each other and having opposed annular grinding surfaces, and a pair of work holders adjacent the peripheries of said members and at diametrically opposite sides of said members, said work holders having mutually parallel axes spaced equally on opposite sides of the axis of said members, and each work holder being adapted to hold a work piece with a portion thereof projecting between and engaged by said grinding members, and means for rotating the work holders in opposite directions thereby to rotate said grinding members by the rotating work engaged between them.

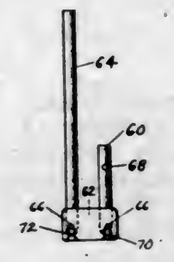


2,407,223
ENGINE COOLING AND CHARGING APPARATUS
Frank W. Caldwell, West Hartford, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application January 9, 1945, Serial No. 572,077
2 Claims. (Cl. 123—171)

1. In an aircraft having an engine, a fan driven from said engine, said fan having a plurality of concentric rows of blades, the blades being so formed that a plurality of concentric air streams substantially parallel to the axis of rotation of the fan are produced, means for delivering the inner and outer air streams directly to the engine for cooling its surface and for combustion,

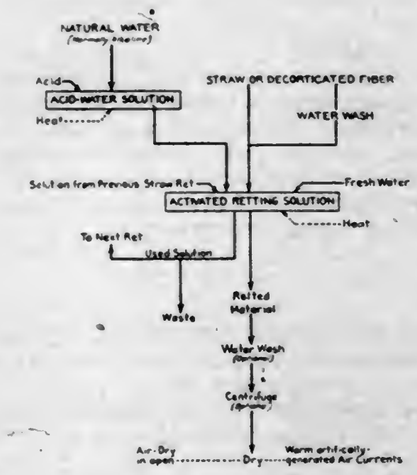
the means for delivering the outer air stream including a conduit, a hollow intercooler positioned within the conduit, and means for diverting a portion of the inner air stream and passing it through the intercooler.

2,407,224
SHOE AND METHOD OF MAKING THE SAME
James D. Chandler, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application September 6, 1945, Serial No. 614,624
19 Claims. (Cl. 36—16)



14. A shoe having, in combination, an upper, a platform sole having a reduced margin and a raised central portion, a sock lining covering said raised central portion, the margin of the upper being turned outwardly and overlying the reduced margin of the platform sole, a wrapper strip engaging the upper, a row of stitches securing the upper to the reduced margin of the platform sole, another row of stitches securing the wrapper strip and upper to the raised central portion of the sole, said wrapper strip being turned downwardly along the line of said last-named stitches and inwardly beneath the bottom surface of the platform sole, and an outsole attached to the inturned portion of the wrapper strip.

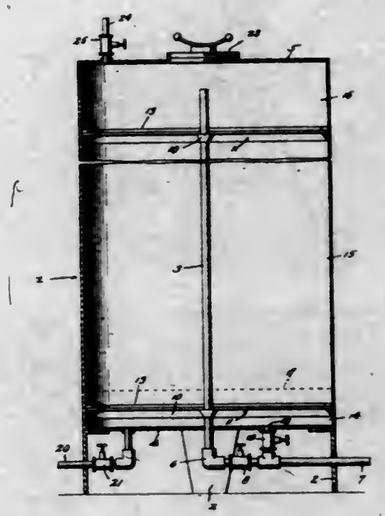
2,407,225
THERMOSETTING MOLDING POWDER FROM WHEAT, WOOD PITCH, AND RESIN, AND METHOD OF MAKING
Cletus L. Dixon, Chicago, Ill., assignor, by mesne assignments, to The Protectoseal Company, Chicago, Ill., a corporation of Illinois
No Drawing. Application January 8, 1943, Serial No. 471,760
19 Claims. (Cl. 260—6)



4. A molding powder adapted to be formed into articles by heat and pressure and characterized by good flowing properties in the mold, comprising an intimate mixture of wheat flour, extracted pine wood pitch having an acid number of about 93 and melting at approximately 115° C., and synthetic resin selected from the class consisting of phenol-formaldehyde resins and urea-formaldehyde resins; said flour being less than half the weight of said molding powder, and the combined weight of said pitch and said resin being approximately two-thirds the weight of said flour.

2,407,226
ANTIBUMPING DEVICE
George L. Doelling, St. Louis, Mo.
Application October 27, 1941, Serial No. 416,666
3 Claims. (Cl. 23—292)

1. In combination, a vaporizer and an antibumping device comprising an integral structure containing more than two chambers, within the vaporizer and in close proximity to the heating surface thereof, one chamber being sealed and extending above the others and connecting therewith by a discharge passage, said first chamber being without opening above the point of discharge, said other chambers being open at the bottoms thereof and each having a discharge opening thereabove but at sufficient distance below the top of the chambers to give a closed space above said discharge openings.

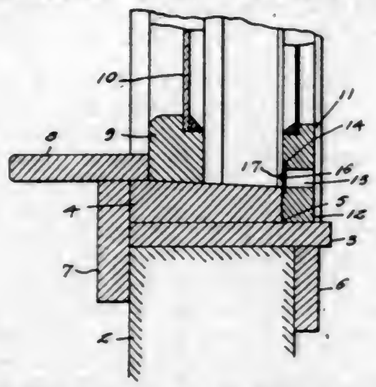


2,407,227
RETTING METHOD
Theodore Earle, Pacific Palisades, Calif.
Application November 12, 1943, Serial No. 510,072
2 Claims. (Cl. 195—8)

1. The method of retting flax and analogous fibrous plant material which consists of positively acidifying water to a degree approaching and slightly less than the acid concentration optimum for enzymic activity, adding thereto such amount of enzymically-active solution from a previous ret as will bring the acid concentration of the resulting mixture to said optimum value, heating said mixture to a temperature conducive to maximum enzymic action, steeping the material to be retted in said mixture at sustained elevated temperature, and removing the material from said mixture for termination of retting action when the acid concentration of the solution begins to decline.

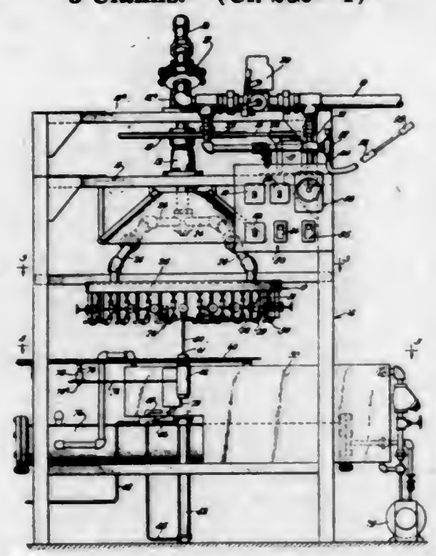
2. The method of retting flax and analogous fibrous plant material which consists of positively acidifying water to a pH of approximately 6.6, adding thereto such amount of enzymically-active solution from a previous ret as will bring the pH of the resulting mixture to a value of approximately 6.3, heating said mixture to a temperature of approximately 91 degrees F., steeping the material to be retted in said mixture at sustained elevated temperature, noting the variation of mixture pH value during the retting operation, and removing the material from said mixture for termination of retting action when the acid concentration of the solution begins to decline.

2,407,228
WATER SOFTENER
Alexander R. Forsyth, Los Angeles, Calif.
Application December 7, 1943, Serial No. 513,272
3 Claims. (Cl. 210—24)



1. A water softener comprising a tank, vertically spaced perforated plates for the reception of a softening agent therebetween mounted in fixed position within said tank, a valve-controlled drain communicating directly with the bottom of the tank beneath said plates, a valve-controlled inlet pipe communicating directly with the bottom of the tank beneath said plates, means to supply water to the tank above said plates including a valve-controlled stand pipe connected to the inlet pipe and extending upwardly into the tank through the bottom thereof to a point adjacent the top of said tank, said stand pipe passing through the perforated plates, and a valve-controlled outlet pipe connected to the top of the tank.

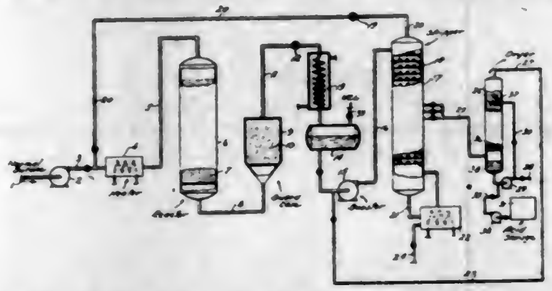
2,407,229
WINDOW SCREEN DRAIN
Herman C. Freese, Houston, Tex.
Application May 11, 1945, Serial No. 593,279
3 Claims. (Cl. 160—44)



1. In a window screen drain the combination with a window casing including a ledge of lesser horizontal width than the thickness of the remaining casing and thereby defining a recess for

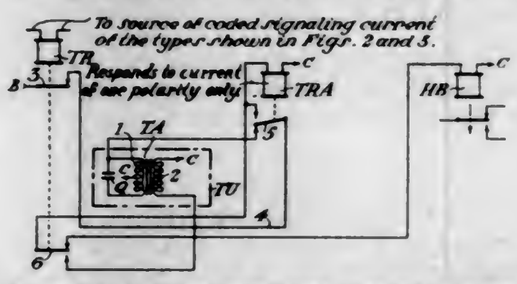
a screen fitted into the casing and seated with its lower end in the recess, a screened opening

in the lower board of the screen and having a bottom flush with the top surface of the ledge.



2,407,230
HEAT-TREATING APPARATUS
Ernst Albert Furkert, Chicago, Ill.
Application October 27, 1941, Serial No. 416,613
3 Claims. (Cl. 266—4)

1. Heat treating apparatus comprising a plurality of rotary burners arranged in positions for projecting flames into a zone located axially with respect to the orbit of the burners, means for rotating the burners, means for supplying fuel thereto during such rotation, vertically reciprocable means for supporting in said zone an article to be heated, means for reciprocating said supporting means between upper and lower positions, and article transferring means operable from a position remote from said supporting means for receiving an article to be heated and transferring the same into the path of movement of said supporting means intermediate said upper and lower positions thereof for delivery thereto upon movement of said supporting means from the lower to the upper position.



2,407,231
MOISTURE REMOVAL IN ISOMERIZATION PROCESSES
Lionel S. Galstaun, Oakland, Calif., assignor to Tide Water Associated Oil Company, San Francisco, Calif., a corporation of Delaware
Application February 24, 1944, Serial No. 523,699
14 Claims. (Cl. 260—683.5)

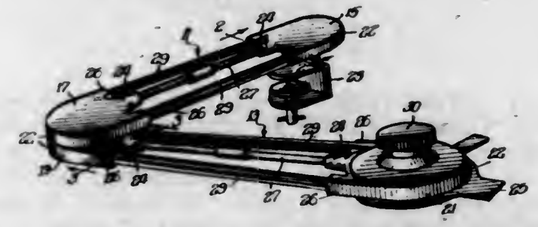
1. A process of preventing corrosion which comprises: introducing a stream of liquid hydrocarbons containing dissolved hydrogen chloride and dissolved water into a corrodible stripper to flow downwardly therethrough under coordinated conditions of temperature and pressure sufficient to separate hydrogen chloride, withdrawing a

portion of said stream from a zone intermediate the ends of said stripper in which said water tends to separate in liquid form when unregulated, and regulating said temperature and pressure conditions to effect removal of water in said portion while in solution in said hydrocarbons.

2,407,232
IMPULSE ACTUATED TIMING MEANS
Chalmers W. Gilbert, Penn Township, Allegheny County, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application July 14, 1943, Serial No. 494,753
4 Claims. (Cl. 175—320)

1. Impulse actuated timing means comprising a relay which will respond to current of one polarity only, an oscillating circuit, means for at times setting up oscillations in said circuit, and means for supplying said relay with an oscillating current in response to the oscillations set up in said circuit, said circuit being highly damped and said means being connected with said relay in such manner and the parts being so proportioned that said relay will pick up and again release in response to the first half cycle of said current and will thereafter remain released.

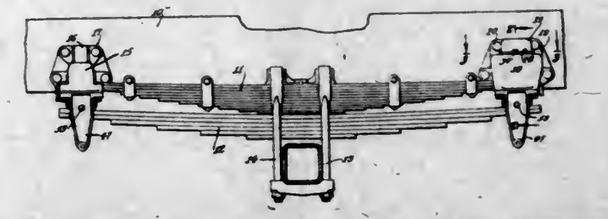
2,407,233
INSULATED WIRE STRIPPING DEVICE
John J. Greer, Conimicut, and Albert Luongo, Wickford, R. I.
Application February 21, 1944, Serial No. 523,378
6 Claims. (Cl. 81—9.5)



1. An insulating wire stripping device comprising a pair of members, means to pivotally relate said members, said members providing handle portions at one of their ends and cutting jaws at their other ends, said jaws being notched to receive the wire while cutting the insulation there-

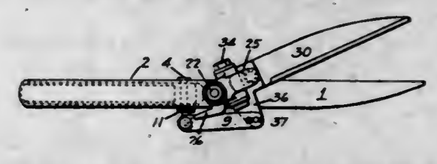
about, a wire positioning means having a portion located on the side of the jaws away from the pivot means and provided with a guide substantially in line with the cutting jaws when the latter are in closed position to direct the wire into the jaws toward the pivot means, and means to pivotally mount said positioning means on said pivotal means said jaws being movable relative to said positioning means.

2,407,234
ELECTROMAGNETIC PRODUCT AND PROCESS OF MAKING THE SAME
Robert G. Guthrie and John Chumasero, Chicago, Ill., assignors to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
No Drawing. Application May 31, 1941, Serial No. 396,180
2 Claims. (Cl. 75—22)



1. A method for producing a high permeability sintered core structure for an electromagnet with a minimum of further metal working being required which comprises employing material in powdered form, the composition of said powder substantially comprising equal portions of iron and nickel and 2 to 3 per cent of the group consisting of molybdenum and chromium, molding the powdered material to the desired shape, and sintering the same by the application of pressure and heat until the saturation point is high, the initial permeability is over 2,000, the maximum permeability is over 10,000, the coercive force is less than 0.250 oersted, and the residual flux density is less than 4,000 gausses.

2,407,235
DRAFTING MACHINE
Laban Richard Halstead, Chicago, Ill., assignor to Eugene Dietzgen Co., Chicago, Ill., a corporation of Delaware
Application October 12, 1942, Serial No. 461,688
4 Claims. (Cl. 33—79)

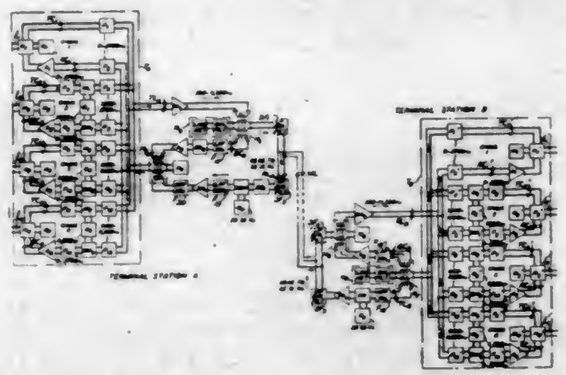


2. In parallel motion apparatus comprising an arm having a pair of spaced heads, a turnable member in each head, a driving member interconnecting said turnable members, said driving member including a portion extending between said heads, the combination of a detachable cover extending between and attached at its opposite ends on said spaced heads in position enclosing the driving member between said heads, said cover comprising a resilient shell of sheet metal having a pair of spaced walls, at least one of which is formed with an outwardly pressed flute extending substantially throughout the length of the cover for strengthening the same, said flute being disposed between the opposite sides of the wall in which it is formed, said heads having each a socket for receiving the opposed ends of said cover, one of the said sockets comprising a lateral open slot having opposing walls and a closed bottom, and a longitudinal groove in a wall of the slot in position between the bottom and the open side of the slot, whereby the end of the cover may be assembled in the slot through said open side, by compressing the opposed walls of the cover, the resilience of which, after assembled, serves to yieldingly press the walls of the cover apart in said slot and interlock the flute in said groove to retain the cover in the slot.

2,407,236
RUBBER SPRING MOUNTING
John W. Heiney, Allentown, Pa., assignor to Mack Manufacturing Corporation, New York, N. Y., a corporation of Delaware
Application March 16, 1944, Serial No. 526,666
10 Claims. (Cl. 267—56)

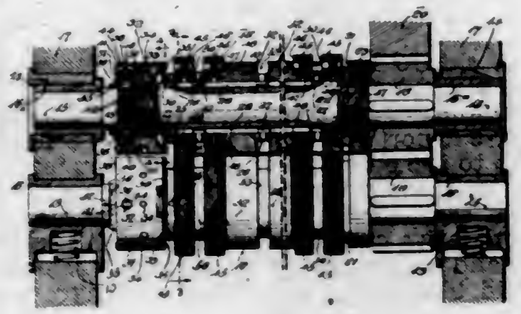
1. A yielding non-metallic connection between a spring and vehicle frame comprising a housing mounted on the frame, a spring adapted to be connected to the frame, a recess in the housing forming a seat, openings in the housing on opposite sides of the recess, a cover adapted to be secured over the recess and providing sides for said openings, an end portion of said spring extending through said openings, a block of yielding non-metallic material in the seat, means to secure the block to the spring end portion and a lug on the free end of said end portion of said spring overlapping the adjacent outer face of said cover in spaced relation thereto and constituting limiting means for limiting the retraction of said end portion from said housing.

2,407,237
SHEARS
David Howard Keiser, Jr., West Lawn, Pa.
Application January 25, 1945, Serial No. 574,507
7 Claims. (Cl. 30—248)



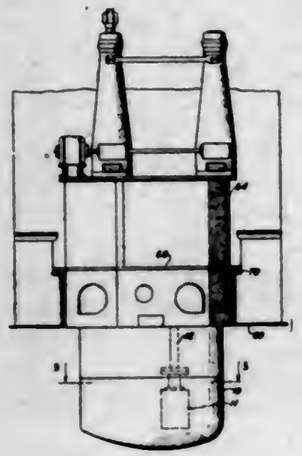
3. In shears having a pair of pivotally connected blades relatively movable in parallel cutting relation, one of said blades having a separate cutting-end portion beyond its pivotally connected portion to the other blade, pivotally connected to the latter portion for independent pivotal movement of said cutting end portion transversely to its cooperative cutting movement with the other blade, and spring means for normally maintaining said blades in cooperating cutting engagement.

2,407,238
CARRIER COMMUNICATION SYSTEM
Leonard G. Abraham, Madison, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application August 9, 1944, Serial No. 548,731
10 Claims. (Cl. 179—15)



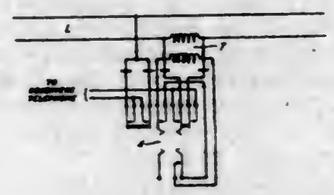
1. In a multiplex communication system, two terminal stations, a two-way, two-wire line connecting said stations, means at one station for providing a plurality of low frequency carrier communication channels for transmission to the

other station, means at said other station for providing a plurality of higher frequency carrier communication channels for transmission to said one station, a low-pass directional filtering means and a high-pass directional filter means at said one station for respectively supplying the outgoing low frequency carrier channels to said line and receiving the incoming higher frequency carrier channels from said line, another low-pass directional filtering means and another high-pass directional filtering means at said other station



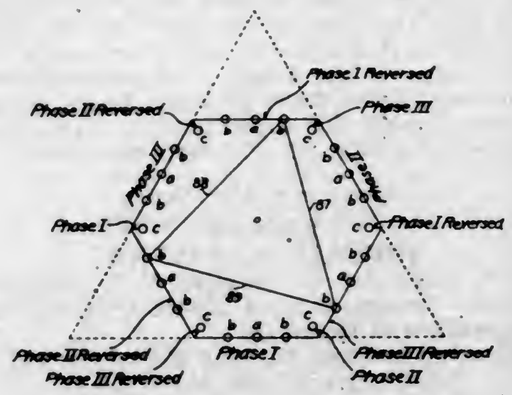
for respectively selecting the incoming low frequency carrier channels from said line and supplying the outgoing higher frequency carrier channels to said line, means at each station for separately supplying an outgoing voice frequency communication channel through the low-pass filtering means thereat to said line for transmission thereover, and means at each station connected to the drop side of the low-pass directional filtering means at that station, for selectively receiving the voice frequency channel incoming over said line.

2,407,239
FRICTION DRIVE FOR WEB PROPELLING ROLLERS
Alexander J. Albrecht, West New York, N. J., assignor to R. Hoe & Co., Inc., New York, N. Y., a corporation of New York
Application October 9, 1942, Serial No. 461,477
5 Claims. (Cl. 271—2.3)



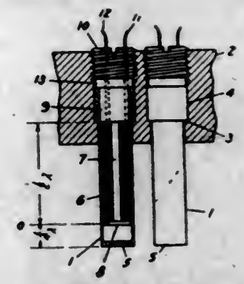
1. In a material propelling roller for printing or folding machines, a rotatable shaft, a rotary material engaging member supported by and rotatable with the shaft, a sleeve rotatable with the shaft and having a friction face, a driven member rotatable about the sleeve and having a friction surface, a friction collar supported relative to and rotatable with the shaft and movable in the direction of the axis of the shaft, an adjusting member supported relative to the shaft and movable in the direction of the axis of the shaft, and a flat spring ring normally disposed entirely in a plane perpendicular to the axis of the material engaging member and surrounding the shaft and operably interposed between the adjusting member and the collar whereby axial movement of the adjusting member causes the spring ring to bias the collar for movement towards the said friction face to thereby press the driven member between the collar and the friction face and yieldingly drive the material engaging member when the driven member is rotated, the adjusting member engaging the spring to constantly bias the spring against the collar and the degree of constant bias of the spring against the collar being determined by the degree of adjusting movement of the adjusting member.

2,407,240
PROJECTING AND RETRACTING MECHANISM FOR UNDERWATER SIGNAL SOURCES
Charles C. Barber, Rockville Centre, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 18, 1943, Serial No. 514,778
13 Claims. (Cl. 116—27)



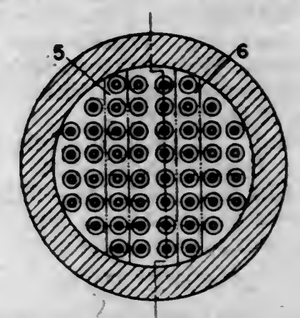
1. In combination, in an under-water sound system, apparatus for mounting on a ship having an opening below its water line and for transmitting sound waves into the water and receiving sound waves from the water, a housing for said apparatus, said housing having an opening at one end and allowing said apparatus to move interiorly thereof such that said apparatus is capable of being lowered into the water through said one housing opening and of being retracted from the water through said one housing opening, said housing having said one end mounted on said ship at said ship's opening such that said housing opening aligns substantially with said ship opening and such that said housing projects interiorly of said ship, means positioned horizontally in the interior of said housing and capable of lowering and raising movements interiorly of said housing for supporting said apparatus in said housing and imparting corresponding lowering and raising movements to said apparatus, means for actuating said supporting means in said lowering and raising movements and thereby lowering said apparatus into the water and retracting said apparatus from the water respectively, and adjustable means interposed between said housing and said supporting means for maintaining the horizontal position of said supporting means in the interior of said housing.

2,407,241
MONITORING SYSTEM
Henry M. Bascom, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application August 9, 1944, Serial No. 548,666
6 Claims. (Cl. 179—51)



1. In a monitoring system, a line, telephone stations at each end thereof for transmitting voice frequency currents thereover in either direction, a monitoring position intermediate said stations, a telephone set at said position, and splitting means including a pair of selective switches controlled at said position for simultaneously preventing transmission of voice currents between said stations and for selectively connecting said telephone set to said line for communicating with either of said stations to the exclusion of the other, said splitting means also comprising a multiwound inductance coil having at least one winding in series with said line and one winding normally short-circuited and adapted to be open-circuited in response to operation of either of said switches.

2,407,242
ELECTRICAL APPARATUS
Laurence Batchelder, Cambridge, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Application April 1, 1933, Serial No. 663,963
10 Claims. (Cl. 177—386)

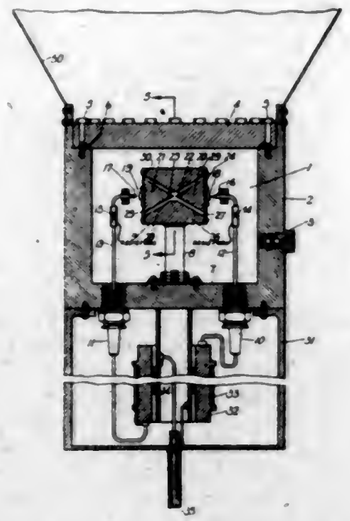


1. In a system for producing a controllable beam of radiated wave energy, a beam radiator, a power distribution source having terminal taps with voltage phases between taps forming a voltage vector diagram of substantially a regular polygon, a plurality of loads formed with branches having input terminals symmetrically connected about the terminal taps of the power distribution source, said loads comprising in one branch the load of the beam radiator and in the other branches loads each 120 degrees out of phase with the first load and each other.

2,407,243
MAGNETOSTRICTION OSCILLATOR
Laurence Batchelder, Cambridge, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Application July 27, 1933, Serial No. 682,420
8 Claims. (Cl. 177—386)

1. A magnetostriction oscillator comprising a heavy plate element, a magnetostriction tube having one end positioned in said plate, means provided in said plate and at the end of said tube whereby said tube may be clamped rigidly to said plate, an electromagnetic exciting coil within said tube and having pole faces for providing electric flux between the clamped portion of said tube and a portion adapted to be a half wave length at the frequency at which the oscillator is vibrated, said tube extending beyond the point at which the flux is applied and means providing a cap at the end of said tube.

2,407,244
APPARATUS FOR SUBMARINE SIGNALING
Laurence Batchelder, Cambridge, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Maine
Application August 2, 1939, Serial No. 287,974
6 Claims. (Cl. 177—386)



1. A compressional wave sending and/or receiving device having a circular radiating and/or receiving surface of diameter larger than the wave length of the compressional waves in the signaling medium at the signaling frequency and means when sending for vibrating said surface and when receiving for producing electrical response to motion of the surface, said vibrations and said response having an amplitude uniform along any chord parallel to a diameter of the surface but varying along any line perpendicular to said diameter, said amplitude variation being symmetrical with respect to said diameter.

2,407,245
ELECTRICAL APPARATUS
Hugo Benioff, La Canada, Calif., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Application April 30, 1941, Serial No. 391,153
4 Claims. (Cl. 250—17)

1. An ultra-high frequency electromagnetic spark oscillator comprising two opposed spark-

ing points, a conical conductive member supporting one of said points and a conical conductor shell surrounding and having a surface parallel to and spaced from said conical member support-

ing the other of said points, said points being closer together than the shell and the conductive member whereby the spark takes place between the sparking points and an insulating disc supporting said conical member to said shell.

2,407,246

FLUORO-CHLORO HYDROCARBONS AND PROCESSES OF MAKING THEM

Anthony F. Benning, Woodstown, N. J., and Joseph D. Park, Wilmington, Del., assignors to Kinetic Chemicals, Inc., Wilmington, Del., a corporation of Delaware

No Drawing. Application July 16, 1943, Serial No. 495,074

6 Claims. (Cl. 260—653)

3. The process of producing the compounds of claim 4 which comprises contacting

$$CF_3CHClCH_2CF_3$$

with elementary chlorine in the vapor phase in light.

4. The compounds represented by the formula $CF_3CXClCCl_2CF_3$, in which X is one of the group consisting of H and Cl.

2,407,247

BONDED ADSORBENT

Southwick W. Briggs, Washington, D. C.

No Drawing. Application November 19, 1940, Serial No. 366,304

4 Claims. (Cl. 252—269)

1. A method of forming an adsorbent body having an increased wet strength comprising forming a mixture of particles of a material having submicroscopic pores and adapted to serve as an adsorbent, ferric oxide, a basic acting material and sodium silicate, and reacting the sodium silicate with the basic acting material and ferric oxide to form a bond for the particles of adsorbent material, the incorporation of the ferric oxide in the bond serving to increase the wet strength of the bond.

2,407,248

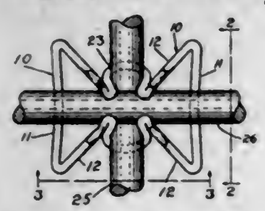
METHOD FOR STABILIZING A POLYMERIZED ROSIN AND POLYMERIZED ROSIN ESTER

Joseph N. Borglin, Wilmington, Del., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application June 26, 1942, Serial No. 448,625

7 Claims. (Cl. 260—103)

1. The method of stabilizing a material selected from the group consisting of polymerized rosin and polymerized rosin esters which comprises contacting the material with from about one to about ten per cent of sulfur, based upon the weight of said material, at a temperature between about 150° and about 350° C. until the bromine number of the material has become reduced to below about 75 without a decrease in its melting point.



2,407,249

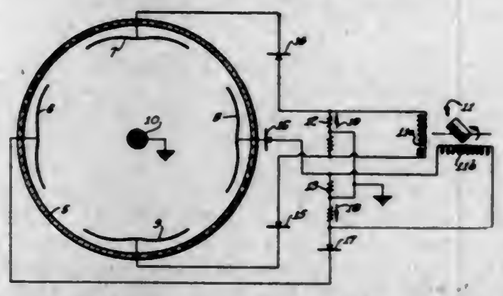
CHAIR TIE FOR REINFORCING RODS

Bingham F. Burner, Arlington, Va., and Lloyd A. Brooke, Washington, D. C.

Application January 17, 1945, Serial No. 573,200

17 Claims. (Cl. 72—122)

1. A rod chair-tie for supporting reinforcing rods at crossings, comprising a pair of substantially triangular leg members each having a supporting base portion and converging side portions, said side portions being spaced apart at their convergent ends, a pair of rod supporting saddle loop members each including side portions and a connecting yoke portion at one end, the side portions of the loop members being joined at their other ends with two adjacent side portions of the two leg members, the convergent ends of the side portions of each leg member being spaced apart a distance less than the diameter of a reinforcing rod, and the said upper ends of the side portions of the saddle loop members being bowed inwardly to form pressure knees designed for contact with the upper part of a reinforcing rod extending between the loop members.



2,407,250

DIRECTIVE ANTENNA

Henri G. Busignies, Forest Hills, N. Y., assignor to Federal Telephone and Radio Corporation, a corporation of Delaware

Application October 30, 1941, Serial No. 417,152

10 Claims. (Cl. 250—11)

7. A directionally responsive antenna system comprising an antenna for translating electro-

magnetic waves, a reflector for said waves disposed adjacent said antenna, said reflector comprising an envelope of non-conductive material, ionizable means within said envelope, a plurality of opposed pairs of electrodes within said envelope for ionizing said ionizable means to produce an ionized path, and means for successively energizing said electrodes in a predetermined sequence whereby the configuration of said path is varied to change the directivity of said antenna system.

2,407,251

RESISTOR

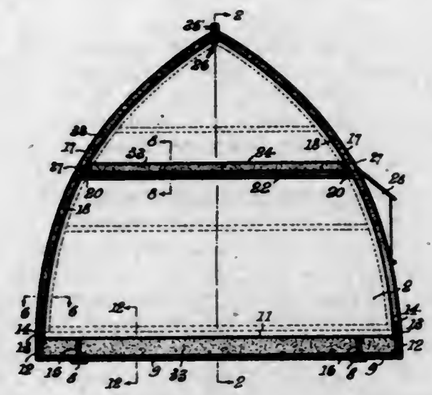
Howard Christensen, Long Island City, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application June 28, 1941, Serial No. 400,341

5 Claims. (Cl. 201—63)

1. A disc of resistive material indented to form four arms and four intervening projections, conductive material on the faces of said projections extending to the vertical faces of the adjacent arms, and electrical connectors on said projections in contact with said material.

2,407,252



PREFABRICATED BUILDING

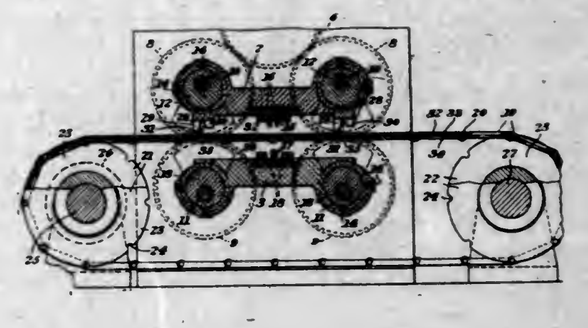
Edwin R. Closs, United States Army, Camp Swift, Tex.

Application October 22, 1943, Serial No. 507,252

6 Claims. (Cl. 20—2)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A building structure including a floor, dual wall and roof panel units, each of said units comprising inner and outer shells formed on similar curves and extending upwardly from said floor, a ridge member uniting the upper ends of the units together and including complemental portions mounted on the upper ends of said units, said portions having upstanding extensions and curved tongues extending outwardly and downwardly adjacent to the lower ends of the extensions, said tongues fitted between the upper ends of said shells and adhesively united to the inner faces thereof and said extensions having parallel confronting faces adhesively united.



2,407,253

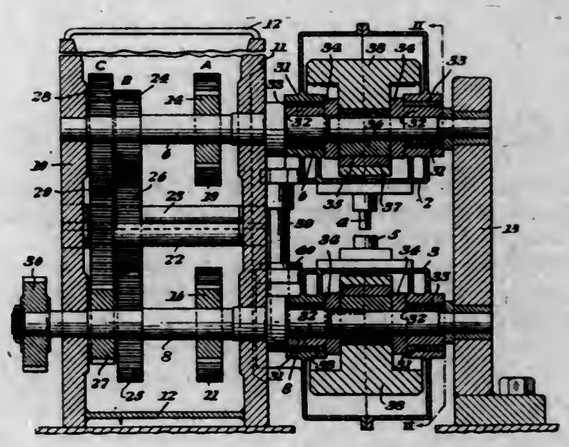
FORMING MACHINE

Guy O. Conner, Wheeling, W. Va.

Application October 28, 1943, Serial No. 507,937

31 Claims. (Cl. 164—20)

1. A forming machine comprising opposed cooperating forming heads each mounted for generally rotary movement while being guided so as to maintain substantially fixed orientation, said heads during operation of the machine moving toward and away from each other and when closest together moving also laterally generally in the same direction, work guiding means separate from said heads and movable therebetween and means on one of said heads for embracing a portion of said work guiding means to insure movement of said work guiding means laterally with said heads at the time said heads are closest together.



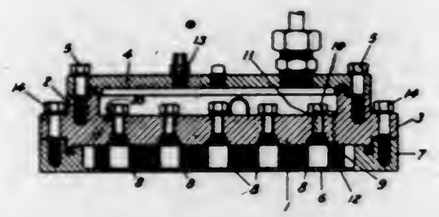
2,407,254

FORMING MACHINE

Guy O. Conner, Cleveland Heights, Ohio

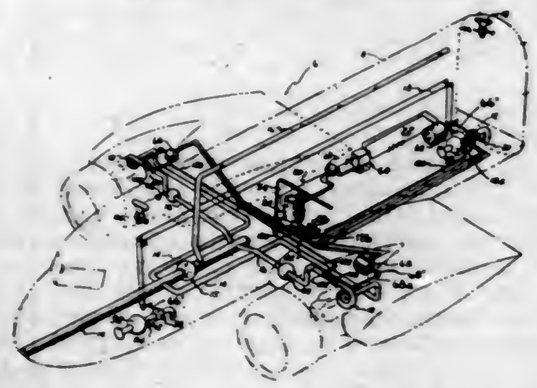
Application February 23, 1945, Serial No. 579,405

32 Claims. (Cl. 164—86)



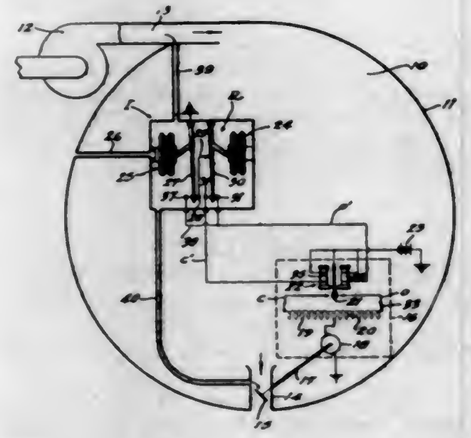
1. A forming machine comprising opposed heads for operating on work positioned therebetween and which relatively move toward and away from each other and when closest together move laterally generally in the same direction, a plurality of parallel shafts on which one of the heads is mounted, eccentric means on said shafts carrying said head to impart the desired movement to said head upon rotation of said shafts, a counterweight also mounted on said shafts and eccentric means on said shafts carrying said counterweight.

2,407,255
DUST COLLECTING COMPOSITION AND METHOD
Martin Eli Cupery, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Original application June 7, 1940, Serial No. 339,331, now Patent No. 2,347,031, dated April 18, 1944. Divided and this application September 3, 1943, Serial No. 501,132
8 Claims. (Cl. 252—88)



1. In air conditioning the method of removing dust which comprises contacting dust-laden air with a water-soluble, substantially non-volatile liquid consisting essentially of an ammonium salt of an acid ester of a polybasic inorganic oxyacid and a polyhydroxy aliphatic compound, and water in proportions such that the liquid has a viscosity between about 20 poises and 80 poises at 25° C.

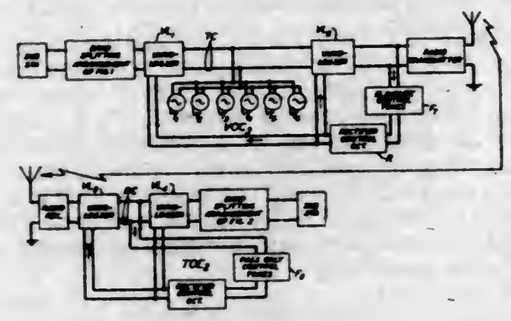
2,407,256
SUBMARINE SIGNALING APPARATUS
Edwin Bertram Dallin, Arlington Heights, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Application June 15, 1933, Serial No. 675,883
8 Claims. (Cl. 177—386)



4. A magnetostrictive oscillator comprising a casing having a diaphragm formed at one end thereof, means providing a heavy plate within said casing, a plurality of magnetostrictive tubes, means rigidly securing one end of each of said tubes to the diaphragm and means detachably and rigidly securing the other ends thereof to said plate.

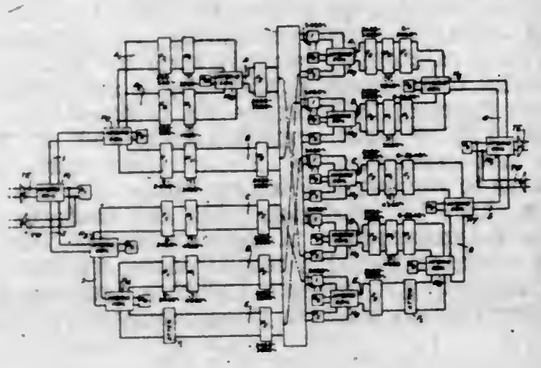
2,407,257
REGULATING MEANS FOR PRESSURE CABINS
Bruce E. Del Mar, Los Angeles, Calif., assignor to Douglas Aircraft Company, Inc., Santa Monica, Calif., a corporation of Delaware
Continuation of application Serial No. 285,216, July 18, 1939. This application February 7, 1942, Serial No. 429,901
14 Claims. (Cl. 98—1.5)

7. In pressure regulating means for a pressurized aircraft cabin, the combination of: air-flow means for circulating a flow of air under pressure through the cabin and including pressurizing inlet means, outlet means, valve means for controlling said flow, and pressure sensitive regulator means for controlling said valve means and thereby controlling the pressure in the cabin; and anticipating control means including a Pitot tube and a venturi disposed in said inlet and outlet means respectively and sensitive to transient changes in differential between quantities of flow in said inlet and outlet means respectively, adapted to produce in said regulator means a response to said transient changes before any substantial change in the pressure of the cabin atmosphere can occur as a result of said transient changes.



2,407,258
CONTROL FOR PRESSURE CABINS
Bruce E. Del Mar, Los Angeles, Calif., assignor to Douglas Aircraft Company, Inc., Santa Monica, Calif., a corporation of Delaware
Application June 6, 1942, Serial No. 446,039
31 Claims. (Cl. 98—1.5)

20. In pressure regulating means for a pressurized aircraft cabin, the combination of: blower means for supplying air to said cabin at a pressure higher than that of the ambient flight atmosphere; an outlet from said cabin; a regulating device for controlling cabin pressure with respect to flight pressure; and means for increasing the rapidity of regulator response to trends of cabin pressure variations, said means comprising a conduit connecting the regulator with a region within the blower air delivery adjacent to the blower wherein the air flow pressure is higher than cabin pressure, and a conduit connecting the regulator with a region adjacent the cabin outlet wherein the air flow pressure is lower than cabin pressure, whereby pressure fluctuations at the blower and cabin outlet are transmitted directly to the regulator.



2,407,259
TRANSMISSION CONTROL IN SIGNALING SYSTEMS
Alton C. Dickieson, Mountain Lakes, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application July 9, 1941, Serial No. 401,596
10 Claims. (Cl. 178—44)

1. A signal wave transmission system comprising a transmitting station and a receiving station connected by a variable transmission medium, said transmitting station including means to transform a signal wave comprising a band of frequency components into a plurality of different frequency subbands the frequencies of which respectively represent the component frequencies in different frequency ranges within said band of signal frequencies, said subbands being slightly separated from each other in the frequency spectrum and means to combine and transmit to said medium said subbands along with a plurality of fixed input amplitude tone waves of different frequencies spaced between

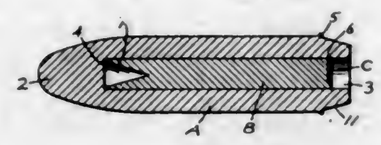
those of said subbands, said receiving station including means controlled by the tone waves received over said medium from the transmitting station for inserting in the path of the received signal waves a loss varying in accordance with the summation of the amplitudes of the received tone waves to compensate for the effect of variations in said medium on the transmitted signal waves, means to separate the signal subbands in the compensated wave, and means for producing transformations in said subbands which are the reverse of those at the transmitting station to reproduce the original signal wave.

2,407,260
PRIVACY SYSTEM
Alton C. Dickieson, Mountain Lakes, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application July 19, 1941, Serial No. 403,098
8 Claims. (Cl. 179—1.5)

1. The method of transmitting a message with privacy which consists in deriving from a message wave having a band of frequency components, a plurality of frequency subbands having the same frequency limits but the frequencies in each subband representing respectively different frequency ranges in the original message band, and with the frequencies in the two halves of the subband corresponding to that frequency range in the original message band having the greatest amount of intelligibility inverted with respect to each other, interchanging said subbands among several circuits, and transmitting the interchanged subbands.

2,407,261
PROCESS FOR STABILIZING OR DEACTIVATING SLUDGES, PRECIPITATES, AND RESIDUES OCCURRING OR USED IN THE MANUFACTURE OF TETRAALKYL LEADS
Frederick B. Downing, Penns Grove, N. J., and Adrian L. Linch, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application September 16, 1942, Serial No. 458,578
9 Claims. (Cl. 260—437)

2. The process of inhibiting spontaneous ignition of tetraethyl lead adsorbed on sludges which are precipitated from crude steam distilled tetraethyl lead and which sludges normally tend to cause spontaneous ignition of the tetraethyl lead adsorbed thereon upon exposure to oxygen, which comprises incorporating with such sludges an aqueous solution of a compound of the class consisting of alkali metal and ammonium monosulfides, polysulfides and sulfhydrates.



2,407,262
PROCESS FOR STABILIZING OR DEACTIVATING SLUDGES, PRECIPITATES, AND RESIDUES OCCURRING OR USED IN THE MANUFACTURE OF TETRAALKYL LEADS
Adrian L. Linch, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application September 16, 1942, Serial No. 458,579
8 Claims. (Cl. 260—437)

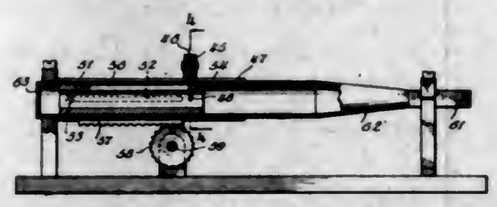
1. The process for inhibiting the spontaneous ignition of tetraalkyl lead compounds adsorbed on sludges which are precipitated from crude tetraalkyl lead compounds and which sludges normally tend to cause spontaneous ignition of the tetraalkyl lead compounds adsorbed thereon when exposed to oxygen, which comprises incorporating with such sludges a phenol containing at least one substituent of the group consisting of hydroxy, alkoxy, carboxy, aldehyde, ketone, nitro, nitroso and ester groups attached to ring carbon atoms and which otherwise consists of carbon, hydrogen and oxygen.

2,407,263
PROCESS FOR STABILIZING OR DEACTIVATING SLUDGES, PRECIPITATES, AND RESIDUES OCCURRING OR USED IN THE MANUFACTURE OF TETRAALKYL LEADS
Adrian L. Linch, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application September 16, 1942, Serial No. 458,582
8 Claims. (Cl. 260—437)

1. The process for inhibiting the spontaneous ignition of tetraalkyl lead compounds adsorbed on sludges which are precipitated from crude tetraalkyl lead compounds and which sludges normally tend to cause spontaneous ignition of the tetraalkyl lead compounds adsorbed thereon when exposed to oxygen, which comprises incorporating with such sludges a compound of the group consisting of oil soluble copper salts of carboxylic acids and oil soluble iron salts of carboxylic acids.

2,407,264
PROJECTILE
Clyde B. Ferrel, San Francisco, Calif., assignor to Ferrel Industries, Inc., Reno, Nev., a corporation of Nevada
Application October 20, 1942, Serial No. 462,700
3 Claims. (Cl. 102—99)

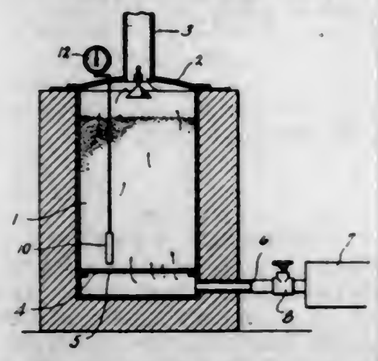
3. A projectile of the class described comprising, a cylindrical body portion terminating in a pointed forward end, an elongated chamber formed within the projectile, open at the rear and terminating in a flat face adjacent the forward end, a molded compressed wave producing propelling explosive detonating charge filling the major portion of the chamber, a primary explosive detonating charge disposed in contact and rearwardly thereof, means for sealing and retaining both charges within the chamber, and a cone-shaped chamber formed in the forward end of the molded compressed charge to concentrate and direct the said propelling waves produced by detonation against the flat face at the forward end of the chamber in unison with a detonation wave produced by detonation of the explosive detonating charges.



2,407,265
COPPER COMPOUNDS OF MERCAPTANS DERIVED FROM TERPENES AND PROCESSES OF PRODUCING THEM
Arthur L. Fox, Woodstown, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application April 23, 1942, Serial No. 440,253
15 Claims. (Cl. 260—438)

1. In the process for preparing copper compounds of mercaptans derived from terpenes the steps which comprise heating the terpene with sulfur at temperatures sufficient to cause the formation of a terpene-sulfur complex, reducing this complex by reacting it with hydrogen under pressure in the presence of a hydrogenation catalyst to form the mercaptan and reacting the resulting mercaptan derived from the terpene with a copper salt.

2,407,266
COPPER COMPOUNDS OF MERCAPTANS DERIVED FROM PINENE
Arthur L. Fox, Woodstown, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application April 23, 1942, Serial No. 440,255
4 Claims. (Cl. 260—438)

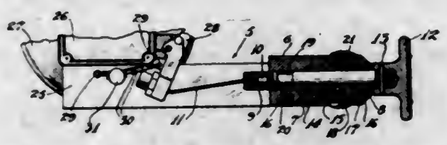


1. The copper compound of a mercaptan derived from a pinene which compound is obtained by reacting a mercaptan derived from the pinene by the introduction of an —SH group into the pinene with a cuprous salt in the presence of a reducing agent capable of maintaining the copper salt in the cuprous state.

2,407,267
ULTRA HIGH FREQUENCY ATTENUATOR
Edward L. Ginzton, Wantagh, N. Y., assignor to Sperry Gyroscope Company, Inc., Brooklyn, N. Y., a corporation of New York
Application March 5, 1943, Serial No. 478,163
13 Claims. (Cl. 178—44)

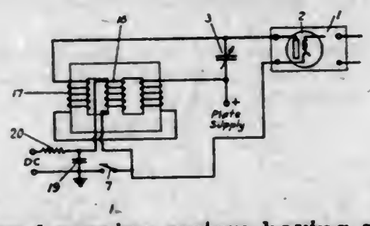
12. An ultra high frequency device comprising an elongated hollow conductive member, conductive means extending along said member for reducing the cross-section thereof, high frequency energy coupling means at a predetermined point of said member, further high frequency coupling means coupled to said conductive means, and means for longitudinally adjusting said further coupling means and said conductive means relative to one another.

2,407,268
METHOD OF CALCINING COAL FOR PRODUCTION OF AN ACTIVATED PRIMARY CARBON
Worth C. Goss, Seattle, Wash., assignor to William A. Carlisle, Jr.
Application November 22, 1943, Serial No. 511,380
4 Claims. (Cl. 202—20)



1. The method of calcining coal, comprising granulating the coal to a degree of fineness that it passes through an 8-inch screen and is retained by a 20-mesh screen confining the granulated coal in a calcining chamber, then subjecting the material by a direct application of super-heated steam thereto, to increase its temperature between 214° F. and approximately 450° F. at a rate not exceeding 25° F. per hour, then continuing to increase its temperature at a rate not to exceed 9° F. per hour until the material attains a temperature of approximately 770° F., then maintaining this temperature constant for approximately four hours, and then increasing its temperature to that for final calcination.

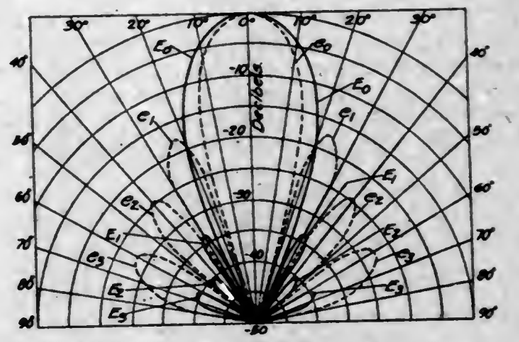
2,407,269
ACTUATOR
Theodore Norrison Hannant, Cedar Grove, N. J., assignor to Specialties Development Corporation, Bloomfield, N. J., a corporation of New Jersey
Application January 12, 1944, Serial No. 517,923
5 Claims. (Cl. 74—502)



1. In combination, control means including a movable arm biased in one direction, a flexible element connected to said arm, a rotatively and

axially movable shaft, a swivel connection between said element and one end of said shaft, said shaft having a peripheral groove one side of which next to said element constitutes an annular shoulder and the other side of which constitutes an abutment of less than complete annularity by an amount substantially as defined by a peripherally narrow flat surface of said shaft flush with the bottom of said groove and extending from said groove toward the other end of said shaft, a handle at said other end, a bearing for said shaft, a stationary stop in said bearing cooperating with said flat surface to prevent rotation of said shaft in initial position and until said shaft is moved axially from such position by a pull on said handle against said bias to a position in which said shoulder engages said stop,

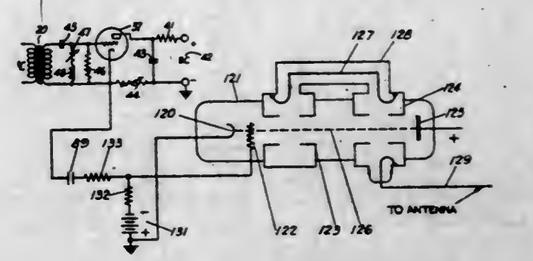
and a detent in said bearing maintained by said shaft in retracted position until engagement of said stop by said shoulder at which point the detent is movable into said groove for cooperation with said abutment, said shaft operating under said bias when said handle is released to be disengaged from said stop and to cause said abutment to engage said detent, partial rotation of said shaft causing said abutment to disengage said detent and providing for axial movement of said shaft to place said detent on said flat surface and said abutment against said stop, and further partial rotation of said shaft moving said detent to retracted position and placing said flat surface in line with said stop for axial movement of said shaft under said bias to initial position.



2,407,270
SUBMARINE SIGNALING
Bertram M. Harrison, Newton Highlands, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Application September 23, 1938, Serial No. 231,391
1 Claim. (Cl. 250—36)

In a sound ranging system having a driver including an oscillator tube, means for varying the frequency of the oscillator comprising a tuning inductance in the oscillator plate circuit, a magnetic core for said inductance, a coil wound on said core, a condenser and means for discharging said condenser through said coil.

2,407,271
APPARATUS FOR SUBMARINE SIGNALING
Harold M. Hart, Cambridge, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Application July 22, 1939, Serial No. 285,902
4 Claims. (Cl. 177—386)

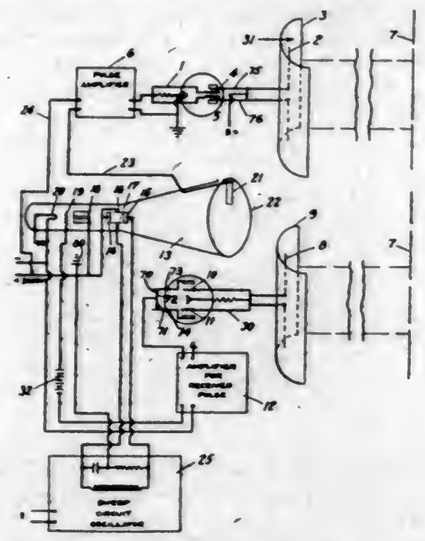


4. A device for producing a beam of compressional waves having a radiating member with a continuous finite radiating surface of a dimension greater than the wave length of the compressional waves in the signaling medium at the signaling frequency and means for vibrating said surface with amplitudes varying progressively over the surface from the center to the edges with the

maximum amplitude at the center, said amplitude variation being in accordance with the equation

$$A_r = A_0 \frac{7 - 12\frac{r^2}{a^2} + 6\frac{r^4}{a^4}}{7}$$

2,407,272
METHOD AND APPARATUS FOR RADIO RANGING
Harold M. Hart, Cambridge, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Application March 20, 1941, Serial No. 384,353
4 Claims. (Cl. 315—3)

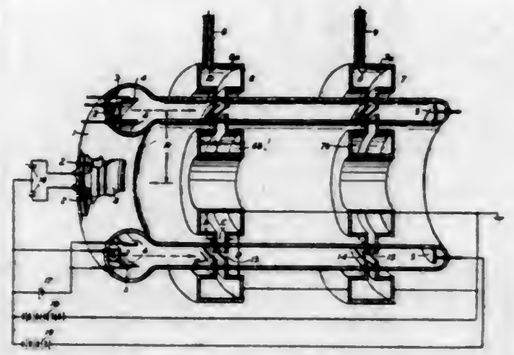


2. A circuit for periodically producing electric impulses including a grid-controlled gaseous discharge tube, means periodically applying to the tube potentials for making the tube alternately conductive and non-conductive, a condenser connected in the discharge path of said tube and adapted to be discharged through said tube and means for charging said condenser only while said discharge tube is non-conductive.

2,407,273
METHOD AND MEANS FOR DISTANCE AND DIRECTION FINDING
Robert W. Hart, Lynn, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Application March 5, 1935, Serial No. 9,459
9 Claims. (Cl. 250—1)

1. Means for measuring distance by means of electromagnetic waves which comprises means for transmitting high frequency electromagnetic waves of approximately one meter, means for controlling the emission of said electromagnetic waves at definite time intervals including an electron beam, means for receiving said impulses after reflection from the surface whose distance is to be measured, means for causing the received im-

pulse momentarily to deflect the course of said electron beam and means cooperating with the



momentarily deflected beam for producing an indication of the distance from said surface.

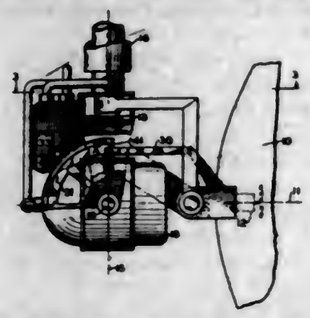
2,407,274

ULTRA HIGH FREQUENCY ELECTRONIC DEVICE

Ralph V. L. Hartley and Arthur L. Samuel, Summit, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application April 16, 1941, Serial No. 388,790
3 Claims. (Cl. 250—27.5)

1. A toroidal-shaped resonator having a relatively small cross-sectional area and a relatively large radius of revolution, an axially elongated toroidal-shaped envelope coaxial with said resonator and intersecting the same, said envelope enclosing an annular electron gun, said resonator being provided with circular gaps to permit the passage of the electron beam through and beyond said resonator.



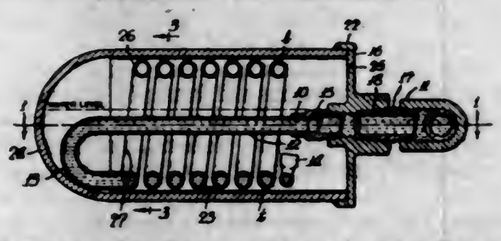
2,407,275

RADIO SCANNING APPARATUS

Robert F. Hays, Jr., Syosset, N. Y., assignor to Sperry Gyroscope Company, Inc., a corporation of New York

Application July 29, 1944, Serial No. 547,152
24 Claims. (Cl. 250—11)

1. In a radio scanning apparatus, an antenna, a frame of which said antenna is mounted for movement about respective vertical and horizontal axes, a gyro vertical having a casing pivotally mounted on said frame on an axis parallel to the horizontal axis of the antenna, and means for maintaining parallelism of the casing and



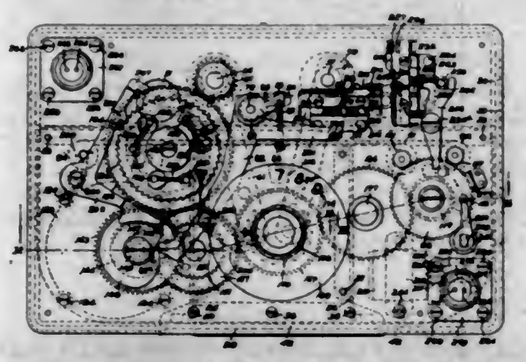
antenna relative to the respective horizontal axes thereof.

2,407,276

SHOCK ABSORBER FOR HYDRAULIC SYSTEMS

Joseph A. Hendel and Michael J. Stupelli, New York, N. Y.

Application January 12, 1943, Serial No. 472,170
6 Claims. (Cl. 138—26)



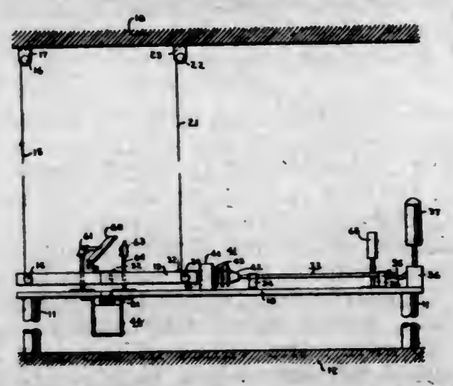
2. A shock absorber unit for a hydraulic system comprising a mounting and inlet head, a tube having a straight inlet run affixed to said head, a U-shaped bend at the end of said straight run, the rest of said pipe comprising a helical length extending from said U-shaped bend and coiled about said inlet length, the extremity of said helical turn being blocked.

2,407,277

MOTOR-DRIVEN CURTAIN-SHUTTER AND RELEASE MECHANISM FOR PHOTOGRAPHIC CAMERAS

Edson S. Hineline, Rochester, N. Y., assignor to Graflex, Inc., Rochester, N. Y., a corporation of Delaware

Original application October 19, 1943, Serial No. 506,848. Divided and this application March 24, 1944, Serial No. 527,918
21 Claims. (Cl. 95—57)



1. Motor-driven, self-capping, focal, two-curtain-shutter winding and releasing mechanism for a photographic camera including, in combination: two, closely parallel, cooperating curtains each having an aperture which together in the running-down movement of the shutter constitute the exposure aperture of the two-curtain self-capping shutter; tension rollers and take-up rollers arranged in respective pairs, supporting each of said curtains; a first curtain re-wind gear in meshing relation with the first curtain take-up roller; a second curtain rewind gear in meshing relation with the second curtain take-up roller; said rewind gears being mounted in parallel proximity to and co-axial with each other; one of said rewind gears having first and second curtain drive studs laterally projecting therefrom and the other rewind gear having a co-acting laterally projecting stud; one of said rewind gears having a shutter release stud laterally projecting therefrom; a movable shutter release member engageable by said shutter release stud in the rotative movement of the rewind gear bearing such stud and mounted laterally adjacent a face of such rewind gear; a main shutter rewind gear in driving relation with one of said rewind gears and co-axially mounted with respect to both of said rewind gears; an electric motor carried by the camera structure and in driving relation with said main shutter rewind gear; an electric circuit carried by said camera for actuating said electric motor and including a switch controlling said electric motor; a movable switch operating member laterally adjacent a face of the rewind gear carrying the shutter release stud and mounted in position to be engaged and operated by said shutter release stud, when at substantially the end of the running-down movement of the shutter and the accompanying rotative movement of the said stud-carrying rewind gears, the said shutter release stud comes into operating relation to said movable switch operating member, thereby starting said electric motor; the said drive and co-acting studs upon the said rewind gears being so positioned relative to each other and having such circumferential spaced location on adjacent faces of said gears that in the rotative movement of one of said rewind gears consequent upon the starting of said electric motor, the rotative movement of the other rewind gear is caused to occur by co-acting engagement of studs thereof and the two curtains are consequently rewound upon their take-up rollers respectively in such timed relation that said two curtains automatically cap each other during their said rewinding.

2,407,278

METHOD OF AND APPARATUS FOR TESTING THE HARDNESS OF MATERIALS

Arthur J. Hodges, Washington, D. C.

Application April 10, 1945, Serial No. 587,601
12 Claims. (Cl. 73—82)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

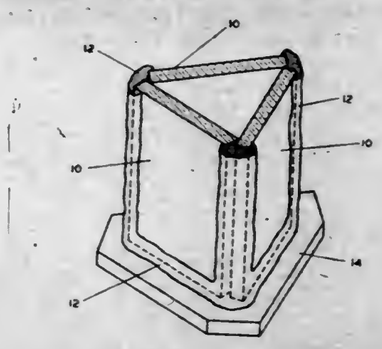
1. In an apparatus for dynamically testing the hardness of a specimen plate of material, a ballistic pendulum for supporting a specimen plate, an indenter, means for propelling said indenter into contact with a specimen plate supported on said pendulum, and optical means associated with said ballistic pendulum for indicating in magnified degree the resulting deflection of said pendulum.

2,407,279

METHOD FOR THE PREPARATION OF NEUTRAL ESTERS OF PHOSPHORIC ACID

David C. Hull and Jerry R. Snodgrass, Kingsport, Tenn., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

No Drawing. Application December 8, 1943, Serial No. 513,472
12 Claims. (Cl. 260—461)



1. The method of preparing triethyl phosphate which comprises reacting phosphorus pentoxide with diethyl ether in excess at a temperature of 65°–180° C. under autogenic pressure for a sufficient time to cause the formation of a substantial proportion of triethyl phosphate.

2,407,280

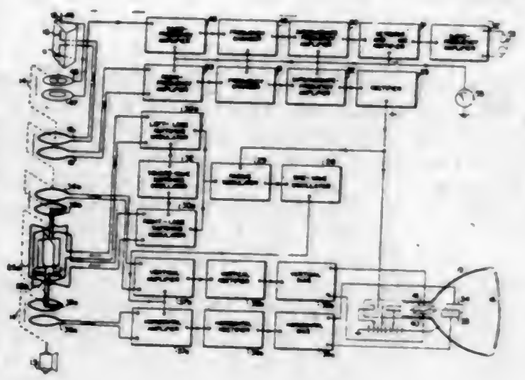
MOLD FOR USE IN THE MANUFACTURE OF OPTICAL ELEMENTS

Mark Hyman, Jr., Cambridge, Mass., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware

Application September 2, 1942, Serial No. 457,031
5 Claims. (Cl. 18—39)

5. A mold for use in the formation of an optical prism of polymerized synthetic plastic material or the like, comprising, in combination, a plurality of glass mold walls forming a prismatic mold cavity and having molding surfaces substantially optically smooth, and a water-soluble cement bonding said walls together and comprising sodium silicate and a filler.

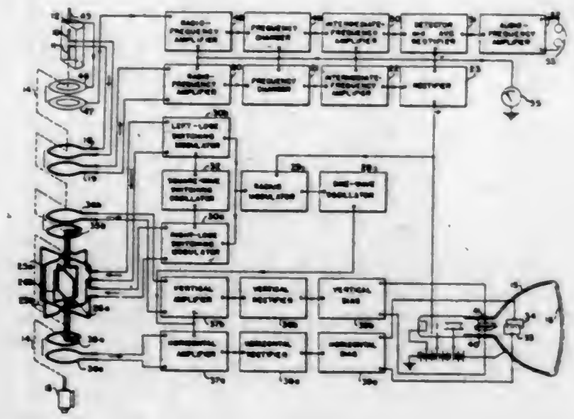
2,407,281



RADIATED-SIGNAL DIRECTION FINDER

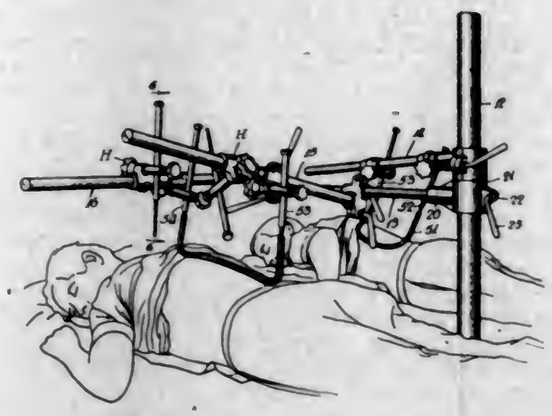
John Kelly Johnson, Deerfield, Ill., and Harold A. Wheeler, Great Neck, N. Y., assignors, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois

Application December 18, 1941, Serial No. 423,514
13 Claims. (Cl. 250—11)



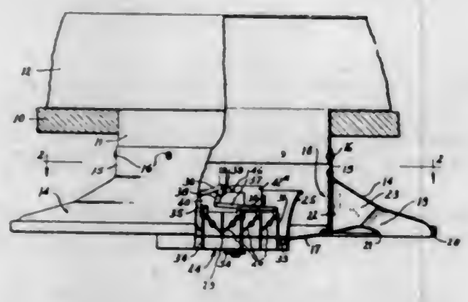
1. A radiated-signal direction finder, comprising, a receiving pick-up system having a directive pattern, means for rotating said directive pattern of said pick-up system, a line-tracing device, means for controlling said line-tracing device to trace a line in synchronism with the rotation of said directive pattern, means responsive to the amplitude of a signal received by said pick-up system for shifting the line traced by said device in accordance with said directive pattern, means for supplying a periodic control signal having a frequency which is high with reference to the frequency at which said directive pattern is rotated, and means responsive to said control signal for cyclically laterally displacing the line traced

by said device at the frequency of said control signal to trace intersecting lines the intersections



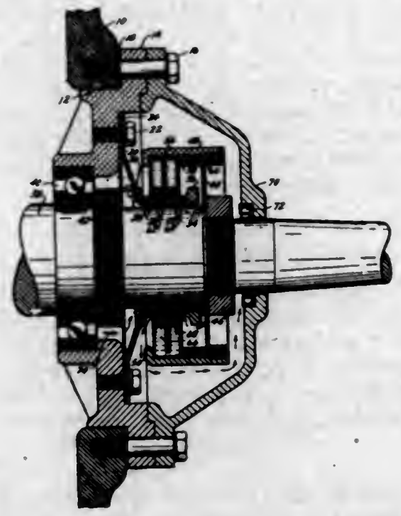
of which are sharply indicative of the direction of reception of said signal.

2,407,282
SYSTEM FOR INDICATING MECHANICAL MOTION
John Kelly Johnson, Deerfield, Ill., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois
Application December 18, 1941, Serial No. 423,515
10 Claims. (Cl. 177—351)



1. A system for indicating relative mechanical motion comprising, two members adapted to have relative motion therebetween, an impedance-coupling means having relatively movable primary and secondary elements the relative position of which determines the electrical coupling therebetween, means for effectively mechanically coupling said primary element to one of said members, means for effectively mechanically coupling said secondary element to the other of said members, means for supplying to said primary element oscillations of a frequency much greater than the effective maximum frequency of said motion between said two members, whereby there are applied to said secondary element oscillations the amplitudes of which are modulated in accordance with said relative motion between said two members, means connected with said secondary element for synchronously rectifying said oscillations coupled thereto to obtain a unidirectional voltage pulsating in accordance with said motion, and means for utilizing said undirectional voltage for producing a synchronous indication of said motion between said two members.

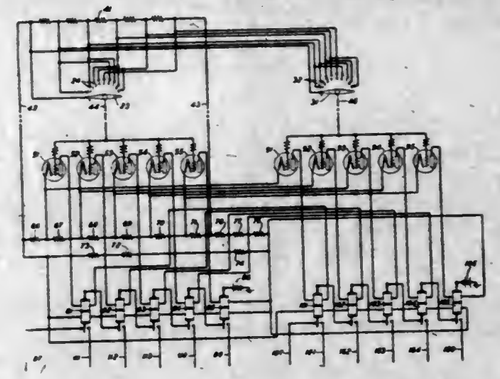
2,407,283
MECHANOTHERAPEUTIC EQUIPMENT
Florence Kelhoffer, Brooklyn, N. Y.
Application July 12, 1944, Serial No. 544,539
7 Claims. (Cl. 128—24)



1. A mechano-therapeutic apparatus comprising a standard having a plurality of carrier bars, each having a mounting clamp on the standard and adjustable longitudinally thereof and one or more members, each having a presser head, said members being adjustably clamped with respect to the corresponding carrier bar, each of said members including resilient means interposed between the clamp and the head thereof.

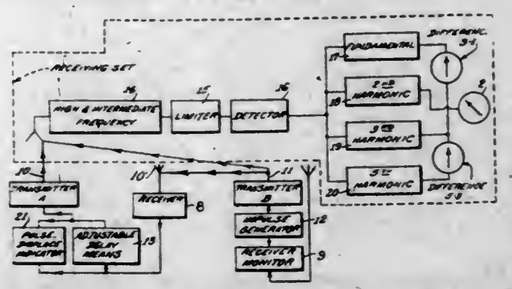
2,407,284
AIR DISTRIBUTION OUTLET
Walter W. Kennedy, Rockford, Ill., assignor to Barber-Colman Company, Rockford, Ill., a corporation of Illinois
Application June 20, 1942, Serial No. 447,853
7 Claims. (Cl. 98—40)

1. In an air distributing unit, the combination of a tube providing an air discharge outlet, a plurality of plates extending transversely of said tube and dividing said outlet into a plurality of separated openings extending parallel to each other, damper vanes each pivotally supported in one of said openings to turn about a longitudinal axis disposed intermediate the side margins of the vane, means connecting said vanes and operable to swing the vanes in the two halves of said outlet simultaneously in opposite directions between an open position paralleling the axis of the inlet and a closed position in which the vanes of the two sets extend diagonally of said openings and converge toward each other in the direction of air flow through the outlet.



2,407,285
SEAL FOR RUNNING SHAFTS
Jesse J. King, Dayton, Ohio
Application May 15, 1945, Serial No. 593,918
5 Claims. (Cl. 286—9)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a device wherein a rotatable shaft extends through a partition and there is a pressure difference in the fluid on opposite sides of said partition, a shaft seal for preventing leakage of fluid along said shaft from one side of said partition to the other, said seal comprising an annular plate having a central opening loosely surrounding said shaft, means for holding said plate by its inner edge and nonrotatably supporting it on said partition, an annular enclosure having a central opening somewhat larger than the opening in said plate concentrically supported on said shaft to be rotated thereby and having the opening medially slotted to receive said plate, said plate extending outwardly to a point near the outer extremity of said enclosure and thereby dividing it into two compartments connected by a narrow passage at the outer edges, and a heavy fluid substantially filling the two compartments, the sides of said enclosure being resilient and tensioned to force the sides of said slot into frictional contact with said plate, whereby centrifugal force acting on the said heavy fluid will spread said slot and free said plate from frictional engagement therewith.

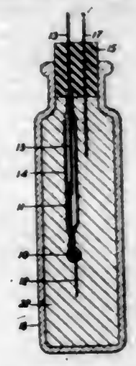


2,407,286
COMMUNICATION SYSTEM
Fullerton S. Kinkead, deceased, late of New York, N. Y., by Rita Smith Kinkead, administratrix, Trudau, N. Y., and George A. Locke, Glenwood Landing, N. Y., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application November 7, 1942, Serial No. 464,846
4 Claims. (Cl. 177—353)

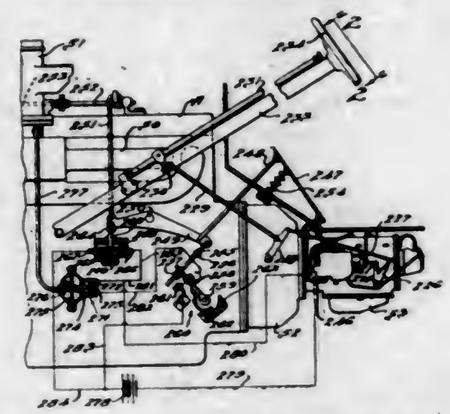
1. In a communication system, a station, a potential divider at said station having a plurality of fixed potential derivation points, a switch controllable according to information to be transmitted from said station, said switch having a greater number of contact points than the number of said potential derivation points and having combinations of two contact points connected to certain of said potential derivation points, a second station, a set of electron tubes at said second station comprising a lesser number of tubes than the number of said contact points and controllable by said switch for operation in repetitious progressions for each full cycle of said switch, a counting relay system comprising relays exceeding the number of said tubes and less than the number of said contact points for distinguishing

between successive repetitious progressions of operation of said tubes, and an indicator representative of each of said contact points controlled jointly by said tubes and said counting relay system.

2,407,287
COURSE BEACON
Emile Labin, New York, N. Y., assignor to Federal Telephone & Radio Corporation, a corporation of Delaware
Application June 28, 1941, Serial No. 400,259
14 Claims. (Cl. 250—11)



1. The method of guiding a mobile unit by signals from a plurality of fixed spaced antennas which comprises generating energy in a periodically recurrent series of relatively short impulses, dividing such energy into a plurality of similar portions, introducing a relative delay between corresponding impulses in said portions, transmitting from each of said antennas energy from one of said portions, simultaneously receiving energy radiated by each of said antennas, filtering said received energy into individual odd-multiple frequencies of said periodical recurrence, and obtaining an indication of the relative magnitudes of the energy of two of said odd-multiple frequencies.



2,407,288
RESISTOR DEVICE
Joseph J. Kleimack, Bayonne, and Gerald L. Pearson, Towaco, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application April 25, 1941, Serial No. 390,286
8 Claims. (Cl. 201—63)

1. A resistor having a declining voltage-current characteristic comprising a small bead of high negative resistance-temperature coefficient material, having a plurality of electrically conductive leads embedded therein, a tube of glass enclosing said leads and sealed around said bead,

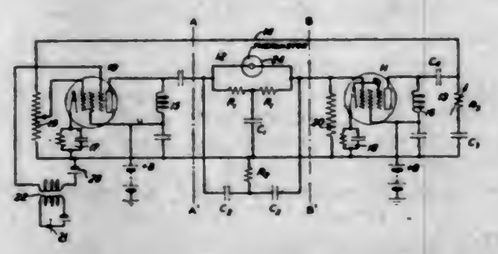
a container, a closure for said container, said closure supporting said glass tube within the container, and a body of mercury in said container and surrounding the glass tube.

2,407,289
POWER TRANSMISSION
Ludger E. La Brie, Detroit, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application December 4, 1941, Serial No. 421,536
45 Claims. (Cl. 74—472)

1. In a power transmission for a vehicle having an engine and a driven shaft, a hydraulic torque converter including an impeller wheel, a runner wheel and a guide wheel drivingly disposed between the engine and the driven shaft; change speed gearing drivingly disposed between the engine and driven shaft and arranged and constructed to provide either a direct drive or an underdrive connection between the engine and the impeller of the torque converter; means for conditioning said change speed gearing in direct drive to drive the impeller at the speed of the engine or in underdrive to drive the impeller at a reduced speed relatively to the engine; and manually operated means for controlling said last means arranged to establish said change speed gearing in underdrive at relatively low engine speeds.

2,407,290
LITHOGRAPHIC PLATE AND PROCESS FOR MAKING SAME
John D. Pursell, St. Louis, Mo.
No Drawing. Application January 21, 1944, Serial No. 519,219
2 Claims. (Cl. 95—5.6)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

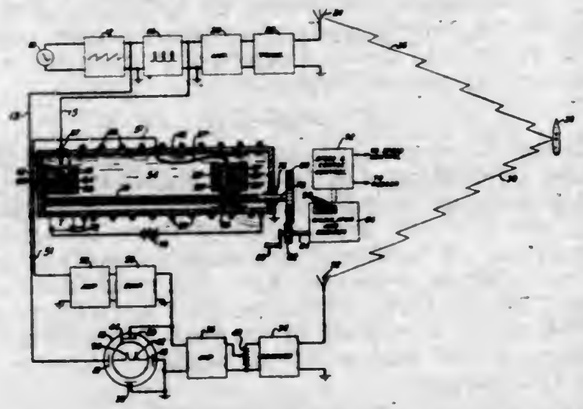
1. The process for the production of a photolithographic printing plate having a printing surface consisting of an ink receptive image portion and a moisture receptive, non-image portion comprising exposing a photographic film to light projected from a copy, developing and tanning the exposed film to render the light-affected, non-image portion of the printing surface insoluble, washing the film to remove the soluble portion of the film and produce an ink receptive image portion, and impregnating the non-image portion with an aqueous solution of mercuric chloride and bringing said mercuric chloride into contact with the light-affected particles suspended in the non-image portion of the printing surface to convert said mercuric chloride to insoluble mercurous chloride and produce a uniformly distributed deposit of insoluble mercurous chloride throughout said non-image portion.



2,407,291
PROCESS OF MAKING OLEFINS
William M. Quattlebaum, Jr., Charleston, and Walter J. Toussaint, South Charleston, W. Va., assignors to Carbide and Carbon Chemicals Corporation, a corporation of New York
No Drawing. Application September 17, 1942, Serial No. 458,736
12 Claims. (Cl. 260—681)

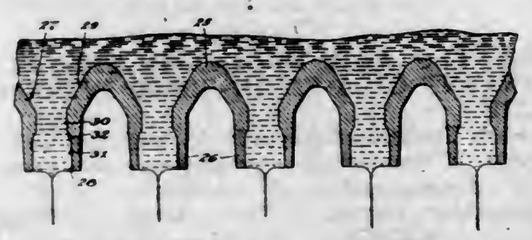
1. Process for making an olefin which comprises passing a vaporous mixture of a carbonyl compound capable of keto-enol tautomerism and an alcohol capable of dehydrogenation to a carbonyl compound, over a silica gel catalyst, and recovering an olefin from the reaction products.

2,407,292
PRODUCT
Paul L. Salzberg, Carrcroft, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application December 18, 1943, Serial No. 514,818
6 Claims. (Cl. 260—454)



6. Compounds selected from the class consisting of organic thiocyanates represented by the formula Hal_2CRSCN and $Hal_2C{=}CHRSCN$ wherein Hal is halogen and R is an alkylene radical.

2,407,293
FREQUENCY MODULATION
William G. Shepherd, Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application July 26, 1944, Serial No. 546,603
4 Claims. (Cl. 179—171.5)



1. A frequency modulated oscillator comprising an amplifying vacuum tube, a feedback path coupling the output and the input circuits of said vacuum tube in regenerative relation, a frequency determining network included in said feedback path, a source of signal voltage, circuit means for impressing signal voltage from said source upon said vacuum tube to produce amplitude modulation of the generated oscillations, and means responsive to amplitude variations of the oscillations for producing corresponding variations of substantial magnitude in the oscillation frequency, said frequency varying means comprising a temperature sensitive resistor included in said feedback path and traversed by the oscillation currents therein.

2,407,294
WAVE PROPAGATION DEVICE
William Shockley, Madison, and Gerald W. Willard, Fanwood, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application April 17, 1942, Serial No. 439,396
11 Claims. (Cl. 178—44)

3. A wave propagation device for use within the limits of a specified range of temperatures and velocities, said device comprising a fluid mixture of at least two components, one of said components having a positive temperature coefficient of wave propagation velocity for temperatures and velocities within said range, and the other of said components having a negative temperature coefficient of wave propagation velocity for temperatures and velocities within said range, said components being present in said mixture in such proportions as to give a substantially zero temperature coefficient of wave propagation velocity at a preassigned propagation velocity and at a preassigned temperature within said range.

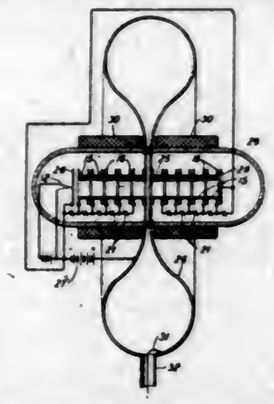
2,407,295
APPARATUS FOR PRODUCING FIBROUS GLASS
Allen L. Simison and Ed Fletcher, Newark, Ohio, assignors to Owens-Corning Fiberglas Corporation, Toledo, Ohio, a corporation of Delaware
Application March 26, 1942, Serial No. 436,236
9 Claims. (Cl. 49—55)

1. Glass fiber forming apparatus by which streams of molten glass are attenuated into fine fibers, comprising a receptacle for the molten glass provided with a metallic bottom, nipples projecting downwardly from said bottom and having metallic walls integral with said bottom to permit heat to flow from said bottom into the walls of said nipples, and a passage extending through each of said nipples and communicating with the interior of said receptacle at its upper end and opening at its lower end to the atmosphere, a straight-sided channel in said passage intermediate the ends thereof, and a second channel greater in cross-sectional area than said first-named channel and connecting said first-named channel with the lower end of said nipple.

2,407,296
ELECTRIC DISCHARGE APPARATUS
Albert M. Skellett, Madison, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application February 5, 1941, Serial No. 377,458
13 Claims. (Cl. 315—14)

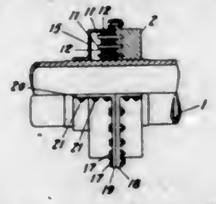
1. The method of generating a potential which comprises producing a stream of charged particles, accelerating said particles, projecting the accelerated particles toward a target, maintaining in the space traversed by said particles in flowing toward said target an electrostatic field increasing toward said target, impressing upon adjacent regions of said space an alternating electric field, the alternating field in each region being substantially 180 degrees out of phase with the alternating field in the adjacent region, and collecting said particles at said target.

2,407,297
ELECTRON DISCHARGE APPARATUS
Albert M. Skellett, Madison, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application October 11, 1941, Serial No. 414,630
18 Claims. (Cl. 250—36)



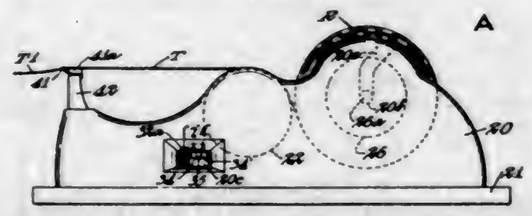
3. The method of generating electrical oscillations which comprises producing a stream of electrons, accelerating the electron stream, successively increasing the potential of the electrons in said stream in a pair of regions traversed thereby while maintaining the velocity of said electrons substantially constant, extracting energy from said stream alternately at said regions, and feeding back a portion of the energy thus extracted to said stream adjacent the region of acceleration thereof.

2,407,298
ELECTRON DISCHARGE APPARATUS
Albert M. Skellett, Madison, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 15, 1942, Serial No. 469,048
11 Claims. (Cl. 250—36)



1. Electron discharge apparatus comprising a pair of electrodes mounted in spaced relation and electrically connected to each other, means for producing in the space between said electrodes direct current fields with voltage increasing nega-

tively in both directions from the median plane between said electrodes substantially as the square of distance from said plane, said means including two groups of electrodes on opposite sides of said plane and resistance means connecting the elec-



trodes of each of said groups, means capacitively coupling the electrodes of each of said groups to one another, a high frequency circuit connected between said groups, and means for introducing electrons into the space between said pair of electrodes.

2,407,299
COMMUNICATION IN PIPE LINES
Edward W. Smith, Melrose, Mass.
Application January 10, 1934, Serial No. 706,159
21 Claims. (Cl. 179—1)

1. A means for transmitting compressional wave vibrations along a metallic pipe line comprising a mass formed in a collar about the pipe, a plurality of magnetostrictive rods positioned in the collar and means for exciting the same.

2,407,300
DEFINITE-LENGTH ADHESIVE TAPE DISPENSER
Fred A. Smith, Newport Beach, Calif., assignor to Minnesota Mining & Manufacturing Company, St. Paul, Minn., a corporation of Delaware
Application April 4, 1945, Serial No. 586,573
9 Claims. (Cl. 164—84.5)

1. A tape dispenser comprising means for holding a supply roll of tape, a movable severing means, a measuring drum between the tape-holding means and the severing means, a stop member associated with the drum, a catch member adapted to engage the stop automatically after a given amount of rotation of the drum whereby rotation of the drum may be halted at a given point, means associated with the movable severing means whereby movement of the severing means automatically disengages the catch and stop to render the drum free to rotate, and means adapted to advance the stop automatically upon disengagement of the catch and stop sufficiently to position the stop beyond the point of engagement.

2,407,301
CONDENSATION OF KETENES WITH DIKETONES
John A. Spence and Edward F. Degering, West Lafayette, Ind., assignors to Purdue Research Foundation, La Fayette, Ind., a corporation of Indiana
No Drawing. Application October 2, 1944, Serial No. 556,886
14 Claims. (Cl. 260—488)

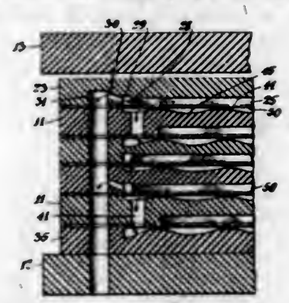
1. A process for preparing an unsaturated carboxylic ester comprising condensing, in the presence of an acid catalyst selected from those represented by the following general formula:

$$X—SO_2—OH$$

wherein X represents a member selected from the group consisting of a halogen atom, a hydroxyl group, and an organic group containing at least one non-metallic atom selected from the group consisting of nitrogen and oxygen, said organic group being attached to the S atom through said non-metallic atom, a ketene with a diketone in which there is a total of at least two hydrogen atoms on the carbon atoms adjacent to one of the keto groups.

2,407,302
CONDENSATION OF KETENES WITH KETOESTERS
John A. Spence and Edward F. Degering, West Lafayette, Ind., assignors to Purdue Research Foundation, La Fayette, Ind., a corporation of Indiana
No Drawing. Application October 2, 1944, Serial No. 556,887
13 Claims. (Cl. 260—484)

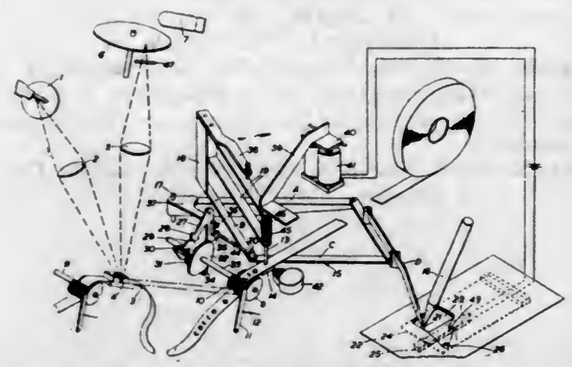
1. A process for preparing an unsaturated carboxylic ester comprising condensing, in the presence of an acid catalyst selected from those represented by the following general formula:



$$X—SO_2—OH$$

wherein X represents a member selected from the group consisting of a halogen atom, a hydroxyl group, and an organic group containing at least one non-metallic atom selected from the group consisting of oxygen and nitrogen, said organic group being attached to the S atom through said non-metallic atom, a ketene with a ketocarboxylic ester in which there is a total of at least two hydrogen atoms on the carbon atoms adjacent to the ketocarbonyl group.

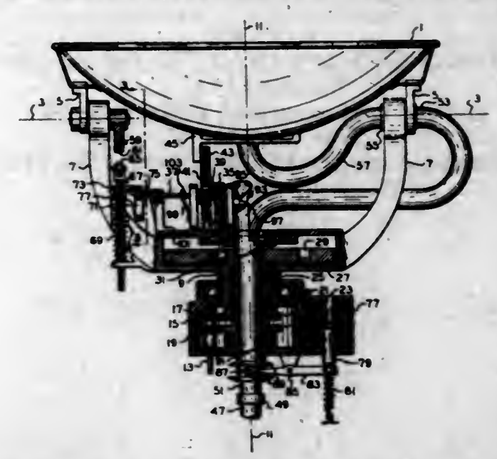
2,407,303
APPARATUS FOR REDUCING THE FLUID CONTENT OF A FLUID-SOLID INTERMIXTURE
Harold A. Teale, Brooklyn, N. Y., assignor to Filter Media Corporation, Irvington - on - Hudson, N. Y., a corporation of New York
Application August 13, 1943, Serial No. 498,520
4 Claims. (Cl. 210—188)



1. In a slurry thickener in combination a filter plate having recesses on the lower side, means for removing filtrate from said recesses, a filter medium under said recesses and constituting therewith filtrate conduit means, and a slurry flow directing plate adjacent to the underside of said filter medium and constituting therewith a conduit for the flow of slurry therethrough, said conduit having an undulating bottom surface pre-

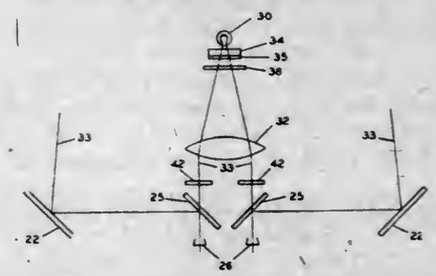
senting nodes and valleys for imparting turbulence to a stream of slurry passing through said

conduit, and also having outlet means for passing slurry from said conduit.



2,407,304
DEVICE FOR PREPARING MESSAGES FOR FACSIMILE TRANSMISSION
Alfred Edward Thompson and Reginald Dennis Salmon, Croydon, England, assignors to Creed and Company Limited, Croydon, Surrey, England
Application May 18, 1942, Serial No. 443,440
In Great Britain January 14, 1941
4 Claims. (Cl. 33—25)

1. A device for writing facsimile telegraph messages comprising means for writing including a pantograph, a manually held stylus mounted at one tracing point of the pantograph and a pen mounted at the other tracing point for vertical movement relative to the pantograph; a universal joint connecting said stylus to the first mentioned tracing point and means actuated by the stylus when in its lowermost position for shifting the recording pen vertically into and out of engagement with the writing surface, said means including an electromagnet and its armature supported independently of said pantograph arms, said armature having an extension extending into position to engage said pen to control the vertical movements thereof.



2,407,305
SCANNING DEVICE
Hall Langstroth, Hempstead, and Fred C. Wallace, Flushing, N. Y., assignors to Sperry Gyroscope Company, Inc., Brooklyn, N. Y., a corporation of New York
Application April 10, 1942, Serial No. 438,398
9 Claims. (Cl. 250—11)

1. A scanning device comprising a directive antenna mounted for rotation and oscillation about independent axes, drive means, means driven by said drive means for rotating said antenna including a first sleeve mounted to rotate about its longitudinal axis, means driven by said drive means for oscillating said antenna including a second sleeve concentric with said first sleeve and rotatably movable with respect thereto, normally ineffective means for holding said antenna in a fixed position with reference to its axis of oscillation including a third sleeve concentric with said first and second sleeves and

reciprocatively movable with respect thereto, means for disabling said oscillating means, means for rendering said holding means effective, and means for effecting simultaneous operation of both said disabling and rendering means.

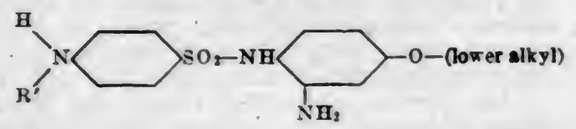
2,407,306
RANGE FINDER
Edwin H. Land, Cambridge, Mass., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application March 17, 1943, Serial No. 479,404
19 Claims. (Cl. 88—2.7)

1. In a range finder, a reticle, means for forming laterally spaced, differently polarized, left-eye and right-eye images of said reticle, means for superimposing said images upon the field of view of said device, and means comprising light-polarizing elements for substantially blocking from each eye of an observer that image intended to be seen by the other eye.

2,407,307
PROCESS FOR STABILIZING OR DEACTIVATING SLUDGES, PRECIPITATES, AND RESIDUES OCCURRING OR USED IN THE MANUFACTURE OF TETRAALKYL LEADS
Adrian L. Linch, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application September 16, 1942, Serial No. 458,580
4 Claims. (Cl. 260—437)

1. The process for inhibiting the spontaneous ignition of tetraalkyl lead compounds adsorbed on sludges which are precipitated from crude tetraalkyl lead compounds and which sludges normally tend to cause spontaneous ignition of the tetraalkyl lead compounds adsorbed thereon when exposed to oxygen, which comprises wash-

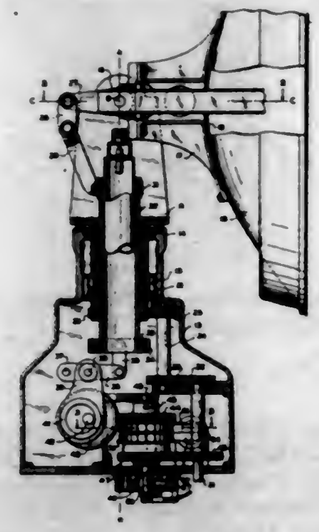
ing such sludges with p-amino phenol in an aqueous carrying medium in an amount sufficient to provide at least 0.05% of the p-amino phenol based on the dry weight of the sludges.



2,407,308
METHOD AND APPARATUS FOR SECRET SIGNALING
Robert Lorenzen and Felix Spiegel, New York, N. Y.
Application January 16, 1941, Serial No. 374,790
2 Claims. (Cl. 179—1.5)

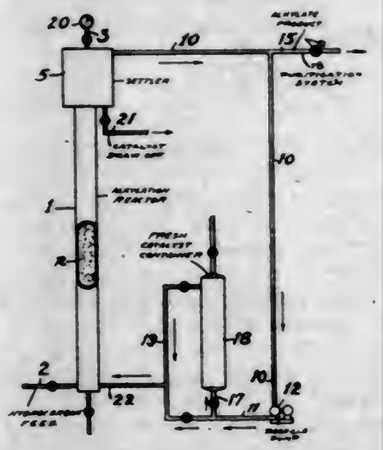
1. A radio signaling system including a transmitter and a receiver, and in which the transmitter is provided with a pickup device and a carrier frequency oscillator, and interposed modulators and companion oscillators employing amplitude, phase, and frequency modulations; and in which the receiver is provided with a receiving element and a translating device, and interposed modulators and oscillators for receiving from the receiving element such amplitude, phase, and frequency modulations as originated in the transmitter and delivering same to the translating element.

2,407,309
CHEMOTHERAPEUTIC AGENTS OF THE SULPHONAMIDE TYPE
William A. Lott, Maplewood, Frank H. Bergeim, Highland Park, and Kathryn A. Losee, New Brunswick, N. J., assignors to E. R. Squibb & Sons, New York, N. Y., a corporation of New York
No Drawing. Application February 4, 1942, Serial No. 429,578
5 Claims. (Cl. 260—397.7)



1. A compound of the general formula

wherein R′ represents a member of the group consisting of hydrogen, hydrocarbon, dialkylamino-substituted-hydrocarbon, and acyl radicals.

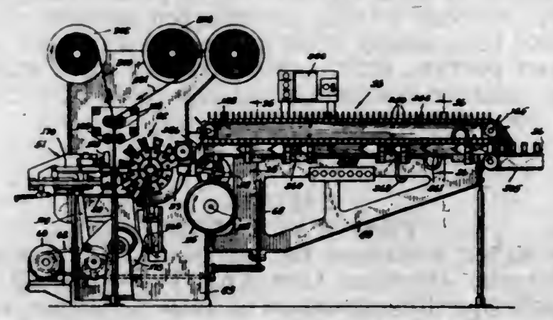


2,407,310
SCANNING DEVICE
Clarence C. Lundy, Floral Park, N. Y., and Hall Langstroth, Greenwich, Conn., assignors to Sperry Gyroscope Company, Inc., Brooklyn, N. Y., a corporation of New York
Application February 27, 1943, Serial No. 477,466
18 Claims. (Cl. 250—11)

1. A scanning apparatus comprising a scanning member, driving means, means actuated by said driving means for spinning said scanning member about a first axis, means actuated by said driving means for oscillating said scanning member through a predetermined angle about a second axis, arresting means for stopping said oscillating means without interruption of the rotation of said scanning member about said first axis, and selective means for presetting said arresting

means to stop the oscillation of said scanning member at a chosen angle of nod.

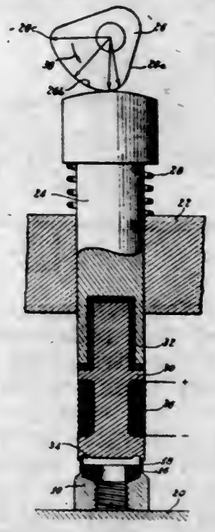
2,407,311
CHEMICAL PROCESS
Charles S. Lynch, Plainfield, and Howard G. Codet, Mountainside, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
Application March 6, 1943, Serial No. 478,184
9 Claims. (Cl. 260—683.4)



1. In the process of continuously alkylating ethylene with an isoparaffin, the improvement which comprises forcing a mixture containing isoparaffin and ethylene through a catalyst charging zone containing aluminum chloride and which can be recharged therewith from time to time whereupon a portion of said aluminum chloride is absorbed in the said mixture, forcing the mixture containing the aluminum chloride into a reaction zone, permitting the ethylene, isoparaffin and aluminum chloride to remain in contact with each other for a sufficient period of time to form a catalytically active aluminum chloride-hydrocarbon complex, thereafter continuing the flow of isoparaffin and ethylene through the catalyst charging zone and through the reaction zone, maintaining the reaction zone at elevated temperatures and pressures during the process and withdrawing from the reaction zone a product containing a C_5 fraction of high octane number.

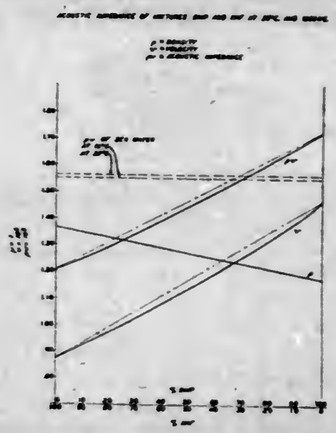
2,407,312
PLASTIC HARMONICA
Finn H. Magnus, West Caldwell, N. J., assignor to International Plastic Harmonica Corporation, Newark, N. J., a corporation of New Jersey
Application February 20, 1943, Serial No. 476,517
5 Claims. (Cl. 84—377)

1. For a harmonica, the combination of an elongate flat body of plastic material having a plurality of lugs projecting integrally from one edge thereof in spaced relation to each other and each having a reed projecting integrally therefrom, and a reed plate having a plurality of reed slots and also having notches in one edge each in alinement with one slot, one of said lugs being seated in each said notch, and the corresponding reed being disposed in the slot that is alined with said lug.



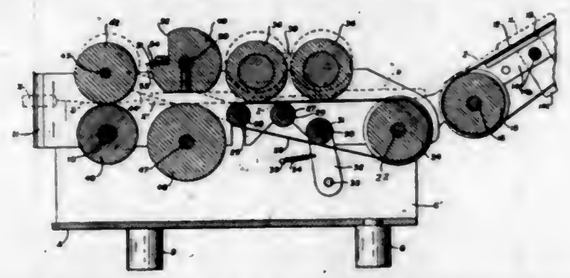
2,407,313
WRAPPING MACHINE
Clarence J. Malhiot, Oak Park, Ill., assignor to F. B. Redington Co., Chicago, Ill., a corporation of Illinois
Application July 3, 1940, Serial No. 343,849
33 Claims. (Cl. 93—7)

1. A packaging machine comprising a package conveyor having alined pockets for conveying packages from a receiving station to a discharge station, packaging mechanism associated with the conveyor and engageable with the packages while the same are being transported between said stations, means for driving the conveyor continuously at alternately increasing and decreasing speeds, and control means for controlling the driven means to drive the conveyor at its slow rate of travel when the pockets thereof are alined with the receiving and discharge stations.



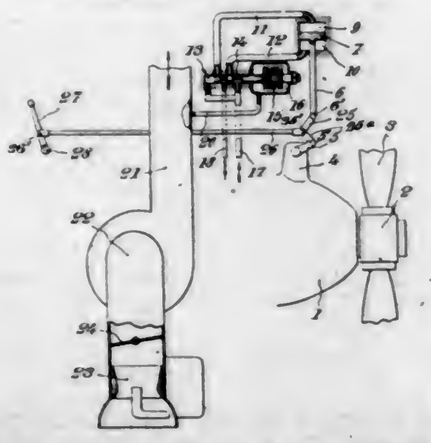
33. A wrapping machine comprising a first conveyor for conveying a series of articles to be wrapped, a second conveyor for receiving the articles from the first conveyor, drive means for continuously operating both said conveyors at alternating increasing and decreasing speeds, said drive means comprising a substantially constant speed rotatable driving member adapted to be connected to a source of power supply, a driven member, crank means connecting said driving and driven members whereby substantially simple harmonic motion is imparted to the driven member upon the constant speed rotation of the driving member, and positive driving toothed connections between said driven member and both said conveyors whereby the varying speeds of said conveyors are maintained in direct proportional relationship during the operation of the machine.

2,407,314
FASTENING DEVICE AND MANUFACTURE THEREOF
Veyne V. Mason, Scotch Plains, N. J., assignor to Elastic Stop Nut Corporation of America, Union, N. J., a corporation of New Jersey
Application September 24, 1943, Serial No. 503,639
2 Claims. (Cl. 10—86)



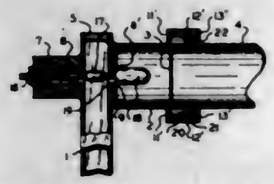
1. The method of making a threaded self-locking fastening device which comprises forming a body of metal consisting essentially of magnesium having a threaded portion and a recess at one end of the threaded portion, forming a locking element of non-metallic elastic material incapable of resisting temperatures ordinarily required for the hot-working of metal, and which provides a surface for the impression of a thread by a cooperating threaded member, placing said element in said recess, heating a portion of said body to a temperature insufficient to injure the material of said element and bending the heated portion over said element to fix the same in said recess.

2,407,315
LIQUID MEDIUM FOR ULTRASONIC COMPRESSIONAL WAVE TRANSMISSION
Warren P. Mason, West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application October 6, 1943, Serial No. 505,158
2 Claims. (Cl. 252—1)



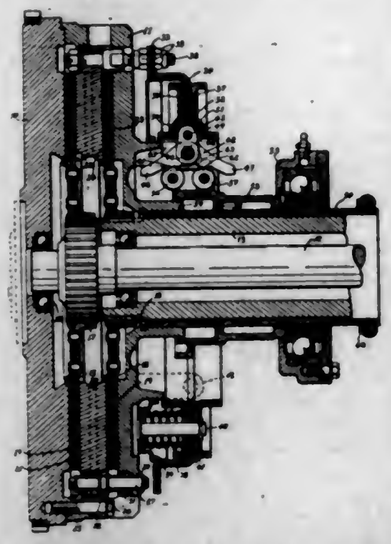
2. In a mixture of liquids having high cohesive force to support large power transmission and high vapor pressure to reduce the destructive effect of cavitation, the combination of dimethyl phthalate and xylene hexafluoride in substantially the proportions of four volumes of dimethyl phthalate and three volumes of xylene hexafluoride.

2,407,316
AUTOMATIC CUTTER
John R. McLaughlin, New Brunswick, N. J., assignor, by mesne assignments, to Tampax Incorporated, New York, N. Y., a corporation of Delaware
Application October 23, 1942, Serial No. 463,095
13 Claims. (Cl. 164—68)



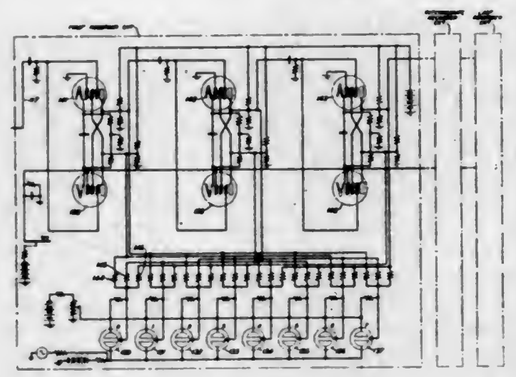
13. An apparatus for severing a continuous strip embodying opposed feed rollers adapted to continuously advance the strip, one of said rollers movable bodily away from the other roller; pivoted arms upon which said movable roller is mounted; an apron movable in the direction of travel of the strip; means coacting with said apron to maintain the strip in frictional contact therewith and also to tighten the strip between said apron and said rollers during the cutting operation of the severing devices; a rock-shaft actuated by the movement of said arms; intermittently operable severing devices spaced from said rollers in the line of travel of the strip; a drive shaft operatively connected to and actuating said rollers; means operatively connecting said driveshaft and severing devices; a clutch interposed in said means; electro-responsive devices for moving said clutch into active and inactive positions whereby said severing devices are intermittently actuated; and an indexing element secured to and actuated by said rock-shaft for controlling said electro-responsive devices.

2,407,317
CONTROL DEVICE FOR VARIABLE PITCH PROPELLERS
Marcel Louis Mennesson, Neuilly-sur-Seine, France; vested in the Alien Property Custodian
Application October 4, 1939, Serial No. 297,931
In France November 17, 1938
2 Claims. (Cl. 170—135.6)



1. In a control device, the combination of a variable-pitch propeller; an aircraft engine, for driving said propeller; means for feeding a fuel-air mixture to the engine; a conduit between said feeding means and the engine; means for changing the pitch of the propeller, comprising a governor dependent upon the engine speed; a reacting spring in said governor; means for changing the tension of said spring, comprising a slidable rod; means responsive to variations of pressure in the said conduit, comprising a piston rod, the two rods being co-axial and inter-connected for unitary movement on their common axis under impulses from said piston rod; and manually operable means for moving said slidable rod independently of movement of said piston rod.

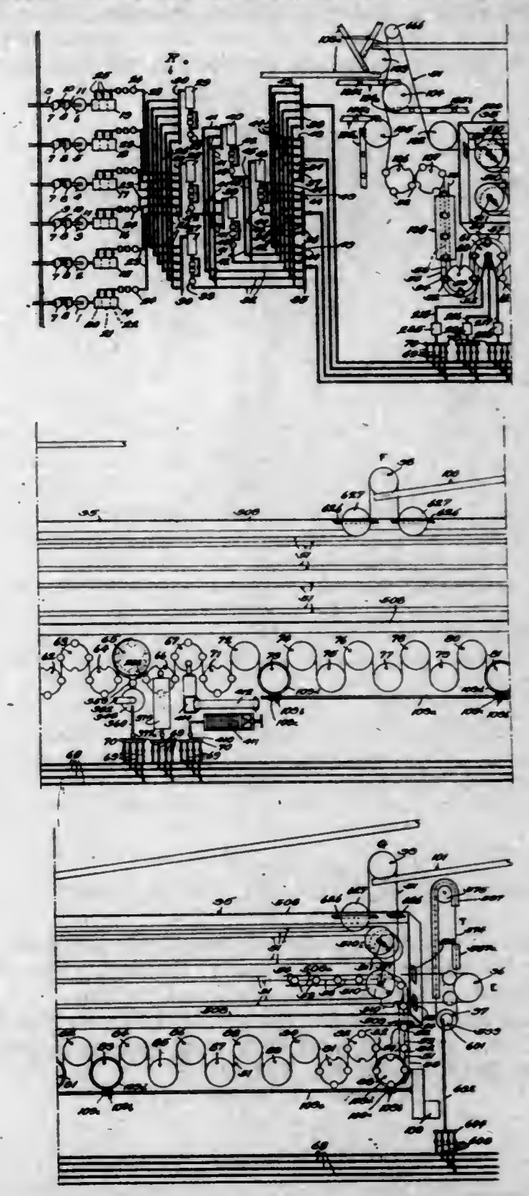
2,407,318
HIGH-FREQUENCY APPARATUS
Walter W. Mieher, Mineola, and John D. Mallett, Garden City, N. Y., assignors to Sperry Gyroscope Company, Inc., Brooklyn, N. Y., a corporation of New York
Application June 18, 1942, Serial No. 447,524
21 Claims. (Cl. 178—44)



1. An energy coupling device between a rectangular wave guide and a circular wave guide, comprising an antenna member positioned transversely of said rectangular guide and extending coaxially of said circular wave guide, said antenna member having an enlarged portion within said rectangular wave guide and a further enlarged portion within said circular wave guide, said enlarged portions being separated by a narrow connecting portion.

2,407,319
TWO-WAY CLUTCH
Kay Miller, Rockford, Ill., assignor to The Atwood Vacuum Machine Company, Rockford, Ill., a copartnership composed of Seth B. Atwood and James T. Atwood
Application October 14, 1942, Serial No. 461,960
21 Claims. (Cl. 192—48)

1. In a clutch mechanism, the combination of clutch disks connected to separate rotary parts, a pressure plate shiftable to driving engagement selectively with either clutch disk, a support connected in fixed spaced relation to and turning with the pressure plate, a pair of rings mounted on opposite sides of the support in concentric relation with the pressure plate and guided on the support for limited axial movement with respect thereto, a plurality of springs in circumferentially spaced relation to said rings holding the same normally in engagement with the opposite sides of said support, and positive acting means for moving the pressure plate in either direction to engage either clutch disk, said means extending between said rings to transmit pressure selectively to either ring and through the springs and support to the pressure plate, whereby to engage the clutch resiliently in either direction.

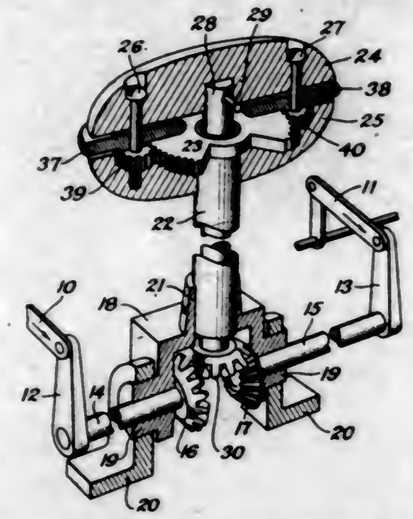


2,407,320
ELECTRONIC COUNTER
Ohmer R. Miller, Morristown, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application November 5, 1942, Serial No. 464,666
5 Claims. (Cl. 235—92)

1. An indicating device for receiving a number in the form of a train of serially related electrical pulses and indicating the number so received in a numbering system based on the use of more than two integers, comprising a plurality of pairs of mutually controlling electronic tubes, each said pair of tubes being responsive to a pulse to render the at the time conducting tube non-conducting and the at the time non-conducting tube conducting, said plurality of pairs of tubes being serially related whereby the incoming pulses are registered according to a binary geometric progression system, a group of indicators, said group corresponding in number to the number of integers used in said numbering system, a network of resistance elements for said group of indicators connected according to a permutation code between said electronic tubes and the indicators of the said group and a source of energizing current for said indicators, each said indicator being responsive to the resultant electrical condition transmitted thereto through said network of resistance elements only when all electronic tubes connected thereto through said network are non-conducting.

2,407,321
APPARATUS FOR PRODUCING POTTERY WARE
William J. Miller, Swissvale, Pa., assignor to Miller Pottery Engineering Company, Swissvale, Pa., a corporation of Pennsylvania
Application January 8, 1943, Serial No. 471,704
47 Claims. (Cl. 25—22)

1. In apparatus for making pottery dinnerware and the like, the combination with a pottery dryer of a plurality of rotary machines having continuously moving clay feeding, ware fabricating, mold and ware conditioning, ware decorating and mold and ware transferring members re-

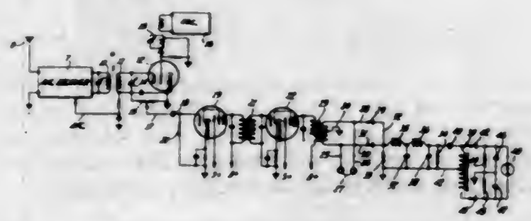


spectively, a continuously moving mold conveyor connected to all of said machines for operation therewith, means for driving the conveyor and machines in unison and means for actuating the members of each machine whilst in motion.

2,407,322
DIFFERENTIAL CONTROL DEVICE
David K. Morrison, Arlington, Va.
Application January 19, 1945, Serial No. 573,619
2 Claims. (Cl. 74—471)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a manually operable control mechanism for a pair of control instrumentalities, the combination, with a differential gear cluster interconnecting the control instrumentalities and a shiftable gear case housing said differential gears, of a manually operable hand lever including a hollow tube fixed to the gear case and having a double segmental gear rigidly secured to the tube and remote from the gear case; a rotatable shaft secured to one of the gears of the differential gear cluster and extending through the tube; a hand grip comprising an upper portion fixed to the shaft and adapted to rotate therewith, and a low-

er portion rotatably mounted on the aforementioned tube at a point between the segmental gear and the gear case, so that the gear lies between the two separable halves of the hand grip; together with a pair of screws to secure the two portions of the hand grip together; a pair of pinions rotatably mounted on the screws and meshing with the opposite sides of the double segmental gear, and a thumb wheel fixed to each of the pinions, so that the thumb wheels lie between the halves of the hand grip and extend outwardly beyond the surface of the grip to provide a thumb operated vernier adjustment on each side of the hand grip.



2,407,323

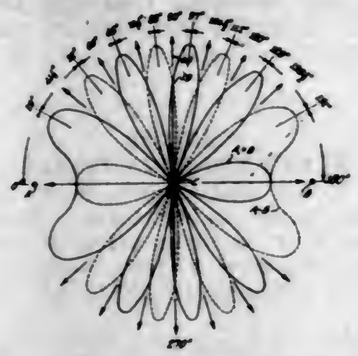
METHOD AND APPARATUS FOR RECEIVING RADIO SIGNALS

William J. O'Brien, London, England, assignor to The Decca Record Company, Limited, London, England, a corporation of Great Britain

Original application December 23, 1941, Serial No. 424,159. Divided and this application November 8, 1943, Serial No. 509,443

5 Claims. (Cl. 250—11)

1. In a device for visually indicating the predominance in intensity of one of two radio signals of like frequency which are produced alternately in a recurring time cycle and for unequal periods in each cycle, the combination of: a radio frequency amplifier for receiving and amplifying said signals; rectifying means for rectifying said amplified signals to produce a direct potential which pulsates in accordance with the alternate production of said signals; filter means for separating the alternating potential and direct potential components of said pulsating potential; means for reversing the phase of said alternating potential component; a pair of half wave rectifiers connected to separately rectify said alternating potential component and said reversed phase alternating potential component; a separate load for each of said rectifiers; and a low resistance indicating galvanometer connected between the load sides of said rectifiers.



2,407,324

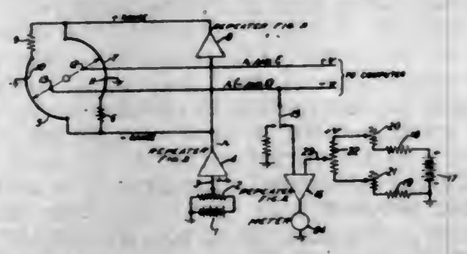
EQUISIGNAL RADIO BEACON SYSTEM

William J. O'Brien, London, England, assignor to The Decca Record Company, Limited, London, England, a corporation of Great Britain

Original application March 2, 1942, Serial No. 432,948. Divided and this application November 8, 1943, Serial No. 509,444

7 Claims. (Cl. 250—11)

1. The method of producing a radio frequency equi-signal surface for guiding mobile vehicles which consists in simultaneously radiating radio frequency signals of like frequency from three aligned points spaced from each other, adjusting the phase of the signals radiated from the end ones of said three points to be in phase opposition to each other, periodically reversing the phase of the signals radiated from the center one of said three points from substantially a leading phase quadrature relation to one of said other signals to substantially a lagging phase quadrature relation to said one other signal, and effecting said periodic phase reversal in a repeating cycle in which the time duration of the periods of one of said phase relations is materially different than the duration of the periods of the other of said phase relations.



2,407,325

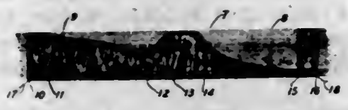
RANGE CONVERTER

David B. Parkinson, Maplewood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application April 23, 1942, Serial No. 440,166

1 Claim. (Cl. 235—61.5)

In a system for controlling from an observation point, artillery firing at a target, a source of voltage, a potentiometer having a winding and a wiper adjusted to select a voltage proportional to the known height of the target, a pair of resistors respectively connected between the poles of said source and the ends of said winding, said resistors being adjusted to a value proportional to the difference in elevation between said observation point and said artillery, a second source of adjustable voltage, a second potentiometer having a winding varying in resistance per unit length with a cosinusoidal function connected across said second source of voltage and a wiper moved in accordance with the elevation angle of said target to select a voltage approximately proportional to the vertical height of the target, means for indicating any inequality between the voltages selected by the wipers of said potentiometers, and means for adjusting the voltage from said second source to reduce said inequality to zero, whereby the voltage from said second source is made proportional to the slant range to said target.



2,407,326

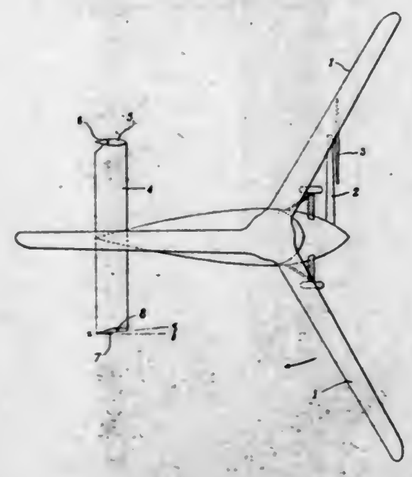
WOVEN-WIRE RESISTANCE AND METHOD OF FORMING THE SAME

Everett M. Patterson, Waterbury, Conn., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application January 30, 1943, Serial No. 474,130

4 Claims. (Cl. 201—60)

1. A woven-wire type resistance comprising a warp of spaced threads and a woof of picks of resistance wire woven transversely through said warp and in which between certain predetermined points taken along said resistance picks of resistance wire are made in predetermined varying lengths, extending from one edge of said warp and partially across said warp to make the resistance value taken from one of said points to another follow a predetermined curved resistance changing pattern.



2,407,327

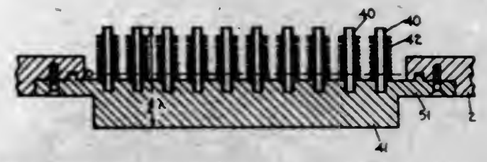
AIRCRAFT WITH POWER DRIVEN ROTOR

Harold F. Pitcairn, Bryn Athyn, Pa., assignor to Autogiro Company of America, Philadelphia, Pa., a corporation of Delaware

Application March 24, 1942, Serial No. 435,925

6 Claims. (Cl. 244—17)

1. In an aircraft having a single sustaining rotor adapted to be power driven, and, when driven, setting up a torque reaction in the body of the craft, airscrew means positioned to develop thrust, acting in a direction to induce translational flight, with the mean thrust line thereof offset from the rotor axis toward that side on which the airscrew thrust opposes said torque reaction, an airfoil positioned at least in large part outside of the slipstream of the airscrew means, and arranged to oppose said torque reaction during translational flight, and a controllable rudder disposed at least in large part within the slipstream of the airscrew means.



2,407,328

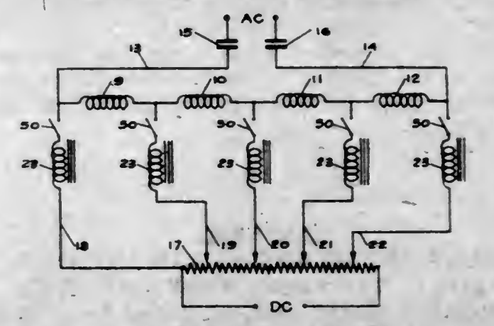
SENDING AND RECEIVING APPARATUS

Edwin E. Turner, Jr., West Roxbury, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware

Application June 23, 1933, Serial No. 677,179

15 Claims. (Cl. 177—386)

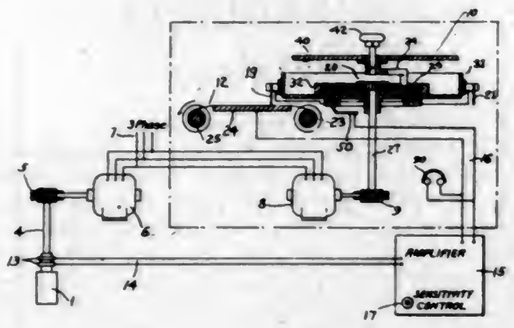
9. A device for transmitting and receiving high frequency compressional waves of approximately 10,000 cycles per second and higher in water including a magnetostrictive rod having one end free and the other end for radiating to the propagating medium, said rod having throughout a uniformly distributed mass, means having a concentrated mass positioned at the radiating end of the rod, said concentrated mass and rod forming substantially a one-half wave length system at the frequency the system is to operate with the node in the rod near the concentrated mass, and a coil surrounding said rod for energizing the same.



2,407,329

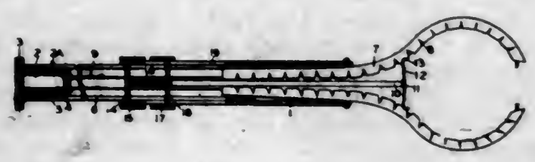
APPARATUS FOR SUBMARINE SIGNALING

Edwin E. Turner, Jr., West Roxbury, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware



Application July 22, 1939, Serial No. 285,910

2 Claims. (Cl. 177—386)



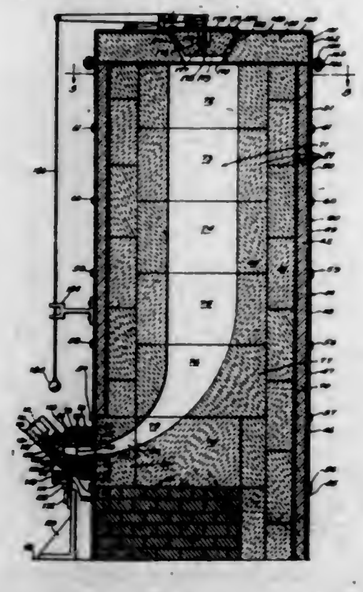
1. A submarine signaling device having a solid unitary radiating member having a continuous radiating surface of surface dimensions many times the wave length of the compressional waves in the signaling medium at the signaling frequency, said surface adapted to be in contact with the signaling medium, said radiating member having a reverse surface opposed to said first surface with a plurality of metallic elastic longitudinally vibratable elements mounted thereon substantially extending over the entire radiating member, a plurality of electric current-carrying coils operatively associated with said metallic elements for vibrating the same, said electric current-carrying coils positioned nearer the center of the radiating member having a greater ampere-turns magnitude than the coils operatively associated with the metallic elements nearer the periphery of the radiating member whereby the radiating areas near the center of the radiating member are excited with larger amplitudes than areas progressively away from the center of the radiating member for the purpose of reducing the intensity of the secondary lobes of the beam pattern of the submarine signaling device.

2,407,330
DIRECTION DETERMINING SYSTEM
Edwin E. Turner, Jr., West Roxbury, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Application February 6, 1941, Serial No. 377,687
14 Claims. (Cl. 181—26)

1. A system for detecting the direction of a source of sound whose position is unknown from an observing vessel comprising a directional receiving element carried by the vessel and adapted to pick up sounds from said source, means for rotating said receiving element continuously, a recording sheet, means for moving a recording stylus over said recording sheet for recording the sounds picked up by said receiving element, the motion of said recording stylus being in synchronism with the rotation of said receiving element and means for moving said recording sheet transversely to the motion of the stylus at a velocity substantially lower than that of the stylus, whereby the presence of a sustained sound will produce a substantially continuous curve on the recording sheet indicating the direction of the sound source.

2,407,331
GLASS BULB AND FLASK HOLDER
Harry L. Van Velzer, State College, Pa.
Application March 1, 1945, Serial No. 580,453
5 Claims. (Cl. 294—20)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

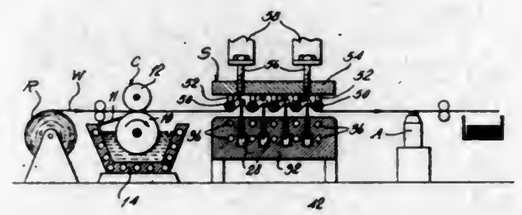
1. In combination in a bulb holding device, a tubular handle, flexible holding members mounted therein and extending therebeyond to provide gripping jaws, means extending through said flexible members and therebeyond within said handle, means stressing said last named means and means movable within said handle between said flexible holding members and yieldably engaging and spreading said flexible members adjacent and exterior to said handle.



2,407,332
PURIFICATION OF ACETYLENE BY MEANS OF ARSENIC TRICHLORIDE
Richard B. Wearn and Gordon N. Jarman, United States Army
No Drawing. Application April 21, 1945, Serial No. 589,687
3 Claims. (Cl. 260—679)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

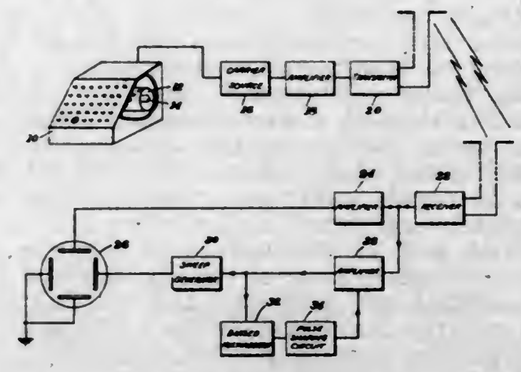
1. A method of purifying crude acetylene comprising intimately contacting the crude acetylene with arsenic trichloride.

2,407,333
FUMIGATION METHOD
Peter R. Wenck and Walter A. Henson, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Michigan
No Drawing. Application October 29, 1943, Serial No. 508,260
3 Claims. (Cl. 167—39)



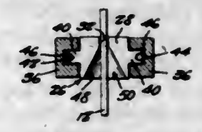
1. The method which comprises fumigating a space wherein the principal known living things subject to destruction by fumigation are microorganisms, with a lethal concentration in air of a toxicant selected from the group consisting of 2-bromo-2-methyl propane and 2-iodo-2-methyl propane.

2,407,334
CASTING MACHINE
Carl Wessel, Chicago, Ill., assignor to Carl Wessel and Lew W. Cleminson, both of Chicago, Ill., as trustees
Application April 16, 1942, Serial No. 439,190
17 Claims. (Cl. 22—57)



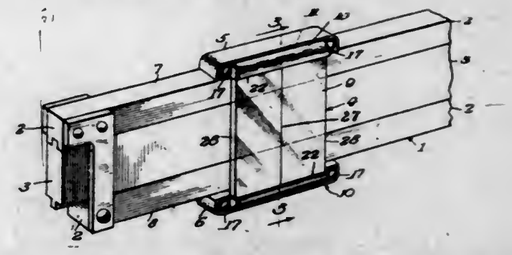
1. In an apparatus for casting, a ladle for casting operations, comprising an external metal shell, an internal metal shell, an insulating filling of mineral fibers between said shells, a lining of firebrick inside said second metal shell, and a lining of smooth refractory inside said firebrick, said lining of smooth refractory defining a ladle chamber, said ladle chamber tapering and extending laterally toward a discharge opening at a lower part of said chamber for the supply of metal to molds.

2,407,335
APPARATUS FOR SMOOTHING HOT MELT COATINGS
Arthur M. Wickwire, Jr., Great Barrington, Mass., assignor to Interchemical Corporation, New York, N. Y., a corporation of Ohio
Original application December 31, 1941, Serial No. 425,211. Divided and this application July 10, 1943, Serial No. 494,237
3 Claims. (Cl. 91—53)



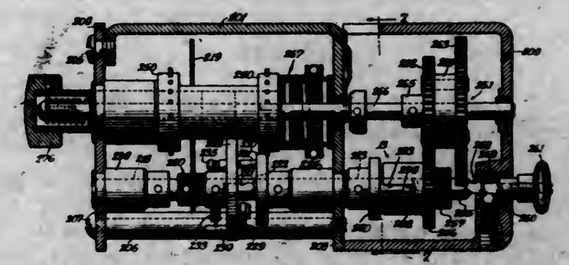
1. Apparatus for smoothing thermoplastic coating material that has been applied to the surface of a sheet or web, comprising a plurality of spaced bars having smooth curved surfaces for contacting the coating material, means for heating each of said surfaces to an elevated temperature, means for causing the material to pass through an angular path in contacting each of said bars, and means for reciprocating said bars while the coating material is in contact therewith.

2,407,336
METHOD AND MEANS FOR TRANSMITTING INTELLIGENCE
Norman H. Young, Jr., Jackson Heights, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application November 1, 1943, Serial No. 508,617
18 Claims. (Cl. 178—68)



2. The method of intelligence-transmission, which includes the steps of generating a series of pulses of predetermined repetition frequency, generating a second series of sets of pulses of the same frequency, each pulse of said second series occurring between successive pulses of the first series and differing from the pulses of the other sets by a different time displacement from the pulses of the first series, whereby each pulse of each set of said second series may represent a character to be transmitted, receiving both series of pulses, and, beginning with any first pulse of the received first series of pulses combining said first series with the individually differently spaced pulses of the second series to reproduce the transmitted intelligence.

2,407,337
WIRE ENAMELING DIE
Robert M. Kolter, Decatur, Ind.
Application January 14, 1943, Serial No. 472,367
2 Claims. (Cl. 91—53)



1. In a wire enameling die, a cylindrical body, an annular flange formed about said body intermediate its ends, said flange having a relatively deep groove in its periphery, said body having a non-circular opening axially through its upper portion and a conically shaped opening increasingly tapered from the non-circular opening to the bottom end of the die, said body being axially divided to provide a pair of complementary sections, a resilient member fitted in said groove to encircle the body and releasably hold the sections in assembled relation, and a pair of channel shaped holder members disposed to receive the body flange therein.

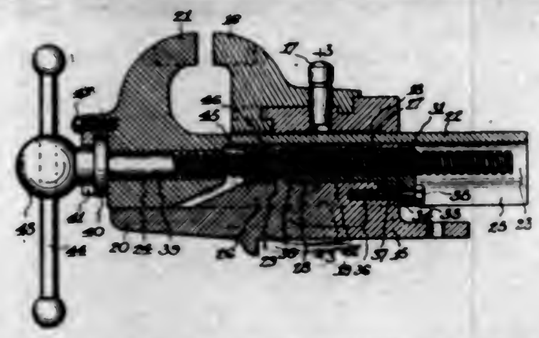
2,407,338
SLIDE RULE INDICATOR
August H. Kreiling, Chicago, Ill., assignor to Eugene Dietzgen Co., Chicago, Ill., a corporation of Delaware
Application August 17, 1944, Serial No. 549,851
5 Claims. (Cl. 235—70)

1. A slide rule cursor having a pane of clear material, an end bar and means to secure the pane, at an end edge thereof, on the end bar comprising a clip formed for attachment on the end bar and providing a pocket for grippingly engaging the edge of the pane, said clip having portions in position to engage the opposite side edges of the pane, adjacent said end edge, to prevent displacement of the pane longitudinally of the end bar.

2,407,339
FILM GATE RELEASE
William A. Lebus, Chicago, Ill., assignor to Prismacolor, Inc., Chicago, Ill., a corporation of Illinois
Original application November 9, 1942, Serial No. 464,961, now Patent No. 2,384,319, dated September 4, 1945. Divided and this application March 18, 1944, Serial No. 527,100
12 Claims. (Cl. 88—28)

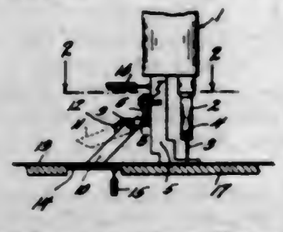
1. A film transport mechanism for intermittently advancing the film through a releasable

pressure plate unit adapted for holding said film in a predetermined focal plane, comprising a main drive shaft, a pair of coaxially aligned countershafts, and a film driving sprocket to advance the film for changing the picture images, actuating means connected between said drive shaft and one of the countershifts to positively revolve the latter, a one way clutch unit for connecting said countershafts, said clutch being adapted to operatively join said countershafts after a predetermined interval of movement of said main drive shaft, sprocket driving means connected between the other of said countershafts and the film sprocket to advance the film during the effective operation of said one way clutch, and release means adapted to be driven by said main drive shaft during the interval of movement of said shaft prior to the joining of said countershafts for operatively releasing the pressure plate unit and the film therebetween before said film is advanced by said film sprocket.



2,407,340
MATERNITY GARMENT
Louise E. McCarthy, Flushing, N. Y.
Application August 25, 1943, Serial No. 499,957
1 Claim. (Cl. 2—74)

A laterally expansible maternity garment comprising a one-piece backless pinafore adapted to be worn and to extend over the front and sides of a dress and including a wide plain front and upwardly tapering side portions integral with said front, upwardly tapered plain bibs of inverted V-shape integral with and rising from the top of said front portion and defining a neck opening therebetween, upwardly tapering pleats in the side portions, means at the apices of the bibs for securing the latter to the dress at the shoulders, and ties attached to the free edges of side portions at the waistline and adapted for connection to each other at the back of the wearer to secure the front and side portions, respectively, against the front and side portions of the dress.

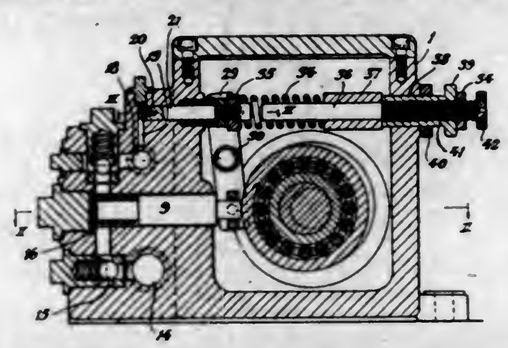


2,407,341
VISE
George J. Meyer, Milwaukee, Wis.
Application June 28, 1943, Serial No. 492,515
1 Claim. (Cl. 81—33)

A vise comprising a vise body having a jaw, a shank slidably guided by said vise body and having a jaw cooperating with said first-named jaw, said shank having a longitudinally extending channel therein, a rotatable screw shaft extending longitudinally in said shank and confined against relative axial movement with respect to said shank, said vise body having an integral longitudinal flange extending upwardly into the channel of said shank, a nut carried by the upper portion of said flange, said screw shaft being engaged with said nut for effecting displacement of the movable jaw, a second nut engaged on said shaft in front of said first-named nut and re-

strained by the forward portion of the flange against rotation, and a spring extending about said shaft and interposed between said nuts for urging said second nut in a forward axial direction tending to open the movable jaw, said second nut and spring being housed in said channeled shank.

2,407,342
SEWING MACHINE
Joseph Nachman, Philadelphia, Pa.
Application February 25, 1944, Serial No. 523,871
4 Claims. (Cl. 112—219)

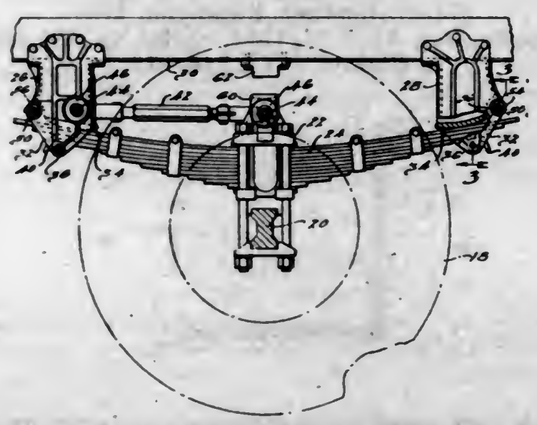


4. In a stitching machine, the combination of a table, a presser foot, and a needle operatively associated therewith, a source of power for the machine and means for cutting off said source of power to stop the machine including a circuit having therein electrically responsive means, a contact plate and a work engaging finger, said plate being positioned for contact with the stitched material at one side thereof as it issues from the needle and presser foot, the finger being operatively supported at the other side of the material and so disposed as to make contact with and complete the circuit through the plate, the construction and operation further being such that the said finger contacts said plate only upon passage of an imperfection in the stitched material.

2,407,343
HYDRAULIC PUMP
Kenneth Edward Pyne and Clifford Douglas Pyne, West Wickam, and David Luther Leadbeater, Prittlewell, England
Application July 12, 1944, Serial No. 544,542
In Great Britain August 3, 1943
2 Claims. (Cl. 103—38)

1. An hydraulic pump for delivering pressure fluid at a pre-determined pressure which pump includes a reciprocating piston, a driving eccentric having releasable driving connection with the rear of the piston, spring means for said piston actuating the same rearwardly toward contact with the eccentric and providing the motive

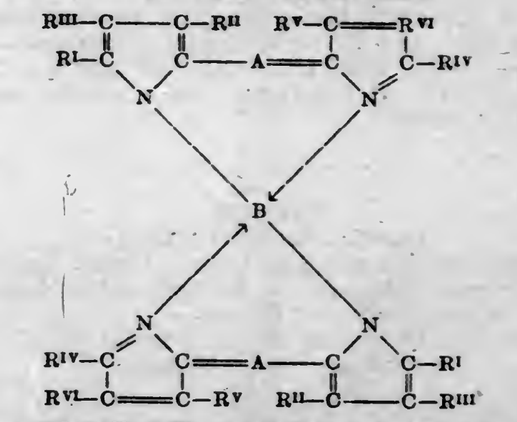
power for the suction stroke, a spring loaded plunger the head of which is exposed to and maintained in contact with the pressure fluid on the pressure side of the pump and adapted upon a pre-determined pressure being reached to move axially against the spring loading the plunger, a yoke member at the rear of said piston movable toward the pressure end of the pis-



ton for reducing the piston stroke, a pivoted link connecting the said plunger and yoke member by which longitudinal movement of the plunger due to pressure thereon swings the link and thereby moves said yoke member toward the pressure end of the piston and lifts the piston off the eccentric proportionally to the movement of the plunger to reduce or to eliminate the stroke of the piston accordingly.

2,407,344
CHEMICAL METHODS AND PRODUCTS
Cortes F. Reed, Anoka, Minn., assignor to Charles L. Horn, Minneapolis, Minn.
No Drawing. Original application December 20, 1938, Serial No. 246,901. Divided and this application November 18, 1941, Serial No. 419,658
6 Claims. (Cl. 260—633)

1. An improved method of reacting upon an alcohol which comprises mixing said alcohol in sulphuric acid and thereafter introducing sulphur dioxide and chlorine into said admixture.



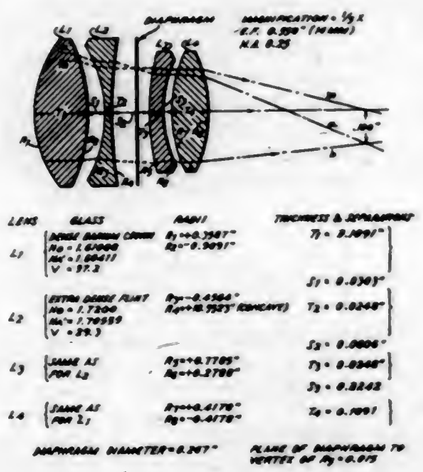
2,407,345
SPRING SUSPENSION
Frederick M. Reid, Detroit, Mich., assignor to Fruehauf Trailer Company, Detroit, Mich., a corporation of Michigan
Application June 9, 1944, Serial No. 539,472
5 Claims. (Cl. 267—44)

1. In a vehicle spring suspension of the type including a pair of longitudinally spaced spring hangers, a semi-elliptic spring interposed between said hangers, and an axle secured to said spring between the ends of the latter, the combination with said spring hangers of curved surfaces fixed to each thereof and adapted for engagement with the corresponding ends of said spring, the curvature of said surfaces being such that as the load on said spring increases the distance between the points of contact of said spring and said surfaces decreases, and a roller carried by each of said hangers outwardly of said surfaces from said axle, said rollers being so located as to engage said spring and transmit the load of the vehicle from said hangers to said spring when said load is relatively light, and when said spring is deflected by a predetermined increase in said load from said light load position the contact between said spring and said hangers is transferred from said rollers to said fixed surfaces.

2,407,346
MANUFACTURE OF NEW COLORING MATTERS
Maurice Arthur Thorold Rogers, Blackley, Manchester, England, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application July 9, 1943, Serial No. 494,120. In Great Britain July 13, 1942
3 Claims. (Cl. 260—313)

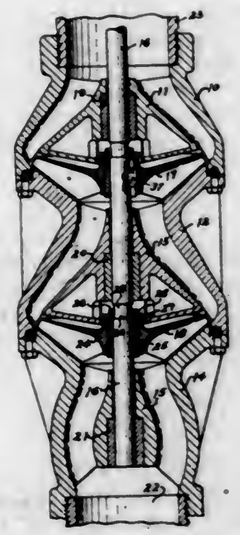
1. Metal complexes of the formula:

where R^{I}, R^{II}, R^{IV}, and R^{V} stand for aryl radicals, R^{III} and R^{VI} each are a member of the group consisting of hydrogen, aryl-, alkyl-, alkylamino-, benzylideneamino-, and acylamino- radicals, A is a member of the group consisting of nitrogen and the group



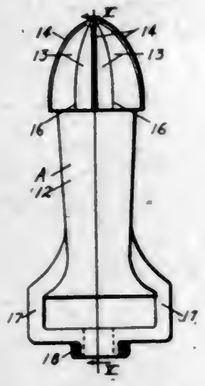
wherein R is a member of the group consisting of hydrogen, alkyl-, aralkyl-, aryl-, and heterocyclic radicals; and B is a metal of the group consisting of copper, zinc, nickel, cobalt, chromium, and cadmium.

2,407,347
OBJECTIVE
Lawrence T. Sachtleben, Indianapolis, Ind., assignor to Radio Corporation of America, a corporation of Delaware
Application June 27, 1944, Serial No. 542,309
8 Claims. (Cl. 88—57)



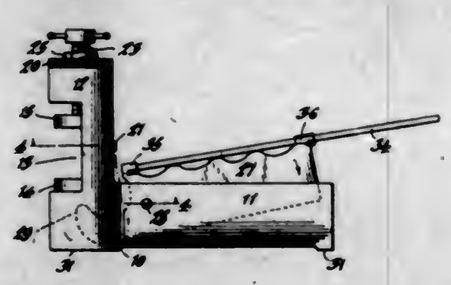
1. A four-lens, axially air-spaced objective comprising in order from front to rear in the direction of incident light, a bi-convex lens, a bi-concave lens, a meniscus concave lens and an equi-convex lens, the outer lenses being of equal thickness and of the same dense barium crown glass having an index of refraction of less than 1.7, and the inner lenses being of equal thickness and of the same dense flint glass having an index of refraction of greater than 1.7, the axial sep-

aration between the two inner lenses being double the axial separation between the two front lenses, the surface of said bi-concave lens having the shorter radius of curvature and the surface of said meniscus concave lens having the greater ra-



dius of curvature being disposed towards the incident light, and the focal length of said equi-convex lens being more than one-half and less than three-fourths of the focal length of the objective as a whole.

2,407,348
IMPELLER MOUNTING
Rudolph D. Schott, Los Gatos, Calif., assignor, by mesne assignments, to Fairbanks, Morse & Co., a corporation of Illinois
Application December 22, 1943, Serial No. 515,201
9 Claims. (Cl. 287—52.06)

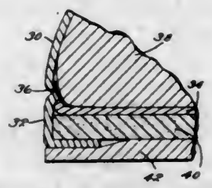


1. In a device of the character described, the combination of a cylindrical shaft, a split cylindrical bushing having a tapered external surface adapted to be clamped upon said shaft, a member having a hub with a tapered bore mounted upon said bushing, means operating to force the hub of said member into clamping relation upon said bushing, and means fixed against axial movement carried by said shaft and engaging said bushing for retaining said bushing in any desired axial position upon said shaft.

2,407,349
AIR-COOLED GAS BURNER
Walter M. Shaw, Moline, Kans.
Application October 21, 1944, Serial No. 559,773
1 Claim. (Cl. 158—99)

In a gas burner of the class described; a burner unit, said burner unit having a Venturi tube, a hollow elongated gas burner head integrally formed on the upper end of the tube, said gas burner head comprising a series of integral, vertically elongated, curved fins having enlarged base portions and relatively thin outer edges radially positioned around the upper end of the Venturi tube, the lower ends of the fins being positioned substantially vertical and the upper portions of the fins gradually curving toward each other and meeting each other at a point on the vertical central axis of the burner unit, each of said fins having long deep and narrow slots extending inwardly through said thin edges and through the thickest dimension of the fins substantially throughout their length to a point just short of the meeting point of said fins, said slots communicating with the interior of the Venturi tube to form ports, said fins having their side walls curved convexly from their base toward their thin edges the valley between opposing fins being a continuation of the outer wall of the Venturi tube, whereby uninterrupted stream line flow of cooling secondary air is provided adjacent said ports, and means for entering air and gas fuel into the Venturi tube at its lower end.

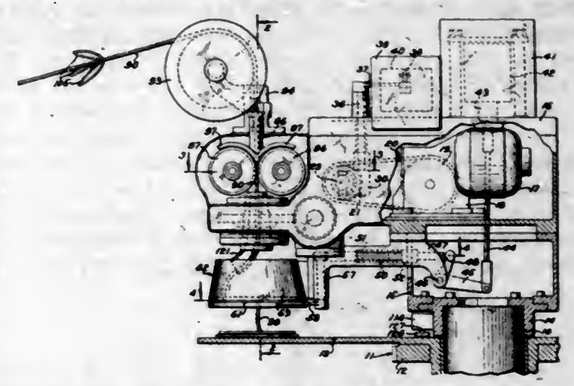
2,407,350
NUTCRACKER
Harry Spooner, Stephens, Ark.
Application April 24, 1945, Serial No. 590,063
2 Claims. (Cl. 146—15)



1. A nut cracker, comprising a substantially L-shaped body including a base portion adapted to serve as a handle and a cylindrical nut-receiving portion open at one side thereof, a plunger guided in said cylindrical portion and open at one side thereof in registering relation with the companion open side of such portion and terminating at that end thereof adjacent the base portion in a nut-cracking jaw, and at its opposite end in an abutment, a companion jaw mounted in the opposite end of the cylindrical portion of the body, a pressure lever fulcrumed on said base portion in operative relation to said plunger to bring its jaw into and out of nut-cracking relation with the companion jaw, and a spring in said cylindrical portion and engaging such plunger-abutment for normally urging the plunger and its actuating lever to a retracted, inoperative position.

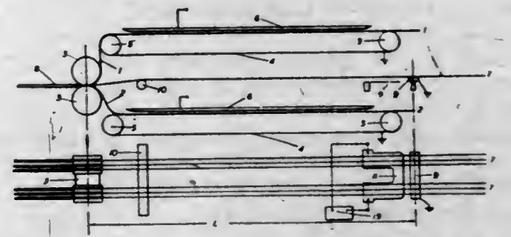
2,407,351
PROCESS FOR THE MANUFACTURE OF o-SULPHOBENZOIC ACIDS
Walter Stammbach, Basel, Switzerland, assignor to the firm J. R. Geigy A. G., Basel, Switzerland
No Drawing. Application June 11, 1943, Serial No. 490.535
3 Claims. (Cl. 260—507)

1. The method of converting a compound selected from the group consisting of neutralised o-chlorobenzoic acid and o-bromobenzoic acid into o-sulphobenzoic acid, which comprises heating a member of the said group in aqueous medium with an inorganic sulphite in the presence of a catalyst selected from the group consisting of copper and copper salts.



2,407,352
METHOD OF MAKING SHOES
Karl A. Stritter, Nahant, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application September 8, 1945, Serial No. 615,146
17 Claims. (Cl. 12—142)

1. That improvement in methods of making platform shoes which consists in securing an upper, an edge covering strip and an insole member together off a last with their margins in superimposed relation and with the upper wrong side out, turning the upper right side out and inserting a last therein, securing a platform sole to the insole member, wrapping the covering strip around the edge of the platform sole and inwardly beneath its bottom surface, and attaching an outsole to the inwardly extending portion of the covering strip.

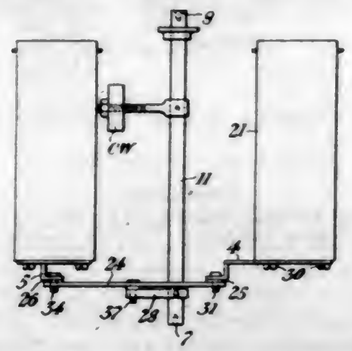


2,407,353
COILING APPARATUS
Julius A. Wagner, Cleveland Heights, Ohio, assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application January 11, 1945, Serial No. 572,417
14 Claims. (Cl. 242—82)

1. An apparatus for delivering coils of cordage to a processing machine comprising means for withdrawing cordage from a supply thereof, means for coiling the cordage withdrawn from the supply, means associated with the coiling means for receiving the coils, and means under control of the cordage for causing the receiving

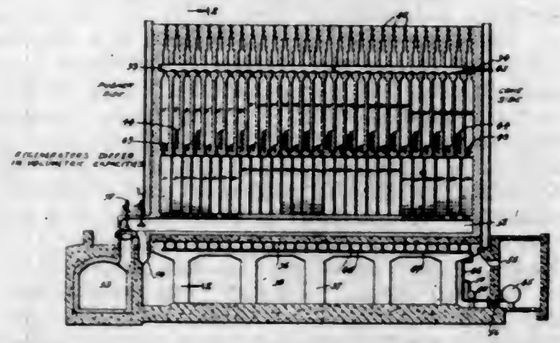
means to discharge a coil onto the processing machine.

2,407,354
MACHINE FOR COVERING WIRES WITH INSULATING MATERIALS
George Hall Walton, Helsby, near Warrington, Joshua Creer Quayle, Helsby, and Peter Jones, Kelsall, near Chester, England, assignors to British Insulated Cables Limited, Prescot, England, a British company
Application December 24, 1943, Serial No. 515,506
In Great Britain January 1, 1943
8 Claims. (Cl. 154—2.26)



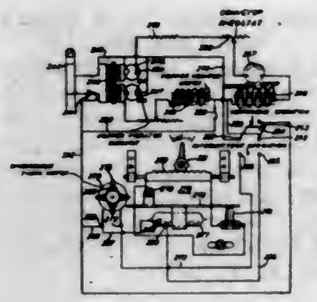
1. Apparatus for heating pairs of strips of organic resin insulation by dielectric loss as they enter the nip of a pair of cooperating electrically conducting rolls having a plurality of opposed grooves therein, each pair of grooves defining a pass for continuously applying said strips as a coating to an electrically conducting wire travelling through said pass and seaming together the strips applied to each wire, said apparatus comprising a capacitor formed by the insulation strips together with the rolls and the portions of the wires in the nip thereof, a resonant transmission line having two parallel sides so connected to said capacitor as to apply high-frequency voltage thereto, at least one side of said line consisting of a length of at least one of said wires on the entering side of said rolls and conductively related to the portion of said one of said wires in the nip of the rolls, means electrically connecting the two sides of the line together at a point in said length distant from said rolls by nearly one quarter of the wave-length corresponding to said frequency, and means between said point and the rolls for feeding said high-frequency electric energy into said line.

2,407,355
LIGHT SIGNAL
Wesley B. Wells, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application August 31, 1943, Serial No. 500,643
7 Claims. (Cl. 175—337)



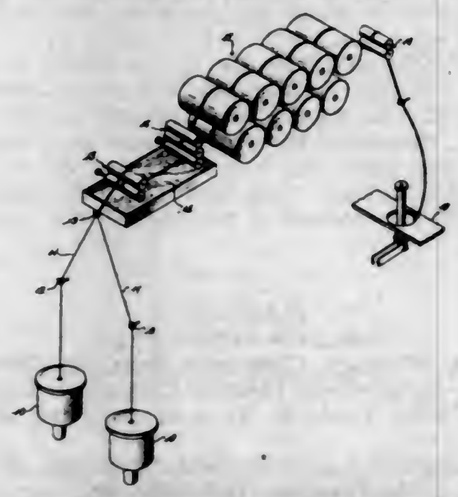
7. In a light signal the combination comprising, two electromagnets mounted in parallel ver-

tical planes a given distance apart and each provided with a tractive armature and which armatures are pivotally mounted in the same horizontal plane, a shaft journaled with its axis parallel to the vertical planes of said magnets and in a horizontal plane below the horizontal plane of said armatures, two extension members one secured to each of said armatures and said extension members disposed for their free ends to align in a horizontal plane above the horizontal plane of said shaft, two links one pivoted to the free end of one of said extension members to extend downward and the other link pivoted to



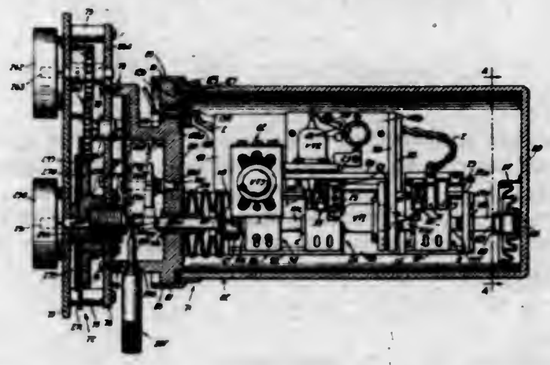
the free end of the other extension member to extend downward, a floating lever having its ends pivoted to the free ends of said links and formed intermediate its ends with a depending arm, and a crank secured to said shaft and pivotally connected to said depending arm whereby said shaft is biased to an initial position when both said magnets are deenergized, is rotated to an intermediate position when one of the magnets is energized and the other magnet is deenergized and is rotated to an extreme position when both magnets are energized with binding and friction at the pivots minimized.

2,407,356
REGENERATIVE COKE OVEN BATTERY
Frans Wethly, Manhasset, N. Y., assignor to Wilputte Coke Oven Corporation, New York, N. Y., a corporation of Maine
Application March 3, 1945, Serial No. 580,858
5 Claims. (Cl. 202—144)



5. In a coke oven battery, having alternate horizontal tapered coking chambers and heating walls, each heating wall consisting of vertical twin flues, a row of regenerators extending crosswise of the battery communicating with said flues in each heating wall, the regenerators being of different volumetric capacities, the regenerator of largest volumetric capacity of each row communicating with the flue on the coke side of the battery, the regenerator of next largest volumetric capacity of each row communicating with the flue on the pusher side of the battery, and the volumetric capacities of the remaining regenerators of each row gradually increasing in a direction from the pusher to the coke side of the battery to compensate for the varying amounts of coal in each unit length of a coking chamber heated by the flues communicating with said remaining regenerators so that substantially uniform coking of the coal in said coking chamber takes place.

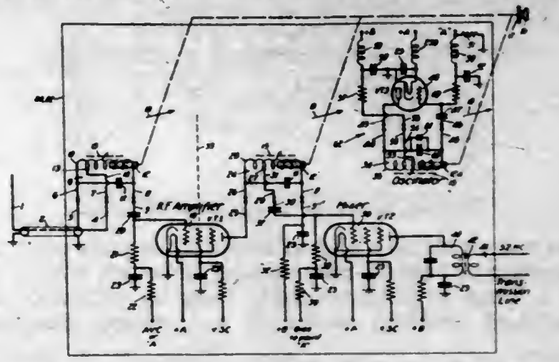
2,407,357
APPARATUS FOR CONVEYING MATERIAL
Carl S. Weyandt, Homer City, Pa.
Original application May 1, 1939, Serial No. 270,999, now Patent No. 2,323,864, dated July 6, 1943. Divided and this application October 5, 1942, Serial No. 460,739
10 Claims. (Cl. 198—220)



1. In apparatus for conveying material, the combination of a vibratory conveyor, and continuously operated interrupter means for intermittently interrupting the vibrations to cause the conveyor to deliver a series of separate quantities of material in a selected period of time the total mass of which provides an abnormally low feed that is below the lowest rate of continuous feed of which the conveyor is capable in the same period of time.

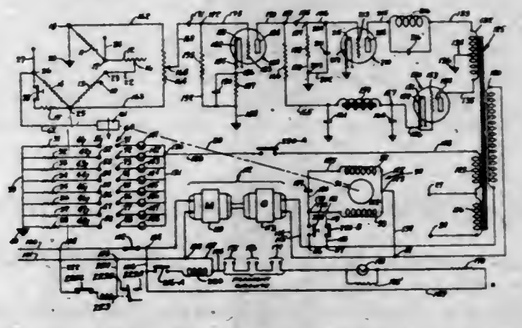
2,407,358
METHOD AND APPARATUS FOR TWISTING THREAD
John K. Whisnant, Enka, N. C., assignor to American Enka Corporation, Enka, N. C., a corporation of Delaware
Application January 23, 1945, Serial No. 574,109
3 Claims. (Cl. 57—34)

3. An apparatus for the preparation of twisted cables of rayon which comprises a yarn source consisting of at least two cakes of freshly spun initially twisted rayon from which the impurities have been removed, means for supporting and rotating the cakes, means for withdrawing the yarns from the respective cakes at a predetermined rate and in fixed relation to the R. P. M. thereof to impart an additional twist to the individual yarns, means for passing the yarns together through a liquid treating bath, said means also acting to stretch the same, means for drying the yarns under tension whereby a low elongation is effected and means for cable twisting the yarns during collection whereby a package of cables in the dry state is obtained directly from the freshly spun wet rayon cakes.



2,407,359
RADIO APPARATUS
Sidney Y. White, Wilmette, Ill., assignor to Victor S. Johnson, Chicago, Ill.; Alex Thomson, administrator of said Johnson, deceased
Original application December 8, 1942, Serial No. 468,195. Divided and this application October 15, 1943, Serial No. 506,372
20 Claims. (Cl. 250—40)

1. A radio unit comprising, in combination, a housing defining an air-tight enclosure, radio circut means within the enclosure including a tunable circuit, a resilient pressure responsive element mounted in sealed relation upon a wall of the housing, a thrust member within the enclosure attached to the pressure responsive element, actuating means located outside the enclosure for transmitting motion directly through an imperforate wall of the pressure responsive element to the thrust member within the enclosure, and circuit tuning means within the enclosure operated by the thrust member.

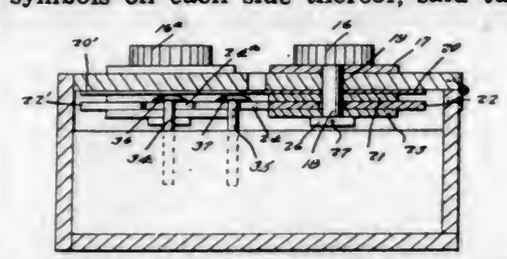


2,407,360
METHOD OF TEMPERATURE COMPENSATING TUNED CIRCUITS
Sidney Y. White, Wilmette, Ill., assignor to Victor S. Johnson, Chicago, Ill.; Alex Thomson administrator of said Victor S. Johnson, deceased
Original application December 8, 1942, Serial No. 468,195. Divided and this application October 15, 1943, Serial No. 506,377
1 Claim. (Cl. 250—36)

The method of limiting changes of frequency of a core tuned oscillator assembly circuit in response to temperature changes, which comprises providing in the circuit a main condenser having a predetermined change of capacity with temperature of an extremely low order, temporarily connecting in parallel with the main condenser a second condenser of minute capacity in relation to the main condenser whose law of capacity variation with temperature is known, heat cycling the entire oscillator assembly at least once through at least a substantial portion of the operative temperature range to stabilize the assembly, heat cycling the assembly a second time through at least a substantial portion of the operative temperature range to determine the change of frequency with temperature, and replacing the second condenser with another con-

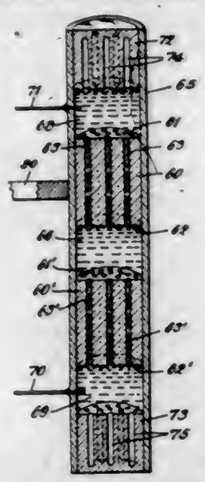
denser having the same capacity as the second condenser and known to have a coefficient of capacity change with temperature suitable for compensating the observed change.

2,407,361
TEMPERATURE MEASURING SYSTEM
John M. Wilson, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application July 28, 1943, Serial No. 496,518
11 Claims. (Cl. 177—311)



4. In combination, an electrical apparatus adapted to be operated when connected to a predetermined electrical resistance value, a resistance means connected to said apparatus and normally having a value other than said predetermined value, a test resistance, and means for connecting said test resistance to said resistance means, said test resistance having such value that the resistance means and test resistance together subject said electrical apparatus to said predetermined resistance value to operate the same when said resistance means is at said normal value, but do not subject said electrical apparatus to said predetermined resistance value if said resistance means is at a value considerably lower than said normal value.

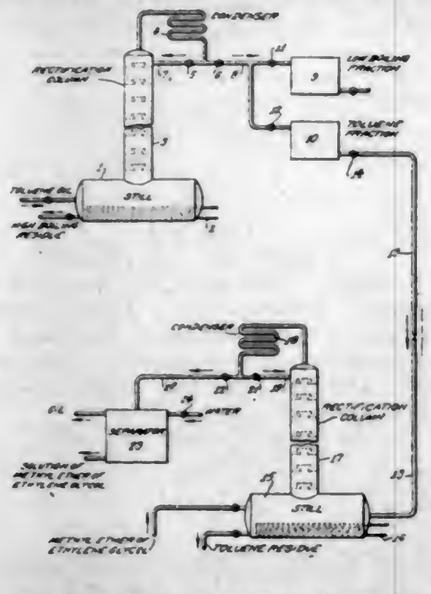
2,407,362
PERMUTATION LOCKBOX
Henry Winterfeld, New York, N. Y.
Application October 26, 1944, Serial No. 560,441
5 Claims. (Cl. 70—315)



1. The combination of a series of permutation locks mounted on a box lid, each of said locks being alike in construction, a wall within the box, tumbler engaging means mounted on the wall, one of said locks consisting of a shank having a knob fixed on one end, a retainer disk fixed on the other end, a plurality of disks on the shank, one being a tumbler disk frictionally held but manually rotatable upon the shank, one of said disks being a symbol dial, said lid having

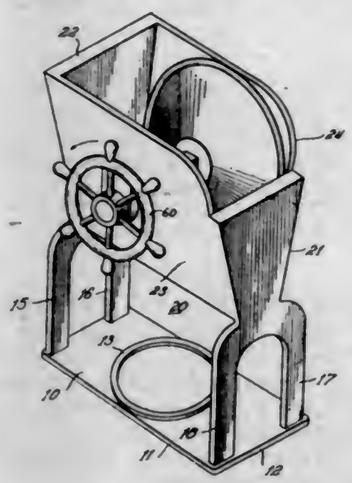
bores through which certain of the symbols are exposed, said dial-disk having identical correlative symbols on each side thereof, said tumbler

having a peripheral gap adapted to pass over said tumbler engaging means and through which one at a time of said symbols may be exposed, said dial and tumbler being of a common diameter.



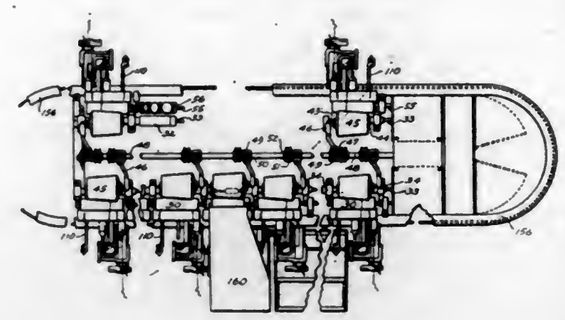
2,407,363
ELECTRICAL APPARATUS
William H. Bussey, Chicago, Ill., assignor, by mesne assignments, to Oliver W. Storey, Wheaton, Ill., as trustee for the partnership of O. W. Storey & Associates, Chicago, Ill.
Application February 17, 1945, Serial No. 578,496
7 Claims. (Cl. 171—327)

1. A transducer comprising an insulating container having a chamber and a pair of dead-end branches including opposed capillary portions leading from said container and being substantially collinear, mercury and another liquid in said container forming at least one capillary electrometer interface in at least one of said capillary portions with a substantial quantity of mercury in said chamber, electrical connections from the outside of said container to said interface forming liquids, and compliant means at the dead-ends of said branches beyond said capillary portions for accommodating relative movement between the liquids and container, said container being adapted to vibrate during normal transducer operation and there being a continuous liquid column between said opposed capillary portions.



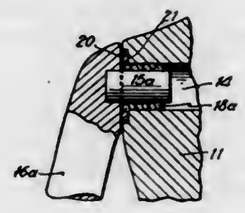
2,407,364
PROCESS FOR THE RECOVERY OF TOLUENE FROM OILS
Charles R. Clark, New York, N. Y., assignor to Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York
Application July 10, 1945, Serial No. 604,130
4 Claims. (Cl. 202—42)

1. A process for the treatment of a hydrocarbon fraction containing toluene and non-aromatic hydrocarbons to separate toluene from the non-aromatic hydrocarbons contained therein which ordinarily distill from said hydrocarbon fraction in the same temperature range as toluene distills therefrom which comprises azeotropically distilling said hydrocarbon fraction in the presence of a



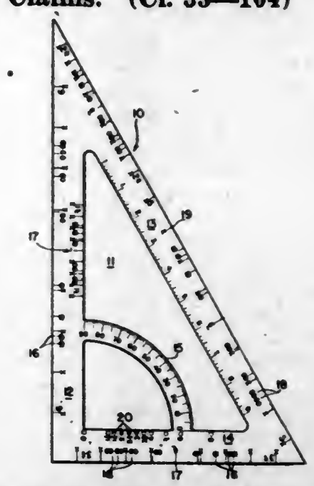
sufficient amount of a material from the group consisting of the methyl, ethyl and butyl ethers of ethylene glycol to vaporize the non-aromatic hydrocarbons together with the ether of ethylene glycol thereby leaving a residue substantially enriched in toluene.

2,407,365
CRUSHING DEVICE
Erling A. Clemetsen and John A. Clemetsen, Prairie View, Ill.
Application November 23, 1944, Serial No. 564,773
3 Claims. (Cl. 100—38)



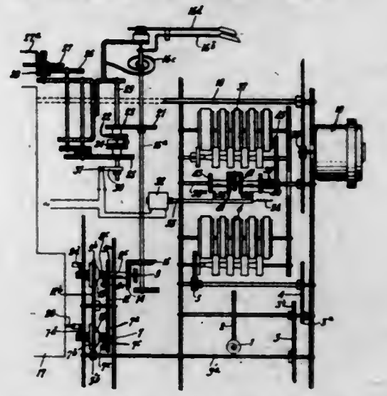
1. A device for crushing fruit or vegetables and the like comprising a container having a screened bottom and open top, said container having two opposed sides sloping toward each other with maximum separation at the top and minimum separation at the bottom, a shaft journalled for rotation in said sloping sides, said shaft being normally horizontal and having a non-circular shaft portion between said opposed side walls, a pair of discs loosely mounted on said shaft but rotatably locked thereto disposed in said container, said discs having enough clearance at said shafts so that each disc may bear against the adjacent sloping side, and means for rotating said shaft whereby upon shaft rotation said discs maintain a maximum spacing at the top between opposed faces and a minimum spacing at the bottom so that edible products dropped in at the open top of the container are crushed.

2,407,366
YARN WINDING MACHINE
Louis M. Cotchett, Hingham, and Lester Campbell and Ferdinand F. Stange, Westfield, Mass., assignors to Foster Machine Company, Westfield, Mass., a corporation of Massachusetts
Application January 19, 1943, Serial No. 472,862
22 Claims. (Cl. 242—35.6)



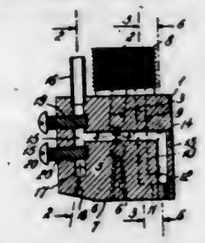
1. In a multi-unit winding machine, the combination of means for supporting and rotating a yarn package, a movable support for a plurality of supply bobbins from which yarn is wound on the package, means for doffing an empty bobbin from the support, a yarn detector normally held in one position by yarn extending from a bobbin to the package and periodically operating means controlled by the detector for rotating the support after the yarn has been exhausted from a bobbin.

2,407,367
JOINTED MANNEQUIN DOLL
Max Geller, Brooklyn, N. Y.
Original application September 22, 1942, Serial No. 459,233, now Patent No. 2,381,897, dated August 14, 1945. Divided and this application January 26, 1945, Serial No. 574,707
3 Claims. (Cl. 46—173)



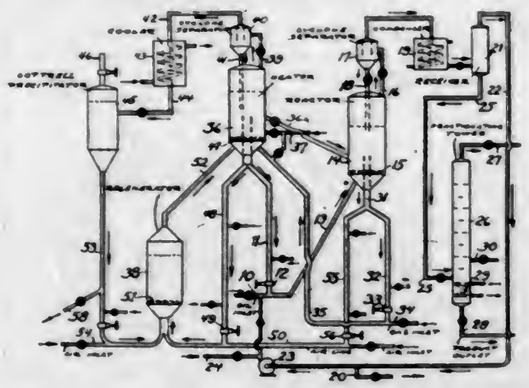
1. In a doll having a rigid body, said body having a pin receiving recess therein which is round in cross section, an extremity member, a pin carried by and extending from said member, said pin extending into said recess free of the walls thereof, and a resilient friction sleeve fitting about said pin and secured thereto, the exterior surface of the sleeve being in tight frictional engagement with the side walls of said recess for turnably and detachably connecting the member to said body.

2,407,368
DEVELOPMENT AND LAYOUT INSTRUMENT
Gerald J. Henjum, Hollywood, Calif., assignor of one-third to Albert H. Farness, North Hollywood, and one-third to Chester H. Sherer, Los Angeles, Calif.
Application May 22, 1945, Serial No. 595,109
4 Claims. (Cl. 33—104)



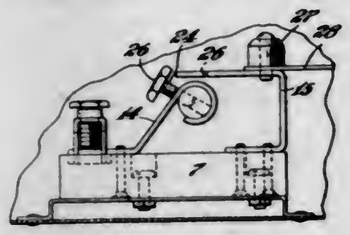
1. A layout instrument embodying a polygonal sheet material having a plurality of scales disposed along the edges thereof, comprising base line projections of equally divided circular arcs corresponding to the inside and outside diameters of a plurality of standard pipe sizes, together with scales of the developed circumference of similar pipe sizes divided into units corresponding to the spacings of said circular arcs.

2,407,369
MEAN-VALUE INDICATOR WITH EXCESS COUNTER
Paul Heynisch, Zug, Switzerland, assignor to Landis & Gyr, A. G., a corporation of Switzerland
Application December 14, 1942, Serial No. 469,036
In Switzerland December 24, 1941
3 Claims. (Cl. 171—34)



1. A maximum demand meter including a meter driven driving mechanism embodying driving elements adapted to be successively reset to provide overlapping demand intervals, a timer, means operated thereby for resetting the driving elements, an excess counter, gearing for operating the counter from the timer, a coupler for throwing said gearing into and out of action, and normally holding the same out of action, and, electrical means for operating the coupler to throw the gearing into action for operating the counter including a switch, a cam operated from the driving mechanism when the rate of metering energy exceeds a predetermined value for closing the switch, and means for varying the action of the cam.

2,407,370
FLAME HARDENING TORCH
Howard G. Hughey, Fanwood, N. J., assignor to Air Reduction Company, Incorporated, a corporation of New York
Application March 13, 1944, Serial No. 526,194
4 Claims. (Cl. 266—4)

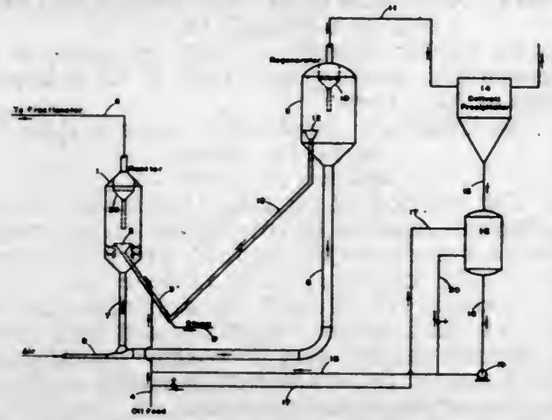


1. A gas torch having a tip, gas passages opening through the face of the tip from which a combustible gas mixture may issue to burn as heating flames, cooling passages through which cooling medium may be circulated to cool the tip, said cooling passages having an entrance through which cooling medium may be admitted and an exit through which cooling medium may pass and be discharged from the torch through a return-flow pipe after circulating through the cooling passages, quenching passages communicating with the cooling passages and opening through the face of the tip and from which cooling medium may issue as quenching jets, and adjustable means for proportioning the amount of cooling medium delivered to the quenching passages and the amount discharged through said exit of the cooling passages.

2,407,371
CONVERSION OF HYDROCARBON OILS
Charles E. Jahnig, Roselle, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application November 28, 1942, Serial No. 467,170
13 Claims. (Cl. 196—52)

1. A process for the conversion of hydrocarbon oils which comprises passing the oil to be converted through a conversion zone, contacting the oil in vapor form within said conversion zone with a finely-divided contact material, maintaining said oil within said conversion zone for a period sufficient to obtain a substantial conversion thereof, continuously removing contact material from said conversion zone, passing at least a portion of the contact material so withdrawn through a heating zone, heating said contact material within said heating zone by direct contact with a heating gas to a temperature materially above the temperature maintained within said conversion zone, mixing a portion of the hot contact material from said heating zone with the oil to be converted having a temperature materially below the temperature maintained within said conversion zone, passing the mixture so obtained back to said conversion zone, controlling the amount of contact material circulating through said heating and conversion zones to maintain said conversion zone at the desired conversion temperature, regenerating a portion of the contact material withdrawn from said conversion zone and thereafter returning the same to said conversion zone.

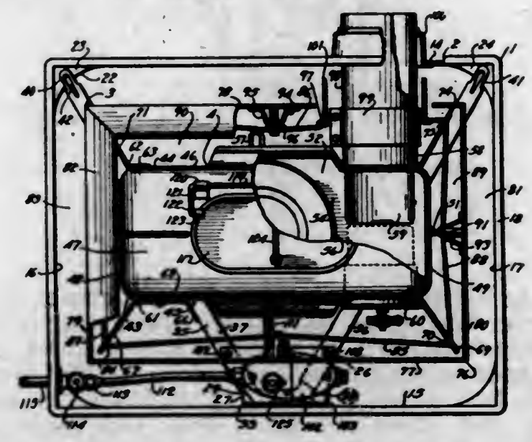
2,407,372
DISCONNECT FOR ELECTRICAL TERMINAL BLOCKS
Ernest G. Johansson, Belmont, Mass., assignor to Anchor Manufacturing Company, Boston, Mass., a corporation of Massachusetts
Application January 6, 1945, Serial No. 571,615
11 Claims. (Cl. 200—153)



1. An electrical terminal block comprising first and second conductors, means for supporting the conductors in spaced relationship with one conductor overlapping the end of the other conductor, said end having a recess, a connector pivotally mounted on the first conductor to swing into and out of said recess, a head on the connector which overlaps the second conductor when the connector is swung into said recess, and means on the connector for moving said head toward the first conductor to clamp the second conductor between the head and the first conductor, one of the conductors being flexible to permit it to move toward the other conductor in response to said movement of the head.

2,407,373
DEHYDROGENATION OF HYDROCARBONS
Kenneth K. Kearby, Elizabeth, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application March 27, 1943, Serial No. 480,843
4 Claims. (Cl. 260—680)

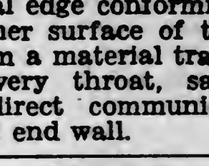
1. The method of dehydrogenating butene to form butadiene which comprises contacting butene admixed with steam with a catalyst consisting of a major portion of copper oxide, a minor portion of a metal oxide selected from the class consisting of chromium oxide, iron oxide and manganese oxide, and a promoter consisting of a compound of potassium.



2,407,374
CATALYTIC CRACKING PROCESS
Conrad H. Kollenberg, Goose Creek, Tex., assignor to Standard Oil Development Company, a corporation of Delaware
Application August 1, 1944, Serial No. 547,553
1 Claim. (Cl. 196—52)

In a catalytic cracking process in which there is a cracking stage and a catalyst regeneration stage wherein the catalyst is subjected to a hot combustion supporting gas, the bulk of the regenerated catalyst is collected and returned to the cracking stage, and from whence combustion gases carrying finely divided catalyst are conducted to an electrical precipitator stage, the steps of maintaining the catalyst regeneration stage at a higher absolute pressure than the electrical precipitator stage, transferring combustion gases and a minor quantity of entrained finely divided catalyst from said regeneration stage to

said precipitator stage, separating the finely divided catalyst from the combustion gases in said precipitator stage, separately removing the combustion gases and finely divided catalyst from said precipitator stage, forming a slurry of the last-mentioned finely divided catalyst with feed oil to the cracking stage, and introducing said slurry into the cracking stage.

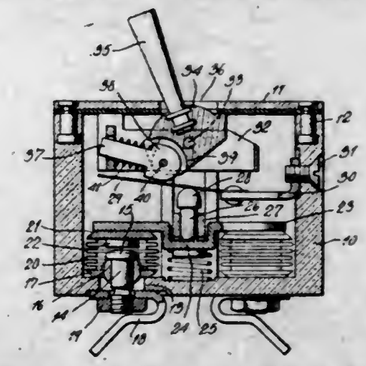


2,407,375
FURNACE ASSEMBLY
Russell Martin, Wichita, Kans., assignor to The Coleman Lamp and Stove Company, Wichita, Kans., a corporation of Kansas
Application November 6, 1941, Serial No. 417,993
12 Claims. (Cl. 126—116)

1. In a floor furnace, a casing, a removable heater unit in the casing, a supporting frame for the removable heater unit, brackets connecting the frame with the heater unit and having seats and jacket guiding portions leading to said seats, and a jacket removably enclosing the heater unit and having support on said seats of the brackets.

2,407,376
COLLOIDALLY DISPERSED DIMETHYLOL UREA RESINS
Charles S. Maxwell, Old Greenwich, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application October 31, 1942, Serial No. 464,109
9 Claims. (Cl. 260—29)

1. A colloidal aqueous solution of a partially polymerized, negatively charged resinous compound of the formula



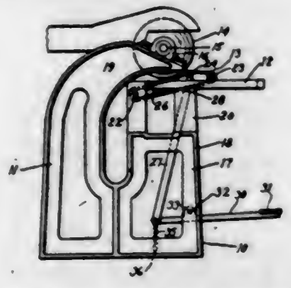
wherein X is a member of the group consisting of oxygen and sulfur and R and R' are members of the group consisting of hydrogen and alkyl, hydroxylalkyl and alkoxyalkyl radicals, said resin particles having a definite negative electrical charge as shown by their migration toward the anode upon electrophoresis of the solution.

2,407,377
TILTABLE TRAP CHAMBER MEASURING DISPENSING DEVICE
Max L. Meyer, Los Angeles, Calif.
Application October 1, 1945, Serial No. 619,447
2 Claims. (Cl. 222—455)

1. In a device for dispensing measured quantities of puverulent material from a container, a cylindrical neck member adapted to have its inner end secured on and in communication with the container neck, an end wall carried by the neck member, said end wall having a dispensing opening therein, and a measuring element within the neck member, said measuring element being formed of a plate having opposite slits opening through its side edges, the plate portion at one side of the slits being bent to form a delivery throat and the plate portion at the other side of the slits being disposed diametrically of the neck member and having an end flange presenting a peripheral edge conforming to and fitting against the inner surface of the neck member whereby to form a material trap communicating with the delivery throat, said throat being mounted in direct communication with the opening in said end wall.

2,407,378
SWITCH
Edward G. Miller and Ralph E. Engberg, New York, N. Y., assignors, by mesne assignments, to Allied Control Company, Inc., New York, N. Y., a corporation of New York
Application March 14, 1944, Serial No. 526,377
2 Claims. (Cl. 200—144)

2. A switch according to claim 1 characterized by a pair of air-tight chambers each compris-

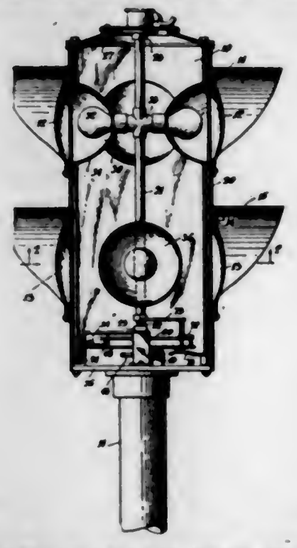


ing two rigid metal end members interconnected by a metal bellows member, means supporting said chambers with one end member of each chamber fixed and the other end member capable of movement toward and away from the fixed end member and arranged for engagement by said bridging member, a contact supported by each member of a chamber within said chamber with one contact of each chamber insulated from its supporting member, and a conductor leading through each stationary end member to the contact supported thereby.

2,407,379
COMBINATION BACTERICIDAL AND ILLUMINATING LAMP
Walter Bertram Morehouse, Auburndale, Mass.
Application December 22, 1941, Serial No. 423,920
9 Claims. (Cl. 176—122)

9. A combined bactericidal-and-illuminating lamp comprising an ultraviolet positive-column-discharge lamp containing mercury vapor, and means for producing a discharge through the lamp to generate sterilizing ultra-violet rays, the lamp having a wall a portion of which is transparent to the sterilizing ultra-violet rays generated within the bulb, the bulb being adapted to be positioned with the said portion of the wall so disposed in a region that the ultra-violet rays may travel through the said portion of the wall into the region to sterilize the region, and a portion of the wall being coated with a fluorescent substance that when impinged upon by the ultra-violet rays will produce luminescent rays that may travel through the first-named portion of the wall to illuminate the region.

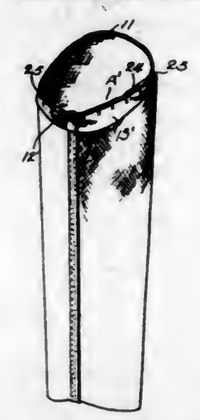
2,407,380
MACHINE FOR TREATING SKINS AND THE LIKE
Bernard C. Nelson, Norwood, Mass.
Original application July 18, 1942, Serial No. 451,461. Divided and this application April 4, 1945, Serial No. 586,515
4 Claims. (Cl. 69—27)



1. A skin treating machine comprising a circular drum, heating means within said drum, said drum having a plurality of substantially V-shaped grooves, the junction point of which is positioned on either side of the circumferential medial line of said drum, a series of parallel straight circumferential grooves crossed by a series of parallel straight grooves in said drum, said grooves being less in depth than said V-shaped grooves, said straight and V-shaped grooves being uniformly spaced around the entire drum.

2,407,381
MEANS AND METHOD FOR TRANSMITTING SECRET INTELLIGENCE
Charles Pecher, Berkeley, Calif., assignor to Research Corporation, New York, N. Y., a corporation of New York
No Drawing. Application June 2, 1941, Serial No. 396,363
3 Claims. (Cl. 250—106)

1. The method of recording normally invisible intelligence capable of interpretation by making a contact radiograph thereof which comprises dissolving a colorless soluble radioactive material in a colorless liquid medium, applying the solution to a first carrier, applying said first carrier to a second carrier, and thereafter exposing said second carrier to a radiation sensitive surface to produce a visible image thereon.

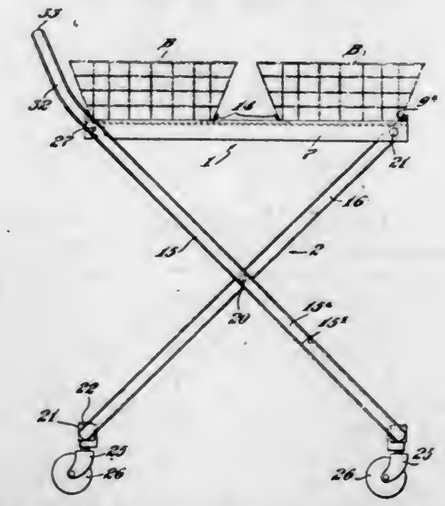


2,407,382
TRAFFIC LIGHT
Frank T. Powers, Glen Cove, N. Y.
Application July 21, 1943, Serial No. 495,568
12 Claims. (Cl. 116—63)

9. In a traffic or signal light, the combination of a vertical shaft having an upper pair of oppositely extending light units and a lower pair of oppositely extending light units at right angles to the first units, means for intermittently oscillating said shaft a quarter turn and causing it to dwell at the end of each oscillation, including a pivoted arm having projections on either side of its pivot, a driven disc eccentric with respect to the arm and carrying variably positionable members engageable with one or another of said projections to move the arm and shaft first in one direction and then the other, the times of movement being determined by the variably positionable members.

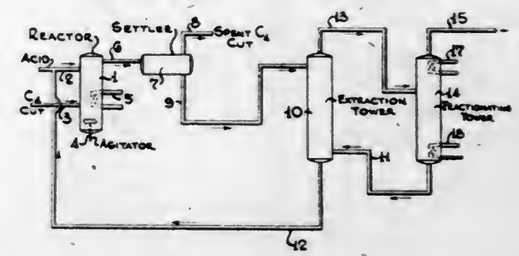
2,407,383
GARMENT SLEEVE
William T. Previdi, Englewood, N. J.
Application April 17, 1944, Serial No. 531,393
8 Claims. (Cl. 2—125)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A garment sleeve having a single seam and having a folded underarm extension comprising a portion of the sleeve on each side of the seam extending above the normal top line of the sleeve and folded back on itself to substantially the normal top line of the sleeve, the fold-forming portions being indented at their seam edges at



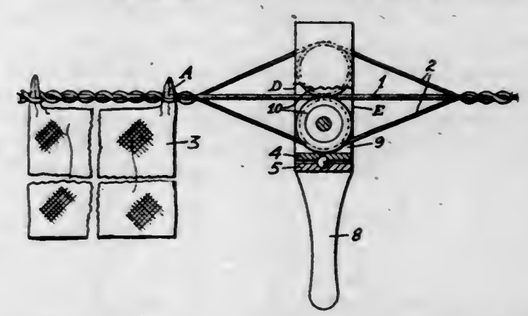
the fold line, whereby the fold is automatically formed at the desired point by the tension produced by the indentations when the side edges of the sleeves and extended portions are seamed together.

2,407,384
SYNTHETIC FOG OR SMOKE
Alexander J. Ritchie, Bayonne, N. J., assignor to Electric Boat Company, Bayonne, N. J., a corporation of New Jersey
No Drawing. Application January 1, 1943, Serial No. 471,079
5 Claims. (Cl. 252—305)



1. A composition of matter for producing synthetic fog or smoke consisting of titanium tetrachloride and containing phosphorus in an amount not over 0.2% by weight based on the weight of the titanium tetrachloride.

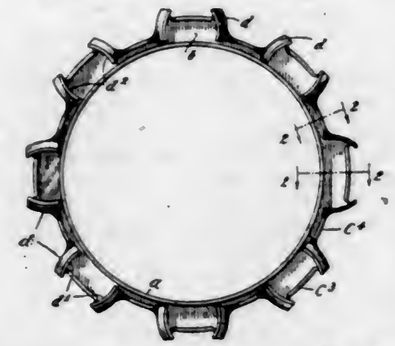
2,407,385
COLLAPSIBLE WHEELED TRAY
Irving Rubin, Brookline, and Julius B. Meltz, Everett, Mass.
Application November 28, 1944, Serial No. 565,460
13 Claims. (Cl. 280—41)



1. A portable tray of the class described, comprising a rigid substantially rectangular platform designed to receive articles to be supported, a support for the platform comprising two pairs of crossed legs, corresponding legs of the two pairs being rigidly connected near their lower ends, a wheel arranged adjacent to the lower end of each leg, pivot means uniting the upper end of one leg of each of the two pairs to the platform near one end of the latter, and a transversely extending rod having its opposite ends rigidly and permanently united to the upper ends respectively of the other legs, the opposite end of the platform having notches designed to receive the rod thereby to hold the platform in its normal elevated position, and detent means operative to prevent accidental disengagement of the rod from said notches.

2,407,386
RECOVERY OF SECONDARY OLEFINS FROM ACID EXTRACTS
Harold W. Scheeline, Elizabeth, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application February 14, 1942, Serial No. 430,872
3 Claims. (Cl. 260—677)

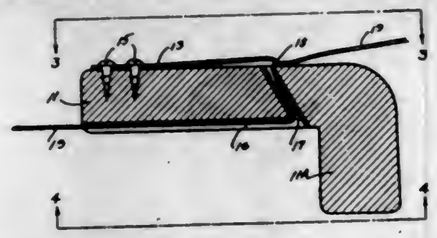
1. Improvements in the separation and concentration of a secondary olefin from a hydrocarbon mixture containing the said secondary olefin which comprises contacting a hydrocarbon mixture containing a secondary olefin with sulfuric acid of about 75%–90% concentration, thereby forming a solution of the secondary olefin in said acid, extracting the secondary olefin from said acid solution by means of a saturated hydrocarbon compound, the said saturated hydrocarbon compound having at least 20° C. difference in boiling point from the secondary olefin, capable of dissolving the secondary olefin and separable from the said secondary olefin by fractionation.



2,407,387
CLOTHESLINE
Mary E. Seymour, Wichita, Kans.
Application April 3, 1944, Serial No. 529,321
1 Claim. (Cl. 211—119.01)

In a clothes line of the class described, in combination, a straight strand of wire of suitable gauge to carry the weight of laundry when the laundry is placed thereon, a pair of pliable strands simultaneously wound and running in spaced relation along and around the straight strand of wire to bind laundry to said wire, said strands having a suitable support for their terminal ends to carry the same, said pliable strands having a separating means for separating the pliable strands from each other and

from said straight strand of wire as the separating means is moved therealong, the separating means comprising a pair of ring-like annular elements, one annular element being placed within the other and having their confronting peripheral surfaces grooved, and balls being placed in the grooves, the outer ring-like element having a handle thereon to convey the said separating means along the clothes line, the inner element having cross bars diametrically positioned and spaced apart, and a pair of grooved rollers journalled on the bars therebetween and peripherally engaging to roll in unison and their grooves being greater in size than the diameter or gauge of the straight strand of wire to avoid friction as the rollers turn, said rollers being turned by the two pliable strands that engage in the grooves of their respective rollers to separate the strands from each other and said straight strand.

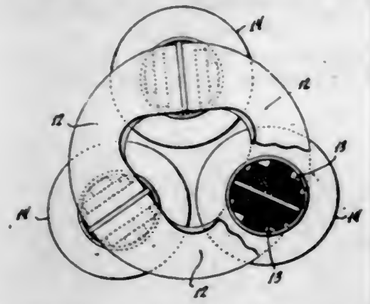


2,407,388
CAGE FOR BALL BEARINGS
Charles Henry Smith and Ernest George Longman, Chelmsford, England, assignors to Norma Hoffmann Bearings Corporation, Stamford, Conn.
Application June 8, 1945, Serial No. 598,302
In Great Britain June 12, 1944
1 Claim. (Cl. 308—201)

In a cage for ball bearings of the one-piece open sided type the combination of an annular channel section side member, a plurality of limbs rigidly supported at their base portions by said channel section side member and integral therewith, each limb having a twist and each pair of adjacent limbs having twists in opposite directions, and having their outer ends in substantially radial planes and of circumferential resiliency and acting as cantilever leaf springs and having their base portions concentric with the axis of the cage, the adjacent inner surfaces of said pairs of wings forming pockets each to hold the ball, and the adjacent outer surfaces of said pairs of limbs forming non-pocket forming surfaces.

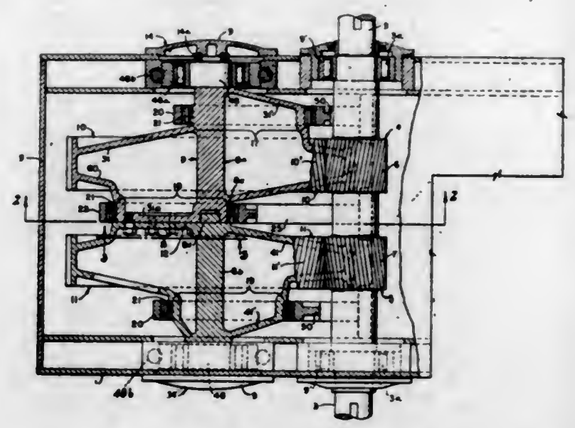
2,407,389
MASON'S GUIDE
George Stevens, Campbell, Ohio, assignor of one-third to Pete Parthemos, Youngstown, Ohio
Application January 29, 1945, Serial No. 575,147
2 Claims. (Cl. 33—86)

1. A pair of body members and a section of guide line forming a mason's guide, each of the body members consisting of a section of material having a projection formed on one end thereof at right angles thereto to form a bracket for engaging a masonry corner, an axially extending channel formed in the said section of material and an angular passageway through said section of material, the said channel and passageway providing for the reception of the said guide line and for snubbing said guide line, a leaf spring affixed to the said section of material and



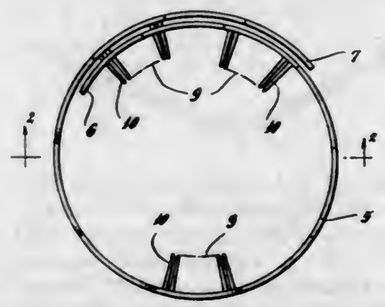
normally engaging the said guide line, so as to hold it against slipping in the passageway to insure the snubbing action.

2,407,390
CHEMICAL PROCESS
Charles H. Watkins, Cranford, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application April 17, 1943, Serial No. 483,498
16 Claims. (Cl. 260—683.4)



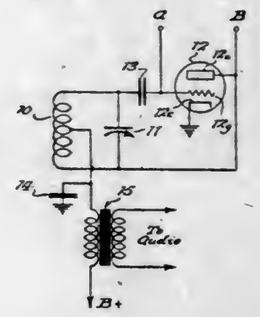
1. Process of alkylating propylene with isobutane which comprises contacting the propylene with an excess of isobutane in the presence of a liquid aluminum chloride-hydrocarbon complex as the alkylating catalyst formed by contacting for an extended period of time aluminum chloride with isobutane and propylene.

2,407,391
METHOD OF MAKING THREE-PHASE TRANSFORMERS
Arthur R. Woolfolk, Wauwatosa, Wis., assignor to Line Material Company, South Milwaukee, Wis., a corporation of Delaware
Original application November 29, 1943, Serial No. 512,134. Divided and this application May 3, 1945, Serial No. 591,705
3 Claims. (Cl. 29—155.57)



1. The method of making a three phase transformer comprising forming three closed cores of wound magnetic ribbon each core having a pair of straight leg portions, clamping the straight leg portions of each core and turning the clamped straight leg portions to place the planes of the ribbon in one straight leg portion at an angle to the planes of the ribbon in the other straight leg portion for each core and allowing the end portions to arch outwardly at each end of each core, annealing the cores while they are clamped and while the straight leg portions for each core are held in their angular relation to each other, assembling the cores with the outer faces of adjacent cores arranged back to back, and winding three conducting winding assemblies around the straight leg portions of the cores with each winding assembly surrounding a straight leg portion of each of two adjacent cores.

2,407,392
DRIVE FOR TRIPLEX PUMPS
Albert A. Ashton, Houston, Tex., assignor to Emsco Derrick & Equipment Company, Los Angeles, Calif., a corporation of California
Application January 15, 1945, Serial No. 572,816
9 Claims. (Cl. 74—44)



1. In a driving mechanism including a power receiving drive shaft having pinions thereon; a driven shaft associated therewith and having a duplex driven gear unit thereon, the teeth of the respective pinions and gear wheels being in mesh: an eccentric on the driven shaft between the gear wheels of said duplex unit; a connecting rod having an eccentric strap embracing said eccentric the teeth of one pinion and gear wheel meshing unit being inclined in a direction substantially opposite to the direction of inclination of the teeth of the other meshing pinion and gear wheel unit to thereby preclude and obviate side thrust of said shafts.

2,407,393
LADY'S HAIR ORNAMENT
Siegfried Behr, Flushing, N. Y.
Application July 14, 1945, Serial No. 605,102
1 Claim. (Cl. 132—46)

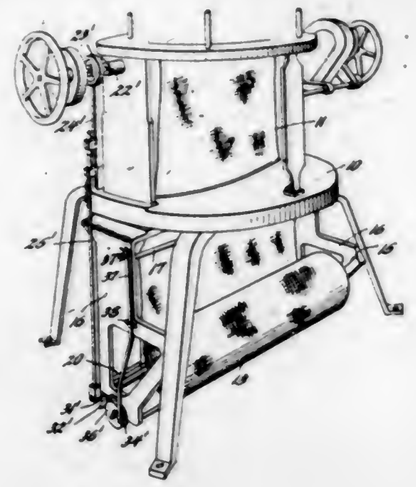
A lady's hair ornament comprising a split annular flexible body portion formed of plastic material with spaced openings therearound, the end portions of said body portion yieldingly positioned in overlapping relation, spaced comb sections formed integrally with the lower edge of said body portion, the teeth of the separate comb sections being positioned close together and extending inwardly at right angles to the body portion, protuberances on the outer surface of one of said overlapping end portions and a ring member of plastic material carried on the other end portion adapted to coact with said protuberances for yieldingly holding the end portions in overlapping relation.

2,407,394
SELF-QUENCHED SUPERREGENERATIVE RECEIVER
Edmund E. Birr, Kenmore, N. Y., assignor to Colonial Radio Corporation, Buffalo, N. Y.
Application June 29, 1944, Serial No. 542,713
5 Claims. (Cl. 250—20)

1. In a superregenerative receiver of the self-quenching type, in combination, a tuned circuit, a thermionic vacuum tube connected thereto having an anode, a cathode, and a control electrode, and a resistance connected between the control electrode and one of the other electrodes of said tube, said resistance having a relatively high value at quench frequencies and a relatively low value at desired signal frequencies.

2,407,395
HECTOGRAPH BLANKET AND METHOD OF PREPARING SAME
Robert C. Bour, Chicago, Ill., assignor to Ditto, Incorporated, Chicago, Ill., a corporation of West Virginia
No Drawing. Application February 13, 1942, Serial No. 430,742
3 Claims. (Cl. 117—35.6)

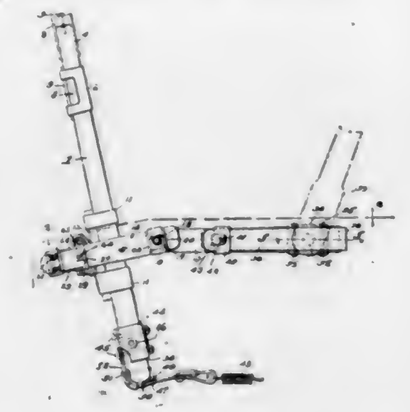
1. A hectograph blanket comprising a hydrophilic gelatinous copy mass, a backing and an intermediate bonding agent of the drying oil type, said copy mass containing a cation active wetting agent consisting essentially of a long chain aliphatic group attached to a radical capable of ionizing in solution in such a way that a positive charge is assumed by the long chain group.



2,407,396
STABILIZATION OF TETRAFLUOROETHYLENE
Merlin Martin Brubaker, Boothwyn, Pa., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 15, 1943, Serial No. 476,027
10 Claims. (Cl. 260—652.5)

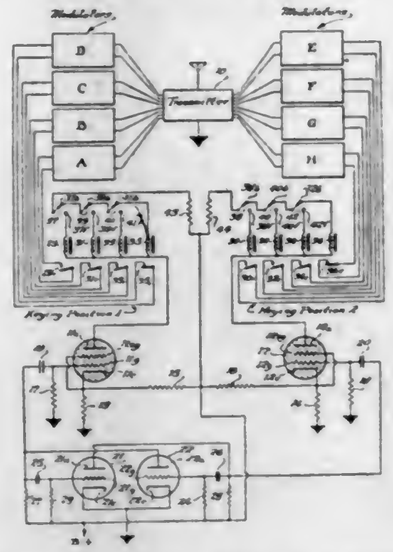
1. Tetrafluoroethylene stabilized with sufficient hydrocarbon thiol to prevent polymerization of the tetrafluoroethylene at 25° C. and superatmospheric pressure.

2,407,397
FABRIC TAKE-UP AND TENSION MEANS FOR CIRCULAR KNITTING MACHINES
Raymond H. Carhart, Philadelphia, Pa., assignor to H. Brinton Co., Frankford, Philadelphia, Pa., a corporation of Pennsylvania
Application January 21, 1944, Serial No. 519,174
4 Claims. (Cl. 66—149)



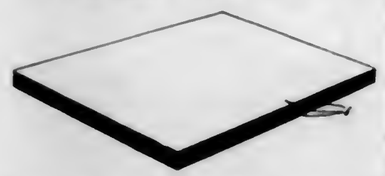
1. In a knitting machine, a take-up for the forming fabric comprising a fabric roll, a roller

in frictional engagement with said fabric roll, pawl and ratchet means at each end of said fabric roll for driving said roller, the driving pawl of



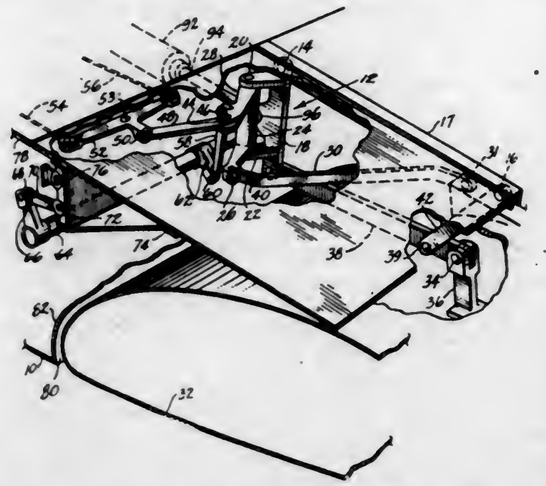
each of said means being constructed and arranged to act on said roller while the other driving pawl is making its return stroke.

2,407,398
PICKER STICK
Harold Carlson, North Franklin, Conn.
Application May 23, 1945, Serial No. 595,443
1 Claim. (Cl. 139—151)



The combination with a picker stick, a cushioning strip thereon, and collars embracing the picker stick and constituting means for holding the cushioning strip in position, of a link embracing the picker stick between the collars for attachment to a sweep stick, said link having a longitudinal slot in which the picker stick is mounted to work, and a cushioning pad interposed between one wall of the slot and the picker stick for engagement with the cushioning strip on the picker stick, said pad including overlying strips of flexible material folded upon themselves to form a single loop, at its sides the loop being cut away below the fold in the pad to receive and be supported solely by the sides of the link thereby to hold the fold portion of the loop in position to contract and expand when subjected successively to pressure by and release from the picker stick, those portions of the strips between the cut away side being extended across the slot and the link.

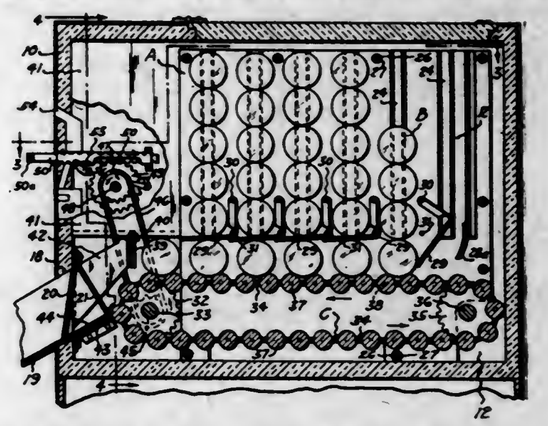
2,407,399
DUPLEX CONTROL CIRCUIT
Robert W. Carlson, Depew, and Madison G. Nicholson, Jr., Snyder, N. Y., assignors to Colonial Radio Corporation, Buffalo, N. Y.
Application July 24, 1944, Serial No. 546,404
15 Claims. (Cl. 179—15)



1. The combination with a transmitter, of a plurality of banks of modulators, each bank comprising a plurality of modulators, each arranged to impress its characteristic modulation on the transmitter, a switch for controlling each modulator respectively, and means for causing sequential operation of the modulators when two switches controlling molulators in different banks are closed simultaneously.

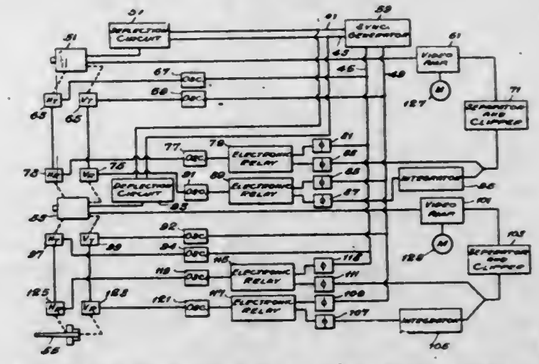
2,407,400
METHOD AND APPARATUS FOR MOLECULAR ABSORPTION OF VIBRATION
Clark W. Chamberlain, East Lansing, Mich.
Application April 20, 1944, Serial No. 531,900
7 Claims. (Cl. 188—1)

1. A device of the class described including an enclosing envelope comprising, a lower member of metal depressed within the peripheral portions thereof to form a recess and flange portions around the recess and a similar upper member reversed with respect to and positioned over the lower member, with flange portions of the envelope members in engagement with each other and permanently secured together, and a plurality of thin sheets of metal in superimposed relation located in the recessed portions of said plates, said sheets at opposing surfaces having liquid applied thereto and with all excess liquid removed to leave a liquid film of a thickness only of the molecules of such liquid as are held by molecular attraction of the metal thereon, said envelope plates bearing against the upper and lower sheets of said plurality of sheets to place them under pressure which forces free air from between the superimposed sheets and leaves a film of air attached to and held by molecular attraction of the liquid films.



2,407,401
LATERAL CONTROL ARRANGEMENT
Francis H. Clauser, Santa Monica, and Carlos C. Wood, West Los Angeles, Calif., assignors to Douglas Aircraft Company, Inc., Santa Monica, Calif.
Application September 8, 1941, Serial No. 410,098
22 Claims. (Cl. 244—42)

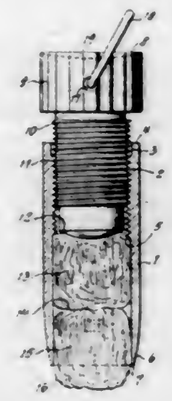
1. In a lateral control device for aircraft, a main supporting airfoil, a control member spaced from the trailing edge of said main supporting airfoil to form a slot therebetween, said member being disposed spanwise of said main airfoil for pivotal movement about an axis, a second control member normally disposed in slot closing relation with said main supporting airfoil and said first named control member and adapted to pivot about an axis substantially parallel to the pivotal axis of said first named control member, unitary means operable by the pilot and independently connected to each of said control members for imparting simultaneous movement to said control members about their respective axes, and means associated with said first named means for changing the position of the axis of said first named control member with respect to the main supporting airfoil and with respect to its spacing from the axis of said second control member, said unitary means being adapted to retain control of both of said control members at all the spacing of said control member axes as determined by said first control member axis changing means.



2,407,402
DISPENSING DEVICE
James R. Clem, Dallas, Tex.
Application July 27, 1942, Serial No. 452,442
7 Claims. (Cl. 312—46)

2. A bottle dispensing device including, a casing having a discharge opening in one wall thereof, means within the casing for storing a plurality of bottles in vertical rows, a pivoted supporting element at the lower end of each row of bottles and adapted to support said row when in one position, swinging of the element to another position permitting the bottles of said row to fall downwardly below said element, the element being angular and having an upstanding portion contiguous to and engaging the lowermost bottle of an adjacent rearward row when in its supporting position whereby swinging of said element to its discharging position is prevented until after discharge of the bottles from said adjacent rearward row, and a conveyor below the bottles for receiving said bottles when the supporting elements are swung to allow downward movement of the bottles, the bottles upon the conveyor supporting the elements in their supporting position,

said conveyor extending to a point adjacent the discharge opening whereby said bottles are delivered to said opening and discharged therethrough.

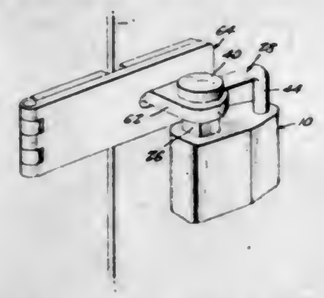


2,407,403
TELEVISION CONTROL SYSTEM
Robin D. Compton, Westport, Conn., assignor to Radio Corporation of America, a corporation of Delaware
Application August 12, 1942, Serial No. 454,529
6 Claims. (Cl. 172—239)

1. A control system for aiming and directing a controlled device comprising a first and a second television camera each directed to receive optical images from a predetermined field of view toward at least a portion of which the said controlled device is adapted to be aimed, means to derive separate video signal outputs from each of the cameras, a standard signal generator to control the normal rate at which video signals are derived and to stabilize the operation of each of the cameras to a synchronous state, Selsyn drive means connected between the first and second television cameras, said drive means comprising a Selsyn transmitter and a Selsyn receiver for transferring control energy between the first camera and the second camera, said energy transfer being representative of motional shifts of the first camera from a predetermined normal position in both a vertical and a horizontal plane, means to supply energy to both of the said Selsyn means, separator and clipper means to derive control energy from the video signals of the first camera, relay means to control the Selsyn receiving means under the influence of the sync generator during periods of video signal interruption and from the video signals separated from the control signals during periods of video signal development whereby tracking of the second camera with the scene of action scanned by the first camera is effected, and a like system including a

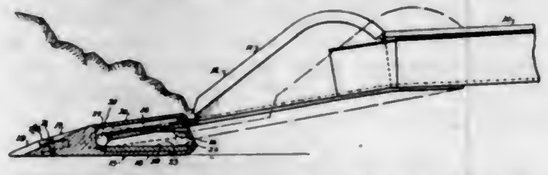
pair of Selsyn transmitters and receivers connected between the second camera and the controlled device, and means comprising a separate separator and clipper unit and relay means to effect a similar operation of the Selsyn receiver means associated with the controlled device which control is effected under the influence of the video signals developed by the second camera.

2,407,404
PAD HOLDING AND FEEDING DEVICE
Murray Dessaur, Bronx, N. Y., assignor to Murray Dessaur and Richard D. Gale
Application October 23, 1944, Serial No. 559,972
1 Claim. (Cl. 15—209)



A pad holding and feeding device comprising an elongated hollow cylindrical container open at both ends, the inner surface thereof at the upper end only being threaded, an externally threaded plunger cooperating with said threaded surface, the diameter of said plunger being uniform throughout its length except the lower end thereof which is slightly less in diameter so as not to contact with said threaded surface, a head on the top of said plunger of larger diameter than the threaded portion of said plunger, the inside surface of the lower end of said container and the outside surface of said lower end of said plunger both being smooth, a plurality of steel wool pads in said lower end of said container and placed in end to end contact, the diameter of said pads being equal to that of said lower end of said container, the inner end of the inner pad contacting the lower end of said plunger and the outer end of the outer pad protruding outward from the lower end of said container, said plunger having longitudinal and rotational movement relative to said container to cause the lowermost pad to protrude from the lower end of the container as the steel wool extending from the container is consumed.

2,407,405
STABILIZATION OF TETRAFLUOROETHYLENE
Melvin Adam Dietrich, Claymont, and Robert Michael Joyce, Jr., Marshallton, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 15, 1943, Serial No. 476,028
7 Claims. (Cl. 260—652.5)

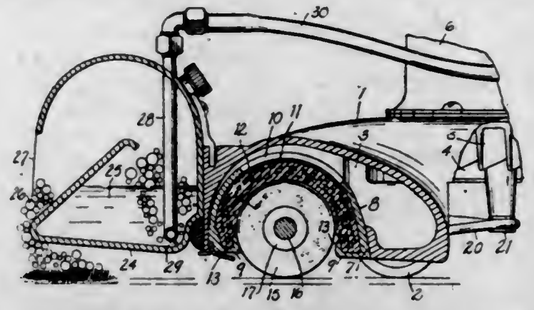


1. Tetrafluoroethylene stabilized with sufficient ethylenically unsaturated hydrocarbon to prevent polymerization of the tetrafluoroethylene at 25° C. and superatmospheric pressure.

2,407,406
PADLOCK
Howard B. Dutton, Des Moines, Iowa
Application May 27, 1943, Serial No. 488,717
3 Claims. (Cl. 70—38)

1. A padlock for use with hasps, comprising a casing having a rotatable key cylinder therein with an eccentric cam pin, the casing having first and second openings to either side of the cylinder, the first opening having a larger diameter than said second opening, a chamber above the cylinder to receive the cam pin and communicating with the first opening, a heavy pin having a substantially rectangular cross-sectional contour in said first opening and formed with a notch, a circular shoulder on the pin, a bolt engaging the notch and retractible by the cam pin upon turning of the cylinder by a key, a guide having a portion secured at right angles to the shoulder and a part depending from said portion and substantially parallel with the pin and receivable in the second opening in the casing for limited sliding movement, means for limiting the sliding movement, and means for sliding the guide to release the pin when the bolt is disengaged from the notch.

2,407,407
SHAKER CONVEYER
Herman R. Eberle, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application December 26, 1944, Serial No. 569,774
9 Claims. (Cl. 198—14)

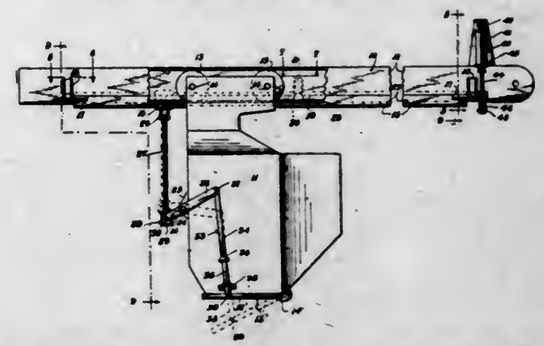


1. In a shaker conveyer loading device, a reciprocating trough having a shovel forming a continuation of its forward end and including a nose slidably connected with the forward end of said shovel so as to be advanced or retracted by extensible or retractible movement of said reciprocating trough, but remaining stationary during reciprocable movement of the conveyer when loose material is piled on said nose.

2,407,408
CARPET AND RUG CLEANING MACHINE
Carl E. Erickson, Kalamazoo, Mich.
Application September 18, 1943, Serial No. 502,857
9 Claims. (Cl. 15—98)

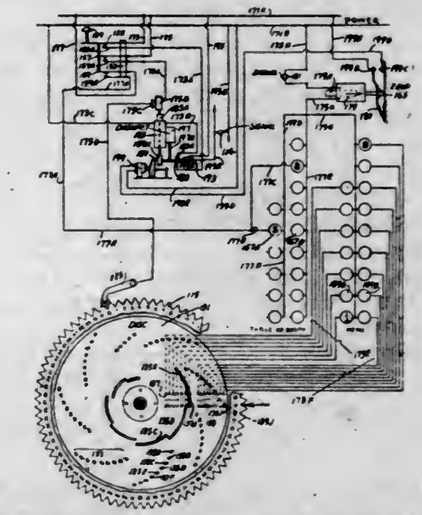
1. In combination in a vacuum cleaner including a casing adapted to be translated over the surface to be cleaned and having a vacuum chamber therein with a downwardly facing opening, of a downwardly facing elongated housing member of channel section having inturned

flanges at its edges and a longitudinal screened opening at the top thereof communicating with said vacuum chamber for passage of air from said housing into said vacuum chamber when the housing member is in operative position within said opening in said vacuum chamber, a driven brushing and wiping member rotatably and removably mounted in said housing member to be removed therewith and comprising a shaft, a plurality of circular disks arranged on said shaft in spaced relation with substantial portions of their peripheral edges free, a foraminous cleaner and filter element of resilient cellular material removably arranged in said housing



with its edges in supported engagement with said flanges thereof to present a downwardly facing curved transverse channel embracing a substantial portion of said brushing and wiping member, the edge portions of said disks being in wiping engagement with said cleaner element as the brushing and wiping member rotates, said cleaner element absorbingly removing moisture with dirt from said disks, said cleaner element being disposed over said screened opening for passage of air therethrough from said housing into said vacuum chamber, and means for discharging a cleaning fluid upon the surface to be cleaned in advance of and independently of said brushing and wiping member.

2,407,409
NONFRICTION BEARING BALL DISPENSER
Jack D. Farries, Petersburg, Va.
Application December 8, 1944, Serial No. 567,275
6 Claims. (Cl. 29—201)



1. A bearing ball dispenser comprising a tubular magazine having an inlet in the top thereof for the reception of a supply of bearing balls and an outlet in the bottom thereof for communication with a ball-receiving circuit, said magazine having an indicating slot at substantially the elevation of the top of a column of balls of predetermined number, a stop movable into said slot to restrain said column at the top thereof, a push rod insertable in said magazine to discharge said column therefrom, means associated with said magazine near the bottom thereof to support said column and yieldable to permit the passage thereof upon operative application thereto of said push rod.

2,407,410
LEVER-TRACK CONTROLLED BOOM BUCKET CLOSURE
James H. Fitzgerald, Westfield, N. J.
Application April 21, 1945, Serial No. 589,651
14 Claims. (Cl. 214—59)

2. Apparatus of the class described comprising a boom, a conveyor bucket movably mounted thereon, said bucket having an outlet, closure means for the outlet, a track member pivoted on the boom, an operating means for said closure means interengaged with and movably mounted by the track member, and actuating mechanism to move said track member as a lever relatively to the boom to control the position of said closure means.

2,407,411
MENU SELECTOR AND RECORDER
Frank L. Folis, Memphis, Tenn.
Application May 25, 1944, Serial No. 537,341
4 Claims. (Cl. 177—339)

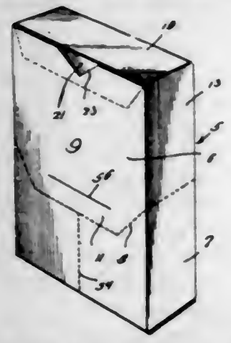
1. In apparatus of the character described, a tabulating mechanism having depressible keys in banks, and electrically actuated printing and clearing mechanisms, including a depressible key for initiating actuation thereof; two groups of solenoids respectively disposed in operative relation above keys of adjacent said banks, and an additional solenoid overlying said actuating mechanism key; and control and energizing

means including a source of electric current; actuators positioned respectively at each of a plurality of stations, each said actuator including a circuit selector, open circuits energizable by said source extending respectively each from a said actuator to said tabulator, a first of said circuit including open leads extending in parallel from said actuator each respectively to a solenoid of one said group; a second said circuit including a plurality of leads insulated from said selector and extending therefrom each respectively to a solenoid of the second said groups, all said circuits including a joint return lead through said additional solenoid to said current source, said actuators each respectively including means manually operable to shift said selector into electrical contact with desired leads of said second group, and manually operable means for closing all said circuits leading therefrom.

2,407,412
THERAPEUTIC SOLUTIONS
Douglas V. Frost, Waukegan, Ill., assignor to Abbott Laboratories, North Chicago, Ill., a corporation of Illinois
No Drawing. Application August 15, 1942, Serial No. 454,919
10 Claims. (Cl. 167—81)

1. A therapeutic composition comprising an acidic aqueous solution containing at least about 1 mg. of riboflavin per cc. and at least about 50 mg. of nicotinamide per cc. and a small amount of acidic material sufficient to maintain said solution at a pH of 4 to 6.6.

2,407,413
PLASTICIZED STYRENE-MALEIC RESIN COMPOSITION
Howard L. Gerhart, Milwaukee, Wis., assignor to Pittsburgh Plate Glass Company, Allegheny County, Pa., a corporation of Pennsylvania
No Drawing. Application May 24, 1941, Serial No. 395,062
11 Claims. (Cl. 204—158)

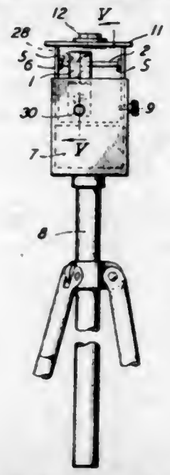


1. A method of forming clear, hard and strong plasticized bodies of styrene-maleic anhydride resin, which method comprises admixing styrene, maleic acid and methyl levulinate and then subjecting the styrene and maleic acid to polymerization to form the resin in the presence of dissolved methyl levulinate.

2,407,414
VARIABLE PITCH PROPELLER
Kenneth Bryan Gillmore and George Henry Fitzroy Brown, Hatfield, England, assignors to The De Havilland Aircraft Company Limited, Hatfield, England
Application July 7, 1942, Serial No. 450,031
In Great Britain April 15, 1941
2 Claims. (Cl. 170—135.6)

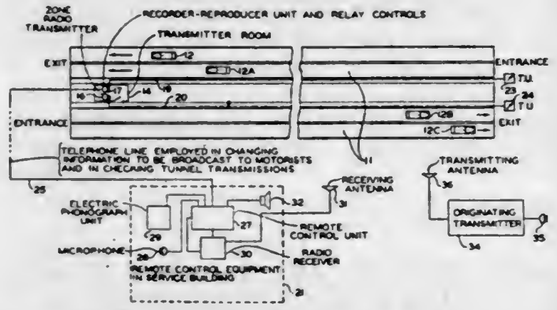
1. Control mechanism for variable pitch airscrews, comprising a pitch-change input drive gear, a cage mounted coaxially of and for rotation relative to the airscrew shaft, pitch-change control gearing and pitch-change reaction gearing; each such set of gearing including two spaced shafts journaled within said cage and a gear on each shaft intermeshing to reverse the relative sense of rotation of the two shafts, the reversing gears of one set being split to locate one half axially distant from the companion intermeshing half on each shaft thereof, the pitch-change reaction gearing further including a sun gear within the cage rotatable with the airscrew shaft and meshed with one of its reversing gears, and a second sun gear within the cage secured to a static anchorage and meshed with the second of its reversing gears; the pitch-change control gearing further including a split sun gear, one half being external of the cage and operatively connected to the pitch-change input drive gear and the other half being internal of the cage and meshed with the distant half of one of the split reversing gears, and also including a second split sun gear, of which one half is internal of the cage and meshes with the distant half of the second of the split reversing gears, and the other half is external and operatively connected to the airscrew blades.

2,407,415
DISPENSING PACKAGE
Joseph S. Graziano, Joliet, Ill.
Application May 17, 1944, Serial No. 535,979
3 Claims. (Cl. 229—7)



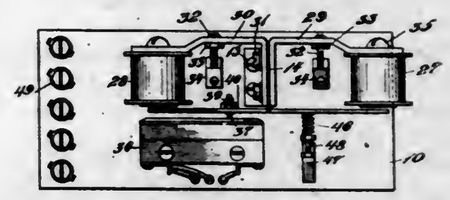
1. A dispensing package comprising an integral major container including upper and lower separable sections, said sections being severable along a horizontal score line intermediate the top and bottom of the container, said container including a bottom on the lower end of the lower section and having an opening therein, a follower comprising an open-top supplemental container slidably positioned in the major container and operable through the medium of an object inserted through the bottom opening of the major container to move the contents of the major container from the lower section into the upper section thereof, said score line having offsets therein, and flaps on the lower edge of the upper section of the major container formed by said offsets and adapted upon removal of the lower section of the major container for folding into overlapping relation to close the bottom of said upper section of the major container.

2,407,416
LEVEL OR LIKE SURVEYING INSTRUMENT
John Ejnar Gudmundson, Brakpan, Transvaal, Union of South Africa
Application April 12, 1944, Serial No. 530,710
In the Union of South Africa April 13, 1943
7 Claims. (Cl. 88—2.2)



1. A surveying instrument of the character described, which comprises a supporting staff, an upwardly open frame housing mounted on said staff, an open-sided mirror frame slidably disposed in said housing and upwardly withdrawable therefrom, means for determining the extent

of relative movement between said frame and housing and for retaining the latter against relative movement, a trunnion pin oscillatably journaled in said frame, a mirror secured to said trunnion pin intermediate the ends thereof, said

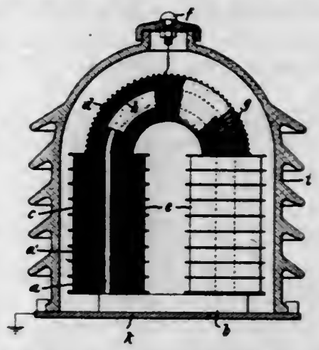


mirror being provided on its face with a horizontal datum line in line with the top of said trunnion pin, and means for adjusting the effective center of gravity of said mirror with respect to the axis of said trunnion pin for maintaining the mirror face in a truly vertical plane.

2,407,417
COMMUNICATIONS SYSTEM
William S. Halstead, Purchase, N. Y., assignor, by mesne assignments, to Farnsworth Television & Radio Corporation, Fort Wayne, Ind., a corporation of Delaware
Application December 19, 1944, Serial No. 568,835
22 Claims. (Cl. 179—2)

1. In an inductive communications system for establishing communications within a predetermined signaling area, a transmitter, a signal conducting means connected to the output of the transmitter for establishing a substantially predetermined signaling area, said signal conducting means being disposed substantially parallel to the desired longitudinal extent of said substantially predetermined signaling area, a receiver, means connected to the input of the receiver and disposed within the effective signaling area for receiving signals impressed upon the signal conducting means, a remote control apparatus having means for modulating and monitoring the transmitter and receiver respectively, and a selective switching mechanism connected between the remote control apparatus and said transmitter and receiver for connecting either the transmitter or the receiver to the remote control apparatus, to the end that the remote control apparatus may be connected to the transmitter for modulating said transmitter or to the receiver for monitoring transmissions in said predetermined signaling area.

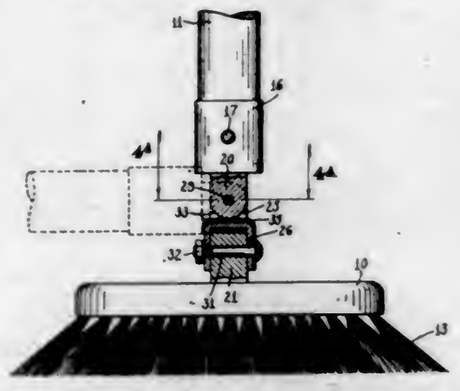
2,407,418
RELAY DEVICE
Ludovic Hanff, Warwick, R. I.
Application July 4, 1942, Serial No. 449,835
6 Claims. (Cl. 175—339)



1. In combination a polarized armature comprising an elongated bar having notches in its opposite edges and a locating recess in one surface connecting said notches, fulcruming means comprising a portion to enter said recess and fingers to enter said notches to prevent movement laterally and longitudinally of said armature, and electromagnetic means having spaced poles adjacent the poles of the armature to rock the armature about its fulcrum.

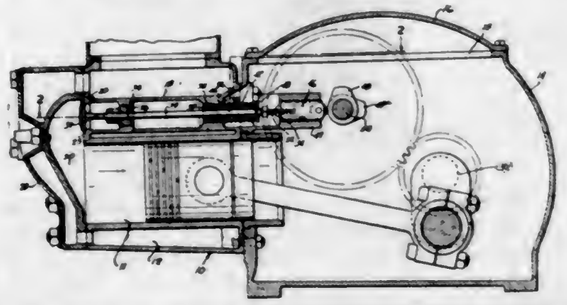
2,407,419
STABILIZATION OF TETRAFLUOROETHYLENE
William Edward Hanford, Easton, Pa., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 15, 1943, Serial No. 476,025
10 Claims. (Cl. 260—652.5)

4. Tetrafluoroethylene stabilized with sufficient tertiary hydrocarbon amine to prevent polymerization of the tetrafluoroethylene at 25° C. and superatmospheric pressure.



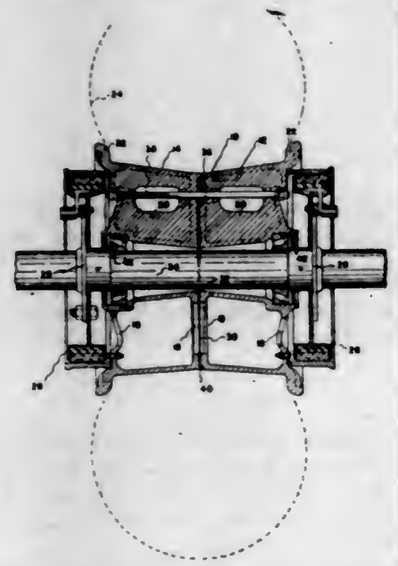
2,407,420
HIGH-VOLTAGE TRANSFORMER
Hans Hartmann, Baden, Switzerland, assignor to Aktiengesellschaft Brown, Boveri & Cie, Baden, Switzerland
Application September 9, 1943, Serial No. 501,696
In Switzerland August 4, 1942
7 Claims. (Cl. 175—356)

1. A high voltage transformer comprising a grounded U-shaped core closed by a yoke, a low voltage secondary winding including sections wound upon the legs of said core, a tubular insulating cover closely fitting said secondary sections and the portion of the core between the same, a high voltage primary winding on the legs of said core and closely fitting said insulating cover, said primary winding comprising a plurality of serially connected disc coils with a low voltage terminal adjacent an end of a leg of the core and a high voltage terminal adjacent the bend of the U-shaped core, and means suppressing edge effects at the high voltage ends



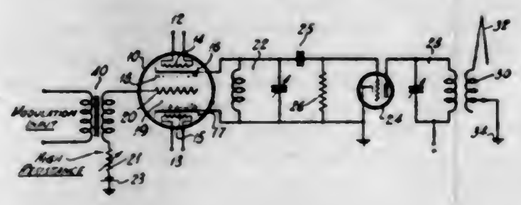
of said windings, said means comprising conducting layers at and closely adjacent the portion of the insulating cover enclosing the bend of the core and not covered by the primary.

2,407,421
FLOOR-CLEANING IMPLEMENT
Walter F. Herold, Easton, Conn., assignor to The Bassick Company, Bridgeport, Conn., a corporation of Connecticut
Application May 26, 1944, Serial No. 537,496
8 Claims. (Cl. 306—11)



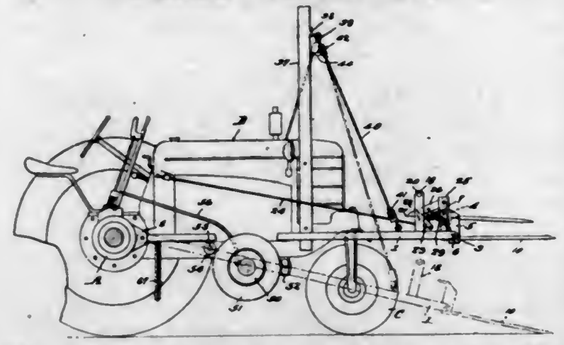
7. A floor-cleaning implement comprising a cleaning head adapted to be moved in contact with the floor, a long handle, a lug fastened to the back of the head, a lug fastened to the end of the handle, a frame intermediate said lugs comprising separate internested U-shaped clips having outstanding perforated arms, the perforations of said arms providing pivot axes one above the other and one at right angles to the other, pivot members engaging said perforations, said lugs having holes through which said pivot members are passed, said lugs being free to pivot about the axes of said pivot members so that the handle can be placed in any of a multiplicity of acutely angled positions with respect to a perpendicular line drawn to the back of the cleaning head.

2,407,422
ENGINE VALVE MOUNTING
Franklin G. Hobart, Beloit, Wis., assignor to Fairbanks, Morse & Co., Chicago, Ill., a corporation of Illinois
Application August 30, 1945, Serial No. 613,542
10 Claims. (Cl. 123—90)



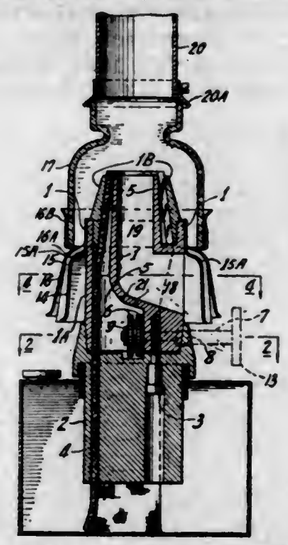
3. In an engine of the character described, a frame providing a cylinder and a housing longitudinally of the cylinder, a cylinder head overlying one end of the cylinder and the corresponding end of said housing, said housing end being adapted as a valve seat, relatively spaced elements in said housing each providing a tapered bore therethrough, tapered bushings seated in said bores, the maximum diameter of one of said bushings being less than the minimum diameter of the tapered bore receiving another of the bushings, and a valve stem having a valve head cooperable with said valve seat, extending longitudinally is said housing and through said bushings.

2,407,423
WHEEL STRUCTURE
Charles Hollerith, Jackson, Mich., assignor, by mesne assignments, to The B. F. Goodrich Company, Akron, Ohio, a corporation of New York
Application April 2, 1945, Serial No. 586,221
2 Claims. (Cl. 188—152)



1. A wheel and brake assembly comprising an open work wheel structure having interior passages between the rim and hub, fluid operated brakes mounted on opposite sides of the wheel structure, and a shield extending between the rim and hub and walling off the interior of the wheel structure sealing the brake structures from each other through the interior of the wheel.

2,407,424
ELECTRON CAPACITY AND ELECTRON CAPACITY MODULATOR
R. Lee Hollingsworth, Riverhead, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application December 8, 1943, Serial No. 513,448
10 Claims. (Cl. 179—171.5)

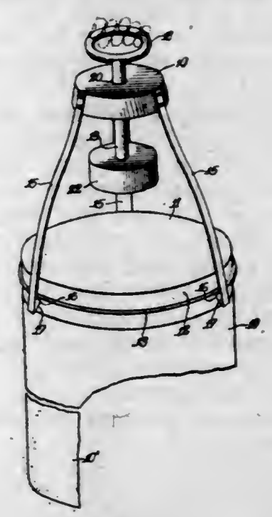


9. In a signalling system, a tube having two cathodes between which a capacitive effect is produced, a control element between said cathodes, a circuit coupled to said cathodes to be tuned by the capacitive effect developed therebetween, a source of control potential coupled between said cathodes and said control element, and means for varying said control potential in accordance with signals.

2,407,425
MATERIAL HANDLING ATTACHMENT FOR TRACTORS
Francis Horning and Howard Horning, Galion, Ohio
Application July 18, 1945, Serial No. 605,708
1 Claim. (Cl. 214—140)

The combination with a tractor or the like, of a frame mounted for up and down swinging movement relative thereto, said frame being extended forwardly beyond and to the sides of the tractor, a material engaging head carried by the frame, and means for raising and lowering the frame relative to the tractor, said means including a motor driven shaft having a friction wheel, a brake shoe spaced from the shaft, a transverse shaft mounted for up and down and back and forth swinging movement, a friction wheel on said shaft, a tire carried by the friction wheel and constituting a friction tread, said wheel and tire being interposed between and normally out of contact with the shoe and the wheel on the motor driven shaft, means for shifting said transverse shaft to position its friction wheel in contact with either the brake shoe or the wheel on the motor driven shaft, a windlass on the transverse shaft, and means actuated by the windlass for raising and lowering the frame relative to the tractor.

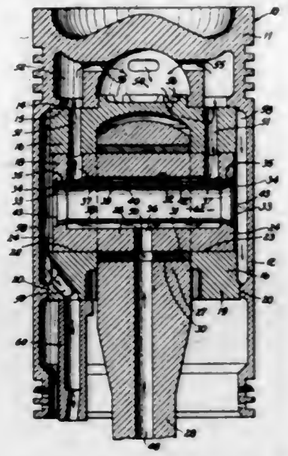
2,407,426
KEROSENE BURNER FOR USE IN REFRIGERATORS OR IN OTHER HEAT-ACTUATED APPARATUS
Georg Elis Jodell, Prahran, Victoria, Australia, assignor to Electrolux Pty. Limited, Sidney, Australia, an Australian company
Application August 2, 1944, Serial No. 547,715
In Australia August 18, 1943
4 Claims. (Cl. 158—94)



1. In a wick type kerosene burner, the combination with a kerosene tank of a composite body for guiding the wick from the interior of the tank upwardly to a level considerably above the top of the tank, said wick guiding body including a lower portion consisting of a plastic of low heat conductivity and extending from the interior of the tank to a level a short distance above the top of the tank, and an upper thick-walled cast metal portion seated on said lower portion.

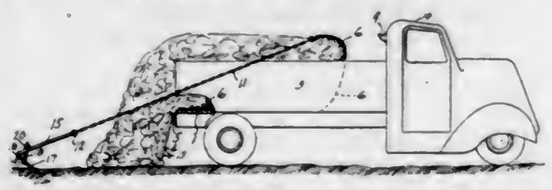
2,407,427
SELF-LOCKING WEDGE
James A. Jones, Fayetteville, Ark.
Application October 11, 1943, Serial No. 505,834
6 Claims. (Cl. 306—33)

1. A device of the character described comprising a wedge having a slot therein and a plurality of locking arms each secured at one end to said wedge in its relatively thin portion and projecting through said slot and beyond the opposite faces of said wedge in the direction of the thicker end of said wedge.



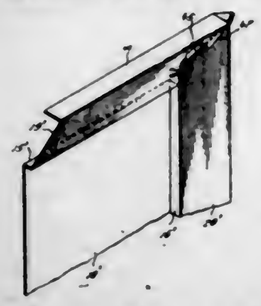
2,407,428
COVER REMOVING TOOL
Stanley Kretchman, Chicago, Ill.
Application June 30, 1943, Serial No. 492,824
4 Claims. (Cl. 81—3.46)

1. A cover-removing tool for containers comprising a support, spring arms secured to said support and having their lower ends provided with inside hooks and outwardly slanting tips, said arms being circularly arranged and spaced on the support and adapted with the aid of the slanting tips to be dropped down over the end of a container with the hooks engaging under the enlarged rim edge of the cover when the tool is thereafter raised, a stem sliding through the support, a handle on the upper and outer end of the stem by which the stem and tool are operated, a stop on the stem below the support and spaced therefrom when the handle is pressed down, whereby when the tool is in place on a container and a sudden pull is given the handle the jerk or blow caused by said stop on the stem engaging the support is transmitted through



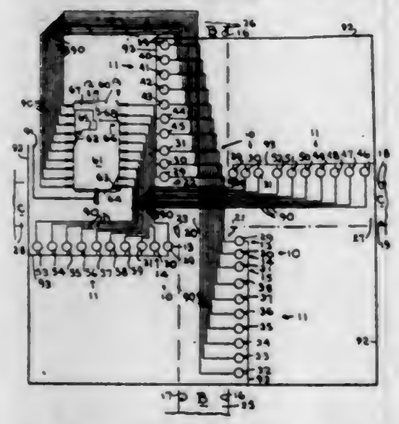
the arms and hooks to the rim edge of the cover whereby to loosen the same and the continued pull on the handle entirely to remove the cover from the container.

2,407,429
WRIST PIN ASSEMBLY
Julius Kuttner, Beloit, Wis., assignor to Fairbanks, Morse & Co., Chicago, Ill., a corporation of Illinois
Application May 19, 1944, Serial No. 536,395
3 Claims. (Cl. 309—6)



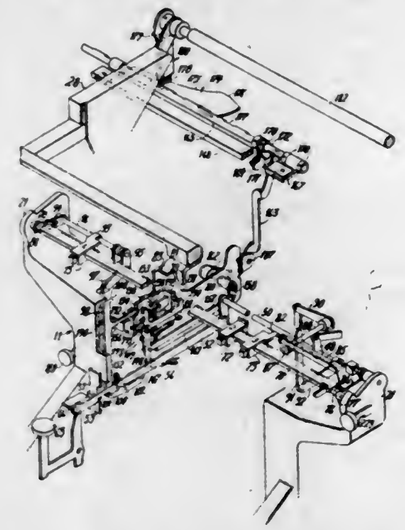
2. A wrist pin structure for a piston of fluid-cooled type, comprising a wrist pin having a bore axially therein and formed to provide in each end of the bore, an internally projecting shoulder providing a circular wall surface tapered longitudinally of the bore, a tubular member having an outer diameter substantially less than the diameter of the pin bore, provided for positionment substantially coaxially in said pin bore, thereby to define substantially concentrically related, longitudinally extending chambers in the wrist pin, one thereof bounded by the tubular member and the wall of said pin bore, and the other formed solely by said tubular member, and means securing the member to the pin and coincidentally therewith, locating the member in said substantially coaxial position in the pin bore, said means being constituted solely by end portions of the tubular member deformed into pressed, fluid-sealing engagement with said tapered wall surfaces of said projecting shoulders, said deformed end portions in coaction with said shoulders, thereby serving to provide end-closures for one of said chambers.

2,407,430
TRUCK UNLOADING APPARATUS
Walter S. MacRae, Castle Hot Springs, Ariz.
Application June 27, 1945, Serial No. 601,785
1 Claim. (Cl. 214—58)



In apparatus for removing a load from a truck body, the combination of a flexible mat secured at one of its ends to the rear end of the bottom wall of the truck body and extending full length and width thereof, the forward end of the mat being connected with an anchor disposed rearwardly of the mat and adapted to draw the mat rearwardly as the truck moves forwardly, said anchor consisting of a plurality of tines swingably attached as a unit to one end of a bracket, and means extending through the tine unit and the bracket for limiting the swinging movement of the tines with respect of the bracket.

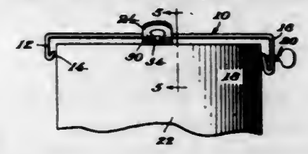
2,407,431
PICTURE FRAME OR THE LIKE
Stanley Madsen, Princeton, N. J.
Application November 19, 1943, Serial No. 510,954
1 Claim. (Cl. 40—154)



A picture frame formed from a single blank of sheet material, said blank including a centrally-disposed, generally-rectangular section forming a recessed central panel for the reception of the picture, an inner side wall, an outwardly-extending diagonal wall, and an outer side wall, the inner and outer side walls lying on substantially a right angle to the plane of the central panel, such walls being formed along each edge of the central panel, the several walls being defined by spaced fold lines, each corner of the blank having a cut-out portion to permit the adjacent terminals of the respective walls to be joined in abutting relationship, one terminal of each diagonal wall extending beyond the terminal of the adjacent diagonal wall, underlying such terminal and forming a support therefor, and an extension tab formed along the edge of one outer side wall at each corner section of the blank, one tab at each corner section having a transverse cut therein and the adjacent tab having a complemental transverse cut, whereby the tabs at the several corner sections may be secured together to set up the frame without the use of adhesives.

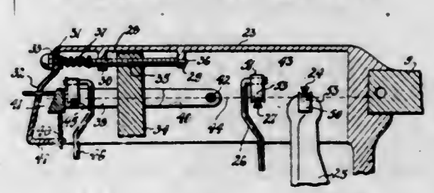
2,407,432
TRAFFIC SIGNALING SYSTEM
Anthony P. Manewich, Detroit, Mich.
Application December 12, 1944, Serial No. 567,869
5 Claims. (Cl. 177—337)

5. In a traffic signaling system for two highways crossing one another and forming an intersection, "stop" signal means and "go" signal means at said intersection for respectively signaling traffic to "stop" and "go" along said highways at adjacent said intersection, a plurality of auxiliary signal means disposed in a row along one of said highways and visible therefrom, and a signal means for operating and synchronizing said "stop" and "go" signal means and said auxiliary signal means so that, after the "go" signal is given for movement of traffic over said intersection in a direction substantially paralleling said row of auxiliary signal means, each of said auxiliary signal means will give a signal, in turn, beginning with the auxiliary signal means farthest from said intersection, and that, prior to the "stop" signal is given for stopping traffic over said intersection in a direction paralleling said row of auxiliary signal means, each of said auxiliary signal means will give a signal, in turn, beginning with the auxiliary signal means farthest from said intersection.



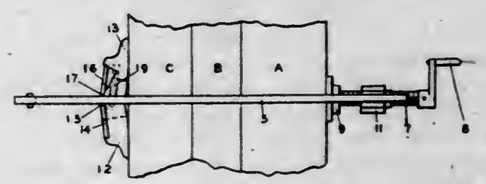
2,407,433
TYPEWRITING MACHINE
Miles H. Mann, Miami, Fla., assignor to Underwood Corporation, a corporation of Delaware
Application December 13, 1944, Serial No. 567,999
20 Claims. (Cl. 197—127)

1. In a machine having a carriage advanceable and returnable on a frame, and having a device on the carriage requiring movement to an operated position to facilitate paper manipulation, a member on the carriage, a member on the frame operable by the first said member through advance movement of the carriage to a specific position, a power operable mechanism engageable for returning the carriage, means conditionable to cause operation of said device incidental to return travel of the carriage, and means to engage said power operable mechanism and to condition said conditionable means responsive to operation of said second member by said first member.



2,407,434
CAN PUNCH AND CLOSURE
Joseph F. Markley, Camden, N. J.
Application October 28, 1943, Serial No. 508,011
1 Claim. (Cl. 220—51)

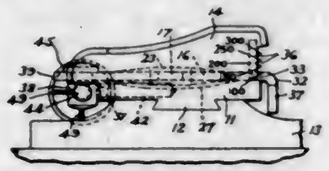
A combination can punch and closure comprising a clamp attached to the can, one end of said clamp provided with a depending right angular flange partly bent back upon itself to provide a can engaging lip, the other end of said clamp provided with a depending right angular flange of a greater length than said first mentioned flange and partly bent back upon itself to provide a can engaging wing of greater length than said engaging lip, a winged screw threadably received in said last named flange having engagement with said wing to flex said wing against the side of the can and firmly hold the clamp to the can through the pressure engagement of



the lip and the wing with the can, a flexible means pivotally connected with said clamp to overlie an end of the can when said clamp is secured thereto, said clamp holding said flexible means in bowed condition on the end of the can to apply constant tension thereto and perforating means attached to said flexible means to perforate the end of the can when pressure is applied to said flexible means, said perforating means being held firmly in the perforations in said can by the flexed condition of said flexible means.

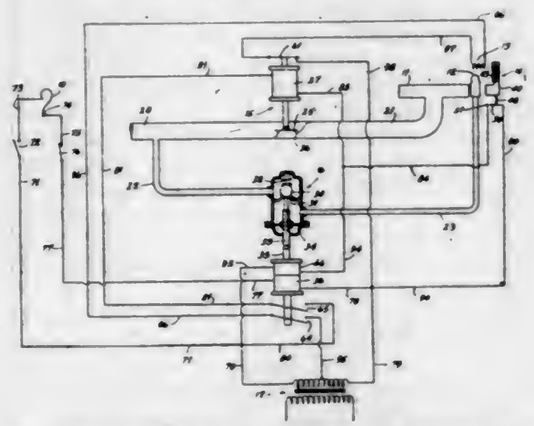
2,407,435
WEIGH BEAM ASSEMBLY
John A. McCulloch and Nicholas R. Siasor, Winnipeg, Manitoba, Canada, assignors to Manitoba Bridge & Iron Works Limited, Winnipeg, Manitoba, Canada
Application February 10, 1941, Serial No. 378,224
In Canada February 10, 1940
3 Claims. (Cl. 265—49)

1. In a weigh beam balance weight assembly, and in combination a balance weight and knife edge supporting structure, a rear balance knife edge adjusting assembly comprising a substantially horizontal bracket in the form of a yoke having an open centre, pivotally attached to said supporting structure, a knife edge spanning said bracket, a horizontally adjustable balance weight and a screw-threaded rod horizontally journalled on said supporting structure, said balance weight depending from said rod, downwardly between the open centre of said bracket.



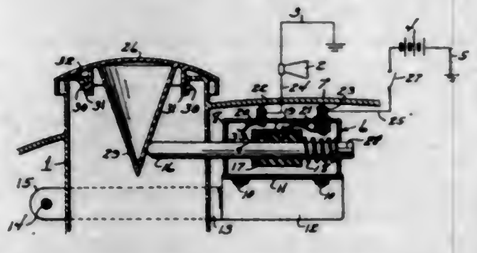
2,407,436
GLUE CLAMPING DEVICE
Robert H. Miller, Brisbane, Calif.
Application March 2, 1945, Serial No. 580,528
1 Claim. (Cl. 144—303)

In an adjustable parallel beam clamp having pressure exerting means at one end and work



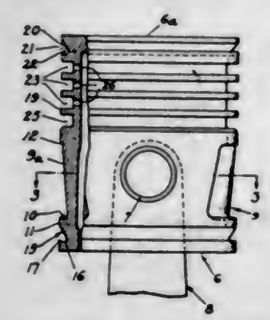
abutment means at the other end, said abutment means comprising a pair of pressure shoes, means for pivoting said shoes one to the other, said pivoting means comprising a threaded member adjustably engaging one of said shoes and having pivotal connection with a pintle carried by the other of said shoes, and divergent wing members carried by each of said shoes, said divergent members of the respective shoes extending towards each other and each having beveled edges to provide a biting engagement with the parallel beam.

2,407,437
REAR SIGHT FOR FIREARMS
Harold F. Mossberg, New Haven, Conn., assignor to O. F. Mossberg & Sons, Inc., New Haven, Conn., a corporation of Connecticut
Application June 9, 1943, Serial No. 490,389
9 Claims. (Cl. 33—56)



1. In a rear sight for firearms, a base having spaced apart side flanges, a sight leaf floatingly mounted for swinging movement laterally on said base and between said flanges, said sight leaf having lugs extending from its sides and intermediate its ends into engagement with said flanges and upon which said sight leaf is pivoted, and a windage screw operably engaging one end of said leaf to laterally swing it and upon which said leaf is pivoted to swing upwardly whereby its other end may be elevated.

2,407,438
BURNER CONTROL
Eric P. Newman, Clayton, Mo., assignor to Automatic Control Corporation, St. Louis, Mo., a corporation of Delaware
Application June 15, 1944, Serial No. 540,372
11 Claims. (Cl. 158—117.1)

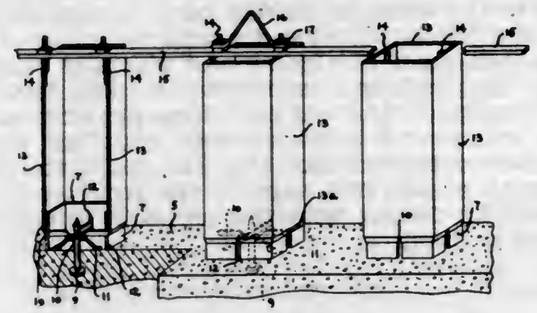


1. In a control for use with a main burner, a pilot burner, and a main control device including a power element, electrical means operated through the main control to supply fuel to the main burner, a flame-responsive switch operated by combustion at the pilot burner, and means controlled by said flame-responsive switch for reducing the power of said element to render the same effective to hold said control device in a closed position once this position is attained, but ineffective to move said device from an open to a closed position.

2,407,439
AUTOMOTIVE GAS TANK COVER SWITCH
Obie E. Olson, Sandwich, Ill.
Application July 21, 1944, Serial No. 545,984
4 Claims. (Cl. 200—54)

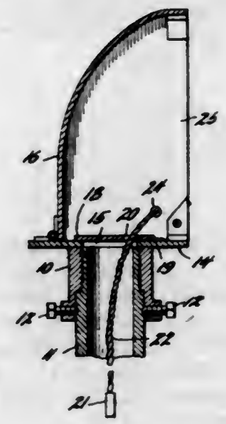
3. In combination with the filling neck of a storage tank and a cover movable into and out of closing relation to the neck; a conical cam member carried by the cover and extending downwardly therefrom in concentric relation to the cover within the neck, a switch having a casing mounted at one side of the neck, a stationary contact in said casing a second stationary contact carried by said casing forward of and in alignment with said first mentioned contact, a plunger slidable through said casing with its forward portion projecting from the casing and into the neck transversely thereof for abutting engagement with a side portion of said cam member, a contact carried by said plunger in insulated relation thereto, and a spring urging said plunger forwardly to move its contact into engagement with the second mentioned stationary contact.

2,407,440
PISTON FOR INTERNAL-COMBUSTION ENGINES
Walter Osborne, Glendale, Calif.
Application January 7, 1944, Serial No. 517,447
12 Claims. (Cl. 309—4)



4. In a piston for an internal combustion engine, a carbon collecting groove around that end portion of the piston which is directed toward the combustion chamber, said groove being deeper along one side than the other and being encircled along said deepest side with a carbon retaining lip which is directed toward the aforementioned end of the piston.

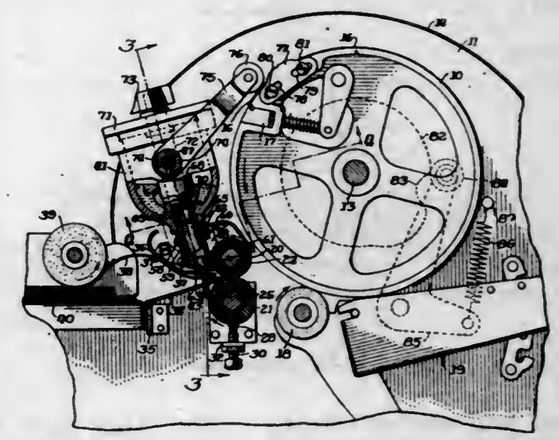
2,407,441
FORM TO PROVIDE AIR PASSAGES IN CONCRETE WALLS
John L. Painter, Jr., West Newton, Pa.
Application July 19, 1945, Serial No. 605,941
5 Claims. (Cl. 25—128)



1. A mold for concrete walls comprising a pair of telescoping hollow forms adapted for resting on a wall footing and including upper and lower forms, said lower form having vertical slots

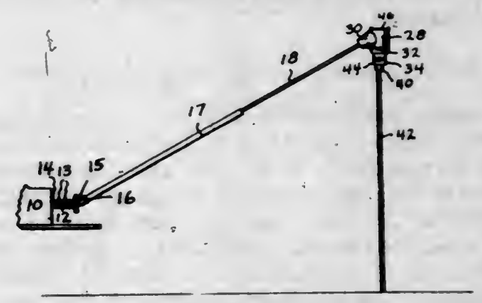
therein, a plurality of arms having an end projecting in the slots for vertical movement therein

and secured to the upper form, and spring means extending between the arms and the footing.



2,407,442
SEPARATION OF BLASTING CIRCUIT LEADS
Josephus O. Parr, Jr., San Antonio, Tex., assignor to Olive S. Petty, San Antonio, Tex.
Application January 29, 1943, Serial No. 473,997
7 Claims. (Cl. 102—22)

5. In electric shot firing apparatus of the type described, comprising an electric percussion cap having a bridge wire, a source of current for firing said cap, recording apparatus for making a record of the instant of firing the cap as indicated by the breaking of the bridge wire therein, and conductors leading from the said source to the recording apparatus, the combination with conductors leading from the source to the cap in a shot hole, of a severing device mounted at the top of the shot hole and positioned to be moved by the force of the explosion, said device being arranged to sever both cap conductors when so moved.

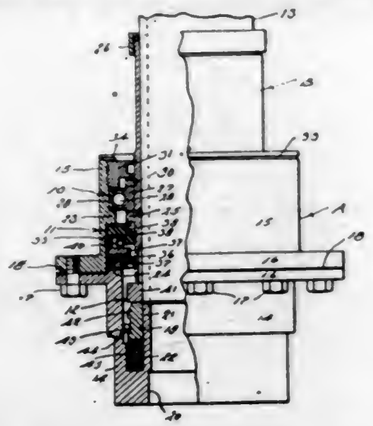


2,407,443
SHEET MOISTENING DEVICE FOR DUPLICATING MACHINES
Eric W. Peterson, Glen Ellyn, Ill., assignor to Ditto, Incorporated, Chicago, Ill., a corporation of West Virginia
Application March 16, 1945, Serial No. 583,060
5 Claims. (Cl. 101—132.5)

2. A duplicating machine having a frame, a drum therein adapted to support a master sheet, a moistening roller operable to moisten the surface of a copy sheet advancing to the drum, drive means operable to rotate the drum through repeated cycles, means for moistening said roller comprising a resilient hollow boot having a surface in engagement with the roller and having an aperture above the engaging surfaces of the boot and roller to supply liquid to the surface of the roller from within the boot, a liquid supply receptacle connected to the boot, and means

operable by the drum rotation periodically to compress the boot against the roller around said aperture and thereby seal the aperture.

2,407,444
TRACTOR OPERATED POST DRIVER
August F. Pfingsten, Rock Rapids, Iowa
Application October 23, 1944, Serial No. 559,983
9 Claims. (Cl. 61—73)



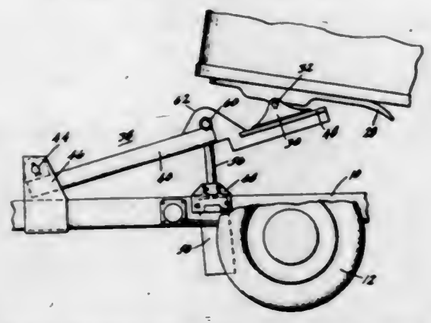
1. A tractor operated post driver comprising a rotatable shaft adapted to be attached to a tractor power take-off shaft, a driving head, said driving head having an opening for receiving the top of a fence post therein, means operated by said rotatable shaft for impacting against the top of the post, received in the head, said impacting means including a cam revolubly journalled in said head, said rotatable shaft driving said cam, a weighted impact member operated reciprocatingly by said cam.

2,407,445
ELECTRICAL CONDUCTING SWING JOINT
Dwight M. Phillips, Fullerton, Calif., assignor to Chiksan Tool Company, Brea, Calif., a corporation of California
Application June 30, 1943, Serial No. 492,830
9 Claims. (Cl. 174—21)

1. A joint of the character described including a tubular outer section comprising two detachably connected parts, a tubular inner section received in the outer section, anti-friction bearing means in one of said parts connecting the sections for free relative rotation and adapted to be removed from the outer end of said part, sealing means in said part at the inner end portion thereof for preventing the leakage of fluid from between the sections to the bearing and located in said part and confined therein by the other

part and adapted to be removed from the other end of said part upon the disconnection of said

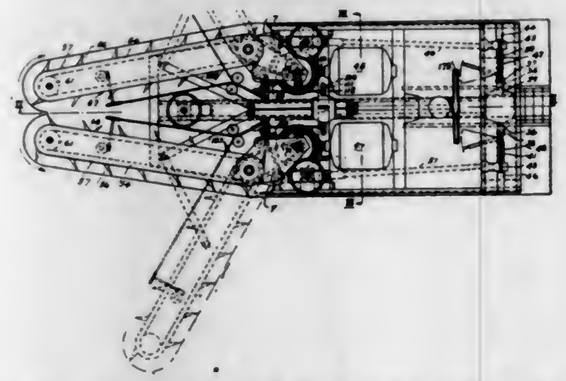
parts, and contact means in the other part for maintaining the sections in electrical connection.



2,407,446
UNSATURATED ESTERS OF CARBONIC ACID AND POLYMERS THEREOF
Maxwell A. Pollack, Austin, Tex., assignor to Pittsburgh Plate Glass Company, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application June 12, 1942, Serial No. 446,779
12 Claims. (Cl. 260—78)

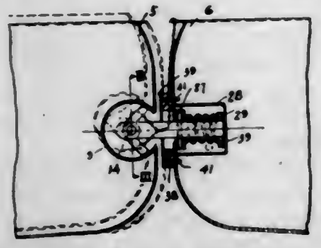
11. A compound corresponding to the structural formula:

$$R_1\text{—}O\text{—}R_2\text{—}O\text{—}\overset{\overset{O}{\|}}{C}\text{—}O\text{—}R_3\text{—}O\text{—}R_4$$



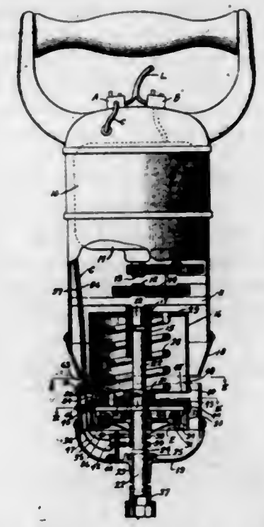
wherein the radicals R_1 and R_4 are each selected from the class consisting of radicals corresponding to the radical R in the alcohol having the formula ROH, said alcohol being an unsaturated, monohydric alcohol having from 2 to 10 carbon atoms and having an unsaturated carbon to carbon linkage in an aliphatic straight chain, the unsaturated linkage being adjacent the beta carbon atom of the alcohol, and R_2 and R_3 are radicals selected from the group consisting of divalent saturated aliphatic hydrocarbon radicals and divalent radicals of the formula $—R_5—(O—R_6)_n—$, in which R_5 is an alykylene radical and n is a small whole number.

2,407,447
FIFTH WHEEL MECHANISM FOR TRACTORS
Charles E. Pollard, Detroit, Mich.
Application August 23, 1944, Serial No. 550,687
5 Claims. (Cl. 280—33.1)



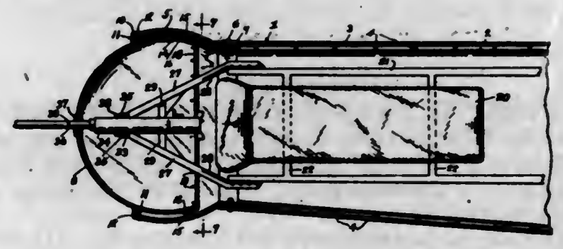
4. In fifth wheel mechanism for a tractor having a frame provided with rear road wheels and provided with platform pivots spaced forwardly of said rear wheels, a platform superimposing that portion of the frame to the rear of said pivots and hinged at its forward end to said pivots to have its rear end swing above the rear end of the frame or to rest upon the frame, hydraulic piston and cylinder mechanism pivotally mounted upon the frame and pivotally coupled with the platform intermiediate its ends to swing and to support the rear end of the platform above the frame and a fifth wheel coupling device pivotally mounted upon the rear end of the platform to engage and support the front end of a trailer for towing with the platform in the elevated position.

2,407,448
MINING MACHINE
Erskine Ramsay, Birmingham, Ala.
Application July 3, 1944, Serial No. 543,304
6 Claims. (Cl. 262—28)



6. In a mining machine, a main frame, gangs of cutters pivotally mounted on the main frame to project forwardly side by side from the main frame and each comprising a plurality of housings having cutter chains mounted therein, jack screws for separating the cutter chain housings, said jack screws being disposed between the housings, means to operate the jack screws in unison to vary the distances between the housings, an extensible drive shaft for each of the gangs of cutters, means to drive the drive shafts in opposite directions whereby the outer flights of the cutter chains move rearwardly toward the machine, and means to swing the gangs of cutters around their pivots to vary the relative distances between the outer ends thereof.

2,407,449
MINE CAR COUPLER
Erskine Ramsay, Birmingham, Ala.
Application February 19, 1945, Serial No. 578,683
7 Claims. (Cl. 213—180)

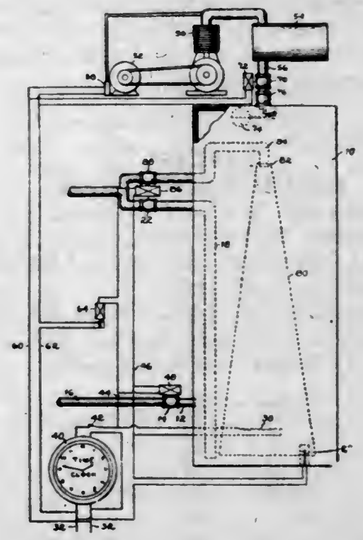


7. In apparatus for coupling cars together, a spheroidal socket member mounted in the end of one car, and having an opening through the end of the car, a draw bar member mounted on an adjacent car and smaller in diameter than the opening, and adapted to enter through said opening, coupling members pivotally mounted on the draw bar member and adapted to spread apart and engage the sides of the spheroidal member, a spring for holding the coupling members apart, flexible means connected to the coupling members and adapted to draw them together to clear the sides of the opening in the socket member and uncouple the cars, a slotted shank on the draw bar member, a socket in the end of the car on which the draw bar member is mounted and larger in cross sectional dimensions than the shank and into which the shank extends, a spring surrounding the shank, means on the end of the shank for restraining one end of the spring, and a pin passing through the slot in the shank and held against outward movement for restraining the other end of the spring.

2,407,450
TORQUE WRENCH
Joe Reilly and Grace M. Reilly, Elmhurst, Ill.
Application December 17, 1943, Serial No. 514,650
6 Claims. (Cl. 192—150)

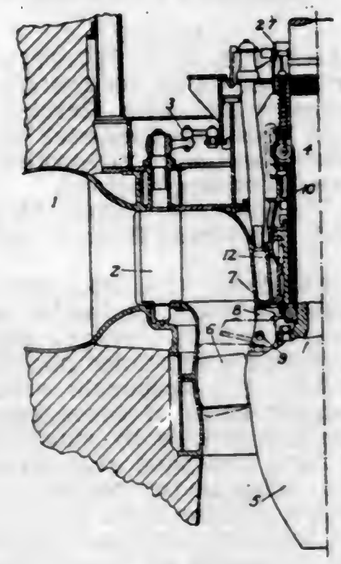
1. A torque device comprising a driving motor, a driving member driven by said motor, an electro-magnetic coupling comprising an armature drum and an electro-magnet, a driving connection between said driving element and said drum including a torsion spring, a driven shaft on which said electro-magnet is mounted, and means for controlling the energization of the electro-magnet winding for electro-magnetic transmission by the coupling of the driving power to the driven shaft.

2,407,451
WING-TIP GUN POSITION
Haigh Reiniger, Sebring, Fla.
Application June 14, 1944, Serial No. 540,289
6 Claims. (Cl. 89—37.5)



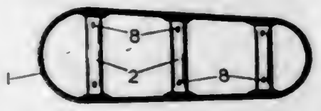
1. A gun position for aircraft having a fuselage and wing supporting surfaces comprising partially telescoping substantially parti-spherical glass sections, one of which is fixed to the wing of the aircraft, the other section being movable with respect to the first section, anti-friction mountings between the sections, a gunner's position in the wing of the aircraft accessible to the interior of said sections, and a gun accessible to the gunner and protruding through the movable section.

2,407,452
PREPARATION OF β-SUBSTITUTED HOMOLOGUES OF INDOLE
Robert Robinson and Rita Harriet Cornforth, Oxford, and Trustham Frederick West, London N. 1, England, assignors to Stafford Allen and Sons Limited, London, England
No Drawing. Application August 21, 1942, Serial No. 455,658. In Great Britain September 12, 1941
3 Claims. (Cl. 260—319)



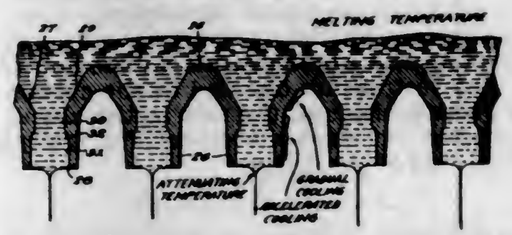
3. A process for the manufacture of β-substituted derivatives of indole, which comprises heating under pressure a substance selected from the group consisting of α-carboxylic acids of indole and α-carboxylic acids of those homologues of indole which are formed by substitution of an alkyl group for a hydrogen atom in the benzene nucleus, said acids being unsubstituted in the β-position and a solution in an alcohol of formula $R.CH_2OH$ of the corresponding alcoholate of an alkali metal, in which R is selected from the group consisting of hydrogen, alkyl and aryl radicals.

2,407,453
OFF-PEAK HOT-WATER HEATER
Harry J. Rougier, Dayton, Ohio
Application May 18, 1944, Serial No. 536,170
19 Claims. (Cl. 219—39)



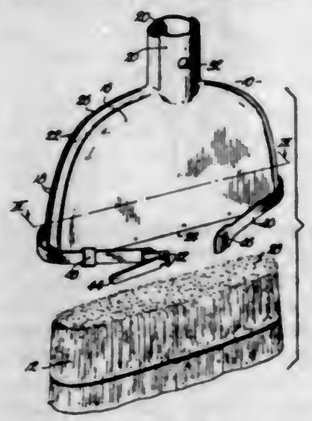
1. A hot water heater system including a reservoir, a heater element for heating the water in the reservoir, means for periodically filling the reservoir with water, means responsive to the periodic means for causing the heater element to heat the water, a conduit extending from the reservoir for supplying hot water, and pressure means acting on the water independent of gravity for forcing the hot water out of the reservoir through said conduit without replenishing the water supply.

2,407,454
AUTOMATIC SPEED LIMITING DEVICE FOR HYDRAULIC TURBINE ROTORS
Paul Werner Seewer, Rugby, England, assignor to The English Electric Company Limited, London, England, a British company
Application December 28, 1942, Serial No. 470,396
In Great Britain January 12, 1942
3 Claims. (Cl. 253—143)



1. In combination, a hydraulic turbine rotor, driving blades mounted on the rotor, a ring of speed-limiting vanes mounted on the rotor and free to move outwardly under the action of centrifugal force into the water stream to limit the speed of the rotor, a flexible cord attached to each of said vanes and extending along the rotor to an exposed position above the water stream, guide pulleys for said cords and means holding the ends of said cords at the said position above the water stream to retain said speed-limiting vanes out of the water stream until centrifugal force corresponding to a predetermined safe rotor overspeed is exceeded.

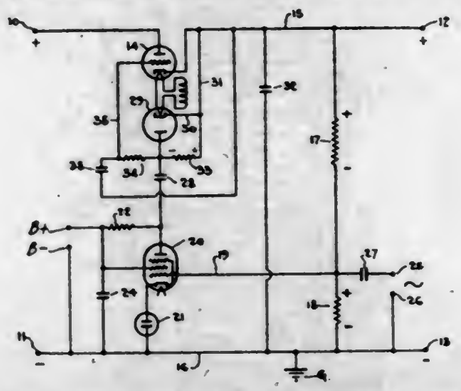
2,407,455
LIQUID CONTAINER
Leonard Shakesby, Wolverhampton, and Sydney Hartley Smith, Manchester, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain
Application May 13, 1943, Serial No. 486,894
In Great Britain April 3, 1942
9 Claims. (Cl. 220—71)



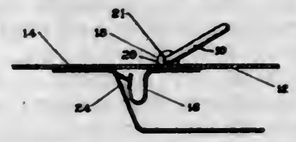
1. In a liquid container which includes an envelope of flexible non-metallic material, a plurality of supporting members inserted between and secured to oppositely disposed portions of the envelope, said supporting members each comprising a flexible tubular core of spirally wound non-metallic material, a surrounding sheath extending longitudinally beyond the ends of said core, slit at its ends and formed as radially extending fingers defining end flanges, a pair of annuli secured on opposite surfaces to said end flanges and to opposite walls of said envelope, respectively, whereby said envelope is supported against tensional and compressional stresses.

2,407,456
METHOD OF PRODUCING FIBROUS GLASS
Allen L. Simison and Ed Fletcher, Newark, Ohio, assignors to Owens-Corning Fiberglas Corporation, Toledo, Ohio, a corporation of Delaware
Original application March 26, 1942, Serial No. 436,236. Divided and this application October 2, 1943, Serial No. 504,800
5 Claims. (Cl. 49—77)

1. In the method of producing glass fibers by attenuating a stream of molten glass, the steps of establishing a supply body of molten glass at a temperature above the attenuating temperature and above the devitrification temperature, flowing a stream of molten glass from said body, accelerating the velocity of the stream through a first cooling zone, and then rapidly cooling said stream to a temperature below the devitrification point of the glass and decreasing the flow of the stream as it approaches the region of attenuation.



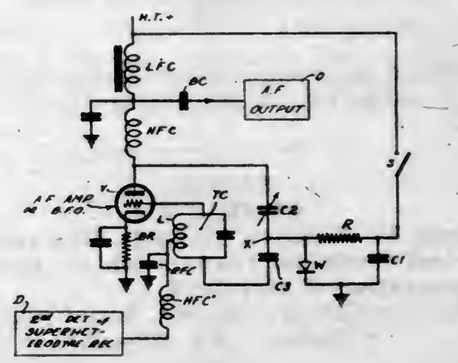
2,407,457
BROOM HOLDER
Herman Sokoloff, Kansas City, Mo.
Application January 22, 1944, Serial No. 519,265
3 Claims. (Cl. 15—177)



1. In a device of the character described, a holder comprising a pair of mating members, each having an extension in its upper end for receiving a handle therebetween; reinforcing beads having their opposed marginal edges overlapping said pair of members and secured thereto to hold the members in spaced apart relation to each other, said beads being slit longitudinally throughout a portion of their length to permit limited spreading of the members when mounting said holder on a broom; and means for drawing said spaced members toward each other.

2,407,458
HIGH-VOLTAGE REGULATOR CIRCUIT
Sterling C. Spielman, Huntingdon Valley, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application December 6, 1943, Serial No. 513,096
5 Claims. (Cl. 171—312)

1. An electrical system comprising a high voltage circuit of unidirectional potential, an electric valve having a control electrode for regulating an electrical condition of said circuit, means including a rectifying device for applying a variable bias to said control electrode, a second electric valve having an output circuit and an input circuit, said output circuit including said rectifying device and means capable of transferring alternating current to and blocking said unidirectional potential from said second valve, said input circuit including a control electrode and a source of alternating current, and means for applying to said control electrode a bias whose magnitude is a function of said electrical condition, whereby upon variation of said condition said bias changes in a direction to produce a resultant corrective action by said first named valve.



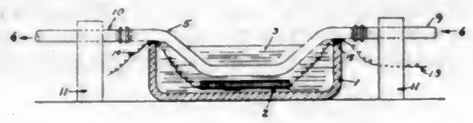
2,407,459
RING CATCH
Henry M. Stieglitz, St. Louis, Mo., assignor to Frank Adam Electric Company, St. Louis, Mo., a corporation of Missouri
Application March 22, 1943, Serial No. 480,110
2 Claims. (Cl. 292—76)

1. A catch assembly for the door of a closure comprising a catch member and a ring, said catch member being a strip of resilient material having a concave formed portion with its concave side against the door and having a free end provided with a formed bump adapted to engage a lip extending from the closure to hold the door in closed position, a pair of opposed openings in the door, a pair of opposed ears bent out from the flat strip at substantially the center of the concave portion and extending through the openings, said ears provided with openings therethrough, said ring being adapted to serve as a handle for the door and extending through the openings in the ears, said ring being adapted to prevent displacement of the ears from the openings, the concave portion of the catch member being adapted to maintain the ring against the front of the door independently of variations in the thickness of the door.

2,407,460
SWITCH FOR HIGH-FREQUENCY CIRCUITS
Bernard van Ryn, Chelmsford, England, assignor to Radio Corporation of America, a corporation of Delaware
Application May 15, 1943, Serial No. 487,426
In Great Britain April 2, 1942
4 Claims. (Cl. 179—171.5)

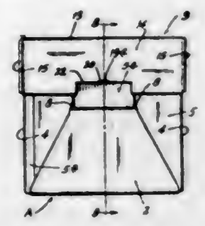
1. A circuit arrangement comprising a tube provided at least with a cathode, control grid and anode, two condensers and a tuned circuit connected in series and in the order named between said anode and control grid, the cathode being connected to ground, means for coupling a source of audio frequencies to said tuned circuit, a rectifier so connected betweeen the junction point of said condensers and ground as to present a high impedance to radio frequency energy and to thereby condition the tube to function as an audio frequency amplifier, and a switch for connecting a potential across said rectifier to reduce the impedance of said rectifier for radio frequency and to thereby condition the tube to function as an oscillation generator.

2,407,461
MAGAZINE FOR FIREARMS
Josef Veselý, London N. 21, England
Application July 28, 1942, Serial No. 452,585
In Great Britain July 26, 1941
7 Claims. (Cl. 89—34)



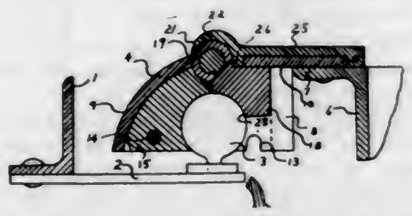
1. A cartridge magazine comprising a receptacle, a discharge outlet therein, a plurality of substantially flat, individually-rotatable cartridge-holding members disposed in said receptacle in superposed relation, and each including a pair of concentric annular sections connected together in spaced relation, said annular sections engaging the opposite ends of a circular series of cartridges to retain the same radially in each holding member, means for severally rotating said cartridge-holding members, means for discharging cartridges therefrom and for guiding the discharged cartridges to said discharge outlet, means carried by the magazine for preventing the discharge of cartridges from an upper cartridge-holding member until the next lower cartridge-holding member is completely discharged, and means on each lowerly disposed cartridge-holding member arranged to engage with its next superposed cartridge-holding member for arresting the rotary movement of such superposed cartridge-holding member.

2,407,462
SUPERSONIC TREATMENT OF FLUID MASSES
Edward Oldroyd Whiteley, New York, N. Y.
Application May 14, 1943, Serial No. 487,069
7 Claims. (Cl. 252—314)



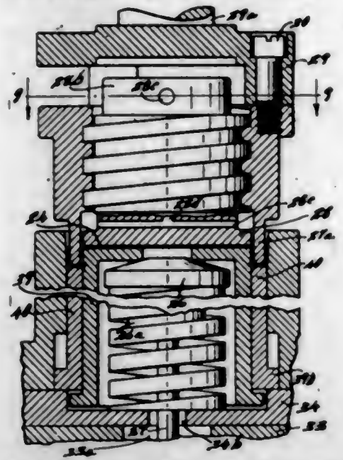
1. The method of treating fluid masses by means of supersonic waves which includes sup-

porting the mass in a thin walled suspended soft rubber container while applying the treatment, and with the rubber container in exterior con-



tact with a supersonic wave transmitting liquid, and the pulsations being set up directly in said liquid.

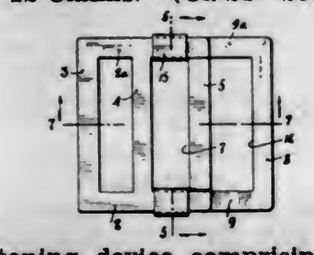
2,407,463
CONTAINER
Benjamin M. Williams, St. Louis, Mo., assignor to Gaylord Container Corporation, St. Louis, Mo., a corporation of Maryland
Application October 16, 1944, Serial No. 558,867
6 Claims. (Cl. 229—45)



1. A carton comprising a body having flaps that are overlapped and secured together to form end walls, said end walls having hand holes in the outermost flaps thereof, means for spacing the overlapped flaps of the end walls apart to provide clear spaces therebetween above said hand holes, and a cover having locking tongues depending therefrom that are bent upwardly around the upper edges of said hand holes and are inserted into the clear spaces located thereabove between said overlapped flaps, said spacing means comprising tabs located along the edges of said hand holes and bent to lie between said overlapped flaps.

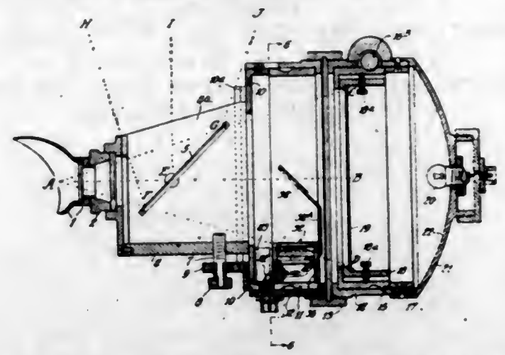
2,407,464
TRAILER HITCH
Alfred W. Wilson, New Westminster, British Columbia, Canada
Application August 13, 1945, Serial No. 610,637
In Canada July 2, 1945
5 Claims. (Cl. 280—33.17)

1. A trailer hitch comprising a ball adapted for connection to one vehicle and a housing adapted for connection to another vehicle, said housing comprising a box-like structure having side walls and an end wall, a pair of blocks hingedly connected together and having complementary recesses adapted to engage the ball, one of said blocks being pivotally mounted on a pin extending between said side walls of the housing and releasable means for engaging one of the blocks to retain both blocks within the housing.



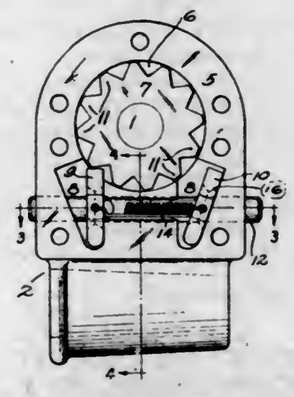
2,407,465
METHOD AND APPARATUS FOR MAKING CAPS OR COVERS
Lawrence G. Zesbaugh, Minneapolis, Minn., assignor, by mesne assignments, to Perma-Seal Closure Co., a corporation of St. Paul, Minn.
Application July 8, 1942, Serial No. 450,140
7 Claims. (Cl. 93—1.3)

1. A method of making a cap or cover for a container for food or other material which consists in pressing a circular flat blank of sheet material such as cardboard or comparatively thick paper at its central portion to form a cup therein with a flat circular rim thereabout, then pressing the outer part of said rim into frusto conical shape to form a down turned flange extending for some distance from the top of said cup, thus forming an annular groove around the underside of said cover which groove has substantially parallel sides and which is adapted to receive the top of said container, then compressing said cup vertically and forming a bead or ridge about the top of said cup to stiffen said cover and forming the whole of said outer flange into substantially cylindrical form.



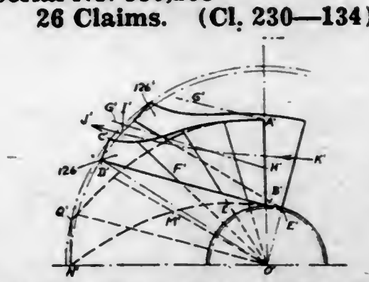
4. An apparatus for forming a cap or cover having in combination, means for forming a cup-like depression in the central portion of a flat circular one-piece blank of sheet material, means for turning down a portion of said blank extending from its outer edge inwardly a substantial distance to form an annular flange and thus form an annular groove having substantially parallel sides at the underside of said blank and means for forming a bead or ridge about the top of said cup-like depression or at the inner corner of said groove.

2,407,466
CLASP
Leon N. Alberts, New York, N. Y.
Application April 15, 1944, Serial No. 531,211
12 Claims. (Cl. 24—200)



1. A fastening device comprising a substantially rigid body portion having side members and at least two spaced cross bars, a locking bar extending in the same general direction as said cross bars, said locking bar being resiliently mounted on the body portion and normally held in a locking position.

2,407,467
APPARATUS FOR DETERMINING GEOGRAPHIC POSITIONS CELESTIALLY
William R. Barry, Valdosta, Ga.; Mrs. Willie R. Dewberry administratrix of said William R. Barry, deceased
Application September 30, 1944, Serial No. 556,622
12 Claims. (Cl. 88—2.3)



1. In a locating device of the kind described, the combination of an enclosure having an opening in one side and an eye opening disposed in the longitudinal axis of the device, in an end of the enclosure, an illuminated plate in the other end of the enclosure disposed at right angles to the longitudinal axis of the device and having indicating marks thereon simulating the stars from which observations are made, a semi-transparent reflector located adjacent said side opening in the enclosure and extending at an angle of forty-five degrees to the line of sight from said eye opening to the center of said illuminated plate for reflecting to the eye opening the celestial sky as seen through the opening in said enclosure, a circular graduated latitude indicator and a circular graduated longitude indicator both rotatably mounted in said enclosure on the longitudinal axis thereof, level means for establishing a horizon, carried by said latitude indicator, and said illuminated plate being carried by said longitude indicator, and independent actuating means for separately adjusting said latitude and longitude indicators.

2,407,468
RATCHET MECHANISM
Lester O. Becker, St. Louis, Mo., assignor to Joseph Pavelka, St. Louis, Mo.
Application April 26, 1945, Serial No. 590,323
4 Claims. (Cl. 74—157)

1. In a ratchet structure, a driven member having a series of teeth, a driving member including a pawl shiftable therein to engage and disengage said teeth, spring means normally thrusting said pawl into engagement with said teeth, there being a passage through said driving member and pawl, an element shiftable manually in said passage to different selected positions and a device yieldingly retaining the element in a selected position, there being a part on said element engaging a face of said pawl to hold the pawl, against said spring means, out of engagement with said teeth when the element is in one of the selected positions.

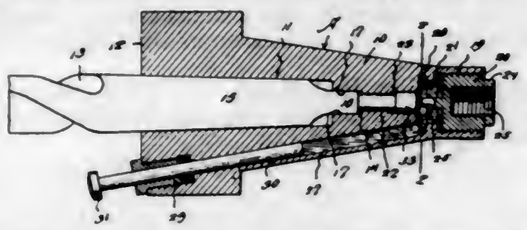
2,407,469
ROTOR FOR ELASTIC FLUID MECHANISM
Rudolph Birmann, Newtown, Pa., assignor, by mesne assignments, to Federal Reserve Bank of Philadelphia, a corporation of the United States of America
Original application March 26, 1943, Serial No. 480,633. Divided and this application April 8, 1944, Serial No. 530,188
26 Claims. (Cl. 230—134)

1. A rotor having passages therein for elastic fluid, each passage conforming substantially to a surface having the parametric equations:

$$y=\frac{x}{\tan(\alpha+M)}-\frac{p}{\sin(\alpha+M)}-n$$

and

$$z=K_1\left(\frac{1}{\tan\alpha}-K_2\right)$$



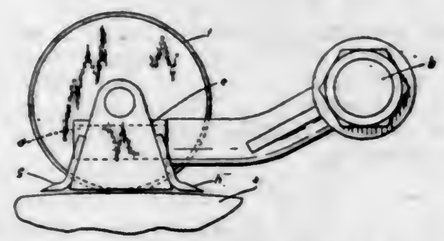
2,407,470
BITUMINOUS COMPOSITION CONTAINING MINERAL AGGREGATES
John Frederick Thomas Blott, Worcester Park, and Peter Alexander, London, England, assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application November 14, 1944, Serial No. 563,456. In Great Britain November 15, 1943
2 Claims. (Cl. 106—283)

1. A process for the preparation of bituminous compositions of improved load-bearing capacities, which comprises mixing a sand containing less than 3% by weight of water with water employed in such an amount that the total water content is not greater than 6.5% by weight of the sand, mixing the thus treated sand with between about 4% and about 6% by weight, as calculated on the weight of the sand, of a bituminous material capable of wetting the surfaces of the sand particles only in the absence of water and with about 2% by weight of calcium hydroxide, and effecting said last-mentioned mixing at a temperature of below about 100° C., the amount of water added to the sand being also such that the total water content is greater than 3% by weight of the composition obtained after incorporation of the bituminous material.

2,407,471
ROTARY TOOL ADAPTER
Robert Burk, Brazil, Ind., assignor of one-half to W. C. Brockmeier, Brazil, Ind., and one-half to M. R. Harding, Greenville, Mich.
Application December 11, 1944, Serial No. 567,676
2 Claims. (Cl. 279—103)

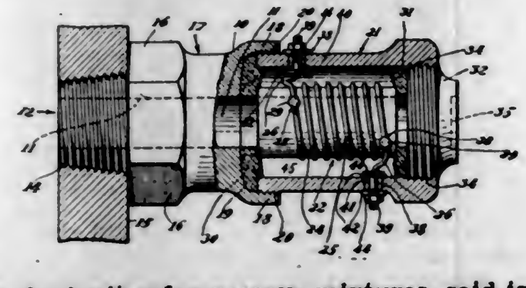
1. An adapter for a milling machine and a rotary tool therefor having a Morse taper tanged

shank, comprising an elongated truncated conical body having a centrally located socket with a drift hole for a portion of its length and opening through the larger end for accommodating the tool shank and the engagement of the tang in the drift hole, the said body further being formed with an oil chamber opening through its smaller end and aligned with the drift hole, a removable plug fitting the smaller end of the body for closing the oil chamber and effecting a



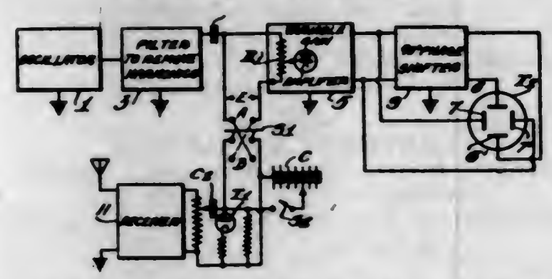
driving coupling between the said body and the machine, an ejecting pin within the body between the socket and the oil chamber for contacting the tank, and a hammer blow actuated plunger slidably fitted longitudinally in the body within the marginal area of its larger end and extending generally in the direction of the socket for action on the content of the oil chamber to displace the ejecting pin for removing the tang of the tool shank from the drift hole.

2,407,472
PROCESS FOR PREPARATION OF UNSATURATED NITRILES
Darrel J. Butterbaugh, Philadelphia, and Le Roy U. Spence, Elkins Park, Pa., assignors to Röhm & Haas Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application June 20, 1944, Serial No. 541,272
11 Claims. (Cl. 260—464)



1. The process of making a mixture of unsaturated nitriles which comprises reacting a member of the group consisting of methyl acetylene and allene with hydrogen cyanide in vapor phase in the presence of a catalytic agent containing a metal from the group consisting of cadmium, magnesium, and zinc, under temperature and pressure conditions such that the reaction will take place.

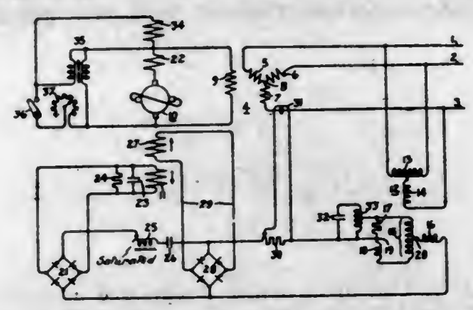
2,407,473
TIRE PRESERVER
William Charles Carlton, Ilford, England
Application October 13, 1944, Serial No. 558,511
In Great Britain December 11, 1943
1 Claim. (Cl. 280—150)



A device for protecting a tire mounted on a vehicle wheel comprising a rigid support mounted for rockable movement about an axis parallel with the axis of the wheel, a blade carried by said support and mounted for rockable movement about an axis at right angles to the axis of the wheel, and means on said support for normally maintaining the blade a predetermined distance from the tire so as to effect engagement of the blade with foreign particles picked up by the tire to remove such foreign particles.

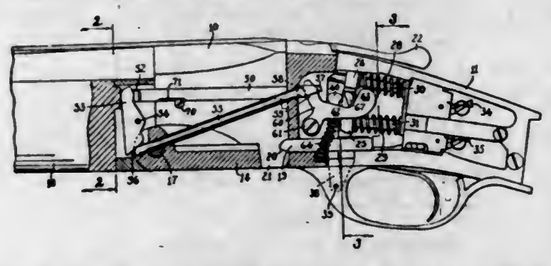
2,407,474
IGNITER FOR INTERNAL-COMBUSTION ENGINES
Edwin D. Chaplin, New York, N. Y., assignor to Harry B. Albert, New York, N. Y.
Application February 3, 1944, Serial No. 520,871
16 Claims. (Cl. 123—145)

1. An igniter for gaseous mixtures, said igniter comprising a casing; a conductive secondary core therein and adapted to be exposed to the gases; a primary coil of wire inductively coupled with the core so that a flow of alternating current in the primary coil will induce a current in the core to heat the latter; and means for substantially preventing the gases from coming in contact with the coil and wire.



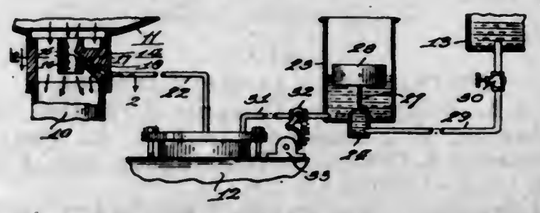
2,407,475
CATHODE RAY SWEEP CIRCUIT
George M. Charrier, Collingswood, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application February 25, 1942, Serial No. 432,191
12 Claims. (Cl. 315—24)

1. In a cathode ray oscillograph, a cathode ray tube having deflecting elements, a source of potential, a source of quadrature voltages, means for applying said quadrature voltages to said deflecting elements to produce a circular trace, and means for varying the radius of said circular trace comprising a common variable gain amplifier to control the amplitude of both of said quadrature voltages, and means for controlling the gain of said amplifier by said source of potential.



2,407,476
ELECTRIC CIRCUIT
Frederick E. Crever, Scotia, N. Y., assignor to General Electric Company, a corporation of New York
Application June 6, 1944, Serial No. 538,933
8 Claims. (Cl. 171—223)

3. In combination, a polyphase alternating-current circuit, means for regulating the voltage of said circuit, a control element for said regulating means, means including an impedance network for deriving from said circuit a single-phase voltage which is proportional to the positive phase sequence voltage of said circuit and which is in quadrature with one of the line currents of said circuit at unity power factor, means

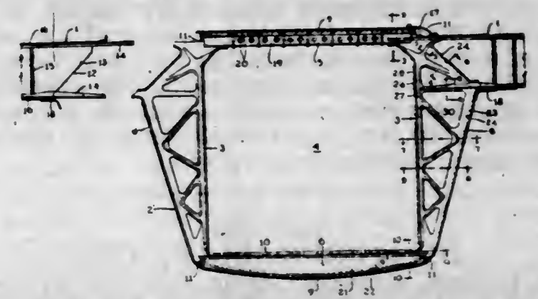


for vectorially adding to said single-phase voltage another single-phase voltage which corresponds in phase and is proportional in magnitude to said line current, and means for energizing said control element in accordance with the vector sum of said single-phase voltages.

2,407,477
EJECTOR MECHANISM FOR FIREARMS
John Crowe, St. Joseph, Mo., assignor to The Marlin Firearms Company, New Haven, Conn., a corporation of Connecticut
Application May 8, 1944, Serial No. 534,556
17 Claims. (Cl. 42—48)

1. A firearm comprising an action frame, a barrel section pivoted thereto, an ejector on the barrel section, a spring-actuated ejector hammer movably mounted on the action frame, means actuated by movement of the barrel section to open position about its pivot for cocking and releasing the ejector hammer, and operative connections from said hammer to said ejector.

2,407,478
ANTIKNOCK OR DETONATION DAMPENING DEVICE
Harold E. Crozier and Albert G. H. Vanderpoel, Hawthorne, Calif.
Application March 20, 1944, Serial No. 527,252
2 Claims. (Cl. 123—25)

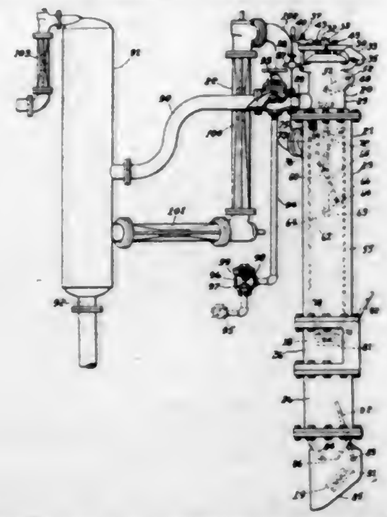


1. The combination with an internal combustion engine, its exhaust manifold, carburetor, and an air filter, of a collar connecting said filter and carburetor, a venturi axially located in said collar, the wall of said collar being provided with a duct, the inner end of which communicates with the center of said venturi a receptacle, float actuated valvular means associated with said receptacle for maintaining a constant supply of water therein, a heater mounted on the exhaust manifold and provided with a tortuous passageway, a duct leading from said receptacle to one end of said passageway and a duct leading from the other end of said passageway to the outer end of the duct that leads to said venturi.

2,407,479
INTERPOLYMERIZATION PRODUCTS
Gaetano F. D'Alelio, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York
No Drawing. Application October 31, 1939, Serial No. 302,167
14 Claims. (Cl. 260—42)

13. A composition comprising the product of polymerization of a polymerizable mixture including (1) a polymerizable unsaturated alkyd resin obtained by reaction of ingredients comprising a monohydric alcohol, a polyhydric alcohol and a plurality of polycarboxylic acids at least one of which is an alpha unsaturated alpha beta polycarboxylic acid and (2) a polymerizable monohydric alcohol polyester of an alpha unsaturated alpha beta polycarboxylic acid, said ester being compatible with the resin of (1).

2,407,480
AIRCRAFT FUSELAGE AND WING CONSTRUCTION
Albert G. Dean, Narberth, Pa., assignor to The Budd Company, Philadelphia, Pa., a corporation of Pennsylvania
Application September 13, 1944, Serial No. 553,890
4 Claims. (Cl. 244—119)



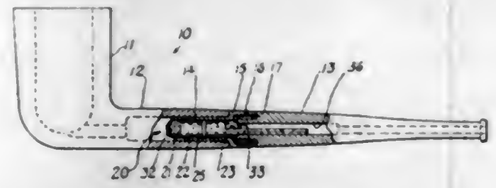
1. An airplane comprising a generally triangular pressed metal bulkhead element with edge reinforcing portions and intermediate triangulated reinforcing hollow rib portions, the edge reinforcing portion being omitted at certain places, and wing and girder elements connected in shear to said bulkhead element, said wing and girder elements being overlapped with the sides of said bulkhead element where the edge reinforcing portions are omitted and some of the overlapped elements constituting part of the triangulated reinforcing portions of said bulkhead.

2,407,481
PROCESS OF PREPARING SULPHAMIDE
Edward F. Degering, West Lafayette, Ind., and George C. Gross, Richmond, Va., assignors to Purdue Research Foundation, West Lafayette, Ind., a corporation of Indiana
No Drawing. Application December 3, 1941, Serial No. 421,488
11 Claims. (Cl. 23—190)

9. The process of making sulphamide, which consists in injecting sulphuryl chloride into a stream of ammonia, with the ammonia in sufficient amount so that throughout the reaction it

is always in excess of 4 mols per mol of injected sulphuryl chloride, maintaining the temperature within the stream of ammonia between −78° C. and +90° C., and after reaction has occurred recovering sulphamide from the reaction mixture.

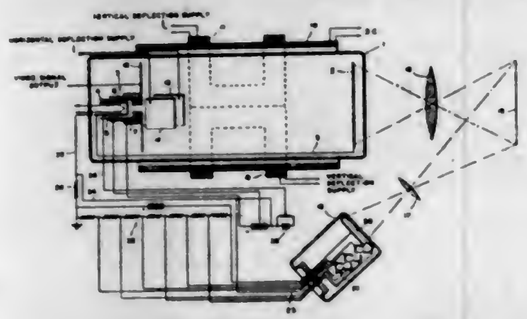
2,407,482
APPARATUS FOR FREEZING
Frank B. Doyle, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, New York, N. Y., a corporation of New Jersey
Application October 28, 1943, Serial No. 507,993
5 Claims. (Cl. 99—240)



1. Apparatus for processing vegetable material and the like, comprising a casing having a plurality of chambers to receive the material successively for different steps of treatment, means operable manually from the exterior of the casing for effecting the discharge of material from one chamber into another, and means for evacuating the chambers and maintain a vacuum in the said chambers during the transference of material from one chamber to another.

2,407,483
TREATING FIBROUS GLASS
Paul Ebaugh, Granville, Ohio, assignor, by mesne assignments, to Owens-Corning Fiberglas Corporation, a corporation of Delaware
No Drawing. Original application April 10, 1937, Serial No. 136,234. Divided and this application November 27, 1940, Serial No. 367,439
7 Claims. (Cl. 117—124)

1. The method of treating fabricated textile material composed of interwoven yarns of a multiplicity of fine glass fibers in substantial parallelism and closely held together in said textile material, which comprises reducing the diameter of the individual fibers throughout the textile material by subjecting the fibers throughout said yarns to a solution of an inorganic alkali selected from the group consisting of potassium hydroxide and sodium hydroxide, for a sufficient length of time to reduce the diameter of the fibers, and then neutralizing the alkali and removing it from the surfaces of said glass fibers by means of an acid wash.

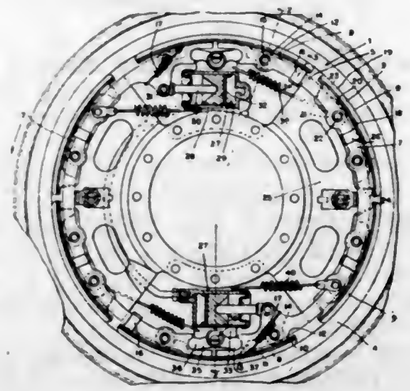


2,407,484
TOBACCO PIPE JUICE ABSORBER
William Ehrhardt, Bronx, N. Y.
Application June 27, 1944, Serial No. 542,362
2 Claims. (Cl. 131—202)

1. A device having a body adapted to fit in a tobacco pipe stem, including an elongated member of moisture absorbent material having portions of different widths folded lengthwise to provide two portions of which one constitutes a split tube and the other a channel, a central clip around the split tube maintaining the member folded, and a core of fibrous, moisture absorbent

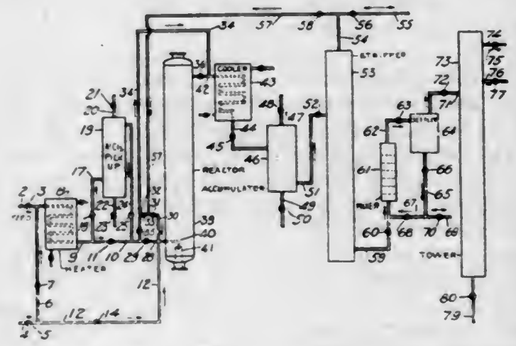
material in the split tube, said core having end portions projecting from the ends of the split tube and adapted to form filter heads, one of the latter heads lying partially in the channel portion with the latter channel portion projecting beyond the head that partially lies therein.

2,407,485
TELEVISION CONTROL SYSTEM
Sanford F. Essig, Fort Wayne, Ind., assignor to Farnsworth Television and Radio Corporation, a corporation of Delaware
Application June 1, 1944, Serial No. 538,211
7 Claims. (Cl. 178—7.2)



1. A television transmitter comprising a photosensitive electrode, an electron gun for directing a low velocity beam of electrons towards said electrode, means for projecting an optical image of a scene to be transmitted on said electrode to establish discrete positive charges thereon corresponding to said optical image, means for focusing said electron beam and for directing it over predetermined paths between said electron gun and said electrode, means for utilizing the effect of said electron beam on said electrode to develop picture signals, and automatic means for varying the intensity of said electron beam in direct relation to the average amount of light projected on said electrode.

2,407,486
VETERINARY COMPOSITIONS
Albert L. Flenner and Clarence A. Littler, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application November 21, 1941, Serial No. 419,994
1 Claim. (Cl. 167—53)

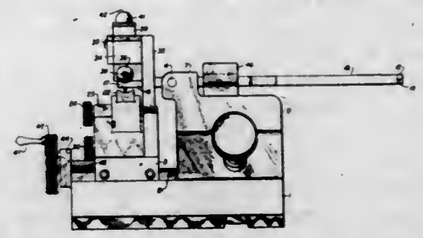


A composition of matter consisting in a dry free-flowing dispersible powder comprising 0.05–5% sodium alginate, 0.05–2% gum karaya, and the balance substantially all phenothiazine, being characterized in a 40% aqueous suspension as a stable fluid paste.

2,407,487
BRAKE
Joseph A. Forbes, Detroit, Mich., assignor to Kelsey-Hayes Wheel Company, Detroit, Mich., a corporation of Delaware
Application May 29, 1944, Serial No. 537,850
6 Claims. (Cl. 188—78)

1. A brake comprising a brake drum, an expansible device having diametrically opposite separable ends, diametrically opposite anchor means between and engageable with said separable ends, diametrically opposite actuators for relatively moving said separable ends away from each other to expand said device and internal brake members movable by said device against said drum and comprising diametrically opposite brake members bridging said separable ends and operatively connected to said device to transmit their torque when against said drum to said device to increase the expanding force on said device in either direction of rotation of said drum.

2,407,488
ISOMERIZATION PROCESS
William B. Franklin, Baytown, Tex., assignor to Standard Oil Development Company, a corporation of Delaware
Application January 22, 1944, Serial No. 519,306
4 Claims. (Cl. 260—683.5)

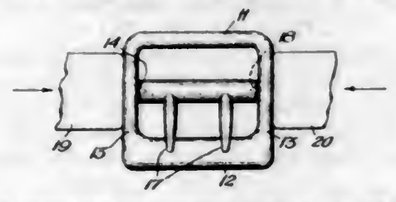


3. In a continuous isomerization process in which a normal paraffin of at least four carbon atoms per molecule in admixture with promotional amounts of hydrogen halide are contacted under isomerization reaction conditions with a catalyst comprising a porous support carrying aluminum halide, the step of replacing, at intervals indicated by decrease in activity of the catalyst, the hydrogen halide in the feed mixture with anhydrous aluminum halide without substantially altering the conditions of operation, the replacement in each instance being of sufficient duration to effect a substantial restoration of the activity of the catalyst.

2,407,489
ELECTRODEPOSITION OF ZINC
Allen G. Gray, Rocky River, Ohio, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application September 22, 1942, Serial No. 459,283
14 Claims. (Cl. 204—55)

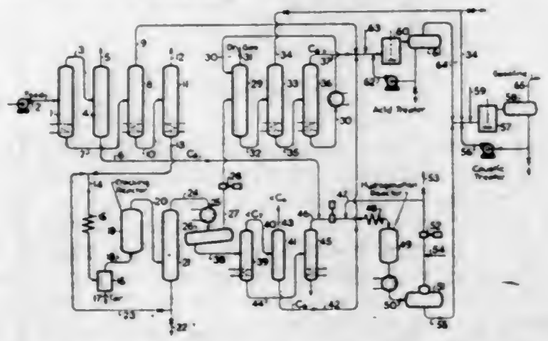
1. In a process for the electrodeposition of zinc, the step comprising effecting electrodeposition of zinc from an aqueous acid-zinc electrodepositing solution in the presence of about from .05 to 5.0 grams per liter of 1-anthraquinone sodium sulfonate.

2,407,490
SURFACE CHECKING AND COMPARING DEVICE
Jonas Floyd Gregg, Cleveland, Ohio, assignor, by mesne assignments, to Jack & Heintz Precision Industries, Inc., Cleveland, Ohio, a corporation of Delaware
Application May 11, 1945, Serial No. 593,167
10 Claims. (Cl. 33—174)



5. A device for comparing and visually indicating the relative conformance between the radius surface contours of a master and a specimen anti-friction bearing race, said device comprising a base a head and mounting means including a pair of sliding blocks with spring means therebetween and carrying balls with flattened surfaces to engage the inner surface of said specimen race to releasably and resiliently center and support the same, a separate head and mounting means thereon for supporting said master race in adjacent spaced relation to said specimen race and manual means for adjusting said master race in two planes relatively to said specimen race, a stylus for each of said races each comprising an arm pivotally connected to said base and carrying a stylus point at its one end resiliently urged to engage the surface contour of its corresponding race, one of said stylus arms carrying at its other end a pointer and the other a reference scale and manual means for moving said heads and said races jointly therewith and equally with their surface contours each in engagement with its stylus point whereby said pointer by reason of its juxtaposition with said scale visually indicates the relative conformity between said surface contours.

2,407,491
BUCKLE AND THE METHOD OF PRODUCING THE SAME
Otto Gries, New Rochelle, N. Y., assignor to Gries Reproducer Corporation, a corporation of New York
Application September 3, 1943, Serial No. 501,197
2 Claims. (Cl. 29—3)



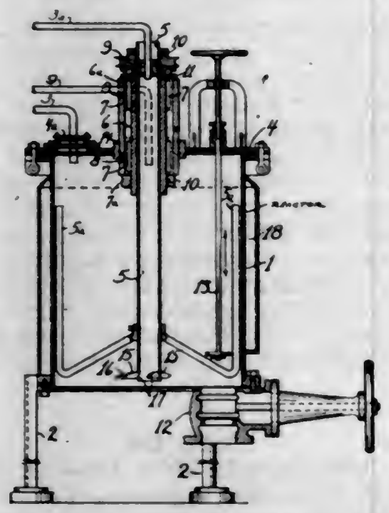
1. The method of producing buckles of the class described, comprising forming independent die castings, one in the form of a four-sided ring-like body having opposed outwardly bowed sides with inwardly projecting and alined conical pivot parts

on said bowed sides, the other casting comprising a pronged rod having a conical socket in the ends thereof, forming said rod of a length less than the spacing between the pivot parts of said bowed sides, arranging said rod between and with the socket ends of the rod in alinement with and ad-

jacent the projecting pivot parts of said bowed sides, and then moving the bowed sides toward each other into parallel relationship to arrange the projecting pivot parts snugly but freely within the sockets of said rod in pivotally coupling and permanently retaining the rod in said body.

2,407,492
PRODUCTION OF GASOLINE
Larry G. Hall, St. Louis, Mo., and Herman G. Boucher, Wood River, Ill., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
Application June 11, 1945, Serial No. 598,708
7 Claims. (Cl. 196—50)

1. In the production from petroleum of gasoline comprising straight run gasoline and cracked gasoline, the improvement which comprises separating from a cracked gasoline an olefinic fraction consisting largely of C_8 hydrocarbons, replacing said separated olefinic fraction with a saturated straight run gasoline fraction consisting largely of C_8 and C_7 hydrocarbons, subjecting the thus produced blend of said dehexanized cracked gasoline and straight run gasoline fraction to a hydrofining treatment under hydrogen pressure in the presence of a hydrogenation catalyst, subjecting said separated olefinic fraction to an acid refining treatment, and recombining the acid refined material with the hydrofined blend.

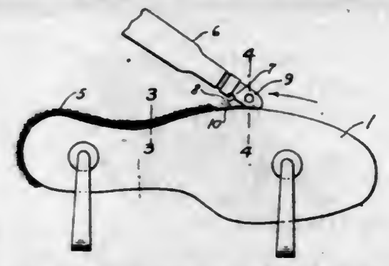


2,407,493
ELECTRIC APPARATUS
Lucas P. Hart, Jr., Pittsfield, Mass., assignor to General Electric Company, a corporation of New York
Application May 16, 1942, Serial No. 443,217
10 Claims. (Cl. 174—17)

1. Electrical apparatus comprising in combination a tank having therein an electrical conductor and an insulating fluid comprising a halogenated aromatic hydrocarbon, and a gasket material between adjoining portions of said tank, said gasket material being exposed to the action of said fluid and comprising a plasticized copolymer of butadiene and acrylonitrile, the plasticizer for said copolymer being dissolvable in said fluid at operating temperatures of said apparatus, said fluid having the characteristic of replacing the dissolved plasticizer so as to main-

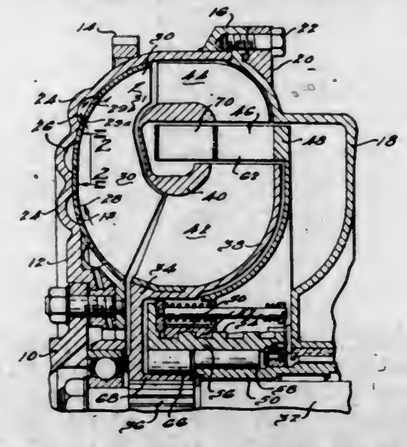
tain substantially the plasticity of said gasket material, whereby a fluid-tight seal is maintained between said adjoining portions of said tank.

2,407,494
LOW-TEMPERATURE PROCESS OF POLYMERIZING ISOOLEFINIC MATERIAL
Harman Hartvigsen, Scotch Plains, N. J., assignor, by mesne assignments, to Jasco, Incorporated, a corporation of Louisiana
Application January 2, 1941, Serial No. 372,947
7 Claims. (Cl. 260—94)



1. In the low temperature polymerization of iso-olefins to high molecular weight polymerization products which are formed as solids under the reaction conditions by addition of a suitable polymerization catalyst to a cold liquid medium containing said iso-olefin at temperatures between 0° C. and −100° C., an improved method of operation comprising turbulently agitating the liquid medium by a rotating member therein having a trailing edge, delivering a fluid Friedel-Crafts polymerization catalyst through the trailing edge of the said rotating member, and introducing said fluid polymerization catalyst through said trailing edge into the cold reaction medium to cause rapid dispersion of the catalyst therein with immediate formation of solid polymerization products which are projected away from the zone of catalyst introduction by the driving action of the said rotating member.

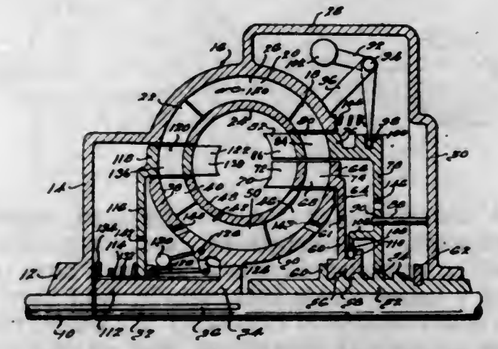
2,407,495
METHOD AND APPARATUS FOR FORMING THERMOPLASTIC INNER SOLES
Le Roy B. High, and Gunnar C. T. Lindh, Detroit, Mich., assignors to The Udylite Corporation, Detroit, Mich., a corporation of Delaware
Application November 24, 1943, Serial No. 511,560
11 Claims. (Cl. 154—42)



1. The method of welding a plurality of sheets of thermoplastic material along their edges comprising the following steps: placing the sheets with their larger faces in contact, applying a hot

gaseous blast to the edges of said sheets to melt the same at a temperature below the thermal decomposition point of the thermoplastic mate-

rial, and then smoothing off the melted edge portions to form a homogeneous joint along the edges of said sheets.

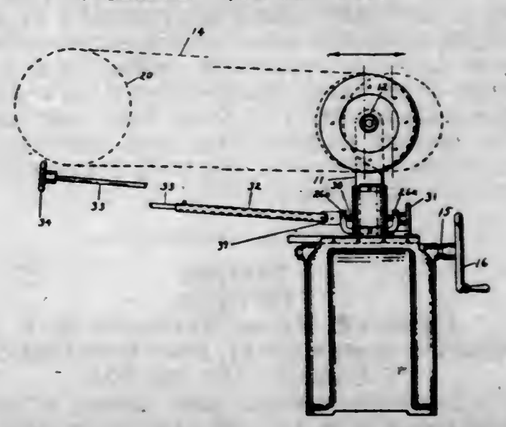


2,407,496
FLUID TRANSMISSION
Joseph Jandasek, Highland Park, Mich., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application June 28, 1943, Serial No. 492,537
7 Claims. (Cl. 60—54)

2. A fluid transmission comprising a corrugated housing, fluid deflecting blades carried thereby and defining therebetween cooling chambers.

5. In a fluid power transmitting device, a housing having a generally radially extending outer wall, spaced vanes positioned in the housing, and liquid cooling chambers interposed between the outer wall and the spaced vanes.

2,407,497
FLUID TRANSMISSION
Joseph Jandasek, Highland Park, Mich., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application October 13, 1943, Serial No. 506,024
13 Claims. (Cl. 60—54)



1. A fluid transmission comprising an impeller, a turbine cooperating with the impeller to form a fluid circuit, an auxiliary impeller and a guide wheel interconnected therewith each including a plurality of spaced channels having rectifying vanes adapted to be alternately introduced in the fluid circuit, and speed responsive means controlling the auxiliary impeller to position one of said spaced channels in the fluid circuit.

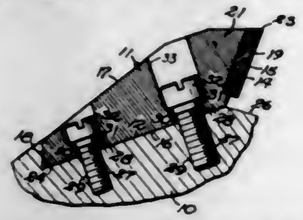
2,407,498
SHOE
Harry H. Johnson, Brookline, Mass.
Application November 8, 1944, Serial No. 562,439
6 Claims. (Cl. 36—2.5)

1. In an article of footwear, a sole structure which has ball, shank and heel portions and has a spring means incorporated within the ball and shank portions thereof and of such a strength and configuration as to resiliently maintain said shank and heel portions of the sole at a materially steeper angle of inclination with respect to said ball portion than the corresponding angle in an ordinary shoe of the same size and style when off the foot, said spring means having a forward portion in the ball of the sole, a flexibly resilient intermediate portion and a rear portion extending rearwardly well into the shank portion of the sole, whereby when said footwear is worn said spring means inherently presses the shank portion of the sole resiliently against the foot and tends to elevate the shank and heel portions of the sole at all times during walking.

2,407,499
MEASURED TENSION CONTROL FOR ABRASIVE BELT SYSTEMS
Stanley H. Klossner, Utica, N. Y., assignor to Divine Brothers Company, Incorporated, Utica, N. Y., a corporation of New York
Application August 27, 1945, Serial No. 612,736
5 Claims. (Cl. 51—148)

1. In a measured tension control for an abrasive belt system, a pedestal, a slide adapted to move in said pedestal, an arm carrying a pulley mounted on said slide, bosses depending from said slide, a screw mounted in said pedestal and piercing said bosses, means for turning said screw, a nut mounted on said screw between said

bosses, a compression spring interposed between said nut and one of said bosses, whereby rotation of the screw will increase tension on said spring and move said slide, to increase tension on said belt, and means on said slide for rocking said pulley, whereby to track said belt.

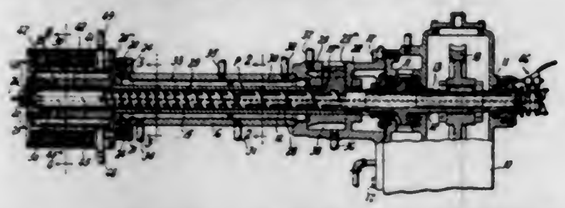


2,407,500
CONTAINER FOR EXPLOSIVE SHELLS
Harold E. Krasner and Bertha Klausner, New York, N. Y.
Application February 3, 1945, Serial No. 576,094
3 Claims. (Cl. 206—3)

2. In a container for explosive shells having a cylindrical case closed at one end, a fibrous laminated disk at said end, a shell on said disk and closely fitting the walls of said case, a second laminated disk on the top of said shell and fitted into said case, the improvement which consists in that each of said disks consists of four transverse plies of felted fibers, the major portion being cellulose fibers and the minor portion being animal fibers in the ratio of about 75% rag fibers and 25% wool fibers, the length of said fibers being from .25'' to .50'', each of said plies being treated with from .5 to 2% by weight of ammonium salts of inorganic acids to render the plies fire-resistant and oil-repellant, a relatively thin cementing film of melted asphalt mixed with finely divided inorganic filler in the ratio of about 50% of asphalt and 50% diatomaceous earth sprayed on the meeting faces of said plies, said plies having been subjected to pressure while the asphalt is hot to consolidate said disk, whereby the resiliency of said plies is retained, the outer faces of said disk being impregnated to a small depth by a solution in a volatile solvent of a mixture of a major portion of asphalt and a minor portion of an inert, finely-divided, mineral filler in the ratio of about 80 to 20, said disk being resilient, strong, and having a high dielectric value, said cellulose fibers having been treated with sodium hydroxide and washed.

2,407,501
CUTTER
Charles E. Kraus, Rochester, N. Y.
Application September 11, 1944, Serial No. 553,484
5 Claims. (Cl. 29—105)

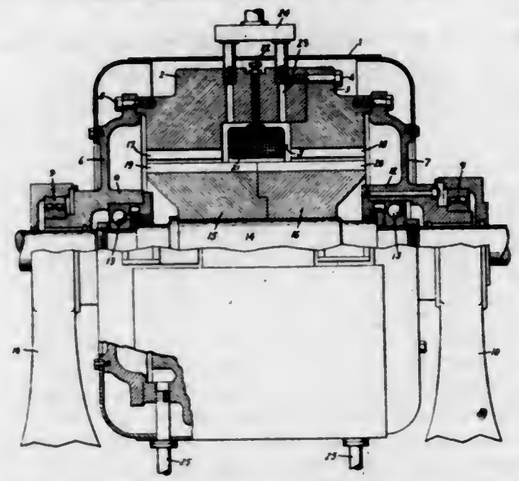
1. A tool comprising a body having a flat blade seat thereon and a rigid abutment upstanding from said seat at one end thereof and disposed at an acute included angle with respect to the seat, a blade having a flat bottom resting on said seat and a tail end contacting said abutment, the top of said blade converging toward said bottom surface in the direction of said abutment, said body extending from said seat beyond the other end of said blade and shaped to fully expose the latter end, a cutting face formed on said other blade end and terminating in a cutting edge projecting laterally from said body, headed screws



spaced longitudinally of said blade and projecting through the blade and into said body to clamp the blade against said seat, the heads of said screws having conical bottoms, and conical seats for said heads formed in said blade.

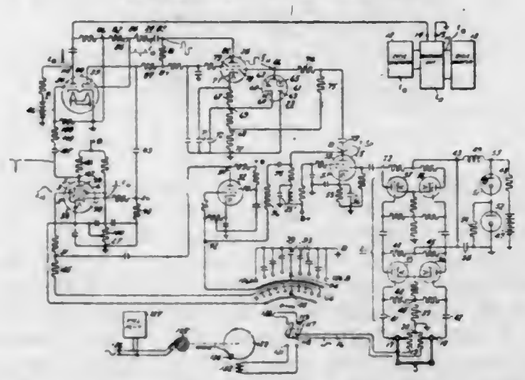
2,407,502
MILLING CUTTER
Charles E. Kraus, Rochester, N. Y.
Application September 11, 1944, Serial No. 553,576
4 Claims. (Cl. 29—103)

1. A rotary cutter comprising a rigid body for rotation about an axis and having an annular face disposed about said axis and an adjoining surface tapered with respect to the axis, a ring adapted to fit against said annular face and having an internal surface mating with said tapered surface, and means for anchoring said ring to said body to clamp the same against said annular end face and tapered surface, said ring having cutting teeth at the periphery thereof.



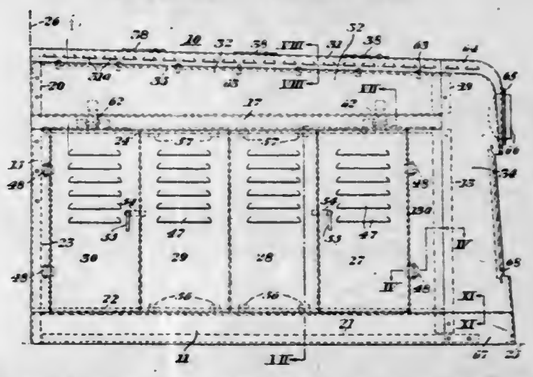
2,407,503
APPARATUS FOR EXTRUDING THERMOPLASTIC MATERIALS
Wilhelm A. Magerkurth and Hans E. Buecken, Akron, Ohio, assignors to National Rubber Machinery Company, Akron, Ohio, a corporation of Ohio
Application January 21, 1941, Serial No. 375,124
5 Claims. (Cl. 18—12)

1. A machine for plasticizing and extruding thermoplastic materials of the character described, comprising a casing having a bore therein, and a screw shaft rotatable in said bore, said screw shaft having a hub with a feeding rib extending outwardly therefrom, said casing having a cavity communicating with said bore at the extrusion end of the machine, said shaft having a



substantially cylindrical extension projecting into said cavity said extension being rotatable with said shaft, the diameter of the extension being greater than that of said hub, the surface of said extension being in closely and uniformly spaced relation to the surface of said cavity, said extension having a helical rib thereon projecting outwardly therefrom and engaging the surface of said cavity.

2,407,504
DYNAMOELECTRIC MACHINE
Harold M. Martin, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application November 20, 1944, Serial No. 564,220
3 Claims. (Cl. 188—104)

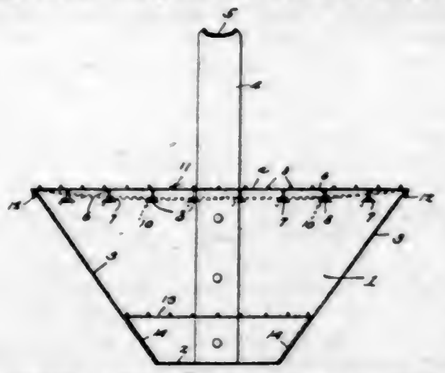


1. An electrical machine having a pair of relatively rotatable members of magnetic material with an air gap therebetween, a plurality of slots in the magnetic material of both of said members adjacent said air gap, means including a field exciting winding for providing magnetic excitation to said magnetic material members and through said air gap, means substantially filling said slots with non-magnetic material for providing a substantially smooth surface to said relatively rotatable members adjacent said air gap, and means for supplying liquid to said air gap intermediate the ends thereof for cooling the air gap surfaces of said members.

2,407,505
ELECTRIC DISCHARGE DEVICE CIRCUIT
Philip C. Michel, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application April 4, 1942, Serial No. 437,627
9 Claims. (Cl. 250—27)

1. Apparatus for producing a sharp signal impulse in response to a cycle of voltage fluctuation comprising a pair of input terminals adapted to have voltage fluctuations applied thereto, a device connected to said terminals for amplifying the voltage to steepen the portion of the voltage cycle at the zero cross-over point, said device having two output connections, a pair of diode rectifiers connected in parallel with unlike electrodes together between the output connections of the amplifying device, and a pair of output terminals for the apparatus, one of the diodes being biased positively with respect to a datum potential, the other being biased negatively with respect to a datum potential whereby the voltage wave applied thereto is clipped at the positive and negative values corresponding to said biases, said diode rectifiers being coupled to said output terminals by a resistance capacity circuit having a relatively small product of resistance and capacity, said coupling circuit including a resistance connected between the output terminals and a condenser connected between one of the output terminals and one of the output connections of the amplifying device, the second output terminal of the apparatus being connected to the second output connection of the amplifying device.

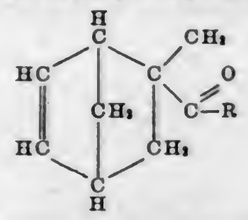
2,407,506
ENGINE HOUSING FOR LOCOMOTIVES OR THE LIKE
Joseph M. Milheizler, Pittsburgh, Pa., assignor to H. K. Porter Company, Inc., Pittsburgh, Pa., a corporation of Pennsylvania
Application March 15, 1944, Serial No. 526,633
2 Claims. (Cl. 105—62)



1. An engine housing for locomotives or the like comprising spaced bottom rails, front and rear posts extending upwardly from said rails, upper rails supported on said posts, a roof carried on said upper rails, front and rear arch members extending between said upper rails, said roof being supported on said arch members and including a pair of downwardly curving side panels each hinged at its lower edge to one of said top rails and a front end closure secured to the front arch member and the front posts, said closure forming a continuation of said panels.

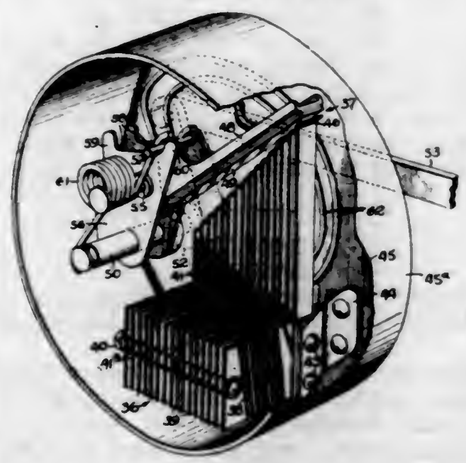
2,407,507
BASKET
Luther L. Mitchell, Anniston, Ala.
Application May 2, 1944, Serial No. 533,717
1 Claim. (Cl. 47—41)

A basket for holding picked flowers including a container portion and a handle portion joined thereto, said container portion having downwardly converging end walls and parallel side walls, a flexible grid removably mounted on the end walls and spaced from the side walls, downwardly converging fingers at the ends of the grid extending under portions of and normally engaging said end walls and underlying the upper



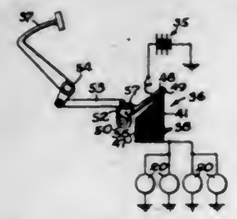
edges of said end walls, and supporting rods detachably connecting the parallel walls, said rods

being located beneath the grid to support the same between its ends and prevent excessive sagging of the grid between the side walls.



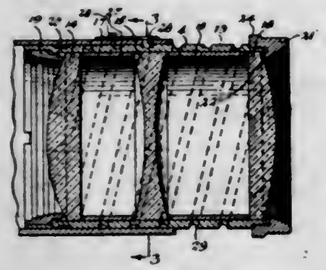
2,407,508
UNSATURATED BICYCLIC CARBONYLIC COMPOUNDS AND THEIR PREPARATION
Rupert C. Morris, Berkeley, and Edward C. Shokal, Oakland, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application April 26, 1944, Serial No. 532,902
6 Claims. (Cl. 260—586)

1. A compound having the general formula



wherein R is a member of the group consisting of the hydrogen atom and the methyl radical.

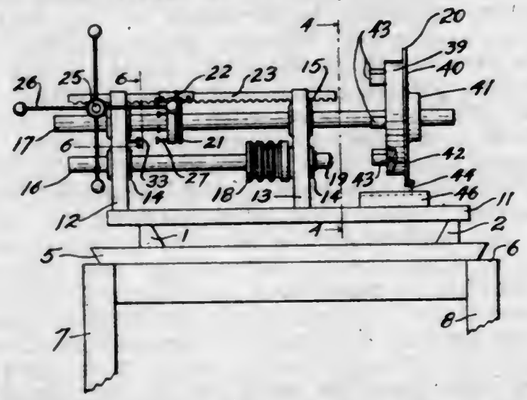
2,407,509
CIRCUIT CONTROLLER
John George Oetzel, Beloit, Wis., assignor to Warner Electric Brake Manufacturing Company, South Beloit, Ill., a corporation of Illinois
Application October 25, 1943, Serial No. 507,548
13 Claims. (Cl. 200—1)



3. In a circuit controller, a contact mechanism combining a plurality of elongated flexible contact strips disposed side by side, means providing a cantilever mounting for one end of said strips, said strips projecting progressively increasing distances from said mounting with their free ends substantially alined, a member mounted for movement toward and away from said free ends, an arm pivotally mounted on said member and having a lost motion connection therewith, resilient means urging said arm toward said ends, and a contact surface carried by said arm and first engaging the longest of said strips and then engaging the free ends of the other strips successively in the advance of said member.

2,407,510
BRAKE CONTROL
John George Oetzel, Beloit, Wis., assignor to Warner Electric Brake Manufacturing Company, South Beloit, Ill., a corporation of Illinois
Application October 11, 1943, Serial No. 505,811
4 Claims. (Cl. 188—161)

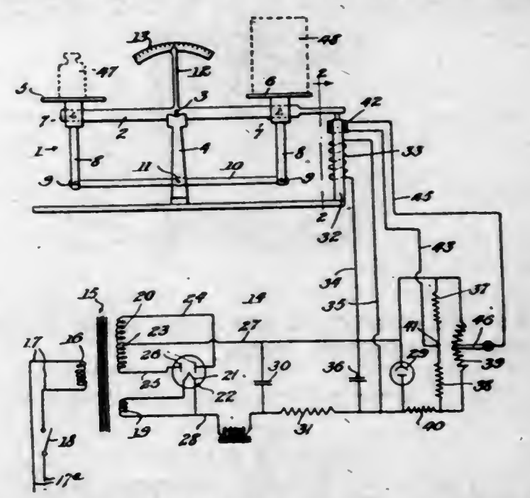
1. A system for controlling the energization of electromagnetically controlled brakes on a vehicle comprising means providing an energizing circuit for said brakes including a source of electric current and a voltage changer having a member movable away from and back toward a brake-released position to respectively increase and decrease the energization of said brakes progressively, a manually operable actuating element, and mechanism actuated by said element and actuating said member differentially to produce greater energization of said brakes at a given position of said element in moving away from said released position than during the return movement of the element.



2,407,511
PROJECTION APPARATUS
William F. Peck, Buffalo, N. Y., assignor, by mesne assignments, to American Optical Company, Southbridge, Mass., a voluntary association
Application December 9, 1942, Serial No. 468,368
3 Claims. (Cl. 88—57)

1. In a device of the character described, for supporting a lens unit in optical alignment with a projection apparatus, a support, a first tubular member mounted on said support, a second tubular member having a portion thereof longitudinally adjustably mounted in said first tubular member, said second tubular member having groove means on the wall thereof adjacent said first tubular member for adjusting said second tubular member relative to said first tubular member, three or more circumferentially spaced

detent members carried by said first tubular member and engaging said grooves in said second tubular means, means for resiliently urging at least one of said detent members toward said second tubular member, said detent members having portions engaging said groove means at spaced intervals to support said second tubular member within said first tubular member and prevent sagging or tilting of said second tubular member within said first tubular member while allowing adjustment thereof for focusing the lens system carried thereby and a circumferential light trap adjacent the inner end of said first tubular member and extending over the space between said tubular members and adapted to prevent the leakage of light between said tubular members.



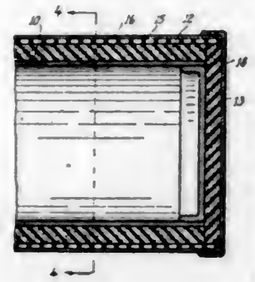
2,407,512
MACHINE
Earl E. Petzold, Burbank, Calif.
Application April 13, 1944, Serial No. 530,842
2 Claims. (Cl. 29—46)

1. In a lathe device and the like, a base plate having means extending therefrom for supporting and providing bearings for a pair of shafts and a toothed rack, a power shaft having at an end thereof means for holding a work piece, another shaft parallel with the power shaft and having a tool head fixed thereto near an end thereof, a toothed rack having means for reciprocating it, a flange-like sleeve fixed to the said another shaft and also to the rack, a stop element supported by the base facing said sleeve, a plurality of adjustable stop pins about the periphery of the sleeve positioned so that any one of the stop pins can make contact with the stop element, a grooved block fixed to the base beneath the tool head, a plurality of fingers around the periphery of the tool head adapted to enter the grooved block and guide the tool head in a predetermined path.

2,407,513
TARE WEIGHT COMPENSATING APPARATUS FOR WEIGHING SCALES
Richard T. Pounds, Columbus, Ohio, assignor to The Exact Weight Scale Company, Columbus, Ohio, a corporation of Ohio
Application October 15, 1943, Serial No. 506,347
6 Claims. (Cl. 265—54)

1. The combination with a weighing scale of the type having a lever pivotally mounted at its center and carrying weight receivers adjacent to its ends, of magnetic means for establishing a localized magnetic field adjacent to said lever in spaced relation from its central pivotal mounting, a coil carried by said lever and arranged in said field to receive the lines of force thereof, and manually regulable means for effecting the passing of direct current in varying magnitude and in either direction through said coil to produce controlled magnetic forces attracting or repelling

said lever, whereby to cause the lever to assume under such magnetic action a desired weighing position.



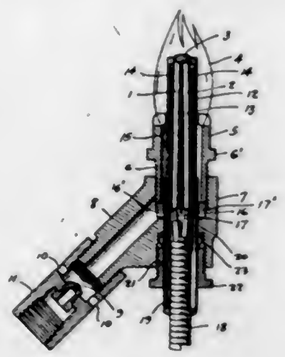
2,407,514
MANUFACTURE OF FIBROCEMENTITIOUS SHEETS
Ernest Wayne Rembert, Hinsdale, Ill., assignor to Johns-Manville Corporation, New York, N. Y., a corporation of New York
Application September 11, 1943, Serial No. 502,047
14 Claims. (Cl. 25—42)

7. In apparatus for molding dense and hard fiber-cement sheets, telescopically fitting relatively movable mold cavity and mold plunger elements, a resilient rubber texture plate reciprocably mounted within the mold cavity and forming the base of the mold cavity, means for restraining said plate against movement within the mold cavity while the mold elements are advancing into telescopic relation in molding a charge, a press having relatively movable platens operatively connected respectively with said mold cavity and plunger elements, said plate being movable independently of movement of the platens, and means for depositing and leveling a non-free-flowing charge of fiber-cement mixture in a layer of predetermined area and thickness over a face of one of said mold elements.

2,407,515
SELF-SEALING TANK
Dudley Roberts, deceased, late of New York, N. Y., by Dudley Roberts, Jr., executor, New York, N. Y., assignor to Rubatex Products, Inc., New York, N. Y., a corporation of Delaware
Application October 9, 1940, Serial No. 360,396
4 Claims. (Cl. 154—43.5)

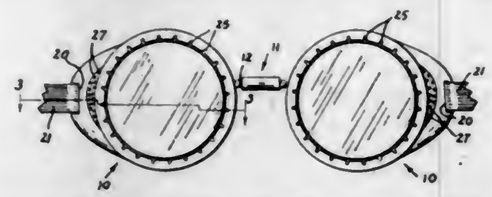
1. A tank and a layer of closed cell gas expanded rubber positioned over said tank, means

for inwardly compressing said closed cell rubber in the plane of said layer of closed cell rubber,



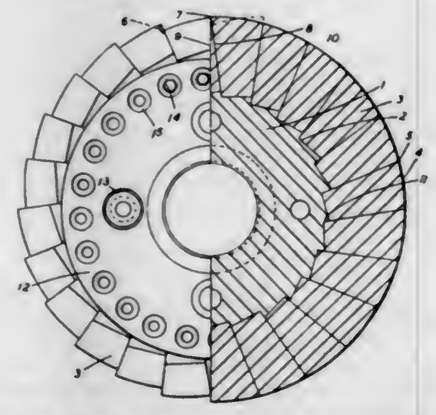
and a shock resistant protective layer positioned over said closed cell rubber.

2,407,516
SAFETY RAZOR
Richard F. Roberts, Freeport, N. Y.
Application August 7, 1944, Serial No. 548,405
9 Claims. (Cl. 30—47)



1. A safety razor having a blade holder with a handle receiving slot therein, and a lengthwise and transversely foldable handle that in folded condition provides an approximate trihedral connection at one end thereof adapted to engage the socket in said holder.

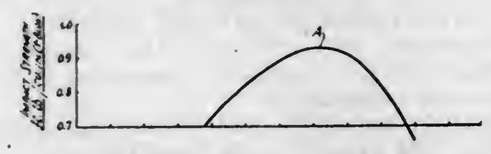
2,407,517
THERMOELECTRIC GENERATOR
William R. Ray, Glendale, Calif., assignor to General Controls Co., a corporation
Application April 9, 1941, Serial No. 387,591
9 Claims. (Cl. 136—4)



1. In combination, a burner tube having open ends, a thermoelectric generator structure having an external sheath and disposed in said tube so that one end of the sheath extends beyond the tube and defines with said end, one or more burner jets arranged around said extending end, an annular clamping ring disposed around the sheath adjacent the other end of said tube, and in contact with the tube, to close the space between the interior of the tube and the exterior of the sheath, and thereby serving to seal and support said sheath within the tube, and means for passing a fuel mixture into the tube.

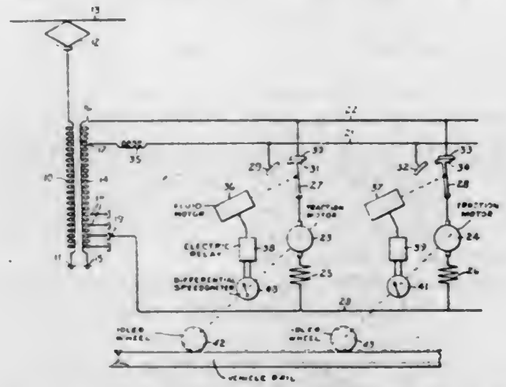
2,407,518
EYE PROTECTION DEVICE
George H. Schauweker, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a voluntary association of Massachusetts
Application December 18, 1943, Serial No. 514,774
3 Claims. (Cl. 2—14)

1. In a device of the character described a pair of eyecups formed of heat expandable plastic material, each of said eyecups having an integral edge portion shaped substantially to fit the face of the wearer and having an opposed integral portion formed with an inner lens receiving groove and a plurality of radially disposed spaced grooves extending transversely of the lens receiving groove with the said spaced grooves being of a greater depth than the depth of the lens receiving groove and a lens located within said lens receiving groove with the contour edge thereof in intimate engagement with said groove between the respective transversely extending grooves, with the base of the respective transversely extending grooves spaced from the edge of the lens and with the forward circumferential edge of the portion having the lens receiving groove therein being of a circumferential dimension less than the greatest circumferential dimension of the lens, the integral side wall on the temporal side of each eyecup being of a thickness much less than the thickness of the remaining side walls of the eyecup and having a plurality of spaced openings extending therethrough.



2,407,519
INSERTED TOOTH TOOL
Wilfred Slater, Quinton, Birmingham, England
Application September 16, 1943, Serial No. 502,685
In Great Britain March 1, 1943
4 Claims. (Cl. 29—105)

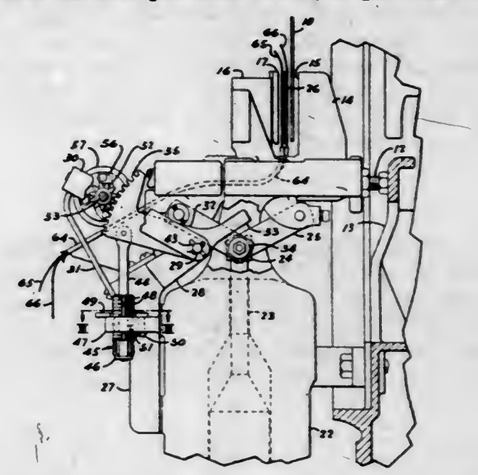
1. Means for supporting independent tooth tools comprising a circular body formed for supporting independent tooth tools for simultaneous shaping into cutting elements and subsequently supporting said cutting elements in cutting position, said body being peripherally formed with immediately successive recesses to present flat seats and tooth tools having flat bases to seat in said recesses and bear throughout on the flat seats, the extended lengths of the tools beyond the recesses being in relatively mutual contact



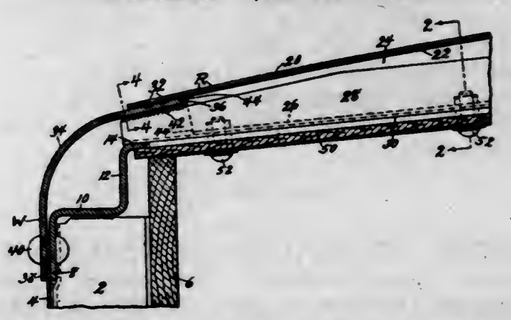
throughout the circumferential length of the body to present the free ends of the tools remote from the body as relatively rigid segments of a common circle to permit desired shaping of the ends of the tools in a single operation under rotation of the body, the formation of the seats, the cooperating ends of the tools and of the tools beyond the seats providing for a movement of the formed tools throughout 180° to arrange the tools in cutting position on the body with the tools having a substantially identical cooperation with the seats and with each other beyond the seats in the cutting position as in the forming position.

2,407,520
MANUFACTURE OF DIELECTRIC SHAPES
George Smolak, Somerville, N. J., assignor to Johns-Manville Corporation, New York, N. Y., a corporation of New York
Application December 16, 1943, Serial No. 514,446
2 Claims. (Cl. 260—38)

1. A hard and tough dielectric panel having an impact strength of not less than 0.9–1.0 ft. lb. per cubic inch, a dielectric strength of at least 55 v. per mil thickness, and a flexural strength exceeding 22,500 lbs. per sq. inch, and comprising 60–70% by weight of long crocidolite asbestos fibers, said fibers being coated and bonded together with 30–40% of heat hardened phenol-aldehyde resin.



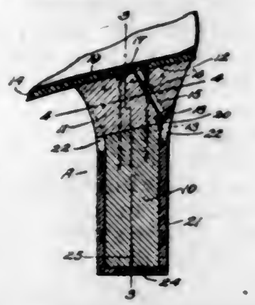
2,407,521
ELECTRIC PROTECTIVE SYSTEM
Zoltan O. St. Palley, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York
Application October 1, 1943, Serial No. 504,575
3 Claims. (Cl. 105—61)



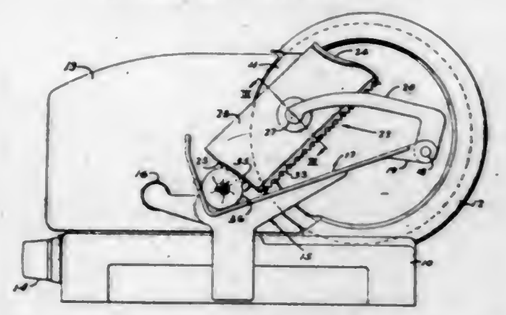
1. A protective system for independently preventing excessive overspeeding of each of a plurality of driving axles of an electrically driven vehicle with respect to an idler wheel of said vehicle comprising a plurality of alternating current traction motors separately connected to said driving axles, a supply transformer having a plurality of voltage taps, separate switching means for connecting one terminal of each of said motors independently to selected taps of said transformer, differential speed responsive means connected between an idler wheel and each of said driving wheels for independently controlling each of said switching means to select said taps, and means connecting the other terminals of said motors together and to selectable taps upon said transformer to accelerate said motors.

2,407,522
TICKET PRINTING MECHANISM
Lawrence S. Williams, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a corporation of New Jersey
Application April 25, 1942, Serial No. 440,479
1 Claim. (Cl. 271—2.4)

In a printer for a weighing scale, paper feeding apparatus comprising, in combination, a fixed stroke reciprocable power source for actuating the printer, a pivoted lever driven in one direction by the power source, a spring urging the pivoted lever in the opposite direction, a segment gear on the end of the pivoted lever, a pinion meshing with the segment gear, a paper engaging roller, an unidirectional clutch operatively connecting the pinion and the roller during the spring urged movement of the lever, and an adjustable stop for limiting the spring urged travel of the lever thereby determining the paper feed per printing cycle.



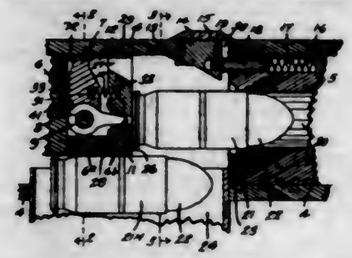
2,407,523
SIDE PLATE CONSTRUCTION FOR FREIGHT CARS
Victor Willoughby, Concord, N. H., assignor to American Car and Foundry Company, New York, N. Y., a corporation of New Jersey
Application June 6, 1945, Serial No. 597,900
8 Claims. (Cl. 105—409)



1. A railway car construction comprising side posts, an inner side plate member secured to the upper ends of the side posts, roof sheets, an outer side plate member having its inner edge secured to the edges of the roof sheets and its outer edge secured to the outer edge of the inner side plate member, and carlines secured to the roof sheets and having their outer ends interposed between and joining the inner edges of said inner and outer side plate members.

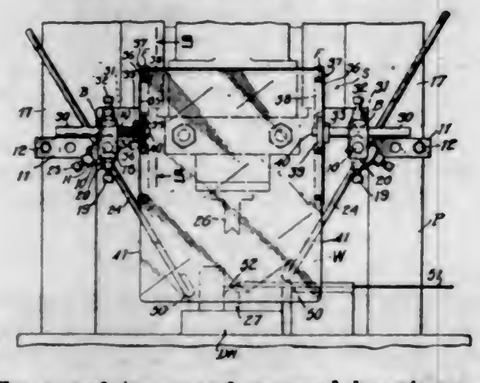
2,407,524
SHOE HEEL CONSTRUCTION
George B. Wisecarver, Pikeville, Ky.
Application May 5, 1945, Serial No. 592,166
3 Claims. (Cl. 36—34)

1. Shoe heel construction, comprising a body composed of cylindrical shank and seat sections suitably united with the major axis of the shank section intersecting that of the seat section, and an outer covering for said sections, said covering being split at its upper end for application to the sides of the seat section.



2,407,525
FOOD HANDLING APPARATUS
George R. Wood, Montreal, Quebec, Canada, assignor to Toledo Scale Company, Toledo, Ohio, a corporation of New Jersey
Application April 12, 1943, Serial No. 482,765
2 Claims. (Cl. 146—102)

2. A commodity clamp for a slicing machine having a V-shaped commodity carrier, comprising a generally rectangular pusher plate fitted with commodity engaging members on its face and some of its edges and mounted for reciprocation along said V-shaped carrier with its face perpendicular to its path of movement, said plate being rotatable to present any of its edges to the surface of said carrier and having one of its edges formed with a smooth warped surface of substantial width adapted to cooperate with the corner of said V-shaped carrier to form a funnel shaped guide through which commodities may be manually fed.



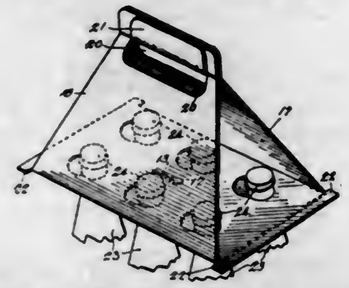
2,407,526
FIRING MECHANISM FOR FIREARMS
George Norman Albree, Winchester, Mass.
Application October 21, 1944, Serial No. 559,757
6 Claims. (Cl. 42—3)

1. A fire arm comprising a barrel having a firing chamber, a breech closure movable from open to closed position and having a rocker-supporting face extending transversely to the direction of movement thereof and facing toward the firing chamber, a rocking member, one face of which has a convexly curved section adjacent one end thereof, a firing pin carried by the other end of the rocking member, said breech closure having provision for supporting the rocking member with its said face loosely resting against and for rolling contact over said rocker-supporting face, and means to engage the first named end of said

rocking member and to rock said member over the rocker-supporting face with a rolling as distinguished from a sliding contact therewith and thus impart to the firing pin an accelerating detonating movement.

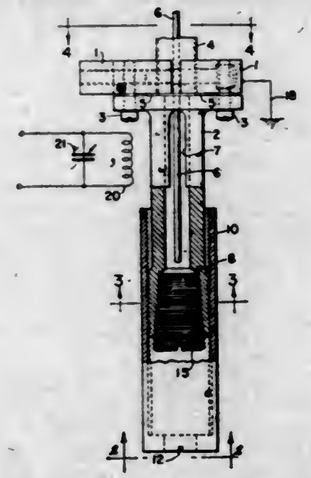
2,407,527
PUNCH PRESS SAFETY GUARD
Paul Anstedt, Des Plaines, Ill., assignor to Northern Metal Products Company, Chicago, Ill., a copartnership
Application August 26, 1944, Serial No. 551,365
24 Claims. (Cl. 74—612)

1. In a safety guard, spaced bearings, a window support having means slidably and rotatably sustained by said bearings, spaced rods slidably carrying said bearings, a plurality of holders slidably and rotatably mounted on said rods, and prong means adjustably carried by said holders.



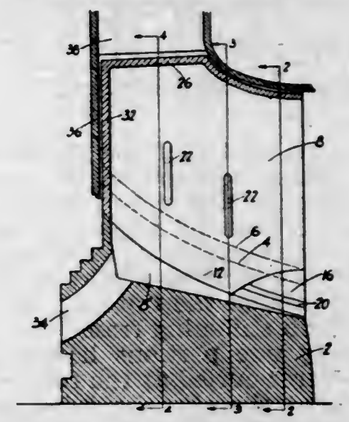
2,407,528
APPARATUS FOR TREATING MATERIAL ON PROPELLER BLADES
John O. Antonson, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application October 17, 1942, Serial No. 462,372
2 Claims. (Cl. 154—41)

1. Apparatus for treating material on the leading edge of a propeller blade, said apparatus comprising an inflatable flexible walled element generally U-shape in cross section for confining said material between said inflatable element and said leading edge, a heating element generally U-shape in cross-section secured to said inflatable element and located at the inner face of the U-shape inflatable element for positioning adjacent said material, cover means secured to said U-shape



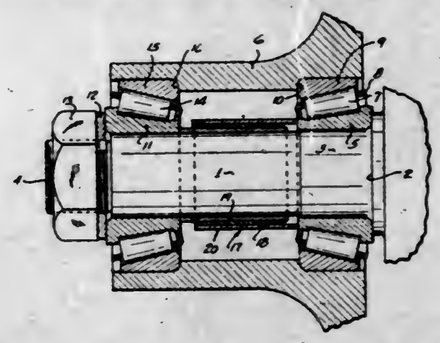
inflatable element and extending from the latter element and providing with said latter element a tubular open-ended body adapted to be mounted over the propeller blade entirely around the same, and means for inflating said U-shape inflatable element to tension said tubular body about said blade while pressing said heating element toward said material.

2,407,529
BOTTLE HOLDER AND CARRIER
William A. Bertram, Chicago, Ill.
Original application March 15, 1944, Serial No. 526,519. Divided and this application March 31, 1945, Serial No. 585,939
5 Claims. (Cl. 224—45)



1. A bottle holder and carrier comprising two juxtaposed face-to-face sheets slightly shiftable on each other, said sheets having overlapping openings forming passages therethrough expansible when the sheets are shifted into one position to enable a bottle head and neck to pass through the passage and contractible when the sheets are shifted into another position to grip the neck and prevent withdrawal of the bottle, the lower of said sheets having its ends extended and bent up and over the other to form, when brought together, a handle for carrying the loaded carrier, and the other sheet having end notches to engage the said raised ends when in carrying position, whereby to put and keep the sheets in carrying position when the device is loaded and being carried.

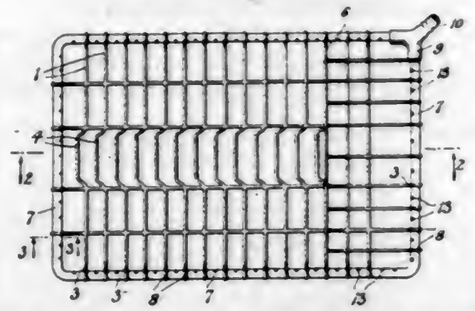
2,407,530
COUPLING DEVICE
Alex J. Bielski and Wayne J. Luckock, Fort Wayne, Ind., assignors to Farnsworth Television and Radio Corporation, a corporation of Delaware
Application September 7, 1942, Serial No. 457,548
3 Claims. (Cl. 178—44)



1. A coupling device for use in connection with an electrical conductor comprising a base, a slotted stud secured at one end to said base for receiving said conductor and exposing it to an electrical field, the other end of said stud being split, a rotatable, nonmagnetic shield surrounding said stud and threaded thereto for variably shielding said conductor from said field, and means for expanding said stud whereby said shield may be locked to said stud.

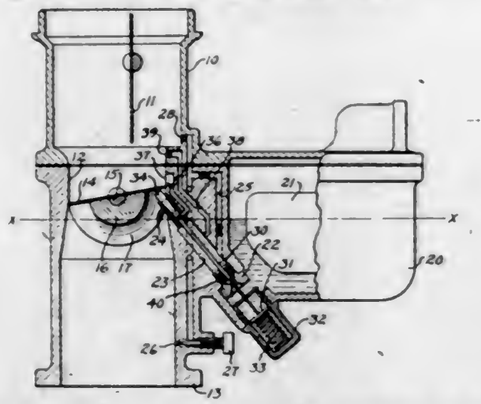
2,407,531
ELASTIC FLUID MECHANISM
Rudolph Birmann, Newtown, Pa., assignor, by mesne assignments, to Federal Reserve Bank of Philadelphia, a corporation of the United States of America
Application May 2, 1942, Serial No. 441,538
9 Claims. (Cl. 60—49)

9. A turbine rotor comprising a hub member and vanes extending radially outwardly therefrom, each of said vanes being hollow to provide a cooling gas space opening rearwardly, and the hub being provided with bores extending in a skew direction with respect to the axis of rotation and providing impeller passages communicating with the spaces in said vanes opening forwardly with respect to the direction of rotation.



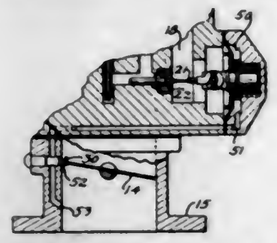
2,407,532
BEARING MOUNTING
Ernest G. Boden, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a corporation of Ohio
Application September 10, 1945, Serial No. 615,396
6 Claims. (Cl. 308—207)

1. A bearing mounting comprising a shaft, a housing surrounding said shaft, spaced bearings interposed between said housing and said shaft, each comprising an inner bearing member, an outer bearing member and rollers therebetween, one bearing member of one bearing being mounted loosely enough to permit adjustment and a resilient spacer between said adjustable bearing member and the corresponding bearing mem-



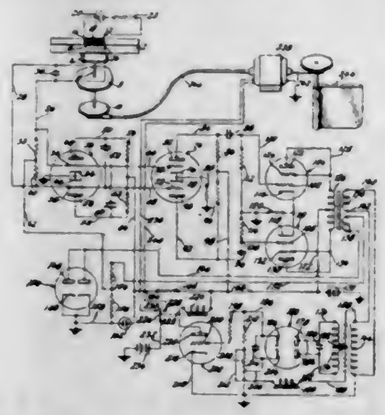
ber of the other bearing, whereby adjustment of said adjustable bearing member is permitted and rotation thereof relative to the corresponding member of the other bearing is prevented.

2,407,533
DISHWASHING DEVICE
Margaret M. Brock, Middle Village, N. Y.
Application January 27, 1944, Serial No. 519,843
1 Claim. (Cl. 134—199)



A dish-washing and draining device comprising, a wire basket adapted to be placed in a conventional kitchen sink and provided with rack elements for receiving and supporting a plurality of dishes, an encircling spray tube consisting of a tubular member forming a part of the basket and extending around the top edge of the same and constituting a stiffening frame therefor, said basket including side portions having substantially vertical wires curled at the top around the tube and secured thereto, the tube being provided with inwardly-directed spray openings located between the curled-over ends of the wires, the tube being formed into a continuous annulus by means of a substantially Y-shaped union located at one corner of the top of the basket, said union having two oppositely disposed leg portions coupling together the ends of the tube, said union having a third leg constituting a nipple for connecting the tube to a source of water.

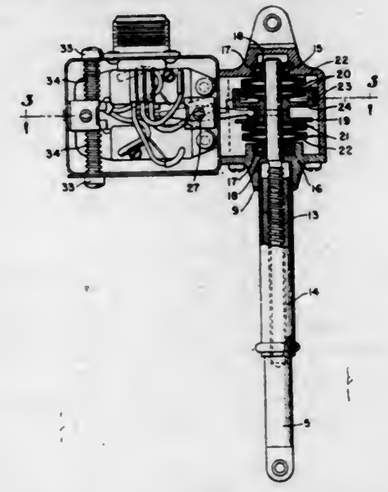
2,407,534
CARBURETOR
Harold A. Carlson, University City, Mo., assignor to Carter Carburetor Corporation, St. Louis, Mo., a corporation of Delaware
Application April 27, 1943, Serial No. 484,787
7 Claims. (Cl. 261—41)



1. In a carburetor, a mixture conduit, a butterfly throttle valve therein having a spheroidal posterior surface with a recess extending normal to the valve axis, a main fuel nozzle with its outlet discharging into said recess, a throttle actuated valve in said nozzle for increasingly restricting the same as the throttle is closed, an air bleed passage opening into said conduit through a port adjacent the edge of said throttle valve when closed, and a second air bleed extending from said nozzle and opening into said conduit beyond said first bleed passage, both said bleed passages being swept by said throttle valve initially during opening thereof for sharply reducing the effectiveness thereof.

2,407,535
CARBURETOR
Harold A. Carlson, University City, and Olin J. Eickmann, Normandy, Mo., assignors to Carter Carburetor Corporation, St. Louis, Mo., a corporation of Delaware
Application June 24, 1943, Serial No. 492,144
2 Claims. (Cl. 261—41)

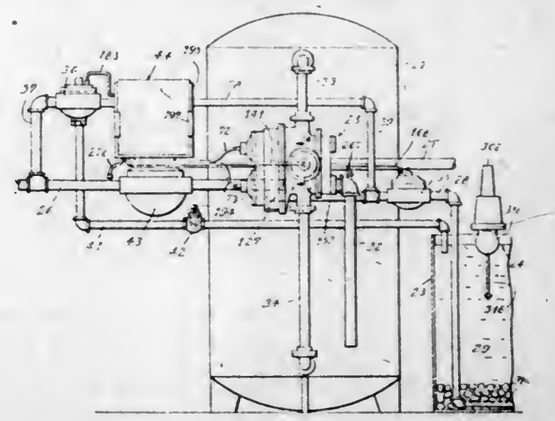
1. In a carburetor, a mixture conduit having a throttle therein, an idling fuel passage and a second fuel passage discharging into said conduit, a valve controlling the flow through said second passage, and a device for operating said valve including a suction chamber having a movable wall, spring means normally urging said wall in the direction to open said valve, and a suction passage connecting said chamber to said mixture conduit, said passage opening into said conduit through port means located partly posterior and partly anterior to said throttle when closed, the posterior part of said port means being at least as large, effectively, as said anterior part, whereby the suction in said chamber decreases with the suction posterior to said throttle as said throttle is opened, said anterior port means being close to the edge of said throttle so as to be increasingly exposed to engine suction as said throttle opens whereby the suction moderating effect thereof is reduced.



2,407,536
COMPASS
Frederick W. Chapman, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application June 23, 1943, Serial No. 491,881
11 Claims. (Cl. 172—239)

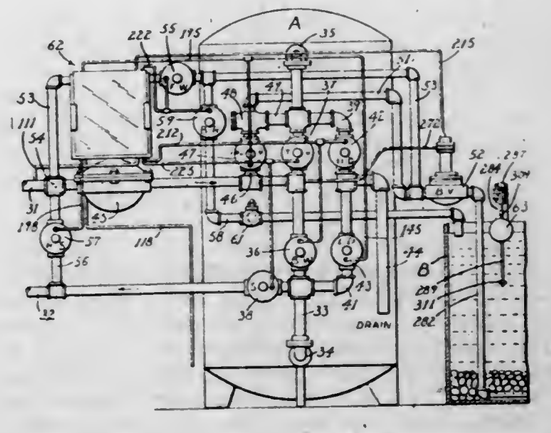
9. In a control system, means whose inductance is altered by a change in its relative axial

position in a magnetic field, capacity means connected thereto to form a resonant circuit, an oscillator controlled by said resonant circuit, frequency sensitive means connected to the output of the oscillator including a transformer having a primary and a center tapped secondary, a connection between one end of the primary and the center of the secondary, a diode connected to each end of the secondary, a pair of resistors connected across the diode output whereby the resultant voltage developed across the resistors will reverse in polarity as the frequency on the primary changes due to phase shift on the primary and half secondary supplying power to the diodes, a vacuum tube relay connected across the resistors, switching means operated by the relay, and control means operated by the switching means.



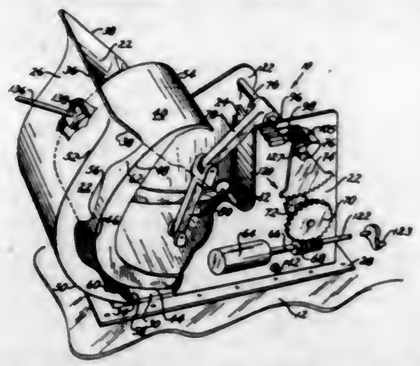
2,407,537
POWER OPERATED ACTUATOR
James E. Chapman, Phoenix, Ariz., assignor to The Garrett Corporation, Los Angeles, Calif., a corporation of California
Application May 13, 1944, Serial No. 535,533
9 Claims. (Cl. 192—142)

1. In an actuator for moving a part into a prescribed position: a first screw member having connection to said part; a second screw member engaging said first screw member so that relative rotation of said screw members will produce operative movement of said first screw member, said second screw member having a rearwardly faced shoulder; bearing means supporting said second screw member so that it may have rotary and axial movement; power means for rotating said second screw member; yieldable thrust means engaging said shoulder and resisting rearward movement of said second screw member under normal load applied thereto, said thrust means permitting rearward axial movement of said second screw member when an overload is applied thereto as the result of said part's reaching its prescribed position; and means actuated by said rearward axial movement of said second screw member to stop the operation of said power means.



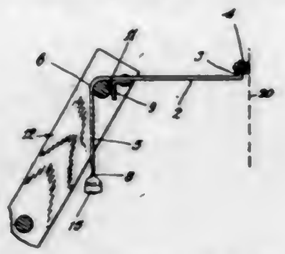
2,407,538
AUTOMATIC WATER TREATING DEVICE
Lee G. Daniels, Rockford, Ill.
Application August 9, 1941, Serial No. 406,188
26 Claims. (Cl. 210—24)

1. The combination in a water treatment apparatus of a treatment tank, a reagent tank, a conduit system connected to said tanks including conduits for raw water, treated water, regeneration reagent, and waste, a first valve means in said conduit system movable for controlling the flow of liquid through said conduits to effect the steps of back-washing, regenerating, rinsing and service, a second valve means in said conduit system connected to the first valve means for supplying to said first valve means an additional flow



of water toward the end of said rinse step, said second valve means also being connected to said reagent tank to simultaneously provide a flow of water thereto, and operating means for moving said first valve means from said rinse step to said service step and for closing said second valve means when said reagent tank is filled to a predetermined level.

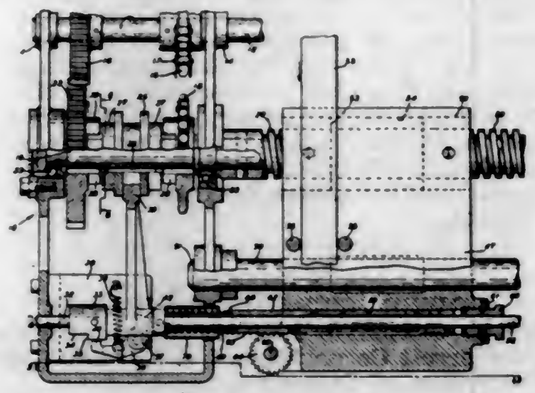
2,407,539
VALVE SYSTEM AND CONTROL THEREFOR
Lee G. Daniels, Rockford, Ill.
Application May 17, 1943, Serial No. 487,239
24 Claims. (Cl. 210—24)



1. The combination in an automatic water treating apparatus having a water treating tank, piping connected to both ends of said treating tank, a water supply pipe, a service pipe, a waste pipe connected to said piping, a plurality of power operated valves located in said pipes and piping, of control means comprising a meter located in said water supply pipe, a disk rotated by said meter as water flows therethrough, a plurality of flat and offset cams on said disk, an electric circuit, a plurality of electrical switches arranged in said circuit and positioned to be actuated by said cams, and means for operating said valves controlled by said switches.

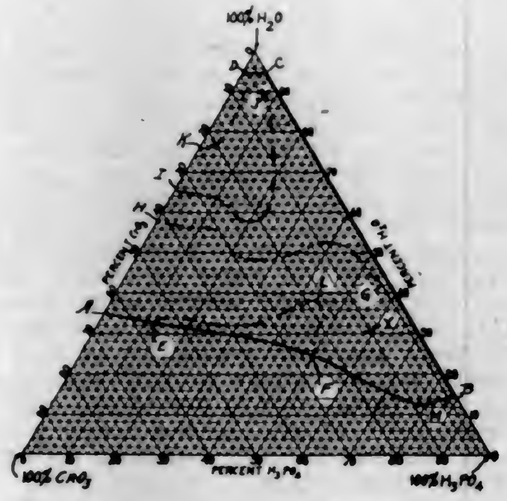
2,407,540
CABIN PRESSURE CONTROL VALVE
Bruce E. Del Mar, West Los Angeles, Calif., assignor to Douglas Aircraft Company, Inc., Santa Monica, Calif.
Application April 30, 1943, Serial No. 485,247
22 Claims. (Cl. 98—1.5)

21. An outlet valve device, including the combination of: stationary wall means and a movable valvar wall forming a passage, the movable wall being shaped and mounted with respect to the stationary wall means to have a wall portion parallel to the opposite stationary wall of the passage and a wall portion which is a continuous downstream extension of said parallel wall portion and converges downstream toward the opposite stationary wall to the outlet opening of the valve; and means for moving the valvar wall as a whole to move the parallel portion thereof in parallelism to the opposite stationary wall and the converging portion thereof toward or from the opposite stationary wall.



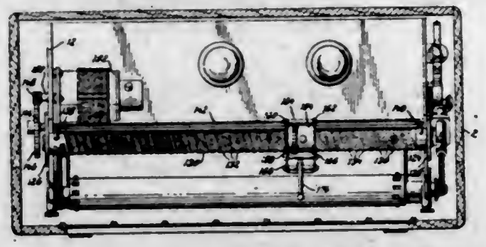
2,407,541
LADDER BRACKET
Victor C. Ehnborn, Chicago, Ill.
Application March 4, 1944, Serial No. 525,099
2 Claims. (Cl. 228—60)

1. In a ladder support bracket, a substantially U-shaped frame having its sides bent laterally of the plane of said frame at points spaced materially from its base, feet carried terminally by said sides for contact with an object, a counterbalance weight detachably secured to the base of said frame and extending longitudinally thereof, and stops secured to the laterally bent side portions adjacent the bends and spaced therefrom to provide rung engaging seats.



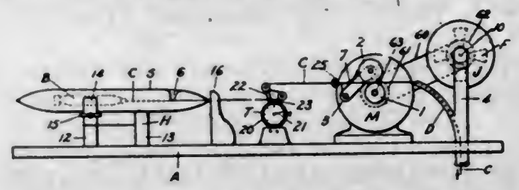
2,407,542
DISTRIBUTING APPARATUS
Waldemar C. Ewaldson, Millington, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application May 12, 1945, Serial No. 593,506
12 Claims. (Cl. 242—158)

1. An apparatus for distributing material comprising a reciprocable distributor for material, a threaded shaft rotatable in reverse directions to support the distributor and move it alternately in reverse directions between given limits, separate driving means to singly rotate the shaft in reverse directions when operatively connected to the shaft, a unit, having a neutral position, movable into either operating position to connect



either driving means to the shaft, means under the control of the distributor to alternately move the unit into operating positions at the said given limits, means to disconnect the unit from either driving means, and auxiliary means movable into operative engagement with the threaded shaft to rotate the shaft in either direction for adjustment of the distributor.

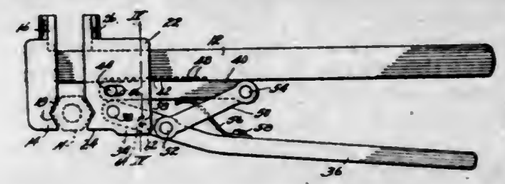
2,407,543
METHOD OF ANODICALLY POLISHING BRASS
Charles L. Faust, Columbus, Ohio, assignor to Battelle Memorial Institute, Columbus, Ohio, a corporation of Ohio
Application November 6, 1939, Serial No. 302,952
11 Claims. (Cl. 204—140)



1. The method of anodically polishing brass, which comprises making brass the anode in a solution comprising from 5 to 65% CrO_3, the balance comprising essentially water, and at a temperature below 212° F. and a current density not in excess of three thousand amperes per square foot passing an electric current therethrough of sufficient density and for a sufficient period of time to effect the polishing of said brass.

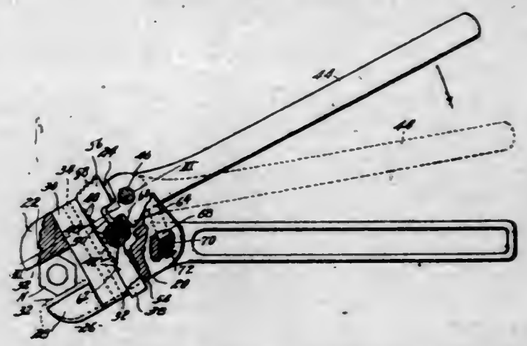
2,407,544
VARIABLE RESISTANCE
Albert W. Fischer, Highland Park, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Original application August 16, 1943, Serial No. 498,777. Divided and this application August 30, 1944, Serial No. 551,821
4 Claims. (Cl. 201—56)

1. In resistance means, a cylindrical member formed of insulating material having a spiral groove in its external surface, a pair of spaced conductors having resistance to current flow wound on the surface of the member between the grooved portions, means encircling a portion of the cylindrical member having projecting teeth that extend into the groove, means for movably and rotatably mounting the last named means whereby as the latter is rotated it will move axially along the surface of the cylindrical member, and conductive means mounted on the rotatable means to bridge the gap between the two conductors at a point as the rotatable means moves along the member.



2,407,545
THREAD FRICTION TESTING DEVICE
Joseph Raymond Fish, Manchester, N. H.
Application January 13, 1944, Serial No. 518,075
1 Claim. (Cl. 73—160)

The combination in a tension determining device for textile threads; a base; a holder for holding a thread package; means for removing the thread from the thread package held in the holder, including a motor, a roll driven thereby and a friction roll driven by said driven roll; a pneumatic thread receiving device including a tubular goose neck behind said rolls, an air pressure pipe which connects with the goose neck, and means to produce a current of air through said air pressure pipe away from the inlet to the goose neck; and a tension meter positioned between the thread package holder and said rolls.

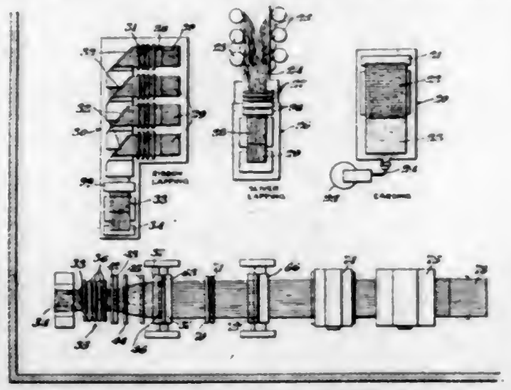


2,407,546
WRENCH
Roy E. Gearhart, Kansas City, Mo., assignor of three-tenths to Richard B. McCreary and three-tenths to Byram L. McCreary, both of Kansas City, Mo.
Application June 7, 1943, Serial No. 490,106
2 Claims. (Cl. 81—89)

1. A wrench comprising a shank having a fixed jaw; a yoke slidably mounted on said shank having a jaw complementing said fixed jaw and having side walls provided with slots disposed parallel with said shank; a rack bar formed in the face of said shank; a fulcrum bar mounted for hinging and sliding movement in the slots of said yoke; a relatively short series of teeth formed on one face of said fulcrum bar and spaced apart from the fulcrum point of said bar and adapted

to mesh with the teeth of said rack bar; a lever pivoted to said yoke; a link pivotally interconnecting said lever with the free end of said fulcrum bar whereby as said lever is moved toward said shank the fulcrum bar is urged toward said shank and said yoke is urged toward said fixed jaw.

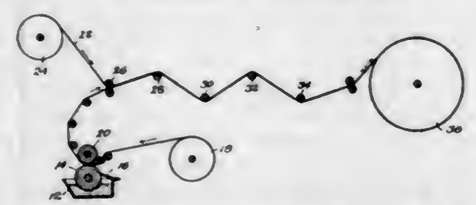
2,407,547
WRENCH
Roy E. Gearhart, Kansas City, Mo., assignor of three-tenths to Byram L. McCreary and three-tenths to Richard B. McCreary, both of Kansas City, Mo.
Application September 16, 1943, Serial No. 502,693
1 Claim. (Cl. 81—89)



A wrench comprising a head member having a fixed jaw; an angled jaw member slidably carried by said head member, and having a jaw complementing said fixed jaw; teeth formed along the inner longitudinal edge of said jaw member; a bar having teeth adapted to operatively engage the teeth of said jaw member; a handle member pivotally carried by said head member and operatively connected with said bar and having a side lug adjacent said pivot whereby when said handle is oscillated relative to said head member said jaw member will be reciprocated in said head member; and resilient means positioned between said lug of said pivoted handle and said bar whereby said bar is constantly urged against said angled jaw member as said pivotal handle is urged outwardly to open said wrench jaws.

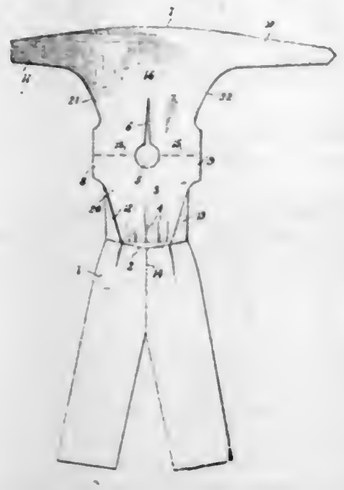
2,407,548
FIBROUS STRUCTURAL MATERIAL AND METHOD AND APPARATUS FOR MAKING SAME
Joseph Goldman, New Brunswick, N. J., assignor to Fibre Products Laboratories, Inc., a corporation of New Jersey
Application August 1, 1940, Serial No. 349,311
27 Claims. (Cl. 154—1)

2. A process of making a web of cobonded unspun fibers which comprises forming a plurality of elongated bodies of unspun fibers, subjecting



said bodies to drafting to draw the fibers therein in the direction of the drafting and orient and straighten said fibers in the direction of the drafting to form a plurality of webs with the fibers so oriented and straightened therein, lapping a plurality of said webs to form a composite web containing a plurality of web laminations, subjecting the composite web to a drafting operation to attenuate the composite web and draw the fibers to increased straightness in a direction corresponding to the direction of the drafting while said fibers are in a dry and essentially unbonded condition, and thereafter cobonding the fibers together while in striated at-

tenuated web form to form a coherent integrally bonded web material, the fibers not being permitted to relax between the drawing step and the bonding step.

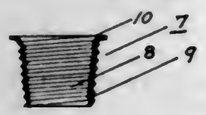


3. Apparatus for making a web of cobonded unspun fibers which comprises drafting means for straightening and arranging the fibers in a predominant direction longitudinally of an elongated web, means spaced from said drafting means for applying a bonding material to the fibrous web after the web is discharged from the drafting means, and means for maintaining said web under tension between said drafting means and said means for applying the bonding material to said web.

2,407,549
METHOD OF SURFACE COATING TISSUE PAPER WITH THERMORESPONSIVE RESINS
Irving Gurwick, New York, N. Y.
Application March 11, 1943, Serial No. 478,820
6 Claims. (Cl. 154—97)

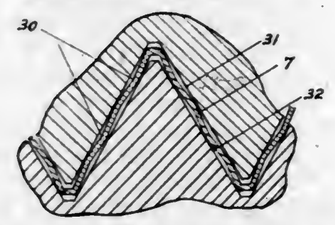
1. The method of surface coating a tissue paper with a thermo-responsive resin, which consists in first coating a thin film of a solution of the resin on a non-adherent carrier, in treating the carrier applied film to effect partial evaporation of the solvent leaving the film partially dried and in a still tacky condition, in then engaging solely by interfacial contact the thus treated film on the carrier with the tissue paper, in then separating the carrier and the tissue paper, the resin film thereby transferring from the carrier and becoming adheringly attached as a thin superficial film to the contacted surface of the tissue paper, and in then heating the resin coated tissue paper and breaking down the continuity of the resin film to form an open mesh which increases the wet strength of the tissue paper without sealing it against filtration or infusing.

2,407,550
GARMENT
Maria Marguerite Handt, New York, N. Y.
Application May 24, 1945, Serial No. 595,554
1 Claim. (Cl. 2—83)



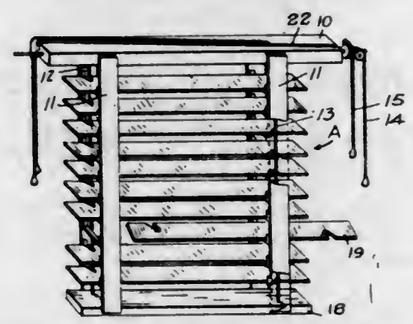
A garment of the character described comprising, a lower garment portion in the form of trousers for covering the lower part of the body downwardly from the waistline, an upper portion secured at the waistline to the back of the lower garment and having infolded parts secured to the front of the lower garment adjacent to the hips, said upper portion having a substantially centrally disposed neck opening and being of substantially T-shape and thus provided at one end with lateral tying extensions to be extended about the waist of the wearer below the upper end of the lower garment part and attached together.

2,407,551
METHOD OF MAKING LEAD ALKYLS
Sam D. Heron, Detroit, Mich., assignor to Ethyl Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application September 7, 1944, Serial No. 553,117
1 Claim. (Cl. 260—437)



In the process of making a lead alkyl with a lead sodium alloy the step which includes mixing a small amount of graphite with the lead sodium alloy.

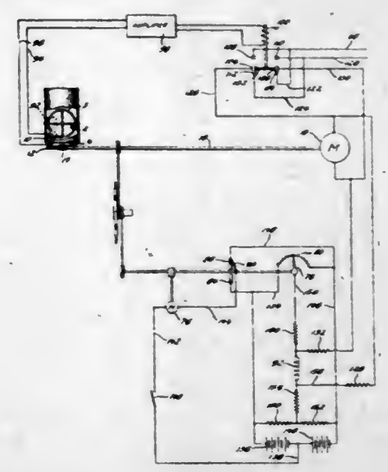
2,407,552
PIPE THREAD GASKET
Anthony F. Hoesel, Chicago, Ill.
Application July 1, 1944, Serial No. 543,085
2 Claims. (Cl. 288—20)



1. A thread gasket, for pipe threaded joints, comprising a tubular structure having internal and external taper threads and an integral outwardly flaring flange adjacent the large diameter of the tapered threads.

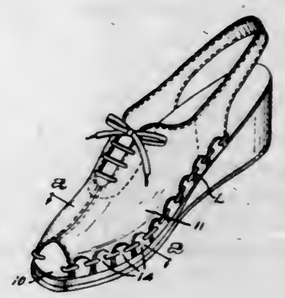
2,407,553
PIPE THREAD GASKET
Anthony F. Hoesel, Chicago, Ill., assignor to Flow Controls, Incorporated, Chicago, Ill., a corporation of Illinois
Application February 15, 1945, Serial No. 578,088
3 Claims. (Cl. 288—20)

1. A pipe thread gasket comprising, in combination, a thin walled tapered tubular form having complementary internal and external threads upon the diametral surfaces thereof, and the slopes of the threads having a wavy form in the circumferential plane of the slopes.



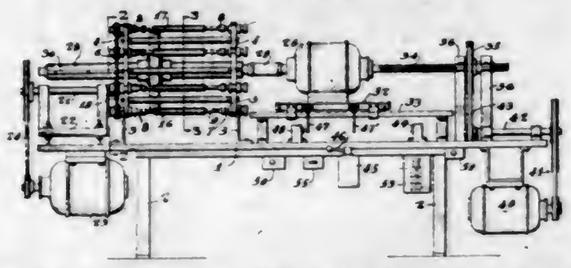
2,407,554
BLIND
Siegfreid G. Isserstedt, Toronto, Ontario, Canada
Application July 5, 1944, Serial No. 543,552
2 Claims. (Cl. 160—173)

2. A slat for a blind of the Venetian type comprising an elongated strip of material having a pair of notches extending inwardly from a peripheral edge of the strip at an incline to the longitudinal axis of the strip and located in spaced apart relation to one another, said notches forming guideways for the cables of the blind when said strip is assembled with other strips in a blind unit, said notches being located in opposite edges of the strip, said slat being capable of partial rotation about its longitudinal axis to disengage said notches from the cables of the blind unit and rotatable into engagement with the cables of the blind unit when respectively removing said slat from and introducing it into a blind unit.



2,407,555
AUTOMATIC CONTROL
Charles F. Kettering, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application July 30, 1943, Serial No. 496,824
20 Claims. (Cl. 172—282)

14. In a control system for a mobile body, steering means for the body, a reversible driving motor connected to said steering means, a source of power, reversing switching means connected to the source and motor to control the same, compass means to actuate the switching means, a coil mounted adjacent the compass means to create a biasing field therefor and connected to the reversing switching means whereby it will be energized simultaneously with the motor, a separate source of power, a resistance connected across said source, a movable contact engaging said resistor and connected to said coil, means connecting said coil to the second source of power whereby when the circuit is balanced, no current flows through the coil from the separate source, but when unbalanced, current may flow in either direction, depending upon the direction of unbal-

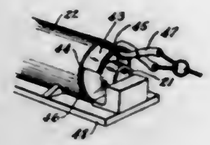


ance, means interconnecting the steering means and the movable contact to cause them to move together to apply an additional biasing force to the compass means, dependent upon the position of the steering means, a second driving motor, and interconnecting means between this second motor and the movable contact to provide for driving said movable contact to balanced position without moving said steering means.

2,407,556
SHOE
Samuel L. Kleven, Augusta, Maine
Application October 6, 1945, Serial No. 620,769
2 Claims. (Cl. 36—12)

1. A shoe, comprising an upper structure continuous along its lower margin throughout its vamp and instep regions and a sole element, said upper structure having a plurality of spaced downwardly extending prongs integral therewith, each prong being provided with a perforation matching a perforation in the upper structure, said sole element having a plurality of spaced marginal slots alined with said prongs and said prongs extending downwardly through said slots and outwardly and upwardly over the edge of said sole element, and a lacing passing through the perforations of the upper structure and prongs to secure them together and bridging the gaps between the prongs externally of the upper structure.

2,407,557
ARTICLE SURFACING MACHINE
Richard F. Kneisley, Toledo, Ohio, assignor to Kneisley Electric Company, Toledo, Ohio, a partnership
Application May 16, 1945, Serial No. 594,024
3 Claims. (Cl. 51—50)

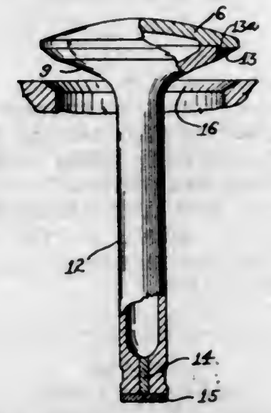


1. In a machine of the class described, a mandrel mounted for rotary movements and adapted to hold an axially elongated cylindrical work-piece, means including an electric motor for rotating said mandrel and work-piece, a carriage mounted for reciprocatory movements in a plane parallel to the axis of rotation of the mandrel, an electric motor mounted on said carriage for movement therewith, a grinding wheel driven by said last motor for peripheral engagement with a side of the work-piece carried by the mandrel and for movement with the motor to cause the wheel to traverse from one end to the other of the work-piece, feed means including an electric reversing motor for imparting predetermined movement to said wheel, first motor and carriage lengthwise of a work-piece, said electric motors being connected in a common electric circuit, a normally open main switch in said circuit, a control circuit including means magnetically operable to maintain said switch closed when said control circuit is closed, a control switch and two normally closed limit switches in said control circuit, means movable with said carriage for opening one or the other of said limit switches when the carriage is at one or the other end of its intended reciprocatory movement, a normally open shunt switch in said control circuit in association with each limit switch and operable to close the control circuit during an open period of the associated limit switch, and a manually operable reversing switch in circuit with said reversing motor.

2,407,558
RATCHET FOR SOCKET WRENCHES
Willard C. Kress, Buffalo, N. Y., assignor to J. H. Williams & Co., Buffalo, N. Y.
Application November 16, 1944, Serial No. 563,771
13 Claims. (Cl. 192—43.1)

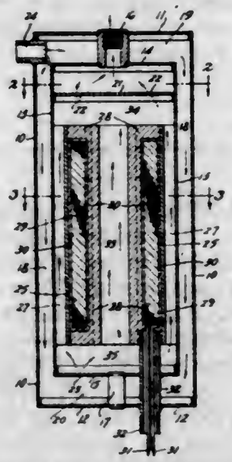
1. A ratchet drive comprising a driving part and a driven part partially telescoping endwise and having cooperating bearing surfaces rotatably supporting one from the other, one of said parts having a peripherally extending row of teeth, the other of said parts mounting a pair of pawls for individual movement into and out of engagement with said teeth, one pawl, by its engagement with said teeth, preventing relative rotation of said parts in one direction and riding idly over the teeth in the other direction, and the other pawl, by its engagement with said teeth, preventing relative rotation of the parts in said other direction and riding idly over said teeth in said one direction, means resiliently urging both of said pawls individually into engagement with said teeth, said pawls having extensions at corresponding ends eccentric to their pivotal axes, and a disk disposed transversely across the ends of said pawls, mounted for movement back and forth about the axis of relative rotation of said parts and having an opening into which said pawl extensions continuously project, said disk when rotated in either direction having one end of said opening engaging the extension of one pawl and forcing it out of engagement with said teeth while the other end of the opening fully releases the extension on the other pawl, and disengaging said pawls alternately as said disk moves back and forth, said opening having a length in the direction of movement of said disk greater than the distance between said extensions when both pawls engage with said teeth, whereby when said disk is in an intermediate angular position in its adjustment, the ends of the opening will fully release both pawls for engagement with said teeth.

2,407,559
METHOD OF MAKING RESILIENT BUSHINGS
Alvin S. Krotz, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Original application July 1, 1939, Serial No. 282,474. Divided and this application April 29, 1942, Serial No. 440,955
2 Claims. (Cl. 18—59)



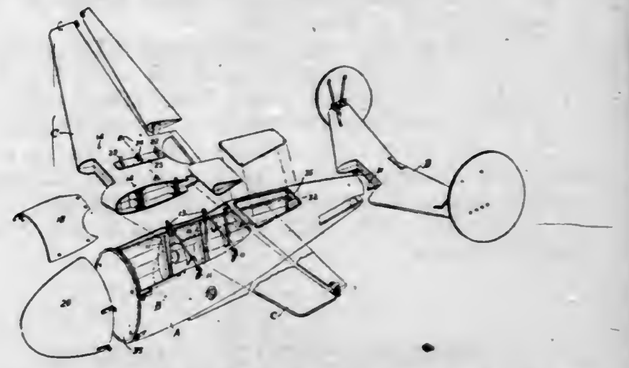
1. The method of making a resilient bushing subject to stresses in circumferential shear in which a body of rubber-like material is molded within an outer sleeve member, which method comprises coating the inner surface of said outer member with an adhesive material, positioning shield elements adjacent the coated surface, forcing a body of rubber-like material within said shield elements, then removing the shield elements from the bushing and applying molding pressure and vulcanizing heat to said body to bond said material to said outer member and vulcanize the material.

2,407,560
MANUFACTURE OF THE OPTICALLY ACTIVE FORMS OF PANTOTHENIC ACID
Richard Kuhn and Theodor Wieland, Heidelberg, Germany, assignors to Winthrop Chemical Company, Inc., New York, N. Y., a corporation of New York
No Drawing. Application August 26, 1941, Serial No. 408,355. In Germany August 10, 1940
3 Claims. (Cl. 260—284)



1. In a process for the optical resolution of a racemic pantothenic acid compound, the step which comprises separating by fractional crystallization from a solvent comprising essentially a lower aliphatic ketone the diastereomeric crystalline pantothenic acid salts of an alkaloid of the group consisting of quinine and cinchonidine.

2,407,561
HOLLOW VALVE FOR INTERNAL-COMBUSTION ENGINES
Rush A. Lincoln, Tarentum, Pa., assignor to Allegheny Ludlum Steel Corporation, a corporation of Pennsylvania
Application May 6, 1943, Serial No. 485,817
4 Claims. (Cl. 123—188)

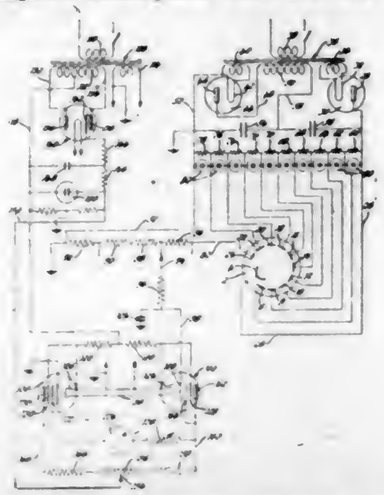


1. A hollow valve for internal combustion engines, having its internal and external surfaces conditioned and substantially free from surface imperfections and comprising a circular, disc-shaped crown recessed on one side thereof to form an annular, shank-engaging shoulder spaced from the edge thereof; a hollow shank consisting of a stem portion and a bell portion formed from a single piece of metal with the bell portion projecting into the recess of said crown, engaging the shoulder thereof and forming with said crown a V-shaped notch extending around the bell side of said crown; and an inlaid weld located within said notch, in welding engagement with said crown and the bell portion of said shank, forming a continuation of the peripheral surface of each and constituting the seat engaging portion of said valve.

2,407,562
INDUCTION HEATER
Einar G. Lofgren, Minneapolis, Minn.
Application August 17, 1942, Serial No. 455,053
2 Claims. (Cl. 219—47)

1. In an induction heater, a drum-like shell having an inlet passage in one end and an outlet passage in its other end, a paramagnetic heating core enclosed entirely within said drumlike shell, said paramagnetic heating core being in peripheral contact with the inner surface of said shell and being spaced from the ends thereof to provide fluid chambers therebetween and the ends of said shell, said paramagnetic heating core comprising telescopically engaged inner and outer heating elements formed to provide an annular coil space therebetween, an induction coil incorporated in said core between the inner and outer heating elements thereof, the said inner heating element of said paramagnetic core being provided with an axially extended fluid passage connecting the said opposite end chambers of the drum-like shell, the said outer heating element of said paramagnetic core being provided with circumferentially spaced passages connecting the said end chambers of the drum-like shell, an outer drum-like shell spaced from the sides and ends of the aforesaid drum-like shell, said outer shell having a fluid passage therethrough at one end portion to the space between said drum-like shells, and a fluid conduit leading through the same end portion of the outer shell to the adjacent end chamber of the other shell.

2,407,563
GLIDER
Laurence J. Marhoefer, Haddon Heights, N. J., assignor to Vidal Corporation, Camden, N. J., a corporation of Delaware
Application June 10, 1944, Serial No. 539,724
10 Claims. (Cl. 244—16)

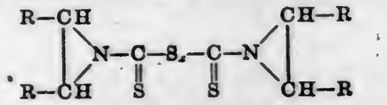


1. A bomb glider adapted to be carried by an airplane and to be released therefrom while in flight, comprising a fuselage having a top opening, a bomb cradle extending within and secured to the fuselage, means carried by the cradle adapted to hold the bomb within the fuselage, a wing structure the central part of which extends over the top opening of the fuselage, and means extending through the wing structure and secured to the cradle to thereby securely connect the wing structure with the fuselage, whereby the bomb, fuselage and wing structure are supportable as a unit from the airplane.

2,407,564
LIGHT METER
Edward J. Martin, Pleasant Ridge, and Carl E. Grinstead, Detroit, Mich., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application March 6, 1944, Serial No. 525,318
1 Claim. (Cl. 250—41.5)

In means for measuring the luminescent radiation of small quantity from a phosphorescent surface, a source of alternating current, means for rectifying said current connected to said source,

tapped resistance means connected across the rectifier output, said taps dividing said resistor into a plurality of substantially equal parts, a photosensitive multiplier tube having a plurality

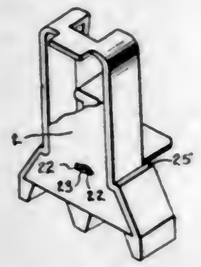


of electrodes sequentially engaged by electron streams, means for connecting each of the electrodes to a tap and voltage regulation means connected across each adjacent pair of taps to provide constant voltage to each electrode.

2,407,565
ZINC MERCAPTIDE-AMINOTHIAZOLINE REACTION PRODUCT
Roger A. Mathes, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
No Drawing. Application April 17, 1942, Serial No. 439,386
11 Claims. (Cl. 260—302)

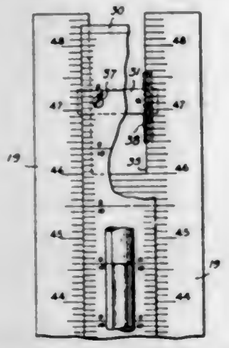
6. The reaction product of a 2-aminothiazoline which, except for the nitrogen of the amino group and the nitrogen and sulfur of the thiazoline ring consists of carbon and hydrogen and is free of aromatic rings, with the zinc salt of a 2-mercaptothiazole.

2,407,566
BISDIMETHYLENE THIURAM POLYSULPHIDES
Roger A. Mathes, Akron, and Paul C. Jones, Silver Lake, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
No Drawing. Application July 18, 1942, Serial No. 451,496
5 Claims. (Cl. 260—239)



1. Compounds having the structural formula

where R is a member of the class consisting of hydrogen and hydrocarbon groups, and x is an integer greater than one.

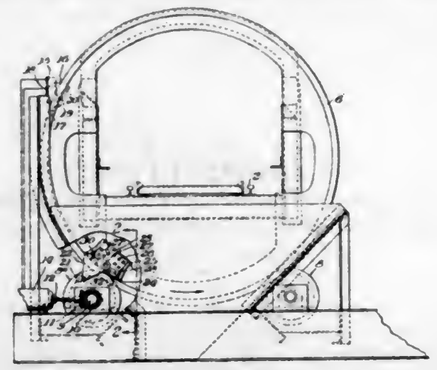


2,407,567
LAMP SOCKET
Henry J. McCarthy, Danvers, Mass., assignor to Sylvania Electric Products Inc., Salem, Mass., a corporation of Massachusetts
Application March 9, 1943, Serial No. 478,576
1 Claim. (Cl. 173—328)

A lamp socket assembly for receiving lamps having contact pins in their bases comprising a body portion of insulating material and having a chamber opening rearwardly and bounded by the walls of the body, a lamp base pin receiving opening in the upper portion of the front wall of said body and communicating with said recess, a pair of spaced metallic resilient contact fingers anchored in the base of said socket and

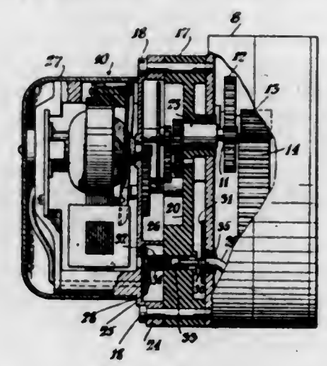
extending into position to be engaged by the lamp base pins, a back plate for closing said chamber and a metallic mounting plate having an elongated portion extending through the socket and back plate, and a forwardly extending mounting shelf and retaining means on the outer end of said elongated portion engaging and securing said back plate to the socket.

2,407,568
MANOMETER
Charles Meriam, Cleveland, Ohio, assignor to The Meriam Instrument Company, Cleveland, Ohio, a corporation of Ohio
Application April 21, 1944, Serial No. 532,058
11 Claims. (Cl. 73—401)



4. A manometer comprising a support, a transparent tube mounted on said support and adapted to receive a liquid indicating column, a graduated scale positioned alongside said tube, a slidable plate interposed between said main scale and tube and having a series of vernier scales at the edge thereof alongside the main scale, means for adjusting said main scale, and means for adjusting said vernier plate independently of said main scale.

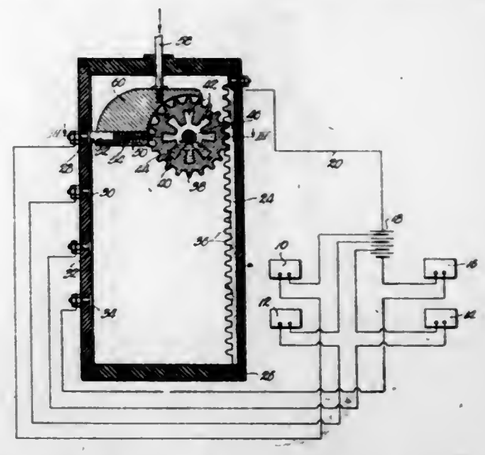
2,407,569
CAR-DUMPING APPARATUS
Glenn W. Merritt, Bowerston, Ohio, assignor to The Mining Safety Device Company, Bowerston, Ohio, a corporation of Ohio
Application May 29, 1944, Serial No. 537,943
4 Claims. (Cl. 214—52)



4. A car dumper of the character described comprising, a rotatably mounted cage having ring rails at the ends thereof, an approach track leading to said cage, a receiving track leading from said cage, wheels supporting said cage by means of said ring rails, means for driving one of said wheels to rotate said cage and a retarder

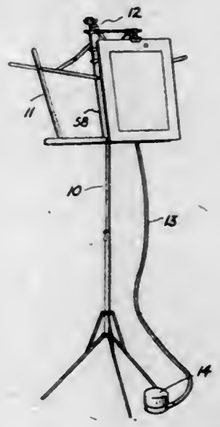
for checking the momentum of the cage in the final stages of angular movement comprising a vertically positioned hydraulic cylinder having a piston therein, a piston rod, a counterbalanced

lever connected to said piston rod, a member attached to and rotatable with said cage to engage said lever and depress said piston to be released therefrom upon commencement of the next revolution of the cage.



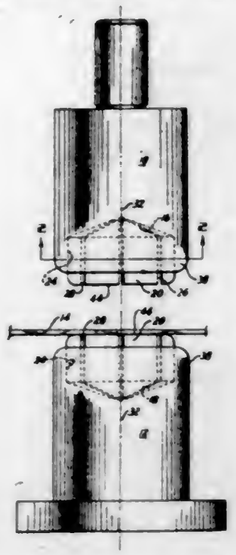
2,407,570
MOTOR MOUNTING FOR RETRACTABLE LAMPS
Carl E. Meyerhoefer, Brooklyn, N. Y., assignor to E. A. Laboratories, Inc., Brooklyn, N. Y., a corporation of New York
Original application June 11, 1943, Serial No. 490,408. Divided and this application April 21, 1944, Serial No. 532,114
4 Claims. (Cl. 172—36)

1. A structure of the class described including in combination a motor casing having a side wall and a flange peripherally extending therefrom, a further casing adapted to contain a mechanism to be driven by the motor within said first named casing said further casing having a flat side wall portion, and a unitary removable sub-base interposed between and in fluid tight engagement with the peripheral wall and side wall of said respective casings, said sub-base being adapted to contain a moisture-repellent substance to prevent entrance of water into said motor casing.



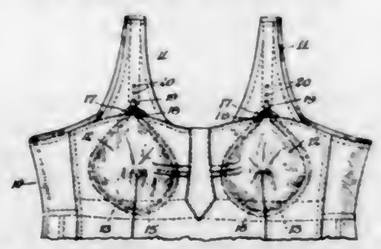
2,407,571
INTERMITTENT SWITCH
Milo F. Miller, Kansas City, Mo.
Application June 16, 1944, Serial No. 540,586
6 Claims. (Cl. 200—33)

1. A switch of the kind described comprising an elongated stationary contact member; a series of relatively short, spaced apart contact plates; a brush disposed to move across the faces of the several plates of the series one at a time; a rotatable hollow element in constant contact with the elongated contact member and in electrical connection with the said brush; and a filling of current conducting liquid in the hollow element, said hollow element having its interior formed to raise and lower the level of the conducting liquid as the element is rotated over the



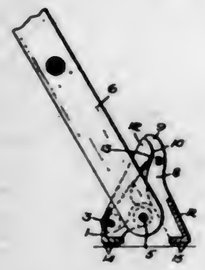
relatively long contact member, the switch being closed when the liquid level is raised to a predetermined point and being opened when the liquid falls below said predetermined point, said hollow element being formed and disposed with respect to the brush to close and open the switch while the brush is on each of the relatively short contact plates.

2,407,572
MUSIC LEAF TURNER
Curtis W. Moss, Detroit, Mich.
Application June 8, 1945, Serial No. 598,337
4 Claims. (Cl. 84—503)



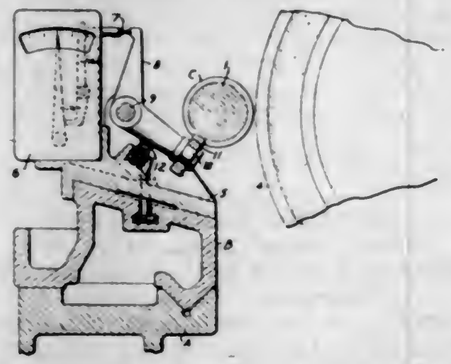
1. A leaf turner of the kind described, comprising, a plurality of rotary, cam-shaped plates, aligned axially, each having a radial contact face but each succeeding face, from top down, being closer to the common axis of rotation than the preceding face, each plate being connected to a radially disposed rod supporting at its end a clamp for attachment to a leaf of a music book, a rotary member axially aligned above said plates but remaining in a fixed relation longitudinally to said axis of rotation, a downwardly extending claw pivotally mounted in said member, said claw being adapted to engage the contact face of each of the plates, successively from top down, and gear means responsive to a pull of a cable to apply said claw to the respective contact face to swing the respective plate around its axis.

2,407,573
METAL FORMING MACHINE
Alex E. Nelson, Los Angeles, Calif., assignor to Douglas Aircraft Company, Inc., Santa Monica, Calif.
Application February 8, 1943, Serial No. 475,193
13 Claims. (Cl. 78—61)



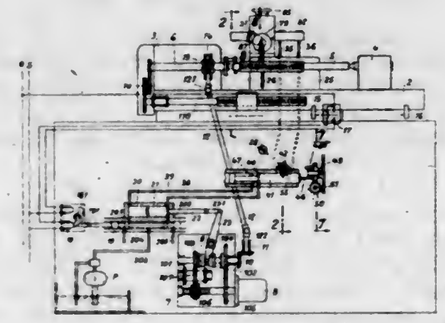
1. In a device for producing a change of form in a piece of sheet metal, the combination of: two sets of gripping jaws, the sets being movable toward and away from each other, and each said set comprising at least three sector shaped jaws with their apexes at a common center and their gripping faces faired to form a common substantially circular surface juxtaposed to a similar cooperating common surface formed by the gripping faces of the other set of jaws; means mounting the jaws of each set for limited radial movement from an initial position with respect to said center; a first means for axially relatively moving the jaws of each set toward the other set to press both sets against a work sheet; and a second means acting coordinately with said first means for radially moving said jaws in the same sense from said initial position with respect to said center.

2,407,574
ADJUSTABLE BREAST POCKET
Isidore Panes, New York, N. Y.
Application September 19, 1944, Serial No. 554,731
2 Claims. (Cl. 2—42)



1. In a brassière having shoulder straps and breast pockets, and means to adjust the size of each of said pockets and to effect an uplift on the breast therein, said means including a tunnel on the pocket extending substantially entirely around the same, said tunnel having top openings therein, a strip of fabric extending through said tunnel whereby said strip is formed into a closed loop, a portion of said strip projecting upwardly through said openings for securement at different points of adjustment in connection with the adjacent shoulder strap, said strip being secured to the tunnel only at one point at or near said opening, the adjacent shoulder strap and projecting portion of the strip having cooperative means to secure the strip to said strap at the desired position of adjustment with respect to the pocket.

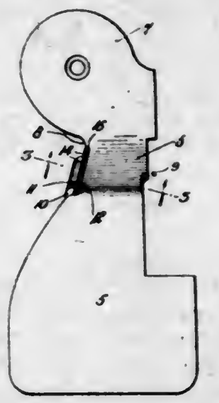
2,407,575
LADDER SUPPORT
Joseph D. Ramsey, Watertown, Mass.
Application July 28, 1944, Serial No. 546,980
4 Claims. (Cl. 228—61)



1. As an article of manufacture a ladder support for maintaining a ladder in an inclined potion, said support comprising a hollow suspension block adapted to constitute forward legs of the said support, a gripper member pivotally attached at either side of the block, said gripper member adapted to provide rearwardly extending legs of the ladder support, spaced-apart lug portions projecting rearwardly from the suspension block, pin means for holding an end of the said ladder in a suspended position between the lug portions, said block further including a pair of upwardly extending, spaced apart uprights, the extremities of the uprights being formed with curved edges which occur at points directly above the point of suspension of the ladder end, said gripper member having upwardly extending arms spaced apart and formed with curved bearing surfaces which lie in contact with the upper ends of the curved edges of the block uprights, said block uprights and gripper arms adapted to provide a leverage for increasing vertical pressure of the gripper member against a supporting surface.

2,407,576
MEASURING AND TESTING DEVICE
Alfred Rickenmann, Zurich, Switzerland
Application March 1, 1943, Serial No. 477,571
In Germany January 27, 1942
4 Claims. (Cl. 33—199)

4. In a grinding gauge for screw threads, the combination of means rotatably supporting the work to be gauged, a lever pivotally mounted about an axis spaced from the axis of rotation of the work, a toothed disc rotatably supported at one end of said lever to rotate about an axis transversely of the axis of rotation of the work and radially spaced therefrom, means engaging said lever for yieldingly urging it in a direction in which said toothed disc is caused to mesh with the thread on the work, and means operable by said lever for indicating the extent of movement of the axis of rotation of said toothed disc toward the axis of rotation of the work, the teeth on said toothed disc having a pitch corresponding to the lead of the screw thread on the work.



2,407,577
DEVICE FOR DRESSING GRINDING DISKS
Alfred Rickenmann, Zurich, Switzerland
Application December 17, 1943, Serial No. 514,589
In Switzerland December 28, 1942
10 Claims. (Cl. 125—11)

1. In a screw thread grinding machine, the combination of a reciprocable work carriage and a tool carriage mounted for cross-feed movement in a direction transverse to the path of reciprocation of said work carriage, manually operable means to adjust said tool carriage, power actuated means for reciprocating said work carriage, a grinding disk rotatably mounted in said tool carriage about an axis substantially parallel to said path of reciprocation of said work carriage, a slide mounted on said tool carriage for movement thereon at a right angle with respect to the movement of said tool carriage, a housing in which is arranged a grinding disk dressing tool, said housing being mounted for oscillatory movement on said slide, a second manually operable means for adjusting said slide to bring said dressing tool into operative position with respect to said grinding disk, means in said slide for oscillating said housing and said dressing tool, means operated by said oscillating means for rotating said dressing tool in said housing, whereby said dressing tool is moved once over the grinding face of the grinding disk during each oscillating movement of said housing, and means actuated by said power actuated means for operating said oscillating means in timed relation to the movement of said work carriage, namely when the latter changes its direction of movement.

2,407,578
THREAD CUTTER
Max Schreiber, Philadelphia, Pa., and Alphonso Stebbins, Delanco, N. J., assignors to Century Mills, Riverside, N. J., a partnership
Application July 3, 1945, Serial No. 602,990
4 Claims. (Cl. 112—252)

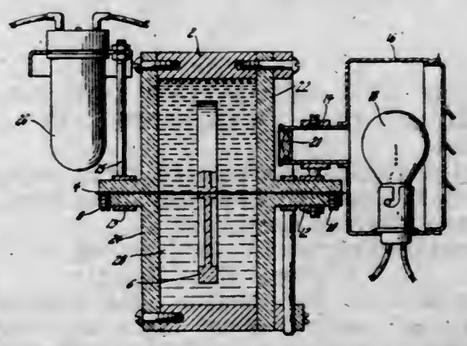
1. A thread cutter comprising a folded guard having notches in the folded edge of the same, a blade enclosed in said folded guard with its edge exposed in said notches, a sewing machine bedplate having the edge of the same cut in

toward the needle center and a clamp for said guard located at said cut-in portion of said bedplate.

2,407,579
ELECTRODEPOSITION OF TIN
Ernest W. Schweikher, Shaker Heights, Ohio, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 7, 1943, Serial No. 493,757
12 Claims. (Cl. 204—54)

1. A tin electrodepositing composition comprising an alkali fluoride and stannous chloride, the composition upon being dissolved in water to give a stannous chloride concentration of between about 37.5 and 150 grams per liter satisfying the equation:

$$pH=\frac{k(\text{mols MF})}{\text{mols } SnCl_2}$$



wherein the following conditions are simultaneously true; the pH is equal to about 1 to 5, k has a value from 0.1 to 1.0, MF is alkali fluoride, and the mol ratio

$$\frac{MF}{SnCl_2}$$

is about from 2 to 12, the static solution potential of tin in the bath being equal in volts to from

$$-0.055\ pH-0.265 \text{ to } -0.055\ pH-0.370$$

2,407,580
LONG PERIOD PENDULUM
Gifford G. Scott, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application February 15, 1945, Serial No. 578,025
3 Claims. (Cl. 250—41.5)

3. In stabilizing means, a casing having transparent walls, an unbalanced wheel of transparent material mounted in a vertical plane forming a

pendulum means, an opaque coating over substantially one-half of said wheel, a thin ribbon suspension for said wheel in said casing, damping means in said casing immersing said wheel, a source of light and a photo sensitive cell mounted on opposite sides of said casing so that the light from the source to the cell passes through the casing and a section of the wheel and the wheel area controls the flow.

2,407,581

ASBESTOS SHEET MATERIAL

Marion F. Smith and Harold W. Greider, Wyoming, Ohio, assignors to The Philip Carey Manufacturing Company, a corporation of Ohio

No Drawing. Application February 9, 1945, Serial No. 577,162

9 Claims. (Cl. 117—118)

1. A coherent fibrous body wherein the fibers consist in major proportion by weight of asbestiform mineral fibers, said asbestiform mineral fibers being bonded by the interaction in situ between said asbestiform mineral fibers and a water-soluble oxalate.

2. A coherent fibrous body according to claim 1 wherein said asbestiform mineral fibers are bonded by said oxalate in combination with an amylaceous material.

2,407,582

RESILIENT INSULATING BAT

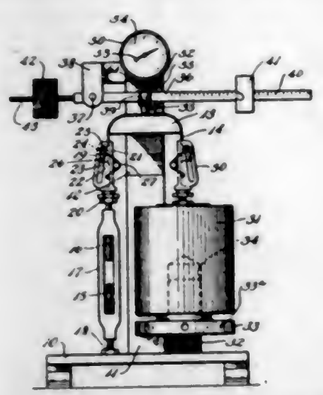
Frank J. Soday, Swarthmore, Pa., assignor to The United Gas Improvement Company, a corporation of Pennsylvania

No Drawing. Application August 10, 1940, Serial No. 352,122

1 Claim. (Cl. 117—126)

A resilient insulating bat comprising felted synthetic mineral fibers having applied thereto a coating comprising an isoprene resin, said isoprene resin being a product of the catalytic polymerization in the presence of boron trifluoride and under temperature conditions at least as low as —20° C. of an isoprene light oil fraction obtained in the pyrolysis of petroleum oil and containing other unsaturated hydrocarbon material, said fraction boiling between 30° and 40° C. and having an isoprene content constituting at least 90% by weight of the total diolefine content thereof and at least 40% by weight of the total unsaturation thereof, said isoprene resin being compatible with drying oil and having a definite and reproducible softening point at least as high as 60° C.

2,407,583



METHOD AND APPARATUS FOR TESTING COMPRESSIBLE HARDNESS OF MATERIALS

Edward A. Sprigg, Wadsworth, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York

Application February 3, 1943, Serial No. 474,557

7 Claims. (Cl. 73—81)

1. Apparatus for testing the compressible hardness of resilient sheet material under tension, said apparatus comprising a support for a sample of sheet material, static means for tensioning the sample across the support, means for locally applying a compression load against the material backed by said support, and means at the load applying position for measuring the depression of the tensioned material under said load.

2,407,584

ALKYLATION PROCESS

William A. Stover, Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York

No Drawing. Application February 24, 1944, Serial No. 523,727

15 Claims. (Cl. 260—683.4)

1. In the process of alkylating a paraffinic hydrocarbon with an olefinic hydrocarbon, which includes reacting a paraffinic hydrocarbon with an olefinic hydrocarbon, in a reaction zone under alkylating conditions, in the presence of catalytic material, and controlling the concentration of the olefinic hydrocarbon so that alkylation is the principal reaction; the improvement which comprises reacting said paraffinic hydrocarbon with said olefinic hydrocarbon, in a reaction zone under alkylating conditions, in the presence of carbon dioxide.

2,407,585

ALKYLATION PROCESS

William A. Stover, Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York

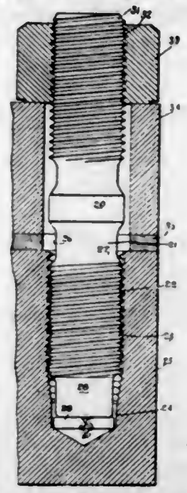
No Drawing. Application September 11, 1945, Serial No. 615,695

12 Claims. (Cl. 260—683.4)

1. The process of alkylating alkylatable paraffinic hydrocarbons with olefinic hydrocarbons, which comprises contacting an alkylatable paraffinic hydrocarbon with an olefinic hydrocarbon, in gaseous phase and in a reaction zone under alkylating conditions, in the presence of a mixture of carbon dioxide and water, and maintaining said alkylatable paraffinic hydrocarbon in excess over said olefinic hydrocarbon in said reaction zone, so that alkylation is the principal reaction.

2,407,586

STRESS-FREE STUD



Otto M. Summers, Mount Gilead, Ohio, assignor to H-P-M Development Corporation, Wilmington, Del., a corporation of Delaware

Application February 16, 1944, Serial No. 522,536

12 Claims. (Cl. 151—32)

1. A stud fastening mechanism that includes a member having a threaded hole therein, a stud having a thread portion thereon received in the threads of the threaded hole, the clearance between the threads on the threaded portion of

the stud and the threads in the hole being greater than the maximum clearance permitted between such threads according to the tolerances allowed in standard thread practice whereby the threads on the stud are a relatively loose fit in the threads in the hole as gauged by standard thread practice, and resilient means within the threaded hole engaged by the stud whereby to apply an axial force upon the stud to cause frictional engagement between one side of the threads on the stud and one side of the threads in the hole.

2,407,587

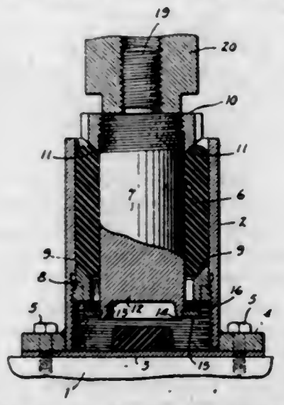
THREAD GUIDE

Francis P. Tamburro, Ozone Park, N. Y., assignor to Wilcox & Gibbs Sewing Machine Company, New York, N. Y., a corporation of New York

Application November 6, 1943, Serial No. 509,208

5 Claims. (Cl. 112—218)

1. A thread guide comprising a plate having a plurality of inclined fingers projecting from one edge thereof, said fingers being bent out of the plane of the plate and skewed toward the plate and forming thread eyes having slanting thread receiving openings between them.



2,407,588

SHOCK ABSORBER

Leon F. Thiry, Montclair, N. J., assignor to The General Tire & Rubber Company, Akron, Ohio, a corporation of Ohio

Application December 4, 1944, Serial No. 566,419

5 Claims. (Cl. 248—358)

5. A telescopic cushioning support comprising a base member, an upright tube mounted on the base member and having an open upper end, a lower confining ring secured to the interior of said tube intermediate the upper and lower ends thereof, a post mounted centrally of said tube and movable vertically within said lower ring, an upper confining ring secured upon said post and movable vertically with the post within the top portion of the tube, a tubular body of rubber held under radial compression between the exterior of the post and the interior of the tube and interposed between said rings, a rebound snubber comprising a collar attached to the lower end of said post and underlying said lower ring, and an overload snubber comprising a rubber buffer block attached to the base beneath the lower end of said post.

2,407,589

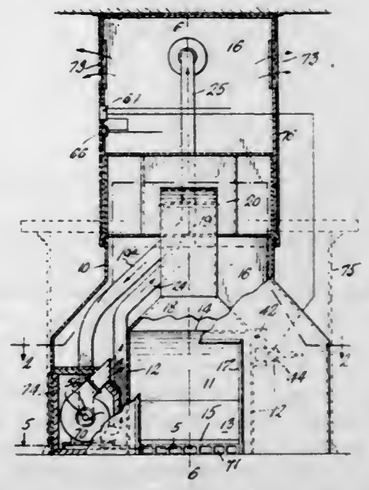
AQUEOUS ALKALINE REACTING CLEANING BATH HAVING REDUCED FOAMING CHARACTERISTICS

Henry Earl Tremain and Leslie R. Bacon, Wyandotte, Mich., assignors to Wyandotte Chemical Corporation, Wyandotte, Mich., a corporation of Michigan

No Drawing. Application February 3, 1944, Serial No. 520,960

5 Claims. (Cl. 252—156)

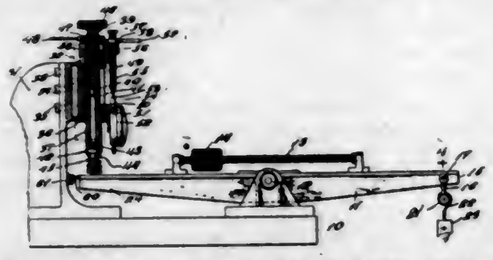
1. An aqueous alkaline solution having reduced foaming characteristics containing in addition to water, a soluble alkaline agent, and a constituent tending to produce foam, admixed with a minimum of .01% by weight of at least one foam inhibitor selected from the group consisting of di - tertiary - amylphenoxyethanol, p-tertiary-amylphenoxyethanol and diamyl phenol.



2,407,590

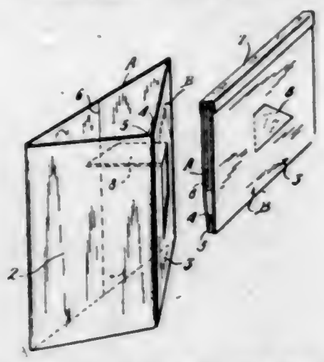
HEATING APPARATUS

Samuel S. Vineberg, Buffalo, N. Y.



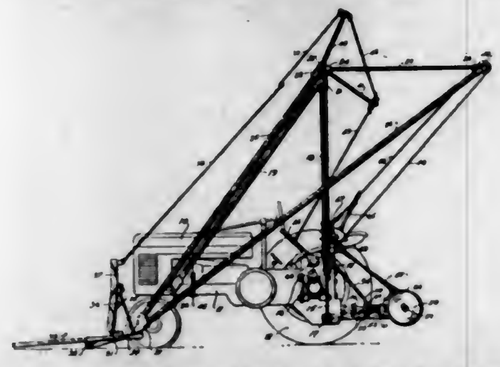
Application January 23, 1943, Serial No. 473,350

6 Claims. (Cl. 126—140)



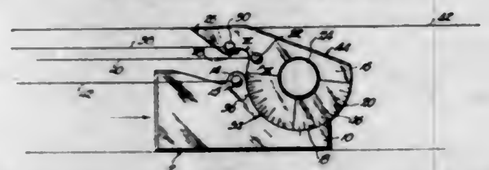
1. A movable closure gate for an open-front heater and control mechanism for said gate comprising stationary upright toothed racks at opposite edges of said gate, a shaft rotatably mounted on said gate and having pinions fixed thereto and meshing with said racks, an upright toothed rack which is shiftable for engaging one or another of its teeth with a part on and movable with said gate for holding said gate in different more or less open positions, and actuating means for moving said shiftable rack into and out of engagement with said part on the gate for holding and releasing the gate.

2,407,591
SPRING TESTER
Herbert H. Walley, Jr., and Alexander W. Keema, Providence, R. I., assignors to Merit Engineering, Inc., a corporation of Rhode Island
Application April 19, 1944, Serial No. 531,700
1 Claim. (Cl. 73—161)



In a spring testing device, a base, a support standing upwardly therefrom, a datum line carried by said support, a beam fulcrumed on said base, a pointer carried at one end of the beam to swing over said datum line, rockable means at said end of the beam to directly engage the work, means at the other end of the beam to weight the beam, a head carried by said support, a member adjustable in said head with relation to said datum line to engage the other side of the work and means to indicate the adjustment of said member comprising a dial indicator carried by said member and an adjustable stop carried by said head and against which an actuator portion of the dial indicator engages.

2,407,592
DISPLAY DEVICE
Ernest Leslie Wathen, Rocky River, Ohio, assignor to The Strobridge Lithographing Company, Cincinnati, Ohio, a corporation of Ohio
Application February 28, 1944, Serial No. 524,227
1 Claim. (Cl. 40—124.1)

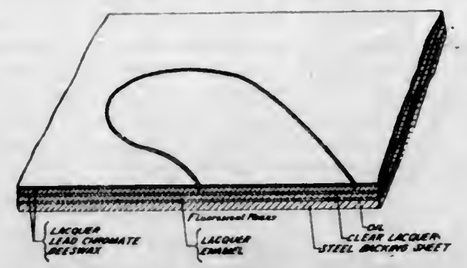


A device of the class described constructed of a single strip of stiff sheet material of uniform width from end to end, the ends of said strip being connected together, a portion of said strip being set off by parallel bending lines that define the lateral edges of a display panel, the entire area of the panel being available for display purposes said panel having a bending line intermediate and parallel to the former bending lines, the remaining portion of the strip being of greater length than the panel and constituting a combined wrapper and easel member treated substantially midway between its junction with the lateral edges of the panel to provide a bending line substantially parallel to said edges whereby the panel and member may be folded book fashion with the panel contained within and completely encased by the member, and bracing means consisting of one or more tongues struck from said member and adapted to be turned from the plane thereof and frictionally engaged with the rear side of the panel to hold the device expanded.

2,407,593
HAY STACKING ATTACHMENT FOR TRACTORS
Edwin Watson, near Littleton, Colo.
Application February 20, 1945, Serial No. 578,912
2 Claims. (Cl. 214—140)

1. A hay stacking attachment for tractors comprising: attachment members arranged for attachment to the rear axle of said tractor; upright posts detachably secured to said attachment members at their lower extremities; diagonal braces supporting said posts in a vertical position; means for detachably attaching said braces to said tractor; a horizontal shaft supported between the upper extremities of said posts; two triangular frame members tiltably mounted at their apexes on said shaft; a rake tiltably mounted on the forward extremities of said triangular frame members; a flexible member extending from and supporting said rake in a horizontal position; and means for connecting said flexible member with the implement lifting lever of said tractor so that operation of said latter lever will allow said rake to tilt; a drum-supporting frame detachably attached to said attachment members and extending rearwardly therefrom; means for supporting said frame from said posts; a horizontal drum shaft carried by said frame; drums on the extremities of said shaft; flexible means extending between said drums and the rearward extremities of said triangular frames so that rotation of the drums will pull the rearward extremities of the frames downwardly to lift said rake member; brake means for resisting rotation of said drum shaft when desired; drive means for driving said drum shaft; and means for detachably attaching said drive means to the power take-off of said tractor.

2,407,594
LETTERING INSTRUMENT
Fred Howard Whiteley, Kansas City, Kans.
Application June 6, 1945, Serial No. 597,800
5 Claims. (Cl. 33—41)



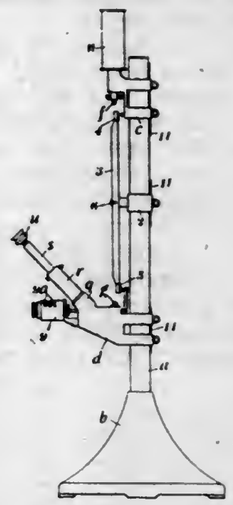
1. A lettering instrument of the type described, comprising a body having a guiding edge; an arm pivotally mounted on the body; and a plurality of marking elements, certain of the elements being on the body and the remaining elements being on the arm, the marking elements and the pivotal connections between the body and arm being in substantial alignment on a line parallel with and spaced from the said guiding edge when the arm is at one end of its path of movement about the pivotal connection.

2,407,595
MANUFACTURE OF DETONATING EXPLOSIVES AND PRODUCTS OBTAINED THEREBY
Vernon Harcourt Williams, Androssan, and Harold Reginald Wright, West Kilbride, Scotland, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application April 27, 1942, Serial No. 440,754. In Great Britain March 5, 1941
19 Claims. (Cl. 52—13)

1. A process for the manufacture of an explosive which comprises forming in solution a mixture of dissolved solid crystalline polynitric ester and a nitro cellulose, co-precipitating the mixture by the progressive addition of liquid miscible with the solvent, separating the precipitate containing the polynitric ester in fine crystalline condition, and mixing the same with a liquid aromatic nitrobody capable of gelatinising the nitro cellulose with the polynitric ester crystals intimately distributed therethrough said polynitric ester having a melting point of at least approximately 50° C.

14. An explosive composition comprising an explosive crystalline polynitric ester in the form of fine crystals distributed throughout a gel made up of liquid aromatic nitrobody and nitrocellulose said polynitric ester having a melting point of at least approximately 50° C.

2,407,596
DRAWING REPRODUCTION
Ralph J. Wirshing and Frank E. Smith, Detroit, Mich., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application December 24, 1943, Serial No. 515,623
10 Claims. (Cl. 250—80)



2. In a master drawing having a layer of excitable luminescent material, a coating therefor in which the drawing may be scribed comprising, a lacquer base and means therein to absorb radiation for exciting the luminescent material whereby proper contrast may be obtained between the scribed and unscribed areas.

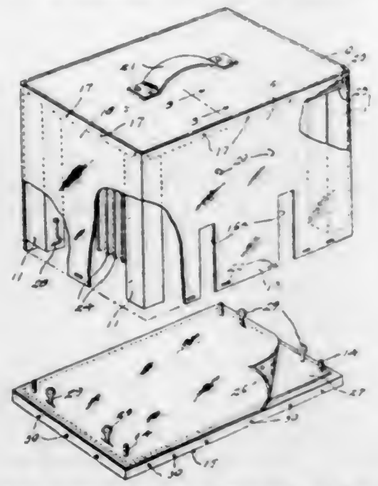
2,407,597
EXPLOSIVE COMPOSITIONS COMPRISING LOW FREEZING LIQUID MIXTURES OF AROMATIC NITRO-COMPOUNDS
Harold R. Wright, West Kilbride, and James Taylor, Saltcoats, Scotland, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application March 2, 1944, Serial No. 524,792. In Great Britain December 12, 1942
5 Claims. (Cl. 52—13)

1. A low-freezing aromatic nitro-compound mixture whereof about 70 to 85 per cent consists of a mixture of isomeric dinitrotoluenes wholly liquid at temperatures approximating the melting point of ice, and the remainder consists of at least 5 per cent each of trinitrotoluene and tetryl.

2,407,598
MEANS FOR INSPECTING GUN BARRELS
Arthur Cyril Webb Aldis, Sparkhill, Birmingham, England, assignor to Aldis Brothers Limited, Sparkhill, Birmingham, England
Application June 19, 1943, Serial No. 491,525
In Great Britain April 14, 1942
8 Claims. (Cl. 88—14)

1. Means for inspecting the bore of a rifle or other gun barrel, comprising the combination of a pair of hollow centres arranged coaxially with each other and at a sufficient distance apart to enable the barrel to be mounted between them, one of the centres having a closed end which serves as a mask and has a relatively small axial orifice, optical viewing means associated with the other centre and arranged so that images formed by reflection of the orifice in the bore of the barrel can be inspected, a transversely movable slide arranged in association with the latter centre and the viewing means and operable to ascertain the position of a defect in the said bore by partially obstructing the light path between the associated centre and viewing means, and supporting means whereby the two centres, the optical viewing means, and the slide are supported in the required relationship.

2,407,599
RESINOUS COMPOSITIONS AND PROCESS OF MAKING SAME
Robert W. Auten, Jenkintown, and James L. Rainey, Abington, Pa., assignors to The Resinous Products & Chemical Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application March 23, 1946, Serial No. 656,784
20 Claims. (Cl. 260—69)



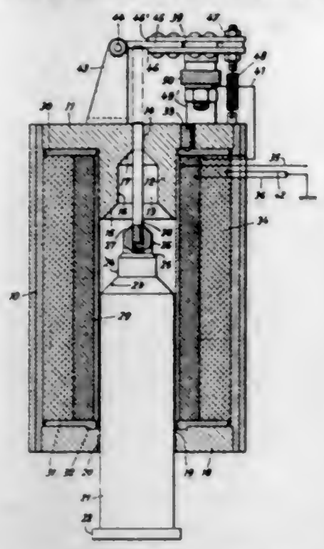
1. A process for preparing thermosetting resinous products containing sulfonate groups, which comprises reacting at a pH of 4 to 10 by condensing as the essential reactants (*a*) an aldehyde from the group consisting of formaldehyde, acetaldehyde, butyraldehyde, furfuraldehyde, and benzaldehyde, (*b*) a salt from the group consisting of water-soluble metal, tertiary amine, and quaternary ammonium salts of sulfurous acid, and (c) a member of the class consisting of carbamides, polyamino diazines, and polyamino triazines, two amino groups of which have two reactive hydrogen atoms each, at a temperature at which condensation occurs with the formation of a resinous product containing sulfonate groups, the aldehyde being present in an amount between about 0.5 and about 2.0 mols

per reactive amino group in said member of the above class and said salt being present in an amount to yield from about 0.05 to about 0.4 mol of bisulfite per mol of aldehyde.

2,407,600
PHOTOGRAPHIC DEVELOPER
Frederic R. Bean, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application March 3, 1945, Serial No. 580,925
2 Claims. (Cl. 95—88)

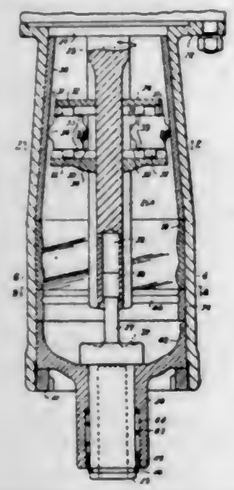
1. A photographic developer, in dry form, containing a developing agent and, as an alkali, a mixture, in equimolecular amounts, of sodium anhydroformaldehyde sulfanilate and sodium sulfite.

2,407,601
BROODER
Harvey L. Clark, Salem, Oreg.
Application January 6, 1944, Serial No. 517,243
1 Claim. (Cl. 119—33)



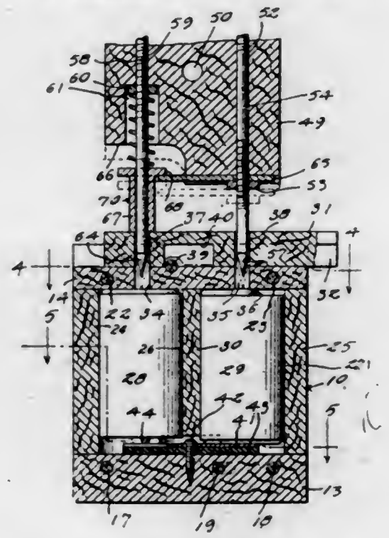
A brooder comprising a housing formed of top and bottom walls, corner posts for supporting said top wall above said bottom wall, upwardly extending pins carried by said bottom wall, said posts having sockets for receiving said pins, eyes carried by said bottom wall, hooks carried by said posts for releasably holding said posts on said pins, felt side and end walls about said posts, each of said side walls having at least a pair of upwardly extending slots of sufficient size to provide chick entrances and the portions of the walls between the slots on each side providing a swinging flap, means releasably securing said side and end walls to said bottom wall, means carried by said side walls for holding said flaps in raised position, a copper plate secured to the lower side of said top wall, a second copper plate secured to the upper side of said bottom wall, a felt covering for said upper plate, depending felt strips carried by said upper felt covering, and a lower felt covering for said lower plate.

2,407,602
PROCESS FOR MILLING FABRICS CONTAINING WOOL AND CELLULOSE ACETATE
Alan Shirley Cluley and Tom Gladstone Allen, Nuneaton, England, assignors to Courtaulds Limited, London, England, a British company
No Drawing. Application January 16, 1945, Serial No. 573,140. In Great Britain February 25, 1944
7 Claims. (Cl. 26—19)



1. A process of obtaining on a woven or knitted fabric containing a blend of wool fibres and cellulose acetate staple fibres, a close compact fibrous surface which obscures the original structure, which comprises milling said fabric in the presence of a plasticiser for the cellulose acetate staple fibres.

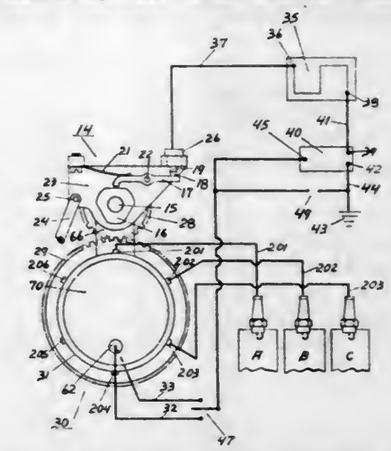
2,407,603
ELECTROMAGNET
Ernest Alphonse Derungs, Le Locle, Switzerland
Application December 23, 1943, Serial No. 515,404
In France April 23, 1940
13 Claims. (Cl. 175—335)



1. In an electromagnet, an exciting circuit, a core member, and an armature member arranged to approach each other when said exciting circuit is closed, at least one of said members having a number of relatively fixed parts arranged in steps and comprising surfaces gradually diminishing towards the end of said member, said member being disposed with regard to the other member in such a cooperating position that during the mutual approaching of said members a canalisation of the lines of force is obtained.

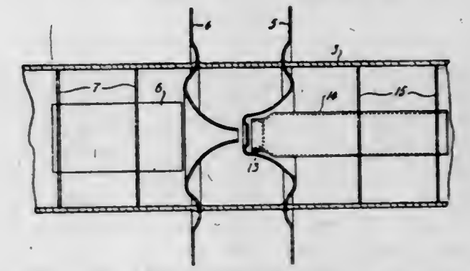
2,407,604
PERCUSSION TOOL
Rudolph Goldschmidt, Sheffield, England
Application February 16, 1944, Serial No. 522,681
In Great Britain March 5, 1943
14 Claims. (Cl. 125—33)

1. A percussion tool including a rotary driving member, a diverging tubular race co-axial with said driving member, a second tubular race adjacent to the larger end of said diverging race and having helical paths on its interior surface, a striker co-axial with and constrained to rotate with said driving member and reciprocable along said axis, said striker having centrifugal masses constrained to rotate with it and capable of co-operating with said helical paths for transforming the kinetic energy of rotation of said striker into striking energy of translation of said striker, and an abutment member capable of arresting such translatory movement of said striker while said striker is within said second race, said helical paths being of opposite hand to the helixes traced out by said masses during the translatory movement of said striker towards said abutment member.



2,407,605
BLASTING UNIT AND SHORT-CIRCUITING DEVICE
John V. Hammond, Spangler, and Dennis J. Keenan, Barnesboro, Pa.; said Keenan assignor to said Hammond
Application March 12, 1945, Serial No. 582,246
5 Claims. (Cl. 136—181)

1. A blasting unit comprising a battery housing, including a top wall formed with a pair of apertures, a slide carried by said top wall having a pair of apertures adapted to register with the aperture of said top wall, a pair of batteries in said housing having terminals confronting the apertures of said end wall, and a contact member including a body member, a pair of spaced apart contact members carried by said body member engageable in the apertures of said slide and said top wall for contact with said battery terminals, and normally engaged contact shorting members engaging said contact members, said shorting members being so constructed and arranged that one of said shorting members will be moved to disengaged position with respect to the other of said shorting members when said contact members are disposed in contact with the battery terminals.

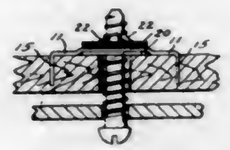


2,407,606
INTERNAL-COMBUSTION ENGINE
Anthony F. Hoesel, Chicago, Ill.
Application July 26, 1944, Serial No. 546,591
3 Claims. (Cl. 123—21)

2. Speed control means, for multi-cylinder internal combustion engines, comprising a movable means to control the volumetric fuel feed rate to the cylinders and means, controlled by the movable means, varying the combustion sequence, among the various cylinders, between the maximum and minimum volumetric fuel feed rates responsive to the movement of the

said movable means, and means, operated at will, to maintain a given combustion sequence irrespective of the volumetric fuel feed rate governed by the said movable means.

2,407,607
ELECTRON DISCHARGE DEVICE EMPLOYING HOLLOW RESONATOR
John Edwin Ingliston Cairns, Chalfont-St. Peter, England, assignor to Electric & Musical Industries Limited, Hayes, Middlesex, England, a company of Great Britain
Application March 13, 1944, Serial No. 526,184
In Great Britain August 8, 1941
4 Claims. (Cl. 315—5)



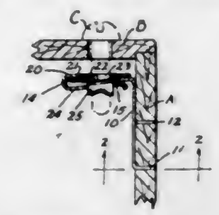
1. An electron discharge device having an envelope containing a cathode for supplying a stream of electrons, and an oppositely disposed electrode toward which said electrons are directed, and a cavity resonator extending transversely of the electron path between said cathode and said other electrode and having apertures through which said electrons are directed, said other electrode being spaced closely adjacent said resonator and having conducting means extending away from said resonator, electrically and conductively connected to said other electrode whereby said other electrode may be heated by eddy currents for degassing said other electrode.

2,407,608
FASTENING DEVICE
Charles H. Judd and Charles Giammatteo, Cleveland, Ohio, assignors to Tinnerman Products, Inc., Cleveland, Ohio, a corporation of Ohio
Original application November 28, 1942, Serial No. 467,224, now Patent No. 2,345,053, dated March 28, 1944. Divided and this application July 22, 1943, Serial No. 495,714
2 Claims. (Cl. 85—32)

1. A combined nut and nut holder comprising a nut holder provided from a strip of sheet metal

defining a body portion having a bolt opening, an offset portion on either side of the body portion defining spaced shoulders, attaching prongs defined by end portions of said strip projecting in the same general direction as said offset portions,

and a nut carried by said body portion comprising bolt engaging means overlying the bolt opening in said body portion and a nut retaining element underlying said body portion and engaging the spaced shoulders defined by said offset portions.



2,407,609

FASTENING DEVICE

Charles H. Judd and Charles Giammatteo, Cleveland, Ohio, assignors to Tinnerman Products, Inc., Cleveland, Ohio, a corporation of Ohio

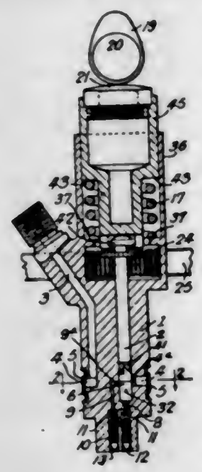
Original application November 28, 1942, Serial No. 467,224, now Patent No. 2,345,053, dated March 28, 1944. Divided and this application July 22, 1943, Serial No. 495,715

2 Claims. (Cl. 85—32)

1. A combined nut and nut holder comprising a nut holder provided from a section of sheet metal bent to define a body and a flange on one end of said body extending in angular relation thereto, a nut carried by said flange comprising bolt engaging means overlying an opening in the flange and a portion for retaining the nut in attached position on said flange, the other end of the nut holder body comprising an attaching prong projecting angularly therefrom, and another prong bent from said body and projecting in the same general direction as the first named prong.

2,407,610

FUEL INJECTION IN INTERNAL-COMBUSTION ENGINES



George Stephen Kammer, Bradford, England

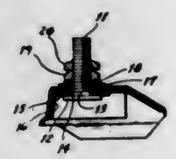
Application August 9, 1943, Serial No. 497,991

In Great Britain March 16, 1942

4 Claims. (Cl. 103—41)

1. A fuel injector for an internal combustion engine of the kind in which fuel to be consumed in each working cycle is injected uninterruptedly into a compressed air charge in two portions, namely a pilot fuel portion and an immediately following main fuel portion, the two portions being injected at substantially different rates, comprising a jerk type pump having a cylinder formed with a compression space, a plunger operable in said compression space, a fuel inlet passage terminating in an inlet port in the wall of the compression space at a part traversed by said plunger, a first outlet from the compression space out of reach of the plunger for the pilot fuel, a second outlet from the compression space separate from said first outlet and having an outlet port opening into the compression space wall at a part thereof traversed by the plunger for discharging the main fuel portion, a groove in the plunger located to uncover said outlet port and said inlet port in succession during the working

stroke of said plunger, and a control orifice in the wall of said compression space separate from said outlet and being located to be covered by said plunger during the latter part of said working stroke and being adapted to discharge fuel from said compression space.



2,407,611

STARTER ADAPTER TERMINAL

Henry M. Lewis, Canton, Miss., assignor of fifty per cent to George B. Herring, Canton, Miss.

Application August 13, 1945, Serial No. 610,623

1 Claim. (Cl. 173—324)

A terminal adapter for a self-starter comprising a casing having tongues extending therefrom and adapted to be secured to a starter and dispose the casing in enclosing relation to a built in knob of the starter, a liner of insulating material fitting snugly in said casing against the top and walls thereof, a threaded post of conductive material passing through an opening in the top of said casing and having a head at its inner end for engaging the knob of the starter, a washer of conductive material fitting about said post between its head and a confronting portion of said liner, said washer having snug fit within the casing to prevent rotation of the washer and said post having a squared shoulder adjacent its head passing through a squared opening in the washer to prevent rotation of the post, a washer of insulating material disposed about said post and bearing against the outer surface of the top of the casing, a wear-resisting washer fitting about said post and against the outer insulating washer, a nut screwed upon said post and bearing against the wear-resisting washer and firmly holding the post in place when tightened, and a second nut screwed upon said post and constituting a lock nut for the first nut and serving as means for securing a conductor wire to the post.

2,407,612

METHOD OF MAKING BUTTER AND BUTTER OIL CONCENTRATE

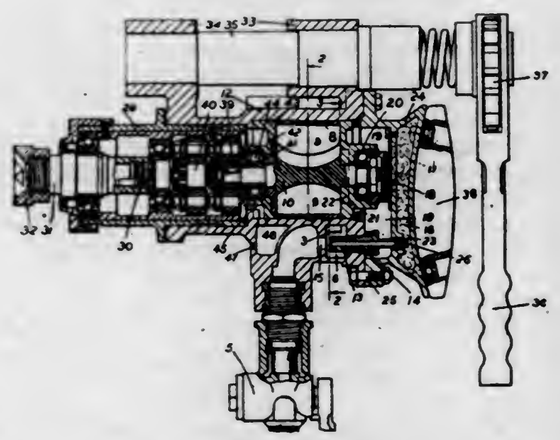
Ingle J. Lundal and Roy P. Robichaux, Chicago, Ill., assignors, by mesne assignments, of one-half to Cherry-Burrell Corporation, Chicago, Ill., a corporation of Delaware, and one-half to Sugar Creek Creamery Company, Danville, Ill., a corporation of Delaware

Application September 7, 1942, Serial No. 457,612

32 Claims. (Cl. 99—119)

20. The method of processing a creamery product containing milk fat in the dispersed phase comprising the steps of agitating the product in the presence of a controlled quantity of gas to secure the uniting of a substantial portion of the milk fat content thereof, attempering the agitated product to a desired separation temperature, and separating the attempered product to produce a separation product having a high milk fat content, whereby the percentage of milk fat remaining in other separated fractions of the product is substantially reduced.

2,407,613



COMPRESSED-AIR DRIVEN DRILL

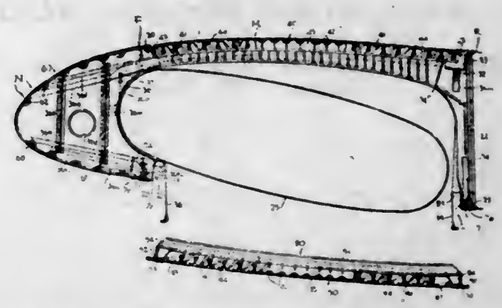
Reginald William Mann, Monkseaton, and Robert Clough Wiles, Newcastle-on-Tyne, England, assignors to Victor Products, (Wallsend) Limited, a British company

Application December 21, 1943, Serial No. 515,136

In Great Britain January 25, 1943

2 Claims. (Cl. 121—34)

1. In a rotary drill adapted to be driven by compressed air, the combination of a rotor with a plurality of radial slots therein, vanes adapted to slide radially of the rotor one in each slot thereof, a surrounding casing with end walls and an internal circumferential wall disposed eccentrically to said rotor and in which the vanes of the rotor are adapted to slide, an inlet for compressed air, a compartment associated with said casing adapted to contain an absorbent material soaked in lubricant fluid, an adjustable plug member associated with said compressed air inlet and adapted to be set in such a manner as to control the rate at which compressed air can enter said casing, a passage through said plug member leading to said compartment and adapted to by pass a small proportion of the compressed air into the said compartment, a passage leading from said compartment to a recess in one end wall of said surrounding casing adjacent the bases of said slots in said rotor in which said vanes are mounted to slide, said recess being so disposed as to permit compressed air soaked with lubricant from said compartment to enter said slots in the rotor, to press out said vanes radially in said slots, and to apply lubricant thereto as the rotor turns in its casing.



2,407,614

STRUCTURE FOR SUPPORTING FUEL TANKS IN AIRCRAFT WINGS

Robert Montgomery and George W. Schane, Philadelphia, Pa., assignors to The Budd Company, Philadelphia, Pa., a corporation of Pennsylvania

Application July 3, 1943, Serial No. 493,378

7 Claims. (Cl. 244—123)

1. A wing construction for carrying a removable tank, comprising, in combination, a nose section, a main section, a front spar-like structure between said sections, a rear spar behind the main section, nose ribs recessed on the rear end adjacent the front spar structure, a tank fitting the recessed ends of the nose ribs, the front spar structure being open intermediate its edges in the tank region to permit the front end of the tank to extend therethrough, one or more L-shaped rib-strut members secured to the front of the rear spar and extending across the top of the main section and being connected to the nose ribs at the front end, an upper skin blanket secured to said rib-strut members, the rear end of the tank fitting a shaped portion on the inside edge of the rib-strut members, straps carried by said nose ribs and said rib-strut members supporting said tank, and a closure secured in a tank-passing opening in the lower part of the wing.

2,407,615

FIRE-RESISTING COATING AND IMPREGNATING COMPOSITIONS

Cecil Frederic Moon, Cricklewood, London, and Norman Collinson-Jones, Hatch End, England

No Drawing. Application October 9, 1944, Serial No. 557,928. In Great Britain September 29, 1943

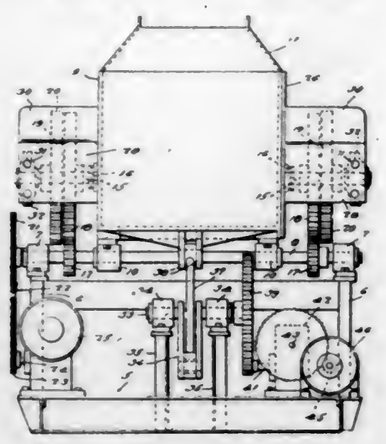
10 Claims. (Cl. 106—84)

1. A fire-resisting coating and impregnating composition comprising a thorough mixture of sodium silicate (and water); a filler selected from the group consisting of: china clay, pure talc, talc and French chalk, kaolin, asbestine, kalytes, Alusan; a setting agent consisting of concentrated oil of vitriol (and water), and a suspension agent consisting of acetic acid (and water).

2,407,616

METHOD OF DEODORIZATION

Guy W. Phelps and Howard C. Black, Chicago, Ill., assignors to Industrial Patents Corporation, Chicago, Ill., a corporation of Delaware

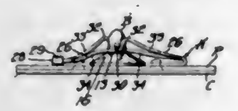


Application November 10, 1941, Serial No. 418,552

15 Claims. (Cl. 260—398.5)

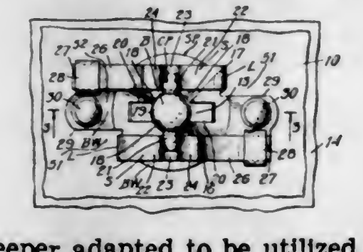
1. The process of deodorizing relatively non-volatile fatty materials containing free fatty

acids and odorous materials, which comprises passing steam through a body of said fatty material at a temperature of at least 200° F. under a vacuum and removing vapors in sufficient amount to substantially reduce the free fatty acids and to improve the odor of the liquid material while supplying heat to the vapors above said body of fatty material so as to maintain sufficient of the vapor zone at a temperature above the condensation point of the vapors to prevent condensate from returning to the liquid fatty material under treatment.



2,407,617
CURD MIXING AND KNEADING MACHINE
Paul Sartori, Plymouth, Wis.
Application February 23, 1944, Serial No. 523,604
2 Claims. (Cl. 259—104)

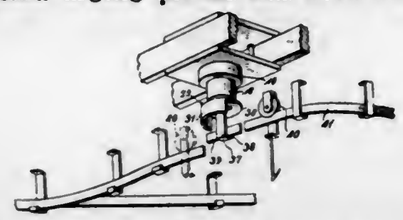
1. A curd mixing and kneading machine comprising a supporting base, a transverse horizontal driving shaft mounted above the base, a tub pivotally mounted upon said driving shaft for movement to upright operative position or tilted dumping position, a motor mounted on the base operatively connected to said driving shaft for rotatably driving the same, rotary paddles mounted in the tub and operatively connected to said driving shaft so as to permit tilting of the tub without disturbing the driving connections between said driving shaft and said paddles, and power means including a motor mounted on the base for tilting said tub and returning the same to upright position, said paddles having intergeared operating shafts projecting through opposite sides of the tub, and said driving connections including pinions on the driving shaft and gears on the shafts of one of the paddles and meshing with said pinions, laterally projecting guard plates fixed to the opposite sides of the tub and disposed forwardly and rearwardly of the paddle shafts, supporting rods connecting said guard plates, and bearings spanning and supported by said rods and having the outer ends of the paddle shafts journaled therein.



2,407,618
COWL FASTENER
Hyman R. Segal, New York, N. Y., assignor to Helen Segal, New York, N. Y.
Application January 26, 1944, Serial No. 519,744
18 Claims. (Cl. 24—221)

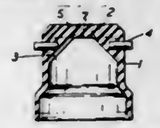
1. In a fastener for removably clamping a cover to a support, a keeper having a base plate adapted to be secured to said support, a hollow boss extending from said base plate and including an elongated opening having an expanded medial portion and communicating restricted portions, a spring plate characterizing spaced and resilient members including transversely alined subkeepers normally spaced from said boss and including terminal portions, resilient loop means integrally merged with said spring plate and base plate for normally hingedly spreading said spring plate away from said base plate, means for slidably guiding said terminal portions and to limit

the spread of said spring plate away from said base plate, and a bolt adapted to be carried by said cover for insertion into and through said boss and having a cross pin for insertion into and through said restricted portions and adapted to be pressed onto and over said members upon rotation of said bolt relative to said cover and support for flexing said members towards said boss and to removably interlock with said subkeepers.



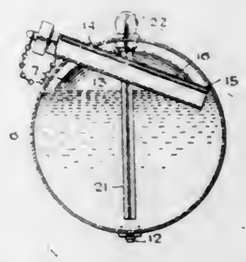
2,407,619
COWL FASTENER
Hyman R. Segal, New York, N. Y., assignor to Helen Segal, New York, N. Y.
Application February 14, 1945, Serial No. 577,841
9 Claims. (Cl. 24—221)

1. A keeper adapted to be utilized with a bolt having a cross pin, said keeper comprising a one piece spring plate including a bottom wall having a boss embodying an elongated slot including an enlarged portion and longitudinally disposed and alined restricted portions communicating with said enlarged portion, loop portions disposed at substantially alternate portions of said spring plate, spaced straps integral with said loop portions and extending in opposite directions and overlying said boss and comprising concaved means and including terminal means, bearing means on said bottom wall for slidably guiding said terminal means, said enlarged portion adapted to removably and rotatably receive said bolt and said alined restricted portions adapted to removably receive said cross pin for removably engaging the latter with said straps and for tensioning said straps prior to interlocking said cross pin with said concaved means, and stop means on said straps to limit rotational displacement of said cross pin.



2,407,620
SWITCH FOR TROLLEY RAILS
Granville Franklin Vinsant, Fort Worth, Tex., assignor to Industrial Patents Corporation, Chicago, Ill., a corporation of Delaware
Application June 16, 1944, Serial No. 540,619
1 Claim. (Cl. 104—97)

An automatic carcass turning device for an overhead trolley system for use in a slaughtering house comprising; a movable track segment adapted to communicate in an upper position with a track section leading into the segment and in a lower position with a track section leading away from the segment; a rotatable and substantially vertically movable mounting for supporting said segment; means to normally urge said segment toward its uppermost position; said urging and mounting means normally holding said segment in communication with said inleading track but being movable to said lower position to place said segment in communication with said outleading track when the lifting action of said urging means has been overcome as



when a trolley loaded with a meat cut is run onto the segment; and means to effect a predetermined degree of rotation of said mounting means as the segment moves between its upper and lower positions so that said trolleys carrying the meat cuts which trolleys are in turn carried on said segment, are turned through said degree of rotation while simultaneously being lowered on said segment from the inleading rail to the outleading rail.

2,407,621
ELECTRIC LAMP BASE OR CAP AND BONDING CEMENT THEREFOR
Henryk Weber, Bedford, England, assignor of two-thirds to Guaranty Plastic Caps Limited, London S. W. 1, England, a British company
Application January 11, 1943, Serial No. 472,057
In Great Britain December 4, 1941
4 Claims. (Cl. 176—32)

4. A one piece molded electric lamp base with integral insulator and skirt portions of high heat resisting properties not detrimentally affected by the heat to which they are subjected in the process of cementing such base to a lamp envelope, said base being formed from a thermosetting material obtained by heating together natural rosin, phenol, formaldehyde, and a heat resisting filler, the amount of rosin comprising up to 10% of the reacting constituents.

2,407,622
FUEL TANK
Merritt R. Wells, York, Pa.
Application November 1, 1943, Serial No. 508,589
2 Claims. (Cl. 220—86)

1. The combination of an elongated fuel tank adapted to be mounted on a vehicle with its longitudinal axis extending substantially horizontally; and a filling tube projecting into the interior of said tank, the tube being mounted in an inclined position with its axis substantially in the vertical plane which bisects said longitudinal axis at right angles thereto, said tube when viewed in plan extending substantially from side to side of the tank, and the lower inner end thereof lying in said plane and opening into the tank at a height such as to trap a substantial air volume in the upper portion of the tank when the latter is filled with liquid fuel supplied through the tube.

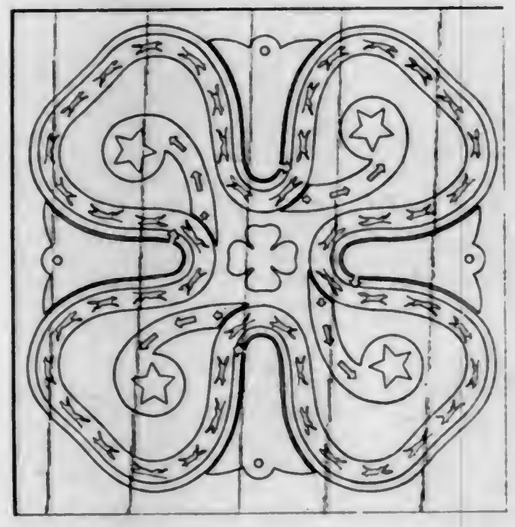
2,407,623
MODIFIED LINSEED OIL WRINKLE FINISH
William A. Waldie, Oakwood, Ohio, assignor to New Wrinkle, Inc., Dayton, Ohio, a corporation of Delaware
No Drawing. Original application January 31, 1942, Serial No. 429,116. Divided and this application November 6, 1942, Serial No. 464,937
6 Claims. (Cl. 106—2)

1. The method of making wrinkle varnish base consisting in heating glycerine with a dehydrating agent from the group consisting of sodium acetate and sodium hydroxide to approximately 500° F. for about 30 minutes, adding non-conjugated double-bonded drying oil and heating to approximately 500° to 520° F.; adding natural resin and heating to approximately 540° F., and blowing the reaction mixture with air at about 400° to 420° F.

DESIGNS

SEPTEMBER 10, 1946

145,557
DESIGN FOR A TABLE LAMP
Alfred I. Alter, Wilton, Conn., assignor to Alfred Alter Company, New York, N. Y., a co-partnership
Application October 12, 1945, Serial No. 122,799
Term of patent 3½ years
(Cl. D48—20)



The ornamental design for a table lamp, substantially as shown and described.

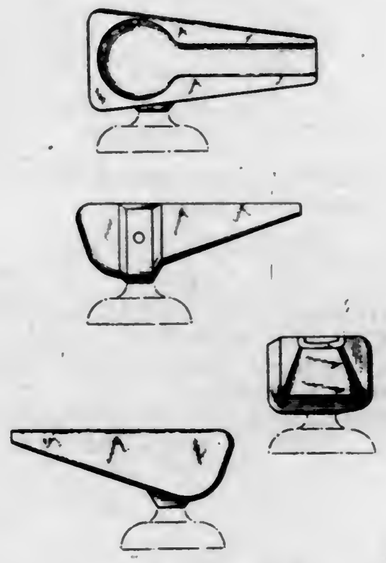
145,558
DESIGN FOR A BUTTON OR SIMILAR ARTICLE
Max Ballot, New York, N. Y.
Application March 23, 1946, Serial No. 127,864
Term of patent 3½ years
(Cl. D17—2)

The ornamental design for a button or similar article, substantially as shown.

145,559
DESIGN FOR A GAME BOARD
Jerome U. Bihl, San Marino, Calif.
Application August 20, 1945, Serial No. 121,508
Term of patent 3½ years
(Cl. D34—5)

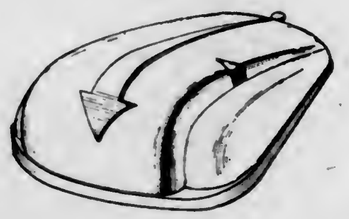
The ornamental design for a game board, as shown and described.

145,560
DESIGN FOR A HAT OR SIMILAR ARTICLE
Harry Bonn, Union City, N. J.
Application March 16, 1946, Serial No. 127,589
Term of patent 7 years
(Cl. D3—13)



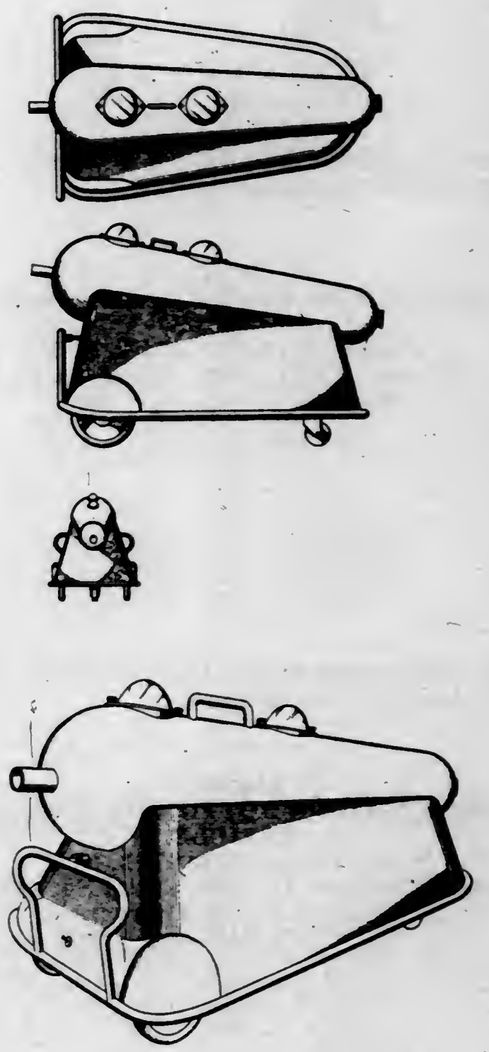
The ornamental design for a hat or similar article, substantially as shown.

145,561
DESIGN FOR A CLIP
Marcel Boucher, New York, N. Y.
Application December 27, 1945, Serial No. 125,048
Term of patent 7 years
(Cl. D45—19)



The ornamental design for a clip, substantially as shown.

145,562
DESIGN FOR A PIPE RECEPTACLE
Frederick C. Chambers, Chicago, Ill.
Application October 8, 1945, Serial No. 122,633
Term of patent 7 years
(Cl. D85—2)



The ornamental design for a pipe receptacle, as shown and described.

145,563
DESIGN FOR A CARPET SWEEPER CASING
Paul Dale, Chicago, Ill.
Application November 26, 1945, Serial No. 124,083
Term of patent 14 years
(Cl. D9—2)

The ornamental design for a carpet sweeper casing, substantially as shown and described.

145,564
DESIGN FOR A RUG AND UPHOLSTERY EXTRACTION MACHINE
Truman W. Doyle, Los Angeles, Calif.
Application October 2, 1945, Serial No. 122,470
Term of patent 7 years
(Cl. D9—2)

The ornamental design for a rug and upholstery extraction machine, substantially as shown.

145,565
DESIGN FOR A BUTTON OR SIMILAR ARTICLE
William Drell, New York, N. Y.
Application May 17, 1946, Serial No. 129,804
Term of patent 3½ years
(Cl. D17—2)

The ornamental design for a button or similar article, substantially as shown.

145,566
DESIGN FOR A BUTTON OR SIMILAR ARTICLE
William Drell, New York, N. Y.
Application May 17, 1946, Serial No. 129,805
Term of patent 3½ years
(Cl. D17—2)

The ornamental design for a button or similar article, substantially as shown.

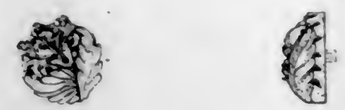
145,567
DESIGN FOR A BUTTON OR SIMILAR ARTICLE
William Drell, New York, N. Y.
Application May 17, 1946, Serial No. 129,806
Term of patent 3½ years
(Cl. D17—2)

The ornamental design for a button or similar article, substantially as shown.

145,568
DESIGN FOR A BUTTON OR SIMILAR ARTICLE
William Drell, New York, N. Y.
Application May 17, 1946, Serial No. 129,807
Term of patent 3½ years
(Cl. D17—2)

The ornamental design for a button or similar article, substantially as shown.

145,569
DESIGN FOR A BUTTON OR SIMILAR ARTICLE
William Drell, New York, N. Y.
Application May 31, 1946, Serial No. 130,265
Term of patent 3½ years
(Cl. D17—2)

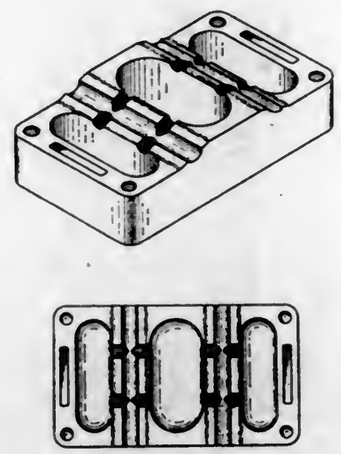


The ornamental design for a button or similar article, substantially as shown.

145,570
DESIGN FOR A BUTTON OR SIMILAR ARTICLE
William Drell, New York, N. Y.
Application May 31, 1946, Serial No. 130,266
Term of patent 3½ years
(Cl. D17—2)

The ornamental design for a button or similar article, substantially as shown.

145,571
DESIGN FOR A BUTTON OR SIMILAR ARTICLE
William Drell, New York, N. Y.
Application May 31, 1946, Serial No. 130,267
Term of patent 3½ years
(Cl. D17—2)



The ornamental design for a button or similar article, substantially as shown.

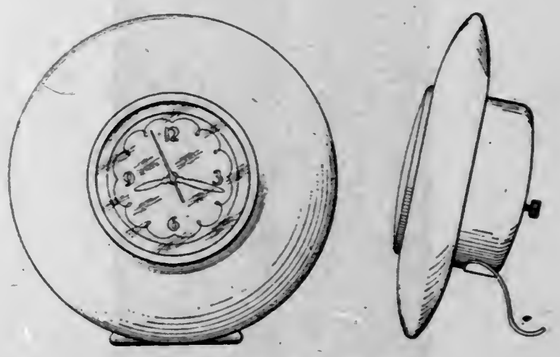
145,572
DESIGN FOR A FINGER RING
Barnett Esh, New York, N. Y., assignor to Weisfield & Goldberg, Inc., Seattle, Wash., a corporation of Delaware
Application April 17, 1945, Serial No. 119,068
Term of patent 14 years
(Cl. D45—10)

The ornamental design for a finger ring, as shown.

145,573
DESIGN FOR AN ASH TRAY OR SIMILAR ARTICLE
Samuel K. Frank, Wheeling, W. Va.
Application December 14, 1945, Serial No. 124,710
Term of patent 14 years
(Cl. D85—2)

The ornamental design for an ash tray or similar article, substantially as shown.

145,574
DESIGN FOR A COAT
Mario Frascino, New York, N. Y.
Application May 4, 1946, Serial No. 129,310
Term of patent 3½ years
(Cl. D3—4)

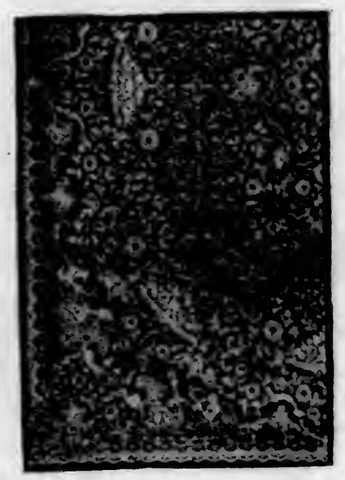


The ornamental design for a coat, substantially as shown.

145,575
DESIGN FOR A TOWEL OR SIMILAR ARTICLE
Isabel H. Hall, New York, N. Y.
Application May 17, 1946, Serial No. 129,796
Term of patent 3½ years
(Cl. D92—26)

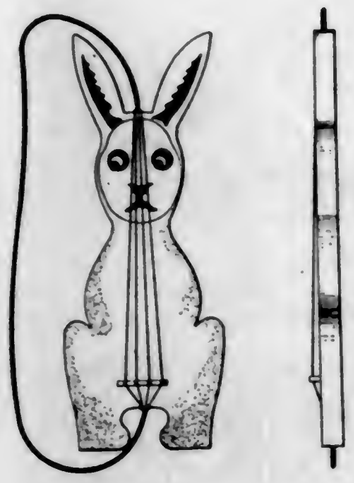
The ornamental design for a towel or similar article, substantially as shown and described.

145,576
DESIGN FOR A CLOCK
Michael Hallward, Swampscott, Mass.
Application January 18, 1946, Serial No. 125,698
Term of patent 14 years
(Cl. D42—7)



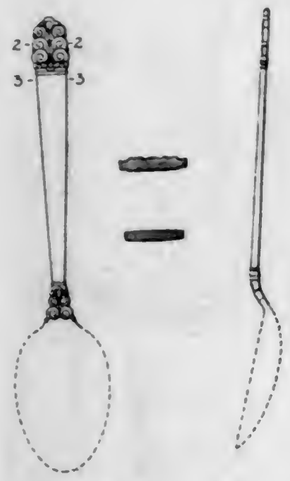
The ornamental design for a clock, substantially as shown.

145,577
DESIGN FOR A SHOE
John Henkel, Baltimore, Md., assignor to Dixon-Bartlett Company, a corporation of West Virginia
Application March 25, 1946, Serial No. 127,926
Term of patent 7 years
(Cl. D7—7)



The ornamental design for a shoe, substantially as shown and described.

145,578
DESIGN FOR A LACE TABLECLOTH
Howard Hooven, Doylestown, Pa., assignor to Quaker Lace Company, Philadelphia, Pa.
Application June 18, 1946, Serial No. 130,836
Term of patent 14 years
(Cl. D92—26)



The ornamental design for a lace tablecloth, substantially as shown and described.

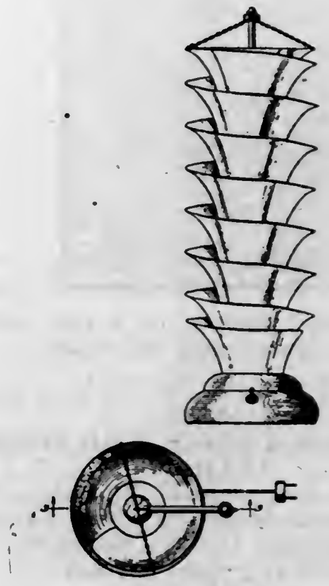
145,579
DESIGN FOR A TOY GUITAR
George F. Kearney, New York, N. Y.
Application December 19, 1945, Serial No. 124,864
Term of patent 3½ years
(Cl. D34—15)

The ornamental design for a toy guitar, as shown and described.

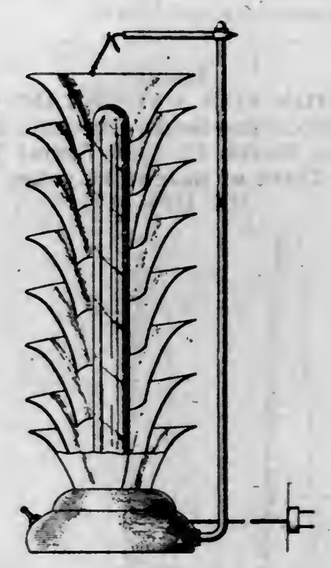
145,580
DESIGN FOR A SPOON OR OTHER ARTICLE OF FLATWARE
Alfred G. Kintz, Wallingford, Conn., assignor to The International Silver Company, Meriden, Conn., a corporation of Connecticut
Application April 6, 1946, Serial No. 128,345
Term of patent 14 years
(Cl. D54—12)

The ornamental design for a spoon or other article of flatware, substantially as shown and described.

145,581
DESIGN FOR A TOWEL OR SIMILAR ARTICLE
Albert Lange, New York, N. Y.
Application May 17, 1946, Serial No. 129,791
Term of patent 3½ years
(Cl. D92—26)

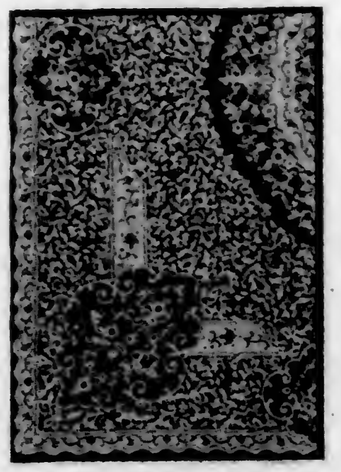


The ornamental design for a towel or similar article, substantially as shown and described.



145,582
DESIGN FOR A TOWEL OR SIMILAR ARTICLE
Albert Lange, New York, N. Y.
Application May 17, 1946, Serial No. 129,792
Term of patent 3½ years
(Cl. D92—26)

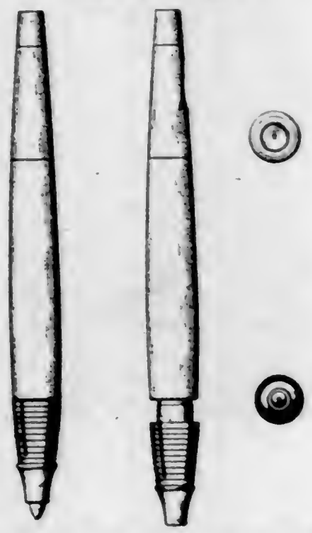
The ornamental design for a towel or similar article, substantially as shown and described.



145,583
DESIGN FOR AN ELECTRIC LAMP
John Lolli, Chicago Heights, Ill.
Application October 31, 1945, Serial No. 123,349
Term of patent 7 years
(Cl. D48—20)

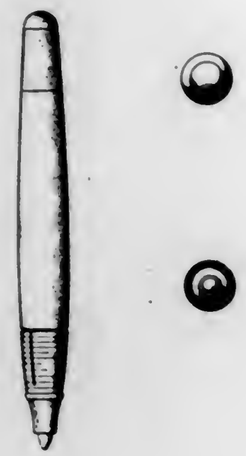
The ornamental design for an electric lamp, substantially as shown.

145,584
DESIGN FOR A LACE TABLECLOTH
Ferdinand P. Otto, Philadelphia, Pa., assignor to Quaker Lace Company, Philadelphia, Pa.
Application June 19, 1946, Serial No. 130,866
Term of patent 14 years
(Cl. D92—26)



The ornamental design for a lace tablecloth, substantially as shown and described.

145,585
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel Inc., New York, N. Y.
Application January 24, 1946, Serial No. 125,897
Term of patent 7 years
(Cl. D45—19)

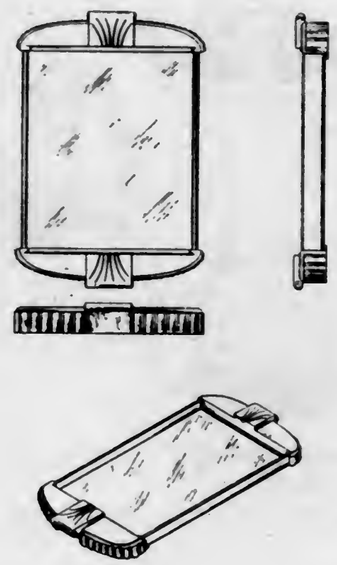


The ornamental design for a brooch or similar article, substantially as shown.

145,586
DESIGN FOR A FOUNTAIN PEN
Milton Reynolds, Chicago, Ill.
Application March 13, 1946, Serial No. 127,435
Term of patent 14 years
(Cl. D74—17)

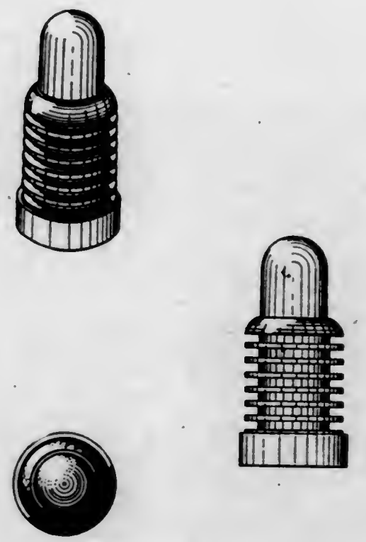
The ornamental design for a fountain pen, substantially as shown.

145,587
DESIGN FOR A FOUNTAIN PEN
Milton Reynolds, Chicago, Ill.
Application March 13, 1946, Serial No. 127,436
Term of patent 14 years
(Cl. D74—17)



The ornamental design for a fountain pen, substantially as shown.

145,588
DESIGN FOR A LAMP
Herbert Rubin, New York, N. Y.
Application August 21, 1945, Serial No. 121,551
Term of patent 14 years
(Cl. D48—20)

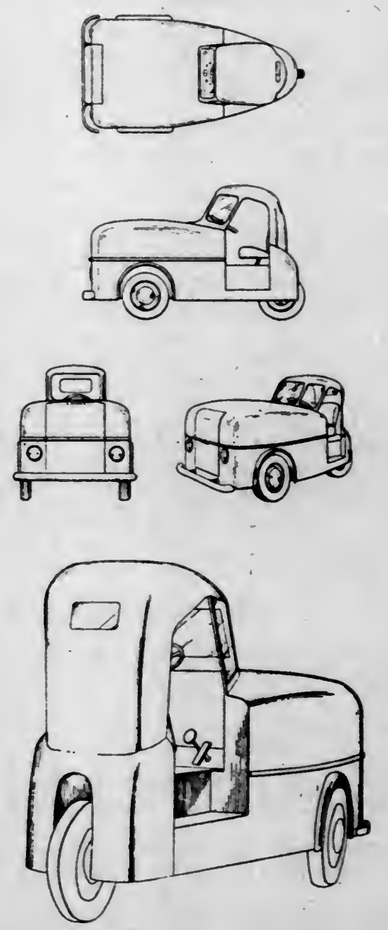


The ornamental design for a lamp, as shown.

145,589
DESIGN FOR A TRAY
Harry S. Scholl, Chicago, Ill., assignor to Consolidated Industries, Chicago, Ill., a partnership
Application February 24, 1945, Serial No. 118,238
Term of patent 3½ years
(Cl. D44—10)

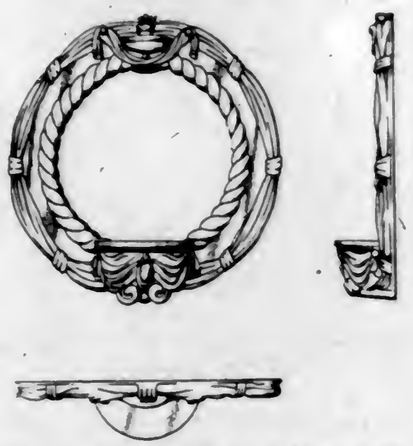
The ornamental design for a tray, as shown.

145,590
DESIGN FOR A CASING OR BODY FOR A LIGHTER OR THE LIKE
Leo Soklaski, Brooklyn, N. Y.
Application January 17, 1946, Serial No. 125,672
Term of patent 14 years
(Cl. D48—27)



The ornamental design for a casing or body for a lighter or the like, substantially as shown.

145,591
DESIGN FOR A PIN OR SIMILAR ARTICLE
Kurt Speck, Palisade Park, N. J., assignor to Jacques Kreisler Manufacturing Corporation, North Bergen, N. J.
Application August 17, 1945, Serial No. 121,459
Term of patent 7 years
(Cl. D45—19)



The ornamental design for a pin or similar article, substantially as shown.

145,592
DESIGN FOR AN AUTOMOTIVE DELIVERY VEHICLE
William S. Tandler and Ferdinand A. de Weiss, New York, N. Y., assignors to Industrial Scientific Company, New York, N. Y.
Application October 13, 1945, Serial No. 122,810
Term of patent 14 years
(Cl. D14—3)

The ornamental design for an automotive delivery vehicle, as shown.

145,593
DESIGN FOR A FRAME FOR MIRRORS, PICTURES, AND THE LIKE
Lily Mark Tolpo, Chicago, Ill., assignor to Plasto Manufacturing Company, Chicago, Ill., a partnership composed of Joseph Borowitz and Louis Hochstadter
Application May 4, 1945, Serial No. 119,399
Term of patent 3½ years
(Cl. D29—20)

The ornamental design for a frame for mirrors, pictures, and the like, as shown.

145,594
DESIGN FOR A TOY FIGURE
John H. Wright, Philadelphia, Pa.
Application June 8, 1946, Serial No. 130,550
Term of patent 14 years
(Cl. D34—4)

The ornamental design for a toy figure, substantially as shown.

LIST OF TRADE-MARK APPLICANTS

PUBLISHED FOR OPPOSITION

[Act of Feb. 20, 1905, Sec. 6, as amended Mar. 2, 1907]

A. C. Mfg. Co.: *See*—
Aircraft Components, Inc.

Abbott Laboratories, North Chicago, Ill. Sedative, analgesic, and antipyretic compound. Serial No. 494,804; Sept. 10. Class 6.

Accessocraft Products Co., New York, N. Y. Plastic plated jewelry. Serial No. 492,672; Sept. 10. Class 28.

Aero-Art: *See*—
Frantz Industries.

Aircraft Components, Inc., now by change of name A. C. Mfg. Co., Van Nuys, Calif. Combined charcoal-fired broiler and serving cart. Serial No. 473,493; Sept. 10. Class 34.

Alice Frock Co., San Francisco, Calif. Women's and children's wearing apparel. Serial No. 497,912; Sept. 10. Class 39.

Allen Manufacturing Co., Chicago, Ill. Women's, misses' and juniors' sportswear. Serial No. 498,367; Sept. 10. Class 39.

Alosium Products Company, Pittsburgh, Pa. Clays that are suitable for use in tooth paste, lotions, face pacts, etc. Serial No. 489,577; Sept. 10. Class 1.

Alpha-Craft Company: *See*—
Meyers, Louis G.

American Lens Company, Inc., New York, N. Y. Objective lenses and reflectors. Serial No. 483,839; Sept. 10. Class 26.

American Oil Company, The, Baltimore, Md. Automobile storage batteries. Serial No. 496,944; Sept. 10. Class 21.

Anabolic Food Products, Inc., Glendale, Calif. Multivitamin perles. Serial No. 496,419; Sept. 10. Class 6.

Asher & Boretz, Inc., New York, N. Y. Woven cotton fabrics. Serial Nos. 485,852–3; Sept. 10. Class 42.

Associated Products, Inc., Chicago, Ill. Face powder, face makeup in liquid form, creams for the hands and face, etc. Serial No. 498,482; Sept. 10. Class 6.

Associated Products, Inc., Chicago, Ill. Face powders, face makeup in liquid form, creams for the hands and face, etc. Serial No. 498,484; Sept. 10. Class 6.

Bachmann, Eric R., Jackson Heights, Long Island, N. Y. Smoking pipe cleaning tool. Serial No. 495,534; Sept. 10. Class 8.

Bass, Gottlieb, doing business as Sapo Elixir Chemical Company, St. Louis, Mo. Rubbing massage compound, hair oil, and brilliantine. Serial No. 492,888; Sept. 10. Class 6.

Bay State Optical Company, Attleboro, Mass. Ophthalmic mountings. Serial Nos. 494,007–8; Sept. 10. Class 26.

Bee Chemical Company, Chicago, Ill. Grinding chemicals, additives and cutting chemicals. Serial No. 491,391; Sept. 10. Class 6.

Bennett, M. J., & Co., New York, N. Y. Insecticide. Serial No. 497,770; Sept. 10. Class 6.

Berman, S. A., doing business as Frozen Dough Products of America, Minneapolis, Minn. Frozen dough. Serial No. 497,771; Sept. 10. Class 46.

Birdsall, Robert E., Fontana, Wis. Box and crate shooks, and knockdown and assembled wooden and metal boxes, etc. Serial No. 455,884; Sept. 10. Class 2.

Blue Ribbon Products Company, San Francisco, Calif. Washing and cleaning compound. Serial No. 496,497; Sept. 10. Class 4.

Bonney Forge and Tool Works, Allentown, Pa. Tool boxes. Serial No. 482,269; Sept. 10. Class 2.

Bugler Brand and Agencies Ltd., The, Vancouver, B. C., Canada. Wines. Serial No. 495,537; Sept. 10. Class 47.

Bugler Brand and Agencies Ltd., The, Vancouver, B. C., Canada. Beer. Serial No. 495,538; Sept. 10. Class 48.

Caplan, Leo, Detroit, Mich. Lawn edgers. Serial No. 496,539; Sept. 10. Class 23.

Carnahan, William G., Blaine, Tenn. Packaged prepared food. Serial No. 497,591; Sept. 10. Class 46.

Carosel Parfum Co.: *See*—
Gordon, Marvin.

Carrel, Ltd., Chicago, Ill. Cosmetic preparations. Serial No. 494,177; Sept. 10. Class 6.

Cenicola, John M., Los Angeles, Calif. Ointments. Serial No. 496,765; Sept. 10. Class 6.

Certified Dry Mat Corporation, New York, N. Y. Matrix, dry mats and flongs. Serial No. 496,949; Sept. 10. Class 50.

Charvet & Fils, Inc., New York, N. Y. Neckties, outer shirts, sweaters, etc. Serial Nos. 488,188–89; Sept. 10. Class 39.

Chemical Coating Materials Company, Belleville, N. J. Finishing compositions comprising lacquer and resin-mixed emulsions. Serial No. 495,011; Sept. 10. Class 6.

Coffing Hoist Company, Danville, Ill. Hand operable endless chain powered chain hoists. Serial No. 471,301; Sept. 10. Class 23.

Colgate-Palmolive-Peet Company, Jersey City, N. J. Methyl ester of cocoanut oil fatty acids. Serial No. 493,659; Sept. 10. Class 6.

Colgate-Palmolive-Peet Company, Jersey City, N. J. Denture cleanser and soaps, etc. Serial No. 493,660; Sept. 10. Class 4.

Colonial Dames Company, Ltd., Los Angeles, Calif. Soap. Serial No. 474,654; Sept. 10. Class 4.

York Pharmacal Company, St. Louis, Mo. Liquid insecticide. 423,803; Sept. 10; Serial No. 493,093; published June 4, 1946. Class 6.
Zeuzius, Matthew J., Los Angeles, Calif. Certain fresh fruits and vegetables. 217,603; renewed Sept. 7, 1946. O. G. Sept. 10. Class 46.

CLASSIFIED LIST OF TRADE-MARKS REGISTERED

CLASS 1

Bones, Dried. Swift & Company. 216,536; renewed Aug. 10, 1946. O. G. Sept. 10.
Boots and shoes, Leather. Rice & Hutchins, Incorporated. 52,000; re-renewed May 1, 1946. O. G. Sept. 10.
Coal. Clark Coleman Coal & Coke Co. 215,753; renewed July 27, 1946. O. G. Sept. 10.
Facings or blacking, Foundry. J. S. McCormick Company. 51,845; re-renewed Apr. 24, 1946. O. G. Sept. 10.
Facings or blacking, Foundry. J. S. McCormick Company. 51,892; re-renewed Apr. 24, 1946. O. G. Sept. 10.
Leather. Ohio Leather Company. 423,897; Sept. 10.

CLASS 2

Boxes, Corrugated-pasteboard. Strohmeyer & Arpe Company. 218,867; renewed Oct. 5, 1946. O. G. Sept. 10.
Cases, cartons, and boxes, Fiber shipping. Ideal Corrugated Box Company. 218,951; renewed Oct. 5, 1946. O. G. Sept. 10.

CLASS 3

Handbags. Marsac Handbag Studio. 423,894; Sept. 10.
Trunks, dress trunks, cabin or steamer trunks, etc., Wardrobe. Oshkosh Trunk Company. 214,178; renewed June 15, 1946. O. G. Sept. 10.

CLASS 5

Mucilage, liquid adhesive starch gums, and liquid adhesive sizings and pastes. Arabol M'f'g Co. 56,407; re-renewed Sept. 25, 1946. O. G. Sept. 10.

CLASS 6

Additive for pickling baths. Waverly Petroleum Products Company. 423,755; Sept. 10; Serial No. 490,092; published June 18, 1946.
Ammonia and laundry bluing. Crescent Bottling Works. 423,872; Sept. 10; Serial No. 497,782; published June 18, 1946.
Ammonia, javelle water. Crescent Bottling Works. 218,490; renewed Sept. 28, 1946. O. G. Sept. 10.
Anaesthetic, Surface. Proco-Sol Chemical Co., Inc. 423,694; Sept. 10; Serial No. 480,621; published June 11, 1946.
Antibacterial preparations. E. R. Squibb & Sons. 423,690; Sept. 10; Serial No. 480,092; published June 4, 1946.
Bath compounds, Bubble. G. J. Banta. 423,696; Sept. 10; Serial No. 481,041; published June 11, 1946.
Bath salts. J. E. Bennett. 212,492; renewed May 4, 1946. O. G. Sept. 10.
Bubble forming solution. Independence Laboratories, Inc. 423,835; Sept. 10; Serial No. 494,684; published June 18, 1946.
Cadmium plating salts, Material for. Udylite Process Company. 219,266; renewed Oct. 12, 1946. O. G. Sept. 10.
Capsules, Gelatin. Schratz Products. 423,721; Sept. 10; Serial No. 486,070; published June 11, 1946.
Carbon dioxide. Liquid Carbonic Corporation. 423,771; Sept. 10; Serial No. 491,346; published June 11, 1946.
Catalysts, Hydrogenation. E. F. Drew & Co., Inc. 423,762; Sept. 10; Serial No. 490,749; published June 11, 1946.
Chemical composition. General Aniline & Film Corporation. 423,728; Sept. 10; Serial No. 487,128; published June 18, 1946.
Chemical composition for removing rust scale and tarnish from metals. Waverly Petroleum Products Company. 423,731; Sept. 10; Serial No. 487,878; published June 4, 1946.
Chemical compounds. Channell Chemical Company. 423,864; Sept. 10; Serial No. 497,068; published June 18, 1946.
Chemical for use in the dyeing of textiles, etc. Calco Chemical Company. 216,522; renewed Aug. 10, 1946. O. G. Sept. 10.
Chemical materials and compositions. Poor & Company. 423,763; Sept. 10; Serial No. 490,766; published June 18, 1946.
Chemical preparation, Liquid. R. G. Lamoureux. 423,773; Sept. 10; Serial No. 491,485; published June 18, 1946.
Chemicals. W. G. Barcroft. 423,891; Sept. 10.
Cologne, After shave. E. Casselman. 423,697; Sept. 10; Serial No. 481,177; published Aug. 21, 1945.
Cologne and dusting powder. Charles of The Ritz, Inc. 423,853; Sept. 10; Serial No. 495,789; published June 11, 1946.
Compound usable as a liniment and an inhalant. Universal Drug Products, Inc. 423,707; Sept. 10; Serial No. 483,291; published June 11, 1946.
Cosmetics. Farel Destin, Inc. 423,865; Sept. 10; Serial No. 497,075; published June 4, 1946.
Cosmetics for tinting the fingernails, lips, and cheeks. Dr. J. Parker Pray Company, Limited. 56,749; re-renewed Oct. 16, 1946. O. G. Sept. 10.
Cough syrup, chest rub, laxative, etc. Pinex Co. 423,766; Sept. 10; Serial No. 491,028; published June 18, 1946.
Cream, Face. First Lady Company, Inc. 423,873; Sept. 10; Serial No. 498,219; published June 11, 1946.
Creams, Face. F. F. Ingram. 52,177; re-renewed May 1, 1946. O. G. Sept. 10.
Creams, tone cream, night, cream, Facial cleansing. Doleith, Inc. 423,898; Sept. 10.
Dentifrices in powder and paste form. Société "Coupès," Société À Responsabilité Limitée. 423,738; Sept. 10; Serial No. 488,836; published June 4, 1946.
Deodorants. House of Westmore, Inc. 423,743; Sept. 10; Serial No. 488,999; published June 18, 1946.
Developing and fixing chemicals, Photographic. Rectigraph Company. 218,544; renewed Sept. 28, 1946. O. G. Sept. 10.
Ear drops. Doho Chemical Corporation. 423,810; Sept. 10; Serial No. 493,331; published June 11, 1946.
Enzymic digest of protein. Mead Johnson & Company. 423,772; Sept. 10; Serial No. 491,421; published June 11, 1946.
Exterminator of rats and mice. E. J. Lizotte. 423,817; Sept. 10; Serial No. 493,927; published June 18, 1946.
Eye drops. Whitehall Pharmacal Company. 423,856; Sept. 10; Serial No. 496,055; published June 11, 1946.
Face powders, toilet waters, rouges, etc. Leigh Chemist, Inc. 219,122; renewed Oct. 12, 1946. O. G. Sept. 10.
Flea and louse powder, Veterinary. Lederle Laboratories, Inc. 423,869; Sept. 10; Serial No. 497,485; published June 4, 1946.
Fungicide for addition to a varnish, paint or lacquer. Mer-Q-Ree, Incorporated. 423,688; Sept. 10; Serial No. 478,686; published June 5, 1945.
Gas, Highly refined. Acetogen Associates, Inc. 423,736; Sept. 10; Serial No. 488,438; published Feb. 12, 1946.
Hair rinse. C. V. Horvath. 423,793; Sept. 10; Serial No. 492,379; published June 11, 1946.
Hemostatic, astringent, blood-pressure raising and stimulating preparations. Parke Davis & Co. 53,934; re-renewed June 12, 1946. O. G. Sept. 10.
Insecticide. A. Bromm & Company. 423,689; Sept. 10; Serial No. 478,850; published Apr. 3, 1945.
Insecticide. Griffith Laboratories, Inc. 423,839; Sept. 10; Serial No. 494,904; published June 11, 1946.
Insecticide. Toledo Rex Spray Company. 218,040; renewed Sept. 21, 1946. O. G. Sept. 10.
Insecticide, Liquid. York Pharmacal Company. 423,803; Sept. 10; Serial No. 493,093; published June 4, 1946.
Insecticide repellent. R. M. Hollingshead Corporation. 423,866; Sept. 10; Serial No. 497,096; published June 11, 1946.
Insecticides. I. Lower. 423,782; Sept. 10; Serial No. 491,720; published June 11, 1946.
Lead oxides, mixture of lead oxides and metallic lead. National Lead Company. 423,844; Sept. 10; Serial No. 495,087; published June 18, 1946.
Leak compound, chemical radiator cleaner, chemical radiator rust resistor, etc, Radiator stop. Sun Oil Company. 423,859; Sept. 10; Serial No. 496,347; published June 4, 1946.
Liniment. Minards' Liniment Manufacturing Company. 52,210; re-renewed May 1, 1946. O. G. Sept. 10.
Liniment and salve. M. G. Tolman. 423,805; Sept. 10; Serial No. 493,228; published June 18, 1946.
Lipstick. R. Hudnut. 423,717; Sept. 10; Serial No. 485,219; published Oct. 30, 1945.
Lipstick, rouge, face powder, etc. Impression Products. 423,769; Sept. 10; Serial No. 491,204; published June 11, 1946.
Liquid inhalant. Macia Corporation. 423,893; Sept. 10.
Lotion, After-shave. Affiliated Retailers, Inc. 423,841; Sept. 10; Serial No. 494,997; published June 18, 1946.
Lotion, Antiseptic suntan. McKesson & Robbins, Incorporated. 423,847; Sept. 10; Serial No. 495,179; published June 11, 1946.
Lotion, cologne, hair tonic, etc., Face. Hickok Manufacturing Company. 423,723; Sept. 10; Serial No. 486,201; published June 18, 1946.
Lotions, Hand and face. J. Cochran. 423,882; Sept. 10.
Luminescent chemicals. E. I. du Pont de Nemours and Company. 423,770; Sept. 10; Serial No. 491,244; published June 11, 1946.
Medical compounds. G. C. Hanford Manufacturing Co. 51,073; re-renewed Apr. 3, 1946. O. G. Sept. 10.
Medicinal preparation. D. F. Clarke. 423,900; Sept. 10.
Medicinal preparation. Endo Products Inc. 423,824; Sept. 10; Serial No. 494,316; published June 11, 1946.
Medicinal preparation. John T. Milliken & Company. 218,391; renewed Sept. 28, 1946. O. G. Sept. 10.
Medicinal preparation. Upjohn Company. 423,726; Sept. 10; Serial No. 486,441; published Nov. 27, 1945.
Medicinal preparation. Upjohn Company. 423,860; Sept. 10; Serial No. 496,586; published June 11, 1946.
Medicinal preparation. Upjohn Company. 423,867; Sept. 10; Serial No. 497,145; published June 18, 1946.
Medicinal preparation. Vital Foods Corporation. 423,836; Sept. 10; Serial No. 494,727; published June 11, 1946.

Medicinal preparation. Vitamins & Pharmaceuticals, Inc. 423,863; Sept. 10; Serial No. 496,936; published June 11, 1946.
Medicinal preparation. Vitamins & Pharmaceuticals, Inc. 423,871; Sept. 10; Serial No. 497,585; published June 11, 1946.
Medicinal preparations. Bristol-Myers Company. 53,030; re-renewed May 22, 1946. O. G. Sept. 10.
Medicine made mainly of herbs. E. and H. Densmore. 28,958; re-renewed Oct. 6, 1946. O. G. Sept. 10.
Medicines, Certain named. Bristol-Myers Company. 51,922; re-renewed Apr. 24, 1946. O. G. Sept. 10.
Menthol stick. O. Martens. 423,851; Sept. 10; Serial No. 495,678; published June 18, 1946.
Mineral oil, U. S. P. mineral white. L. Sonneborn Sons, Inc. 423,715; Sept. 10; Serial No. 485,163; published Dec. 4, 1945.
Multivitamin preparations. Winthrop Chemical Company, Inc. 423,719; Sept. 10; Serial No. 485,740; published Nov. 6, 1945.
Ointment. Sharpe & Dohme, Incorporated. 423,712; Sept. 10; Serial No. 484,370; published Nov. 20, 1945.
Ointment for itching and inflamed piles, Antiseptic. E. J. Moore Sons, Inc. 423,798; Sept. 10; Serial No. 492,937; published June 4, 1946.
Ointments, Analgesic. Smith-Dorsey Company. 423,837; Sept. 10; Serial No. 494,870; published June 18, 1946.
Organic chemical material. B. F. Goodrich Company. 423,905; Sept. 10.
Penicillin. Wyeth Incorporated. 423,870; Sept. 10; Serial No. 497,519; published June 4, 1946.
Perfume and toilet water. Byck Bros. & Company, Incorporated. 423,888; Sept. 10.
Perfume, lipstick, face powder, etc. Consolidated Cosmetics. 423,713; Sept. 10; Serial No. 484,393; published Jan. 8, 1946.
Perfume, toilet water, eau de cologne, etc. J. F. May. 423,686; Sept. 10; Serial No. 477,026; published Apr. 10, 1945.
Perfumery, extracts, and certain toilet preparations. Caron Corporation. 217,081; renewed Aug. 24, 1946. O. G. Sept. 10.
Perfumes and toilet waters. Parfum L'Orle, Inc. 423,827–8; Sept. 10; Serial Nos. 494,516–17; published June 11, 1946.
Perfumes and toilet waters. Parfum L'Orle, Inc. 423,829; published June 11, 1946.
Perfumes, toilet waters, and cosmetic creams. Lentheric, Incorporated. 423,804; Sept. 10; Serial No. 493,200; published June 11, 1946.
Perfumes, toilet creams, eau de cologne, etc. Myrurgia, S. A. 423,885; Sept. 10.
Perfumes, toilet waters, eau de colognes, etc. Golden Arrow Toiletries. 423,764; Sept. 10; Serial No. 490,815; published June 11, 1946.
Perfumes, toilet waters, face creams, etc. La Salle Company. 213,754; renewed June 1, 1946. O. G. Sept. 10.
Perfumes, toilet waters, rouge, etc. Lanselle Parfumeur (S. A. R. L.). 423,788; Sept. 10; Serial Nos. 492,143–4; published June 4, 1946.
Perfumes, toilet waters, rouge, etc. Lanselle Parfumeur (S. A. R. L.). 423,790; Sept. 10; Serial No. 492,145; published June 18, 1946.
Pharmaceutical preparation. Vitamix Corporation. 423,791; Sept. 10; Serial No. 492,297; published June 11, 1946.
Pharmaceutical products. Chemical Works. 218,376; renewed Sept. 28, 1946. O. G. Sept. 10.
Potassium sodium ferricyanide and sodium ferricyanide. American Cyanamid & Chemical Corporation. 423,848; Sept. 10; Serial No. 495,265; published June 18, 1946.
Powder, dusting powder, toilet water, etc., Face. Coty, Inc. 423,742; Sept. 10; Serial No. 488,993; published June 11, 1946.
Powder, dusting powder, toilet water, etc., Face. Coty, Inc. 423,780; Sept. 10; Serial No. 491,551; published June 11, 1946.
Powder, dusting powder, toilet water, etc., Face. Coty, Inc. 423,781; Sept. 10; Serial No. 491,553; published June 11, 1946.
Powder, face makeup in liquid form, creams for the hands and face, etc., Face. Associated Products, Inc. 423,852; Sept. 10; Serial No. 495,716; published June 18, 1946.
Powder, liquid corn remover, and ointment, Medicated foot. Universal Drug Products, Inc. 423,708; Sept. 10; Serial No. 483,292; published June 11, 1946.
Preparation for external application to the skin, etc. E. G. Mergenthaler. 423,855; Sept. 10; Serial No. 495,902; published June 4, 1946.
Preparation for the treatment of coughs and colds. J. D. Kaplan. 218,538; renewed Sept. 28, 1946. O. G. Sept. 10.
Preparation for the treatment of coughs due to colds, etc. C. A. Lesiak. 423,816; Sept. 10; Serial No. 493,926; published June 4, 1946.
Preparation for treating athlete's foot and ringworm. T. Cook. 423,706; Sept. 10; Serial No. 483,260; published June 4, 1946.
Preparation for use in treatment of water and steam. Elgin Softener Corporation. 423,751; Sept. 10; Serial No. 489,506; published June 18, 1946.
Protein hydrolysate. Burroughs Wellcome & Co. (U. S. A.) Inc. 423,842; Sept. 10; Serial No. 495,008; published June 11, 1946.
Remedies for stomach, intestinal, and bowel disorders. E. J. Hart & Co., Ltd. 52,250; re-renewed May 1, 1946. O. G. Sept. 10.
Rouge, face powder, perfume, etc. L. Friedberg. 423,725; Sept. 10; Serial No. 486,407; published Dec. 25, 1945.
Salts, Nickel. Hanson & Van Winkle Co. 51,930; re-renewed Apr. 24, 1946. O. G. Sept. 10.
Salve. F. C. Evans. 423,826; Sept. 10; Serial No. 494,437; published June 11, 1946.
Sedative. R. J. Moran Co. 423,858; Sept. 10; Serial No. 496,259; published June 11, 1946.
Shampoo, bubble bath, insect powder, etc. F. Koenigsberger. 423,685; Sept. 10; Serial No. 476,770; published Mar. 6, 1945.
Soap, Dog. Polk Miller Products Corporation. 218,757; renewed Oct. 5, 1946. O. G. Sept. 10.
Sodium chloride, photographic fixing baths and fixing bath replenishers, etc. Polaroid Corporation. 423,776; Sept. 10; Serial No. 491,502; published June 18, 1946.
Solvents and preparations adapted for use in internal combustion engines, etc. F. J. Fandrei. 423,795; Sept. 10; Serial No. 492,700; published June 4, 1946.
Spray, Insect. National Chemical & Metal Company. 423,845–6; Sept. 10; Serial Nos. 495,148–9; published June 18, 1946.
Spray, Moth. National Chemical & Metal Company. 423,868; Sept. 10; Serial No. 497,187; published June 18, 1946.
Starch, Laundry. A. E. Staley Manufacturing Company. 423,760; Sept. 10; Serial No. 490,339; published June 4, 1946.
Sulphur. J. W. Woolfolk Company, Inc. 216,506; renewed Aug. 10, 1946. O. G. Sept. 10.
Suppositories. Dr. Pierre Chemical Co. 215,128; renewed July 13, 1946. O. G. Sept. 10.
Tablets, Cold. J. F. Simpson. 423,823; Sept. 10; Serial No. 494,241; published June 11, 1946.
Tablets containing certain drugs. Haack Bros. Manufacturing Pharmacists, Inc. 423,784; Sept. 10; Serial No. 491,828; published June 4, 1946.
Tablets, Milk of magnesia. Affiliated Retailers, Inc. 423,840; Sept. 10; Serial No. 494,995; published June 18, 1946.
Tea. P. C. Larkin. 28,962; re-renewed Oct. 6, 1946. O. G. Sept. 10.
Thyroid-choline-thiamine preparation. Arnold Palm. 423,890; Sept. 10.
Toilet preparations. Rabin Company. 423,861; Sept. 10; Serial No. 496,923; published June 4, 1946.
Toilet preparations, perfumery, and cosmetics. Les Parfums de Dana, Inc. 423,843; Sept. 10; Serial No. 495,045; published June 18, 1946.
Tonic, General. E. J. Hart & Co., Ltd. 213,757; renewed June 1, 1946. O. G. Sept. 10.
U. S. P. light medicinal white mineral oil. L. Sonneborn Sons, Inc. 423,716; Sept. 10; Serial No. 485,170; published Dec. 4, 1945.

CLASS 7

Cordage. Thomas Jackson & Son Co. 423,899; Sept. 10.

CLASS 12

Flooring, Composition. Marine Decking & Supply Co. 218,502; renewed Sept. 28, 1946. O. G. Sept. 10.
Lime, Hydrated. Rockland & Rockport Lime Corporation. 217,504; renewed Aug. 31, 1946. O. G. Sept. 10.
Materials, Certain named. Newport Rolling Mill Co. 218,427; renewed Sept. 28, 1946. O. G. Sept. 10.
Roofing, Asphalt. Southern States Iron Roofing Company. 423,910; Sept. 10.
Roofing, sheathing, and building paper. Barrett Manufacturing Company. 55,556; re-renewed Aug. 14, 1946. O. G. Sept. 10.
Roofing, sheathing, waterproofing and building felt. Barrett Manufacturing Company. 55,919; re-renewed Aug. 21, 1946. O. G. Sept. 10.

CLASS 13

Nozzles and valves, Flexible, combined. Heckethorn Manufacturing & Supply Co. 423,880; Sept. 10.
Wire cloth; and wire guards and wire screens, Certain. Audubon Wire Cloth Company. 211,243; renewed Apr. 6, 1946. O. G. Sept. 10.

CLASS 14

Metal leaf, Package,rolls of gold, silver, aluminium, composition, or other. W. H. Coe Manufacturing Company. 52,117; re-renewed May 1, 1946. O. G. Sept. 10.
Metals, Alloy of. Dunham Company. 212,107; renewed Apr. 27, 1946. O. G. Sept. 10.
Sheets, Galvanized-steel. American Sheet and Tin Plate Company. 213,269; renewed May 25, 1946. O. G. Sept. 10.

CLASS 15

Fluids used as a fluid coupling. Bell Company, Inc. 423,830; Sept. 10; Serial No. 494,538; published June 11, 1946.

Fluids use as a fluid coupling. Bell Company. 423,906; Sept. 10.
Gasoline, lubricating oils and greases. Cities Service Oil Company. 218,449; renewed Sept. 28, 1946. O. G. Sept. 10.
Lubricant. R. J. Bell. 423,700; Sept. 10; Serial No. 482,359; published June 11, 1946.
Oil added to motor lubricating oil, Special. R. J. Bell. 423,701; Sept. 10; Serial No. 482,360; published June 11, 1946.
Oils and automobile lubricants, Lubricating. Beacon Oil Company. 216,915; renewed Aug. 24, 1946. O. G. Sept. 10.
Petroleum products. Beacon Oil Company. 216,011; renewed Aug. 3, 1946. O. G. Sept. 10.
Spirits, Motor. Chemical Research Syndicate, Ltd. 217,534; renewed Aug. 31, 1946. O. G. Sept. 10.

CLASS 16

Paint, Anticorrosive and antifouling. Rahtjen's American Composition Company. 55,908; re-renewed Aug. 21, 1946. O. G. Sept. 10.

Rum. Compania Licorera de Matanzas, S. A. 423,684; Sept. 10; Serial No. 475,387; published June 18, 1946.
Whiskey and brandy. Bernheim Distilling Company. 423,753; Sept. 10; Serial No. 489,789; published June 11, 1946.
Whisky. Rosenfield Bros. & Co. 56,466; re-renewed Sept. 25, 1946. O. G. Sept. 10.

CLASS 50

Art ware. Cordelia China Company. 423,838; Sept. 10; Serial No. 494,890; published June 11, 1946.
Closures, Laminated paper. Standard Cap and Seal Corporation. 423,747; Sept. 10; Serial No. 489,291; published June 11, 1946.
Covers, Transparent article protective. A. L. Siegel Co., Inc. 423,691; Sept. 10; Serial No. 480,197; published June 11, 1946.
Letters, Plastic. New England Advertising Inc. 423,704; Sept. 10; Serial No. 482,757; published June 11, 1946.
Milk caps, Molded. Pro-phy-lac-tic Brush Company. 423,702; Sept. 10; Serial No. 482,589; published June 18, 1946.
Statues, statuettes, artificial flowers, etc., Religious and gift. Syracuse Ornamental Co. 423,705; Sept. 10; Serial No. 483,246; published June 11, 1946.
Wheels, landing gear, and other parts. D. E. Davis. 423,759; Sept. 10; Serial No. 490,296; published June 11, 1946.

LIST OF REISSUE PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 10TH DAY OF SEPTEMBER, 1946

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Brunner, Eugene E., assignor to Read Machinery Co. Inc., York, Pa. Conveyer. Re. 22,789; Sept. 10.

Mastney, Edward J., Berwyn, and J. H. Williams, Chicago, Ill., assignors to Oak Manufacturing Co. Preselecting mechanism. Re. 22,790; Sept. 10.

Oak Manufacturing Co., assignee: *See*—
Mastney, Edward J., and Williams.

Randol, Glenn T., St. Louis, Mo. Control means for change-speed transmissions. Re. 22,791; Sept. 10.

Read Machinery Co. Inc., assignee: *See*—
Brunner, Eugene E.

Williams, John H.: *See*—
Mastney, Edward J., and Williams.

LIST OF DESIGN PATENTEES

Alter, Alfred, Company, assignee: *See*—
Alter, Alfred I.

Alter, Alfred I., Wilton, Conn., assignor to Alfred Alter Company, New York, N. Y. Table lamp. 145,557; Sept. 10.

Ballot, Max, New York, N. Y. Button or similar article. 145,558; Sept. 10.

Bihl, Jerome U., San Marino, Calif. Game board. 145,559; Sept. 10.

Bonn, Harry, Union City, N. J. Hat or similar article. 145,560; Sept. 10.

Boucher, Marcel, New York, N. Y. Clip. 145,561; Sept. 10.

Chambers, Frederick C., Chicago, Ill. Pipe receptacle. 145,562; Sept. 10.

Consolidated Industries, assignee: *See*—
Scholl, Harry S.

Dale, Paul, Chicago, Ill. Carpet sweeper casing. 145,563; Sept. 10.

De Weiss, Ferdinand A.: *See*—
Tandler, William S., and De Weiss.

Dixon-Bartlett Company, assignee: *See*—
Henkel, John.

Doyle, Truman W., Los Angeles, Calif. Rug and upholstery extraction machine. 145,564; Sept. 10.

Drell, William, New York, N. Y. Button or similar article. 145,565; Sept. 10.

Drell, William, New York, N. Y. Button or similar article. 145,566; Sept. 10.

Drell, William, New York, N. Y. Button or similar article. 145,567; Sept. 10.

Drell, William, New York, N. Y. Button or similar article. 145,568; Sept. 10.

Drell, William, New York, N. Y. Button or similar article. 145,569; Sept. 10.

Drell, William, New York, N. Y. Button or similar article. 145,570; Sept. 10.

Drell, William, New York, N. Y. Button or similar article. 145,571; Sept. 10.

Esh, Barnett, New York, N. Y., assignor to Weisfield & Goldberg, Inc., Seattle, Wash. Finger ring. 145,572; Sept. 10.

Frank, Samuel K., Wheeling, W. Va. Ash tray or similar article. 145,573; Sept. 10.

Frascino, Mario, New York, N. Y. Coat. 145,574; Sept. 10.

Hall, Isabel H., New York, N. Y. Towel or similar article. 145,575; Sept. 10.

Hallward, Michael, Swampscott, Mass. Clock. 145,576; Sept. 10.

Henkel, John, Baltimore, Md., assignor to Dixon-Bartlett Company. Shoe. 145,577; Sept. 10.

Hooven, Howard, Doylestown, assignor to Quaker Lace Company, Philadelphia, Pa. Lace tablecloth. 145,578; Sept. 10.

Industrial Scientific Company, assignee: *See*—
Tandler, William S., and De Weiss.

International Silver Company, The, assignee: *See*—
Kintz, Alfred G.

Kearney, George F., New York, N. Y. Toy guitar. 145,579; Sept. 10.

Kintz, Alfred G., Wallingford, assignor to The International Silver Company, Meriden, Conn. Spoon or other article of flatware. 145,580; Sept. 10.

Kreisler, Jacques, Manufacturing Corporation, assignee: *See*—
Speck, Kurt.

Lange, Albert, New York, N. Y. Towel or similar article. 145,581; Sept. 10.

Lange, Albert, New York, N. Y. Towel or similar article. 145,582; Sept. 10.

Lolli, John, Chicago Heights, Ill. Electric lamp. 145,583; Sept. 10.

Otto, Ferdinand P., assignor to Quaker Lace Company, Philadelphia, Pa. Lace tablecloth. 145,584; Sept. 10.

Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel Inc., New York, N. Y. Brooch or similar article. 145,585; Sept. 10.

Plasto Manufacturing Company, assignee: *See*—
Tolpo, Lily M.

Quaker Lace Company, assignee: *See*—
Hooven, Howard.
Otto, Ferdinand P.

Reynolds, Milton, Chicago, Ill. Fountain pen. 145,586; Sept. 10.

Reynolds, Milton, Chicago, Ill. Fountain pen. 145,587; Sept. 10.

Rubin, Herbert, New York, N. Y. Lamp. 145,588; Sept. 10.

Scholl, Harry S., assignor to Consolidated Industries, Chicago, Ill. Tray. 145,589; Sept. 10.

Soklaski, Leo, Brooklyn, N. Y. Casing or body for a lighter or the like. 145,590; Sept. 10.

Speck, Kurt, Palisade Park, assignor to Jacques Kreisler Manufacturing Corporation, North Bergen, N. J. Pin or similar article. 145,591; Sept. 10.

Tandler, William S., and F. A. de Weiss, assignors to Industrial Scientific Company, New York, N. Y. Automotive delivery vehicle. 145,592; Sept. 10.

Tolpo, Lily M., assignor to Plasto Manufacturing Company, Chicago, Ill. Frame for mirrors, pictures, and the like. 145,593; Sept. 10.

Trifari, Krussman & Fishel Inc., assignee: *See*—
Philippe, Alfred.

Weisfield & Goldberg, Inc., assignee: *See*—
Esh, Barnett.

Wright, John H., Philadelphia, Pa. Toy figure. 145,594; Sept. 10.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 10TH DAY OF SEPTEMBER, 1946

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abbott Laboratories, assignee: *See*—
Frost, Douglas V.

Abraham, Leonard G., Madison, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Carrier communication system. 2,407,238; Sept. 10.

Adam, Frank, Electric Company, assignee: *See*—
Stieglitz, Henry M.

Air Reduction Company, Incorporated, assignee: *See*—
Hughey, Howard G.

Aktiengesellschaft Brown, Boveri & Cie., assignee: *See*—
Hartmann, Hans.

Albert, Harry B., assignee: *See*—
Chaplin, Edwin D.

Alberts, Leon N., New York, N. Y. Clasp. 2,407,466; Sept. 10.

Albrecht, Alexander J., West New York, N. J., assignor to R. Hoe & Co., Inc., New York, N. Y. Friction drive for web propelling rollers. 2,407,239; Sept. 10.

Albree, George N., Winchester, Mass. Firing mechanism for firearms. 2,407,526; Sept. 10.

Aldis, Arthur C. W., assignor to Aldis Brothers Limited, Sparkhill, Birmingham, England. Means for inspecting gun barrels. 2,407,598; Sept. 10.

Aldis Brothers Limited, assignee: *See*—
Aldis, Arthur C. W.

Alexander, Peter: *See*—
Blott, John F. T., and Alexander.

Alien Property Custodian: *See*—
Mennesson, Marcel L.

Allegheny Ludlum Steel Corporation, assignee: *See*—
Lincoln, Rush A.

Allen, Tom G.: *See*—
Cluley, Alan S., and Allen.

Allied Chemical & Dye Corporation, assignee: *See*—
Clark, Charles R.

Allied Control Company, Inc., assignee: *See*—
Miller, Edward G., and Engberg.

American Car and Foundry Company, assignee: *See*—
Willoughby, Victor.

American Cyanamid Company, assignee: *See*—
Maxwell, Charles S.

American Enka Corporation, assignee: *See*—
Whisnant, John K.

American Optical Company, assignee: *See*—
Bennett, Alva H.
Peck, William F.
Schauweker, George H.

Anchor Manufacturing Company, assignee: *See*—
Johansson, Ernest G.

Anderson, John W., Gary, Ind., assignor to Productive Inventions, Inc. Windshield wiper system. 2,407,215; Sept. 10.

Anglo-Iranian Oil Company Limited, assignee: *See*—
Birch, Stanley F., Fidler, and Thornes.

Anstedt, Paul, Des Plaines, assignor to Northern Metal Products Company, Chicago, Ill. Punch press safety guard. 2,407,527; Sept. 10.

Antonson, John O., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Apparatus for treating material on propeller blades. 2,407,528; Sept. 10.

Ashton, Albert A., Houston, Tex., assignor to Emsco Derrick & Equipment Company, Los Angeles, Calif. Drive for triplex pumps. 2,407,392; Sept. 10.

Atwood Vacuum Machine Company, The, assignee: *See*—
Miller, Kay.

Auten, Robert W., Jenkintown, and J. L. Rainey, Abington, assignors to The Resinous Products & Chemical Company, Philadelphia, Pa. Resinous compositions and process of making same. 2,407,599; Sept. 10.

Autogiro Company of America, assignee: *See*—
Pitcairn, Harold F.

Automatic Control Corp., assignee: *See*—
Newman, Eric P.

Bacon, Leslie R.: *See*—
Tremanin, Henry E., and Bacon.

Ball, Albert P., Detroit, Mich. Watering device for fowl. 2,407,216; Sept. 10.

Banneyer, Joseph, Chicago, Ill. Conduit supporting device. 2,407,217; Sept. 10.

Barber, Charles C., Rockville Centre, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Projecting and retracting mechanism for an underwater signal source. 2,407,240; Sept. 10.

Barber-Colman Company, assignee: *See*—
Kennedy, Walter W.

Barry, William R., deceased, Valdosta, Ga.; W. R. Dewberry, administratrix. Apparatus for determining geographic positions celestially. 2,407,467; Sept. 10.

Bascom, Henry M., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Monitoring system. 2,407,241; Sept. 10.

Bassick Company, The, assignee: *See*—
Herold, Walter F.

Batchelder, Laurence, Cambridge, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Electrical apparatus. 2,407,242; Sept. 10.

Batchelder, Laurence, Cambridge, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Magnetostriction oscillator. 2,407,243; Sept. 10.

Batchelder, Laurence, Cambridge, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Apparatus for submarine signaling. 2,407,244; Sept. 10.

Battelle Memorial Institute, assignee: *See*—
Faust, Charles L.

Bean, Frederic R., assignor to Eastman Kodak Company, Rochester, N. Y. Photographic developer. 2,407,600; Sept. 10.

Becker, Lester O., assignor to J. Pavelka, St. Louis, Mo. Ratchet mechanism. 2,407,468; Sept. 10.

Behr, Siegfried, Flushing, N. Y. Lady's hair ornament. 2,407,393; Sept. 10.

Beier, Kurt A., assignor to Schwitzer-Cummins Company, Indianapolis, Ind. Fluid sealing device. 2,407,218; Sept. 10.

Bell Telephone Laboratories, Incorporated, assignee: *See*—
Abraham, Leonard G.
Barber, Charles C.
Bascom, Henry M.
Christensen, Howard.
Dickieson, Alton C.
Hartley, Ralph V. L., and Samuel.
Kinkead, Fullerton S., and Locke.
Kleimack, Joseph J., and Pearson.
Mason, Warren P.
Miller, Ohmer R.
Parkinson, David B.
Patterson, Everett M.
Shepherd, William G.
Shockley, William, and Willard.
Skellett, Albert M.

Bendix Aviation Corporation, assignee: *See*—
Jandasek, Joseph.

Benioff, Hugo, La Canada, Calif., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Electrical apparatus. 2,407,245; Sept. 10.

Bennett, Alva H., Kenmore, N. Y., assignor, by mesne assignments, to American Optical Company, Southbridge, Mass. Optical system. 2,407,219; Sept. 10.

Benning, Anthony F., Woodstown, N. J., and J. D. Park, assignors to Kinetic Chemicals, Inc., Wilmington, Del. Fluoro-chloro hydrocarbons and making them. 2,407,246; Sept. 10.

Bergeim, Frank H.: *See*—
Lott, William A., Bergeim, and Losee.

Bertram, William A., Chicago, Ill. Bottle holder and carrier. 2,407,529; Sept. 10.

Bielski, Alex J., and W. J. Luckock, Fort Wayne, Ind., assignors to Farnsworth Television and Radio Corporation. Coupling device. 2,407,530; Sept. 10.

Birch, Stanley F., F. A. Fidler, and L. S. Thornes, Sunbury-on-Thames, assignors to Anglo-Iranian Oil Company Limited, London, England. Production of an aviation or motor fuel or an aviation motor fuel constituent. 2,407,214; Sept. 10.

Birmann, Rudolph, Newtown, Pa., assignor, by mesne assignments, to Federal Reserve Bank of Philadelphia. Rotor for elastic fluid mechanism. 2,407,469; Sept. 10.

Birmann, Rudolph, Newtown, Pa., assignor, by mesne assignments, to Federal Reserve Bank of Philadelphia. Elastic fluid mechanism. 2,407,531; Sept. 10.

Birr, Edmund E., Kenmore, assignor to Colonial Radio Corporation, Buffalo, N. Y. Self-quenched superregenerative receiver. 2,407,394; Sept. 10.

Black, Howard C.: *See*—
Phelps, Guy W., and Black.

Blocker, Mary A., Jupiter, Fla. Nursing slip. 2,407,220; Sept. 10.

Bloomheart, John L., Toledo, Ohio, assignor to M. F. McKesson. Multiple purpose gas unit. 2,407,221; Sept. 10.

Blott, John F. T., Worcester Park, and P. Alexander, London, England, assignors to Shell Development Company, San Francisco, Calif. Bituminous composition containing mineral aggregates. 2,407,470; Sept. 10.

Boden, Ernest G., Canton, Ohio, assignor to The Timken Roller Bearing Company. Bearing mounting. 2,407,532; Sept. 10.

Borglin, Joseph N., assignor to Hercules Powder Company, Wilmington, Del. Stabilizing a polymerized rosin and polymerized rosin ester. 2,407,248; Sept. 10.

Boucher, Herman G.: *See*—
Hall, Larry G., and Boucher.

Bour, Robert C., assignor to Ditto, Incorporated, Chicago Ill. Hectograph blanket and preparing same. 2,407,395; Sept. 10.

Boyce, Malcolm B., Haverhill, Mass. Grinding machine. 2,407,222; Sept. 10.

Briggs, Southwick W., Washington, D. C. Bonded adsorbent. 2,407,247; Sept. 10.

Brinton, H., Co., assignee: *See*—
Carhart, Raymond H.

British Insulated Cables Limited, assignee: *See*—
Walton, George H., Quayle, and Jones.

Brock, Margaret M., Middle Village, N. Y. Dishwashing device. 2,407,533; Sept. 10.

Brockmeier, W. C., assignee, et al.: *See*—
Burk, Robert.

Brooke, Lloyd A.: *See*—
Burner, Bingham F., and Brooke.

Brown, George H. F.: *See*—
Gillmore, Kenneth B., and Brown.

Brubaker, Merlin M., Boothwyn, Pa., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Stabilization of tetrafluoroethylene. 2,407,396; Sept. 10.

Budd Company, The, assignee: *See*—
Dean, Albert G.
Montgomery, Robert, and Schane.

Buecken, Hans E.: *See*—
Magerkurth, Wilhelm A., and Buecken.

Burk, Robert, assignor of one-half to W. C. Brockmeier, Brazil, Ind., and one-half to M. R. Harding, Greenville, Mich. Rotary tool adapter. 2,407,471; Sept. 10.

Burner, Bingham F., Arlington, Va., and L. A. Brooke, Washington, D. C. Chair tie for reinforcing rods. 2,407,249; Sept. 10.

Busignies, Henri G., Forest Hills, N. Y., assignor to Federal Telephone and Radio Corporation. Directive antenna. 2,407,250; Sept. 10.

Bussey, William H., Chicago, assignor, by mesne assignments, to O. W. Storey, Wheaton, Ill., as trustee for the partnership of O. W. Storey & Associates. Electrical apparatus. 2,407,363; Sept. 10.

Butterbaugh, Darrel J., Philadelphia, and Le R. U. Spence, Elkins Park, assignors to Röhm & Haas Company, Philadelphia, Pa. Preparation of unsaturated nitriles. 2,407,472; Sept. 10.

Cairns, John E. I., Chalfont-St. Peter, assignor to Electric & Musical Industries Limited, Hayes, Middlesex, England. Electron discharge device employing hollow resonators. 2,407,607; Sept. 10.

Caldwell, Frank W., West Hartford, assignor to United Aircraft Corporation, East Hartford, Conn. Engine cooling and charging apparatus. 2,407,223; Sept. 10.

Campbell, Lester: *See*—
Cotchett, Louis M., Campbell, and Stange.

Carbide and Carbon Chemicals Corp., assignee: *See*—
Quattlebaum, William M., Jr., and Toussaint.

Carhart, Raymond H., assignor to H. Brinton Co., Frankford, Philadelphia, Pa. Fabric take-up and tension circular knitting machines. 2,407,397; Sept. 10.

Carlisle, William A., Jr.: *See*—
Goss, Worth C.

Carlson, Harold, North Franklin, Conn. Picker stick. 2,407,398; Sept. 10.

Carlson, Harold A., University City, assignor to Carter Carburetor Corporation, St. Louis, Mo. Carburetor. 2,407,534; Sept. 10.

Carlson, Harold A., University City, and O. J. Eickmann, Normandy, assignors to Carter Carburetor Corporation, St. Louis, Mo. Carburetor. 2,407,535; Sept. 10.

Carlson, Robert W., Depew, and M. G. Nicholson, Jr., Snyder, assignors to Colonial Radio Corporation, Buffalo, N. Y. Duplex control circuit. 2,407,399; Sept. 10.

Carlton, William C., Ilford, England. Tire preserver. 2,407,473; Sept. 10.

Carter Carburetor Corporation, assignee: *See*—
Carlson, Harold A.
Carlson, Harold A., and Eickmann.

Cary, Philip, Manufacturing Company, assignee: *See*—
Smith, Marion F., and Greider.

Century Mills, assignee: *See*—
Schreiber, Max, and Stebbins.

Chamberlain, Clark W., East Lansing, Mich. Method and apparatus for molecular absorption of vibration. 2,407,400; Sept. 10.

Chandler, James D., Swampscott, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Shoe and making the same. 2,407,224; Sept. 10.

Chaplin, Edwin D., assignor to H. B. Albert, New York, N. Y. Igniter for internal-combustion engines. 2,407,474; Sept. 10.

Chapman, Frederick W., assignor to General Motors Corporation, Detroit, Mich. Compass. 2,407,536; Sept. 10.
